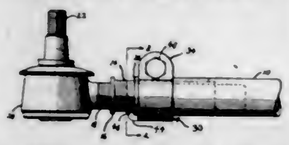
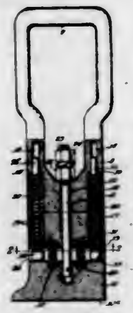
pressure medium, with pitch control apparatus including a governor valve immersed in the medium and responding to the combined effects of centrifugal force and flotation of the valve in the medium for controlling the blade pitch to effect propeller operation consistent with a predetermined selected speed, the combination of means for detecting a variation in flotation of the valve in the fluid pressure medium, and compensating for the influence of the varied flotation upon the response of the valve to effect selected speed operation, said means including a tachometer with scale and needle for indicating the actual propeller speed, a manually operated member for actuating the propeller pitch control to effect a blade angle suitable for the selected speed indicated by the tachometer and including a part rotatable about the tachometer scale and having an index cooperable with the scale for translating blade pitch to speed indication, the coincidence of both needle and index with the same selected speed point on the tachometer scale indicating a prescribed quantity of fluid medium in the reservoir and hence a prescribed flotation force applied to the valve, and non-coincidence of both the needle and index with a selected point on the scale of the tachometer indicating other than a prescribed quantity of fluid medium in the reservoir and hence a variation from the prescribed flotation force applied to the valve and thereby a deviation from the selected speed, and means including the manually operated member with linkage to the propeller control for adjusting the propeller pitch until the needle for propeller speed coincides with the selected point on the scale of the tachometer, thereby altering the actual blade setting for compensation of the variation in flotation force applied to the valve and accomplishing a propeller speed of operation consistent with the predetermined selected speed.

2,451,060
JOINT ASSEMBLY
James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application October 22, 1945, Serial No. 623,740
2 Claims. (Cl. 287—85)



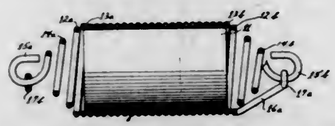
1. A ball and socket joint comprising a housing having a tapered bore and an apertured end wall at the converging end of the bore, a closure plate secured to said housing at the large end of the bore, a stud having a shank projecting freely through the aperture in said wall of the housing and a ball end in the housing, a pair of fragmental annular rigid bearing seats in said housing on opposite sides of the ball end of the stud therein, each seat having an outer wall converging in the same direction as the bore of the housing in spaced relation from the housing, each seat having spaced opposed flat side faces and fragmental spherical recesses in said side faces, said seats having openings in the tops and bottoms thereof communicating with said recesses, said bottoms of the seats having recesses therein terminating in shoulders, said openings in the tops of the seats receiving the shank of the stud freely therethrough, said openings in the bottoms of the seats receiving the end of the ball therethrough, a spring bottomed on the closure plate and seated on the shoulders of said seats in said bottom recesses thereof, and a relatively thin sleeve of resilient material interposed between the tapered outer walls of the seats and the bore for fitting the seats in the housing and for absorbing shock loads to protect the bearing surfaces of the studs and seats.

2,451,061
VARIABLE RATIO STEERING ASSEMBLY
James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application October 27, 1945, Serial No. 625,092
5 Claims. (Cl. 74—496)



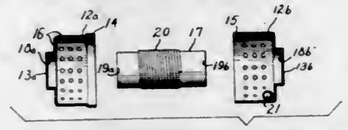
1. A steering assembly comprising a casing having open ends and defining an operating chamber therebetween, a first bearing tiltably mounted in one open end of the casing, a sleeve projecting into the other open end of the casing and having a flanged end secured to the casing, a second bearing tiltably mounted on the sleeve in said operating chamber, a tube slidably mounted in the first bearing and on the second bearing and projecting out of the casing beyond the first bearing, a third bearing tiltably mounted in the sleeve, means in said sleeve holding the third bearing against axial movement, a fourth tiltable bearing slidable in the tube, a worm in said tube rotatably carried in the third and fourth bearings, means holding the worm against axial movement relative to the third and fourth bearings, opposed worm gears rotatably mounted on the tube in said operating chamber of the casing and projecting through the tube into meshed engagement with the worm, means for rotating the worm to drive the gears for reciprocating the tube relative to the casing, a pitman arm depending from the tube outside of the casing, and a shiftable control link connected to said tube to selectively translate reciprocal movement of the tube and pitman arm into rotating movement for swinging the pitman arm.

2,451,062
CLAMP ASSEMBLY
James H. Booth, Detroit, Mich., assignor to Thompson Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application December 21, 1945, Serial No. 636,379
3 Claims. (Cl. 287—90)



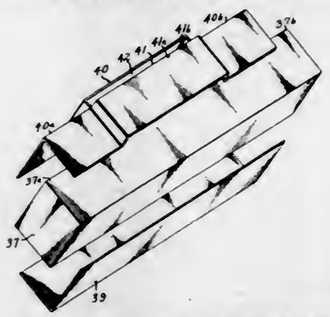
1. In combination, a link rod having a hollow slotted end portion adapted to be contracted around an insert, a clamp member having a split annular body portion surrounding said slotted end portion, means for drawing together said split annular body portion around said link rod, thereby contracting said slotted end portions, and a projecting lip member integrally formed on said clamp member and engageable with said link rod to longitudinally position said clamp member on said link rod.

2,451,063
RIVETING TOOL
Morris Brown, San Diego, Calif.
Application June 2, 1944, Serial No. 538,356
10 Claims. (Cl. 78—53.5)



2. A bucking tool for coacting with a power hammer comprising: a portable body, a bucking element provided with a face for engaging a rivet and receiving impact blows from the hammer through the rivets, a stem centrally disposed on and secured to the element and slidably mounted in the body, a pin means carried by said stem and movable in a slot in said portable body to prevent rotation of said stem, a plurality of spring-pressed anvils provided with stems slidably mounted in the body at the sides of the stem on the element, springs in the body and around the stems on the anvils, for imparting to the element counter blows reactively to the blows received through the rivets from the hammer, and a plurality of resilient devices between the element and the body, for damping the vibration of the element, disposed between the stem on the element and the anvils.

2,451,064
ELECTROLYTIC WATER CORRECTION DEVICE
Edgar M. Butler, New Orleans, La.
Application May 3, 1946, Serial No. 666,901
7 Claims. (Cl. 204—248)



3. In an electrolytic water correction device, a core, a coiled wire sheath of positive metal of the electromotive force series for receiving therein the core of negative metal of the electromotive force series, said sheath comprising a pair of separate coiled sections, each having an open end for receiving the core and a partially closed end, the open ends of the sections being interthreaded to enclose the core therein, the partially closed ends being at opposite ends of the core and serving to hold the core within the sheath.

2,451,065
ELECTROLYTIC WATER CORRECTION DEVICE
Edgar M. Butler, New Orleans, La.
Application May 29, 1946, Serial No. 672,986
2 Claims. (Cl. 204—248)

1. In an electrolytic water correction device, the combination with a perforate two-part cage having closed end sockets of a cylindrical core of negative metal encased within and press-fitted into said end sockets to be supported by said cage, and a tightly wound helical spring of positive metal surrounding an intermediate length only of said core and resiliently gripping said core to insure good electrical contact therewith during expansion and contraction of said core.

2,451,066
ELECTROLYTIC WATER CORRECTION DEVICE
Edgar M. Butler, New Orleans, La.
Application July 25, 1946, Serial No. 686,133
3 Claims. (Cl. 204—248)

1. An electrolytic water correction device for use in water boilers, comprising a bar of rectangular cross-section formed of a negative metal, a two-part sheath of a positive metal, each part enclosing a pair of adjoining sides of said bar, one of said sheath parts conforming to and in surface contact with a substantial intermediate portion of said bar and the other of said sheath parts having end portions conforming to and in surface contact with said bar adjacent the ends thereof and having offset portions intermediate said end portions spaced from and parallel to corresponding intermediate bar surfaces, both of said sheath parts terminating short of the ends of said bar to expose the ends thereof to electrolytic action, and clamping means holding contacting portions of said sheath parts and bar in a pressure contact relationship.

2,451,067
SELF-ENERGIZING ELECTROLYTIC WATER CORRECTION DEVICE
Edgar M. Butler, New Orleans, La.
Application October 30, 1946, Serial No. 706,741
6 Claims. (Cl. 204—248)

5. A self-energizing galvanic electrolytic water correction device comprising a metal core constituting the negative element and a jacket constituting the positive element, said jacket consist-

ing of a plurality of helical turns of resilient metal wire tightly wound and closely spaced along sub-

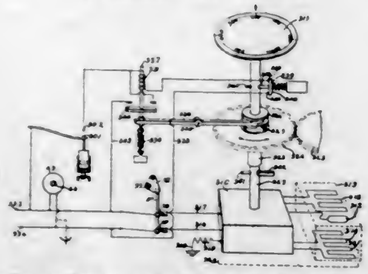
stantially the full length of said core and resiliently and frictionally gripping said core to retain the same and provide a support therefor.

2,451,068

ELECTROLYTIC WATER CORRECTION DEVICE FOR INSERTION IN CIRCULATORY SYSTEMS

Edgar M. Butler, New Orleans, La.

Application November 16, 1946, Serial No. 710,312
5 Claims. (Cl. 204—248)



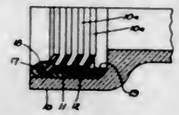
1. A self-energizing electrolytic water correction device, comprising a plug having an internally threaded recess, a negative metal cartridge and a helical positive metal spring frictionally gripping said cartridge and threaded at one end into said threaded recess for retention therein, the other end of said spring being bent across the corresponding end of said cartridge to prevent accidental separation thereof.

2,451,069

TIME AND TEMPERATURE CONTROLLER FOR DOMESTIC APPLIANCES

Robert R. Candor, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application October 11, 1943, Serial No. 505,749
10 Claims. (Cl. 219—20)



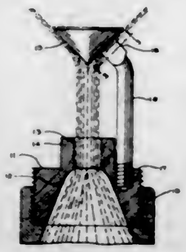
2. In a device of the character described, a source of heat energy, an oven, heating means for said oven, a thermostat controlling the flow of energy from said source to said heating means in response to oven temperature, thermostat adjusting means for said thermostat having an off position and a cooking position, a clock having an on indicator, an off indicator and a time indicator, means for adjusting said indicators, means for disconnecting said source of heat energy from said heating means when said on indicator is adjusted away from said time indicator and for connecting said source with said heating means and for locking said on indicator to said time indicator when said time indicator becomes coincident with said on indicator, means for returning said thermostat adjusting means from cooking position to off position and for locking said off indicator to said time indicator when said time indicator becomes coincident with said off indicator, and thereafter preventing repetition of said returning of said thermostat adjusting means until after said off indicator has been adjusted away from coincidence with said time indicator.

2,451,070

FLUID-RETAINING JOINT AND METHOD OF MAKING THE SAME

James M. W. Chamberlain, Fairlawn, Ohio, assignor to United States Stoneware Company, Akron, Ohio, a corporation of Ohio

Application March 12, 1945, Serial No. 582,218
10 Claims. (Cl. 285—163)



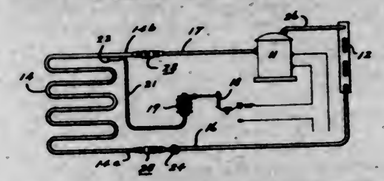
1. A fluid-retaining sub-assembly comprising a rigid member having an annular coupling face, a pouring of a setting material fitting against said face, and a deformable sealing member having a part held in determinate form and position in relation to said rigid member by said setting material, the setting material being formed with a tapered surface for guiding another rigid member into mated relation to the first said member.

2,451,071

SPRAY NOZZLE

Earl E. Cline, Decatur, Ill., assignor to Mueller Co., Decatur, Ill., a corporation of Illinois

Application February 17, 1945, Serial No. 578,474
3 Claims. (Cl. 299—121)



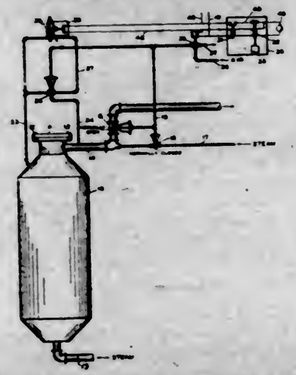
1. A nozzle comprising a base having a fluid jet orifice, a member having a film-forming surface positioned to receive the fluid jet from the orifice and disperse it into film form, and a supporting standard for said member having a reduced film-separating portion coupled directly to and in contact with the film-forming surface of said member.

2,451,072

REFRIGERATING SYSTEM HAVING THERMOMETER-RECEIVING WELL AT THE EVAPORATOR INLET AND OUTLET

Lonzo S. Cooper, Piqua, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application July 24, 1946, Serial No. 686,039
1 Claim. (Cl. 62—115)



A closed refrigerating system comprising in combination, a refrigerant translating device, a cooling element having a refrigerant inlet and a refrigerant outlet, a conduit establishing communication between said device and the inlet of said element and a conduit establishing communication between said device and the outlet of said element, a coupling connecting said first named conduit to said cooling element, a coupling connecting said second named conduit to said cooling element, and each of said couplings having means disposed in the path of flow of refrigerant therethrough and forming a well adapted to receive a thermometer from exteriorly of said couplings for indicating the temperature differential between refrigerant entering and refrigerant leaving said cooling element.

2,451,073

CONTROL APPARATUS

Robert D. Cowherd, Atlanta, Ga., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut

Application June 22, 1944, Serial No. 541,613
6 Claims. (Cl. 210—152)

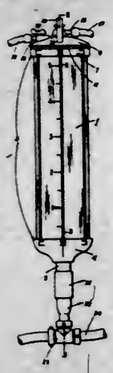
6. In combination with a processing vessel having a vent pipe for the escape of fluid therefrom and a strainer in said vessel adjacent said vent pipe to separate entrained matter from said fluid, a valve in said vent pipe normally opened and adapted to be closed to prevent the outflow of said fluid, means for supplying steam to said strainer for purging the latter of accumulated suspended matter, a valve normally closed and controlling the admission of said steam to said strainer, a fluid-pressure responsive element, conduit means for connecting opposite sides of said element to said vessel on opposite sides of said strainer for subjecting said element to corresponding fluid pressures, electrical switch means mechanically connected to said fluid-pressure responsive element for operation in response to attainment of a predetermined pressure differential across said strainer, means for operating said valves substantially simultaneously in opposite senses, a source of electric power, and connections from said source controlled by said switch means for controlling said valve operating means to close the first-mentioned valve and open the second mentioned valve in response to attainment of said pressure differential.

2,451,074

STRAINER

Beatrice M. Dean, Los Angeles, Calif.

Application April 4, 1947, Serial No. 739,447
1 Claim. (Cl. 210—162)

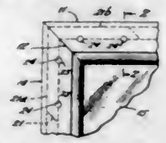


A strainer of the class described, comprising a long stem, a flat disk head forming an integral part of one end of the stem, said disk having a surrounding groove in the edge thereof, an annular filtering element surrounding the head and having its inner edge fitting in said groove, a binding rim secured to and enclosing the peripheral margin of the strainer element, a nut threaded upon the opposite end portion of the stem, and arms carried by the nut.

2,451,075

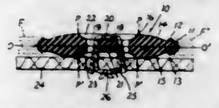
MILK RECEIVER FOR AUTOMATIC MILKING SYSTEMS

John J. De Caril, Stockton, Calif.



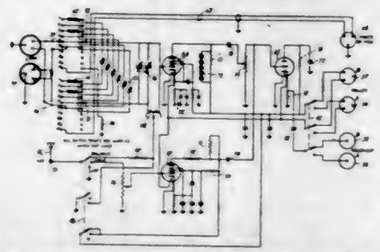
Application June 28, 1943, Serial No. 492,487
4 Claims. (Cl. 31—82)

1. In a vacuum milking apparatus, a closed milk receiver constructed at its upper end for connection with separate sources of vacuum and milk, a milk outlet neck on the lower end of the receiver, an outlet conduit depending from the



neck and including a relatively stiff but resilient sleeve removably engaging over the neck in frictional contact therewith, and a downwardly opening flap valve unit mounted in the removable sleeve and held therein solely by frictional contact with the inner surface of such sleeve.

2,451,076
FRAME STRUCTURE
Alfred B. Edwards, Jr., Plandome, N. Y.
Application April 2, 1946, Serial No. 659,081
5 Claims. (Cl. 189—76)



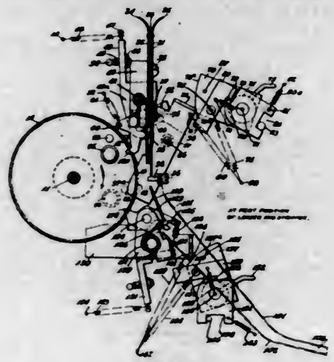
1. In a frame, a pair of rail members each having a longitudinal passage therein; an insert for connecting abutting ends of said rails, said insert having arms inserted into and slidably engaging the walls of the passages in said rail members respectively; and means engaging an inner edge of the insert and forcing said insert outwardly for holding said insert assembled with said rail members, said means including a plurality of fastener elements extending transversely through said rail members laterally intersecting a surface of said corner member and having frictional engagement with said rail members and said corner piece.

2,451,077
MOLDED INTEGRAL SEWING HOLE BUTTON OF THERMOSETTING SYNTHETIC RESINOUS MATERIALS
Sidney Emsig, Woodmere, N. Y.
Application March 1, 1948, Serial No. 12,299
4 Claims. (Cl. 24—90)

1. A molded integral sewing hole button made of a moulding mixture consisting of thermo-setting synthetic resinous material comprising symmetrically positioned anchor zone thread compression cavities.

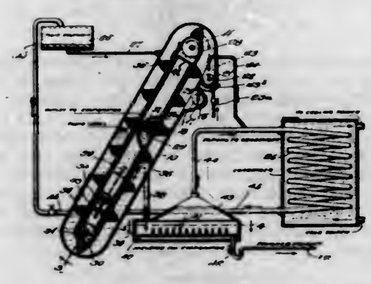
2,451,078
DIRECTIONAL ANTENNA TUNING SYSTEM
William G. H. Finch, Newtown, Conn.
Application September 7, 1944, Serial No. 552,957
5 Claims. (Cl. 343—113)

1. In radio direction finding apparatus, a plurality of loop antennae and a plurality of radio receivers, each of said loops and said receivers being adapted to receive signals of a different limited frequency range, means for combining said loops and said receivers comprising a tuning unit, said tuning unit comprising a plurality of independently operable tuning elements each adapted to a selected frequency range, and switch means for selecting the tuning element having the frequency range to which the said loop antennae is adjusted; and means for tuning the tuning element and loop within said frequency range for receiving a signal within said selected frequency range means for amplifying said signal and selective means for impressing said signal upon one of said receivers, a non-directional antenna, and means for selectively coupling said non-directional antenna to said amplifier, and to said loop antenna, a variable condenser, said last mentioned connection being made through said variable condenser, and means for disconnecting said non-directional antenna.



2,451,079
FACSIMILE APPARATUS RECORD MOUNTING MEANS
William G. H. Finch, Newtown, Conn.
Application January 24, 1946, Serial No. 643,105
12 Claims. (Cl. 271—3)

1. In facsimile apparatus, a rotatable cylindrical drum; means for mounting a facsimile sheet on said drum; said means comprising two rows of pins extending from the surface of the drum parallel to the axis of the drum; one row of pins being adapted to impale one margin of said facsimile sheet; the other row of pins being adapted to impale the opposite margin of said facsimile sheet; and a loading plate having one end engageable with said drum; said loading plate including means for supporting a facsimile sheet; manually operated means for preparing the loading plate for a sheet loading operation; a member movable with the drum and connectable with the loading plate at a specific angular position of the drum when said manually operated means is operated to cause said one end of the loading plate to move against said drum to impale the sheet carried thereby on the pins of the drum.

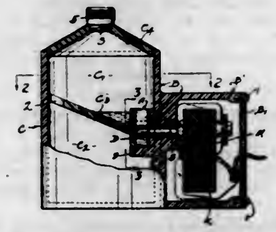


2,451,080
FACSIMILE TRANSMITTER-SHEET LOADING AND STRIPPING MECHANISM
William G. H. Finch, Newtown, Conn., and Gottfried H. Hohmann, Bronx, N. Y., assignors to Finch Telecommunications, Inc., Passaic, N. J., a corporation of Delaware
Application December 17, 1946, Serial No. 716,772
7 Claims. (Cl. 271—3)

1. In facsimile apparatus, a rotatable cylindrical drum; means for mounting a facsimile sheet on said drum; said means comprising two rows of pins extending from the surface of the drum parallel to the axis of the drum; one row of pins being adapted to impale one margin of said facsimile sheet; the other row of pins being adapted to impale the opposite margin of said facsimile sheet; a loading plate having one end engageable with said drum; said loading plate including means for supporting a facsimile sheet; said loading plate being biased away from said drum; and means for driving one end of said loading plate against said drum; said last-mentioned means comprising an operating cam biased to a predetermined position and manually operable to a second predetermined position; an operating lever for moving the loading plate toward said drum and biased against said cam; and latch members connecting said operating lever

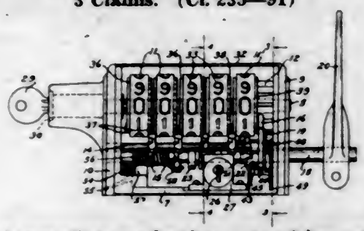
and said loading plate; said latch members being normally disengaged; the movement of said operating cam to said second position causing said latch members to engage and permitting the operating lever to rotate to a second position under the influence of its bias; a pin movable with said drum and engaging an end of said lever to rotate the same back toward the first position thereof at a predetermined angular position of the drum; said engaged latch members transmitting the motion of the lever to the loading plate at said predetermined angular position of the drum.

2,451,081
APPARATUS FOR EXTRACTING VEGETABLE OIL
Lester L. Ford, Eufaula, Ala.
Application August 24, 1943, Serial No. 499,873
2 Claims. (Cl. 23—267)



1. An extraction apparatus combination comprising an elongated inclined extraction chamber having shafts positioned at its upper and lower end, an endless conveyor operated by said shafts, perforated buckets on said conveyor arranged to travel with small clearance with the walls of said chamber and in upward flight to raise material from the bottom section of said chamber for drainage through said perforated baskets and in its downward flight to force material downwardly into said bottom section, a central partition in said chamber dividing said flights so that liquid admitted thereto in the upflight compartment flows downwardly and under the partition for drainage in the downflight compartment, an inlet for extraction liquid in the upper portion of said upflight compartment, an overflow outlet for the micella, a first screw conveyor extending into the upper portion of said downflight compartment of the chamber, and a second screw conveyor extending into said downflight compartment above said first conveyor and arranged to receive material discharged from said baskets on commencement of said downward flight.

2,451,082
PURIFICATION OF PHENOTHIAZINE
Charles W. Gates and Cecil R. Howey, Elmira, Ontario, Canada, assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application September 5, 1946, Serial No. 695,032
5 Claims. (Cl. 260—243)



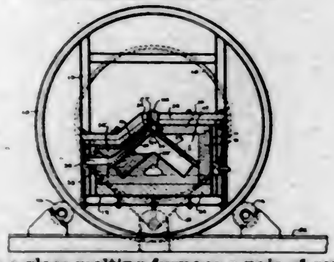
1. A method of purifying crude phenothiazine containing sulfur and an acidic catalyst as impurities which comprises agitating the crude phenothiazine in finely-divided form with a dilute aqueous solution of an alkali and a water-soluble reducing agent selected from the group consisting of alkali metal sulfites, hydrosulfites and hydrosulfides, and subsequently separating the phenothiazine from the mixture and washing the separated product to produce a product purified of said impurities and having a yellow to yellow-greenish color.

2,451,083
LATHER MAKING MACHINE
William A. Haines, Jr., Glendale, Calif.
Application September 17, 1945, Serial No. 616,934
4 Claims. (Cl. 259—9)

1. In a device of the character described, the combination of: a container formed with an upper and a lower compartment arranged, respectively, to hold a minor and a major quantity of liquid and in communication with each other, a chamber depending from the bottom of the upper compartment and in communication therewith at spaced points but not in communication with the lower compartment except through the upper compartment, and an impeller rotatably mounted in said chamber for inducing a flow of liquid and air therethrough and for discharging the same therefrom into the upper compartment during the rotation of the impeller, said upper chamber having an inclined bottom formed with munication with the lower compartment and said impeller chamber being positioned at the lowest point thereof.

2,451,084
LOCKING AND RESETTING MEANS FOR COUNTERS
Mark M. Hennessy, Milwaukee, Wis., assignor to Durant Manufacturing Co., Milwaukee, Wis., a corporation of Wisconsin
Application October 11, 1946, Serial No. 702,643
3 Claims. (Cl. 235—91)

1. A counting mechanism comprising, one or more numeral wheels, a common supporting shaft for said wheels, a drive shaft for revolving said wheels about said supporting shaft, a clutch interposed between said drive shaft and the numeral wheel of lowest order, a key actuated lock for disconnecting said clutch and for rendering said wheels inactive whenever the key is removed from said lock, another lock for effecting rotation of said supporting shaft, and common means for effecting actuation of both of said locks.



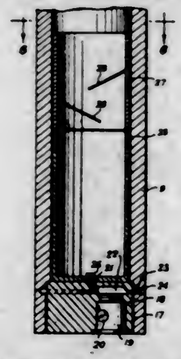
2,451,085
INSECTICIDAL HALOIDO-ALKYLENE ESTERS OF CAPRYLPHENOXYACETIC ACID
William F. Hester, Drexel Hill, and W E Craig, Philadelphia, Pa., assignors to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application June 14, 1945, Serial No. 599,508
18 Claims. (Cl. 167—30)

1. Compounds of the formula

$$\text{Capryl-Ph-OCH}_2\text{COOC}_n\text{H}_{2n}(\text{OC}_n\text{H}_{2n})_m\text{X}$$

wherein Ph is a phenyl nucleus, X is a haloid from the group consisting of chlorine, bromine, iodine, thiocyano- and cyano-groups, m is a number from zero to two, inclusive, and C_nH_{2n} is an alkylene chain of at least two carbon atoms in which n has a value of two to three, inclusive.

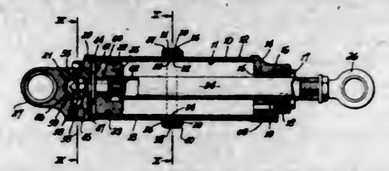
2,451,086
APPARATUS FOR MELTING AND CASTING GLASS
John F. G. Hicks, Corning, and Carl F. Henkel, Big Flats, N. Y., assignors to Corning Glass Works, Corning, N. Y., a corporation of New York
Original application December 5, 1941, Serial No. 421,794. Divided and this application November 8, 1943, Serial No. 509,462
5 Claims. (Cl. 49—39)



5. In a glass melting furnace a pair of generally disc shaped bodies mounted for movement about a horizontal axis passing through their geometric centers, a platform secured between said bodies, a refractory container and means for heating the same secured to said platform, said container being a hollow body having a discharge opening in one portion of its surface, said opening being in a plane including the axis of said bodies.

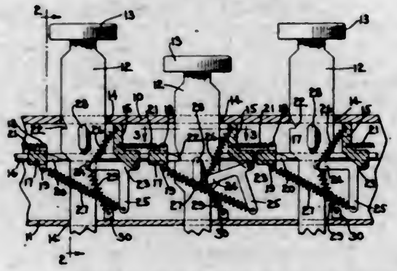
2,451,087
METHOD OF RECONDITIONING BATTERY PLATES
Alva L. Hindall, Muncie, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
No Drawing. Application December 1, 1944, Serial No. 566,253
5 Claims. (Cl. 136—165)

2. The method of rejuvenating negative battery plates of worn-out storage batteries comprising the steps of, washing the plates to remove all old acid and the like, charging the plates in a 5 to 10% solution containing equal parts of alkali metal salts of sulfates and tartrates for converting the lead sulfate in the plates to spongy lead, filling the pores of the plates with barium hydroxide and waste sulfite liquor, and then drying the plates, whereby the plates are rejuvenated and may be reassembled with a new set of positive plates.



2,451,088
COIN-RECEIVING STRUCTURE
Lawrence Hoyt, Little Rock, Ark.
Application December 8, 1943, Serial No. 513,397
2 Claims. (Cl. 232—4)

1. A collection device of the character described comprising an elongated tube including a permanently closed top portion having a money receiving slot therein, a removable lock and plug in the lower portion of the tube, a cylindrical coin receiving can fitted in said tube and surmounting said plug, and a swivel connection between said plug and the bottom of said can whereby said can is removable with said plug and the plug rotatable in the tube independently of the can to facilitate locking the plug.



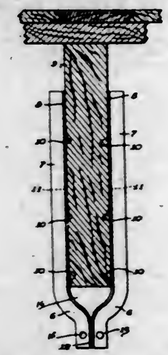
2,451,089
HYDRAULIC CYLINDER CONSTRUCTION
Frank B. Hunter, Roscoe, Calif., assignor to Casimir A. Miketta, Beverly Hills, Calif.
Application August 20, 1945, Serial No. 611,623
9 Claims. (Cl. 309—2)

5. A hydraulic cylinder assembly comprising a full length tubular liner forming a central bore of relatively precise dimension, a piston slidably mounted in the bore having a piston rod thereon extending from one end, a structural casing surrounding the liner with a clearance therebetween comprising elements each of substantially one half the length of the liner and having a closed end thereon forming one end of the cylinder assembly and means for connecting the open ends comprising opposed and abutting flanges on the elements of the structural casing recessed at the inner corner forming a space therebetween, a

ring packing in the space formed by the recesses adapted to be compressed against the exterior of the liner, a split ring assembly adapted to enclose the flanges throughout their circumferences, a circumferential exterior rim on the ring assembly, a continuous ring retained by the rim and surrounding the split ring assembly, an annular circumferential recess in the side of the split ring assembly opposite the rim and a spring snap ring adapted to be retained in the recess for anchoring the continuous ring in place.

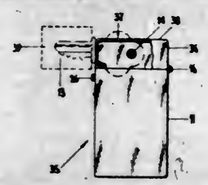
2,451,090
KEY LOCKING MECHANISM
Edward B. Johnson, Grand Rapids, Mich.
Application July 18, 1945, Serial No. 605,677
5 Claims. (Cl. 235—130)

1. In a machine provided with a key having a shank, the key adapted to register numerical data on full depression thereof, the combination of latch means on the shank, a movable latch means adapted to engage the shank latch means to hold the key in partially depressed position and normally held yieldable out of engagement with the shank latch means, means for yieldably moving said movable latch means into engagement with the shank latch means on partial depression of the key and means for rendering the last mentioned yieldable latch moving means ineffective on full depression of the key.



2,451,091
KEY RING
Keith Whitaker Johnson, Arlington County, Va.
Application March 18, 1946, Serial No. 655,093
20 Claims. (Cl. 70—456)

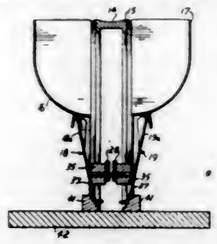
1. The combination with a resilient key-ring, of an opening member carried thereby having a cam adapted to force apart the opposite sides of the ring, whereby the meeting ends of the ring may be separated, and a stop adjacent to said cam to prevent the movement of the opening



member relative to the ring in one direction beyond the position at which the meeting ends of the ring are maintained separated.

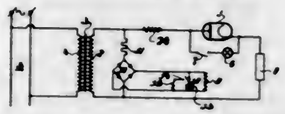
2,451,092
UTILITY HOLDER
Donald S. Jones, Ellwood City, Pa.
Application April 8, 1946, Serial No. 660,376
2 Claims. (Cl. 248—228)

1. A line holder comprising a yoke having its legs spaced apart to receive a joist between them, fastening devices on said legs, for preventing withdrawal of the yoke from the joist, and means for connecting a line to the closed end of the yoke, the said fastening device comprising laterally-yieldable spurs struck inwardly from the yoke legs and extending toward the closed end of the yoke.



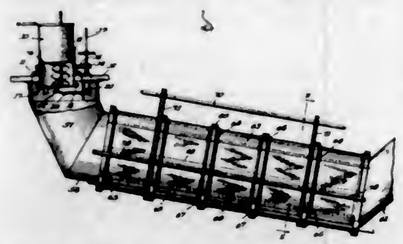
2,451,093
KEY CASE
Bernard H. Kaminer, Brooklyn, N. Y.
Application March 25, 1946, Serial No. 656,967
2 Claims. (Cl. 70—456)

1. In a pocket size key case, a receptacle of rectangular cross-section and comprising two narrow end walls and two wide side walls respectively lying in parallel planes, said walls being solid and non-separable and having an opening at its upper end, a cover having bearing means centrally thereof and being hingedly mounted on said receptacle at said open end, said hinge being mounted on one of said end walls to cause said cover to swing clear of said receptacle, said cover being of a size to close said opening, catch



means secured to said case on the side opposite said hinge to automatically lock said cover on said receptacle, key-carrying means detachably mounted in said bearing means, said key-carrying means being positioned transversely of said cover to permit said keys to swing outwardly from said receptacle when said cover is swung into open position, said keys being movable into concealed relation within said receptacle when said cover is moved into closing position, said cover being centrally slotted on two adjacent sides to permit the body of one of said keys to project in operating position outside said receptacle with the head of said key projecting outside the boundaries of said cover while said receptacle is held in depending relation from said key.

2,451,094
DISPENSING MACHINE
Harry M. Kauffman, Philadelphia, Pa., assignor of one-half to William La Monaca, Philadelphia, Pa.
Application April 30, 1946, Serial No. 665,966
5 Claims. (Cl. 312—79)

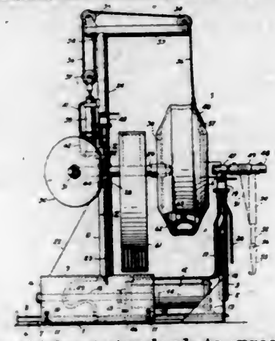


5. A dispenser for cigarettes and the like comprising in combination a standard with a receiving tray in the upper surface thereof, a storage hopper with an open side abutting said standard, a recessed vertical trackway in said standard, extending from the top of said hopper to a point below said hopper, an elevator slidably mounted in said trackway, operating means for raising and lowering said elevator in said trackway, said elevator having a hinged cigarette engaging plate adapted to be forced inwardly into said recess by the cigarettes or the like in the hopper during the downward movement of the elevator and means to force said plate out of said recess and into cigarettes engaging position below said hopper.

2,451,095
SAFETY DEVICE FOR RECTIFIERS
Hendrik Abraham Wijnand Klinkhamer and Ewout Cassee, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application April 25, 1946, Serial No. 664,722
In the Netherlands January 29, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires January 29, 1962
6 Claims. (Cl. 175—363)

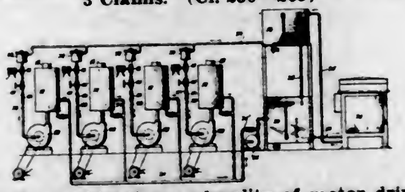
1. In combination with an electrical supply system having rectifier means to which is applied a source of unrectified power, a safety device adapted to apply said power to said rectifier means at a predetermined gradual rate, said safety device comprising an impedance having a non-linear temperature coefficient of impedance connected to said system so as to absorb a portion of said power, the value of said impedance being low in the unheated state relative to the value in the fully heating state, said impedance having a thermal capacity effecting the application of said power to said rectifier means at the desired rate, and switching means interposed between said impedance and said system for disconnecting said impedance after it has attained the fully heated state.

2,451,096
METHOD OF PREPARING CANDY COATED CONFECTIONS
Jacob J. Kooman, Chicago, Ill., assignor to Confections, Inc., Chicago, Ill., a corporation of Illinois
Application April 3, 1946, Serial No. 659,337
6 Claims. (Cl. 107—54)



1. In a method of preparing candy coated popcorn, the steps which consist in coating the popcorn units with a melted caramel, spraying the caramel coated units with a shortening ingredient to which has been added lecithin in an amount not greater than one per cent by volume, whereby to wet the surface of the coated units and inhibit any tendency of the same to adhere or stick together and form accumulations, agitating the coated units to break up any acumulations which may exist and to maintain the separated units in separated condition, and subjecting the units during the agitating step to air currents for cooling purposes.

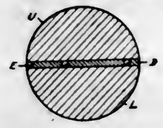
2,451,097
TIRE BEAD SPREADER
Herman T. Kraft, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application November 30, 1945, Serial No. 631,883
11 Claims. (Cl. 18—2)



4. A tire bead spreader for use in assembling tire casings with interior and exterior retread vulcanizing mold elements which comprises a pair of laterally spaced front standards spaced apart a distance greater than the bead diameter of the tire casing, a standard mounted rearwardly of the front standards and movable forwardly and rearwardly relative to said front standards, an arm attached to said rear standard of a length to receive a retread ring mold and to support the same alongside the standard, a disc attached to the outer end of said arm for interiorly engaging a tire bead, a ring for interiorly engaging the opposite bead of a tire, means connecting diametrically opposite portions of said ring to said front standards so as to provide an unobstructed front

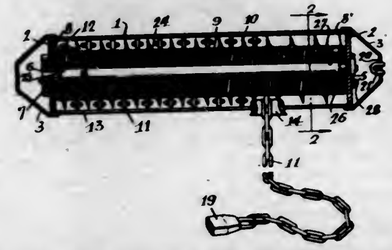
opening to the interior of the casing through said ring, and means for shifting said rear standard

relative to said front standards to spread the tire beads.



2,451,098
OIL PURIFYING SYSTEM FOR VACUUM PUMPS
Theodore A. La Brecque and Arvid W. Skoog, Elmira, N. Y., assignors to The Hilliard Corporation, Elmira, N. Y., a corporation of New York
Application January 13, 1945, Serial No. 572,609
3 Claims. (Cl. 230—205)

1. In combination a plurality of motor driven vacuum pumps, each including relatively movable parts sealed and lubricated by oil and each having a port through which air, gases and entrained oil particles are exhausted, means connected to the ports of each pump for removing the entrained oil particles from the exhaust gases and air, means providing a collecting space for such removed particles, a series of conduits connected one to each of said collecting spaces, a single oil reclaimer connected to said conduits, said reclaimer including filtering means, means for removing volatile foreign liquids from the oil and means for passing liquids through said reclaimer, a further series of conduits extending from said reclaimer in an elevated plane and to said pumps, a series of solenoid controlled valves above and individual to said vacuum pumps for controlling the flow of oil from said latter conduits to each of said pumps and said solenoids being connected in circuit with the motors of said pumps to open said valves when said motors are operating.

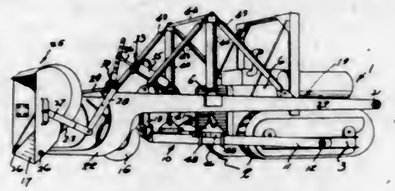


2,451,099
METHOD OF UNITING METAL PIECES BY MEANS OF A BONDING LAYER OF PREDETERMINED THICKNESS
Ralph R. La Motte, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 28, 1945, Serial No. 613,162
4 Claims. (Cl. 113—112)

1. The method of bonding bodies of ferrous metal which comprises cleansing and fluxing the contiguous surfaces of the bodies, placing between the surfaces metal spacing balls sufficient in quantity to obtain the required spacing, placing between the surfaces a bonding metal sufficient when melted to fill the remaining space between said contiguous surfaces, and having a melting point substantially below the melting points of the bodies and balls, applying to the bodies external pressure sufficient to maintain the contiguous surfaces of the bodies in contact with the balls but less than required to deform the balls or to cause them to deform the contiguous surfaces of the bodies, said balls being substantially uniform in diameter and of such

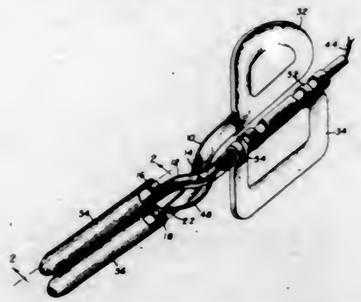
dimension as to limit the thickness of the bonding layer to that which will give satisfactory fatigue strength, and, while said pressure is maintained, heating the assembly of bodies, balls and bonding material in a non-oxidizing atmosphere to a temperature sufficient to melt the bonding metal but substantially below the melting points of the bodies and the balls, and cooling the assembly while said pressure is maintained, whereby there is provided a substantially contiguous bonding layer of substantially uniform thickness of a dimension such as to give satisfactory fatigue strength.

2,451,100
CHAIN LOCK
Armand Lecompte, Montreal, Quebec, Canada
Application August 30, 1946, Serial No. 693,913
In Canada September 6, 1945
1 Claim. (Cl. 242—107)



A locking device comprising an elongated housing, a cylinder rotatably mounted therein, said housing having a longitudinal slot, a guide slidable in said slot, a chain passing through said guide and having one end fixed to said cylinder, said cylinder having a thread receiving said chain, said thread having successive convolutions fitted into said guide, a coil spring in said cylinder, said spring having one end fixed to said cylinder and the other end fixed relatively to said housing, a ratchet on said cylinder, and a pawl in said housing and engaging said ratchet.

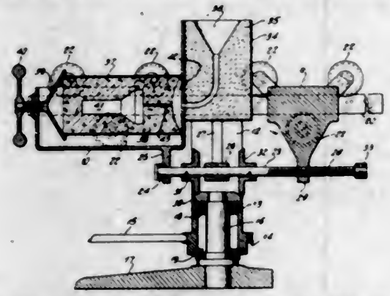
2,451,101
BULLDOZER-LOADER DEVICE
Francis P. Leschinsky, Berkeley, Calif., assignor of one-half to Earl S. Waldie, Berkeley, Calif.
Application November 22, 1946, Serial No. 711,525
7 Claims. (Cl. 214—140)



1. A combination of a prime mover with a bulldozer-loader attachment comprising a frame one end of which is pivoted to the prime mover frame,

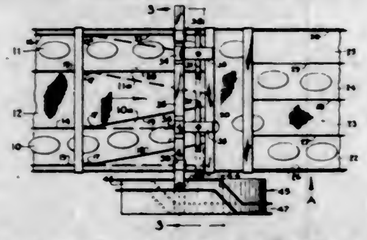
and a bucket pivotally arranged on the other end of the frame; means for changing the position of said bucket in relation to said frame; means for lifting and lowering the frame; a sub-frame ex-

tending from said prime mover beyond the front thereof and mounted independently of said first frame; and a wheel supporting the front end of said sub-frame; said means for lifting or lowering the frame resting on said sub-frame.



2,451,102
RUFFLE IRONER
Bernhardt J. Litke, Burbank, Calif.
Application March 14, 1947, Serial No. 734,705
1 Claim. (Cl. 219—21)

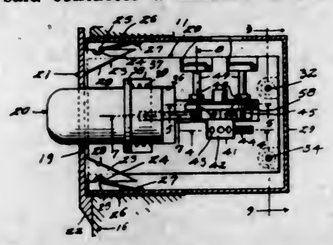
An ironer for ruffles and the like comprising a pair of pivoted and crossed shank members, handles on one pair of adjacent ends of said shank members the portions of the shank members on the side of the pivotal connection thereof remote from said handles comprising short stubs, flange members on the ends of said short stubs, elongated cap members secured to said flanges, and electrical heating elements operatively mounted within each of said caps, said cap members being open ended cylinders, the open ends thereof being secured exteriorly to said flanges.



2,451,103
CENTRIFUGAL CASTING APPARATUS
Theodore Loew, New York, N. Y.
Application March 18, 1946, Serial No. 655,285
3 Claims. (Cl. 22—65)

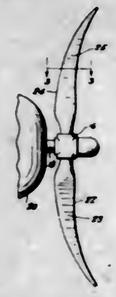
3. In a centrifugal casting machine, the combination with a carriage rotating horizontally about a vertical axis, of a mold and a counterweight movably mounted on the carriage, means for feeding material to be cast into the mold, means connecting the mold and counterweight to move one relatively toward or from the other during rotation of the carriage, and operating means to move said connecting means and so effect movement of the mold and counterweight relatively toward or from each other during the rotary movement of the carriage so as to maintain the center of gravity of the system substantially coincident

with its axis of rotation as the weight of the material in the mold varies.



2,451,104
DISTRIBUTING APPARATUS
Horace Lowe, Eastport, Maine, assignor to Riviera Packing Company, Eastport, Maine, a partnership composed of Victor N. Cory and Arnold Vogl
Application November 10, 1945, Serial No. 627,916
4 Claims. (Cl. 198—30)

1. In a distributing apparatus having a pair of rearwardly hinged gate guides the forward portions of which are movable between two predetermined limiting positions, the combination of a transversely disposed spacer pivotally connected to the said forward portions of the gate guides, a longitudinally disposed actuating arm pivotally connected to said spacer, a rest support underlying the arm for slidably supporting the arm during its operative movements, a transversely disposed slide bar connected to said arm for actuating it laterally, guiding means in slidable engagement with said slide bar for holding it along its operative path, a rotary cam wheel, and a reciprocating cam follower member operatively connected to said cam wheel and said slide bar for reciprocatingly actuating the bar, whereby the gate guides will be operatively oscillated between said limiting positions.



2,451,105
PUSH-BUTTON STEPPING SWITCH
Harold C. Macnamara, Minneapolis, Minn.
Application December 20, 1946, Serial No. 717,559
3 Claims. (Cl. 200—156)

1. A pushbutton switch wherein successive actuation of the pushbutton produces alternate "on" and "off" or "off" and "on" positions thereof, said switch comprising a switch body having a pair of diametrically aligned contacts, an insulated rotary contactor mounted on said body with its axis of rotation between said contacts, said contactor comprising a plurality of pairs of diametrically aligned electrically connected arms arranged to bridge said contacts when engaged therewith, said rotary contactor having peripheral ratchet teeth, a pushbutton mounted on said switch body for reciprocation in a plane substantially at right angles to the rotary axis of said rotary contactor, return spring means for returning said pushbutton to initial inoperative position when released from a pushed-in operative position, and a ratchet pawl operable into effective engagement with said ratchet teeth to turn said contactor a distance of one ratchet

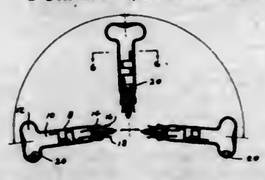
tooth on each reciprocation of said pushbutton, whereby a pair of said diametrically aligned arms are caused to alternately engage with and disengage from said pair of contacts, a peripheral portion of said rotary contactor being formed with circumferentially spaced indentations corresponding in spacing to said pairs of contactor arms and the spacer between adjacent pairs of contactor arms, and spring pressed detent means on said body engageable in said indentations to hold said rotary contactor in the positions into which it is operated by the actuation of said pushbutton.

2,451,106
PROPELLER BLADE CONSTRUCTION
Erle Martin, West Hartford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application April 22, 1944, Serial No. 532,246
3 Claims. (Cl. 170—159)

1. An aeronautical propeller having a hub and metal blades extending substantially radially outward from said hub, said blades having a thrust face and being initially curved away from said face to an extent at least as great as the extent determined by the formula

$$\int_X^R F_c \frac{dy_0}{dx} dx = \int_X^R t dx \int_X^R F_c \int_0^X \frac{M}{EI} dx dx - M$$

I=minor moment of inertia of section at radius X
A=area of section at radius X
C=distance from neutral axis to outermost fibre on face side at radius X
t=total blade air load per in. of radius at maximum operating power and thrust conditions for radius X
F_c=centrifugal stress at station



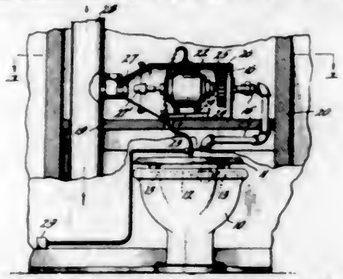
$$X = \frac{1}{A} \int_X^R \gamma \omega^2 A dx$$

S=desired face side compressive stress at station X
M=desired bending moment=

$$\left(\frac{F_c}{A} - s\right) \frac{I}{C} \text{ at station X}$$

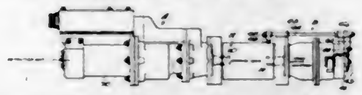
E=modulus of elasticity
Y_0=desired offset at any station X
ω=rotative speed radians per/sec.
x=radius of section being considered
R=radius of blade tip
γ=mass density of blade material

2,451,107
ELECTRIC SWITCH
Ira E. McCabe, Chicago, Ill.
Application March 9, 1945, Serial No. 581,747
4 Claims. (Cl. 200—152)



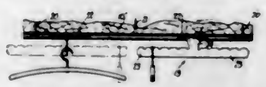
1. An electric switching device comprising a container, spaced electrodes sealed therein including a body of mercury adapted to bridge said electrodes when said container is in a predetermined position to close an electric circuit, said mercury being disposed in spaced relation to said electrodes when said container is in other predetermined positions to open said circuit, and baffle means disposed within said container including at least an apertured baffle member and a baffle member spaced therefrom having an uninterrupted wall disposed in opposed spaced relation to said aperture and being in spaced relation to the adjacent wall of said container, oppositely disposed fingers projecting perpendicularly from the baffle means into the container spaces on both sides thereof, and said fingers being spaced from the adjacent wall of the container to provide therebetween passageways adapted to serve as a vent for each of said container spaces into which the mercury is desired to flow.

2,451,108
TOILET VENTILATING MEANS
Caleb M. Molpus, Memphis, Tenn.
Application October 24, 1946, Serial No. 705,377
8 Claims. (Cl. 4—213)



2. In combination, a toilet seat, a toilet bowl having an air passage formed therein and communicating with the interior of the bowl, a casing, a track in the casing, inlet and outlet ports in the casing adjacent opposite ends of the track, connections from the inlet port to said air passage, a motor movable along said track, a valve traveling with the motor to close the outlet port, a fan driven by the motor and arranged to move the motor along the track so as to open the outlet port when the motor is energized, means biasing the motor to travel in the opposite direction along

the track when the motor is deenergized, and a gravity actuated valve so located as to close the

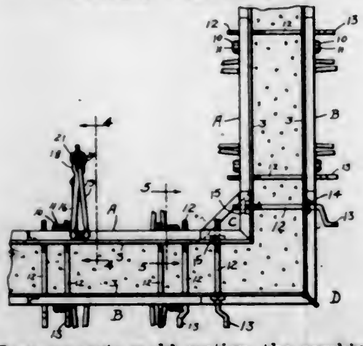


passage to the inlet valve in the absence of suction in said passage.

2,451,109
ACTUATOR AND CONTROL ASSEMBLY FOR RETRACTABLE LANDING GEARS
Romeo M. Nardone, Teaneck, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application January 28, 1944, Serial No. 520,123
6 Claims. (Cl. 244—102)

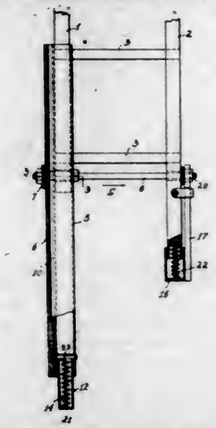
4. The combination for retractable aircraft gear having means movable in accordance with extending and retracting movements of the gear, brake control means movable in accordance with, and adapted to effect its control function at a position near the end of said extending movement, an element rotatable in accordance with said extending movement, means normally braking said element, means adapted to adjust the braking effect of said braking means in accordance with the rate of rotation of said element, electroresponsive means adapted to release said braking means near the beginning of said extending movement, and means capable of manual operation for similarly releasing said braking means and operable by said brake control means at said position to cause said braking means to brake said rotatable element.

2,451,110
SUSPENSION RACK
Armand E. Newman, New York, N. Y.
Application July 26, 1944, Serial No. 546,622
1 Claim. (Cl. 211—94)



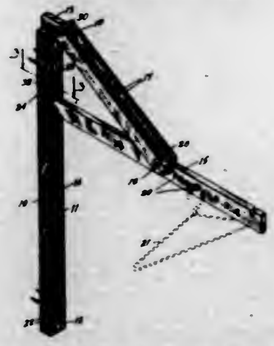
In a mobile suspension rack for clothes hangers or the like, a relatively wide, horizontal channel plate having relatively narrow inwardly extending flanges placed closely to the channel web, a rack member having an upper, horizontal, relatively thin circular plate slidable and closely fitting in said channel, a relatively broad stem extending downwardly and centrally from said circular plate and being rigidly connected therewith, said stem having integrally formed at its lower end a horizontally extending flat bar provided with notches at its upper edge to support garment hangers.

2,451,111
WRITING INSTRUMENT
Edgar B. Nichols, Moorestown, N. J.
Application August 19, 1944, Serial No. 550,277
8 Claims. (Cl. 120—14.5)



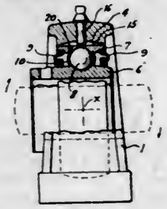
1. In a mechanical pencil, a casing, a plurality of lead magazines within said casing each movable therein to and from lead concealing and lead exposing positions and each including (1) a lead guide, (2) lead propelling means movably carried by the lead guide, and (3) an operating member for moving the lead propelling means relative to the lead guide, said operating members being non-operable to move their respectively associated lead propelling means when said magazines are in lead concealing position, manually operable means associated with said magazines for effecting simultaneous exchange of positions between a pair of said magazines one of which is in lead exposing position and the other of which is in lead concealing position, said means including an actuating member within said casing positioned beyond the lead concealing positions of said magazines, and means associated with said operating members for rendering the operating member of said other magazine operable to move its associated lead propelling means when said last named magazine is moved into lead exposing position.

2,451,112
FOLDING CONCRETE FORM
Walter C. Niccolls, San Jose, Calif.
Application October 4, 1946, Serial No. 701,229
5 Claims. (Cl. 25—131)



1. In a concrete mold-section, the combination with a pair of horizontally hinged panels, of a horizontal arm and integral head mounted on the lower panel, a diagonally arranged bolt mounted on the upper panel, and co-acting means on the head and bolt for holding the panels in vertical alinement.

2,451,113
AUTOMATICALLY ADJUSTABLE LADDER
Karlis V. Ozols, Brooklyn, N. Y.
Application August 9, 1945, Serial No. 609,751
6 Claims. (Cl. 228—63)



1. A ladder for use on an uneven locality comprising an extension foot attached to the one ladder leg, said foot being freely displaceable along said ladder leg, a shaft transversally shiftable in the two ladder legs, a pinion wheel rotatably carried by the one end of said shaft, parallel racks of different width carried by said extension foot to be successively brought in meshing cooperation with said pinion wheel, means connected with the other ladder leg to displace said shaft and said pinion wheel upon arrival of the ladder in its operating position and to thereby effect the meshing cooperation of said pinion wheel with both of said racks to thereby stop the free displacement of said extension foot and to lock the same in the thus adjusted position.

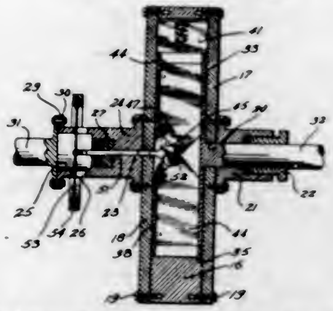
2,451,114
FOLDING CLOTHES HANGER
Fritz R. Peterson, Denver, Colo.
Application July 17, 1945, Serial No. 605,573
1 Claim. (Cl. 211—104)

A folding clothes hanger comprising: two vertical guide members; a bracket member secured between said guide members at their upper extremities maintaining the latter extremities spaced apart; a spacing block secured between said guide members at their lower extremities maintaining the latter extremities spaced, said bracket member and said block being equal in width to maintain said guide members in parallel relation; a hanger bar extending slidably between said guide members at its one extremity; a guide pin extending through an opening in said latter extremity into vertical guide grooves in said guide members; and a pair of diagonal brace members extending from a pivotal connection on each side of said bracket member to a pivotal connection on each side of said hanger bar intermediate the extremities of the latter to hold the bar in horizontal position, the pivotal connection between said diagonal braces and said bracket member being positioned sufficiently far forward of said guide members so that said diagonal braces may swing vertically downward against and parallel to the forward faces of said guide members.

2,451,115
PILLOW BLOCK BEARING
Thomas C. Pew, Ann Arbor, Mich., assignor to Hoover Ball and Bearing Company, Ann Arbor, Mich., a corporation of Michigan
Application February 5, 1945, Serial No. 576,207
2 Claims. (Cl. 308—187)

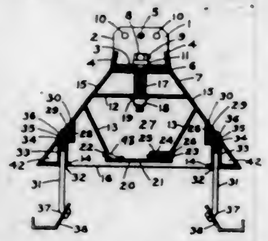
1. In a pillow block bearing, a pillow block having an internal circumferential seat, the surface of the seat being concave and formed as a segment of a sphere, an anti-friction bearing having an outer race and an inner race with rolling elements therebetween, the inner race adapted to receive a shaft or the like, the exterior surface of the outer race being convex and formed as a segment of a sphere and seating in the internal seat of the pillow block whereby the bearing may rock relative to the pillow block to accommodate for misalignment between the shaft and the pillow block, the outer race having a cross slot therein, a lubricant fitting in the pillow block positioned substantially on the center line of the bearing and extending into the cross slot, the end of the fitting being spaced from the bottom of the slot whereby the bearing may oscillate, and a port in the outer race connecting the slot and the chamber for the rolling elements, said port being positioned off center relative to the rolling elements.

2,451,116
METHOD OF RECOVERING ALBUMIN ADHERING TO EGG SHELLS
Frederick F. Pollak, New York, N. Y.
No Drawing. Application March 8, 1947, Serial No. 733,431
6 Claims. (Cl. 260—122)



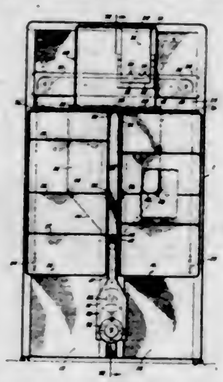
6. A method for the manufacture of a water soluble pure egg albumin from the solution adhering to the egg shells after the dumping of the eggs comprising treating the juice with a mixture of water insoluble terpineols, dissolving the egg yolk and egg yolk oil in the alcohol and separating the alcoholic egg yolk solution from the aqueous albumin solution.

2,451,117
PULLING APPARATUS
Leo F. Price, Spokane, Wash.
Application July 30, 1945, Serial No. 607,858
3 Claims. (Cl. 29—267)



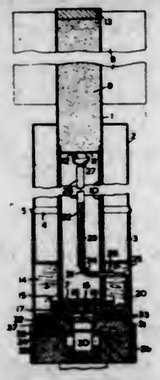
2. A grease block puller comprising a frame having side arms spaced transversely of the frame, bars mounted between said arms, blocks slidable along said bars, rods carried by said blocks and extending transversely of the frame in opposite directions and through the arms for movement from a retracted position to an extended position for engaging through ears of a bearing casing and mounting the frame outwardly of an open front of the casing, a lever pivotally carried by said frame, a pin carried by said lever and extending transversely thereof, a draw bar slidable across the pin of the lever and having teeth for engagement thereby, and means at the front end of the draw bar for engaging through a screen of a grease block.

2,451,118
FLUID TRANSMISSION
Robert A. Pyle, Lapeer, Mich.
Application November 20, 1945, Serial No. 629,782
1 Claim. (Cl. 192—58)



In a fluid transmission a casing having a circular chamber therein, a rotor body mounted in the chamber to rotate about the axis thereof, said body having a slot extending diametrically therethrough, an elliptical flange at each end of the body the major axis of which coincides with the longitudinal axis of the slot, circumferentially spaced radial vanes in the wall of the chamber yieldingly held in contact with the rotor body and adapted to be moved out of contact therewith by the flanges as the rotor rotates within the body, a sliding vane mounted in each end of the slot, the inner end of each sliding vane being beveled, a wedge block within the slot and slidable axially of the rotor body and slidably coupled with the beveled ends of the sliding vanes to cause said vanes to move inwardly or outwardly of the rotor body when the wedge block is moved, a rod mounted to move axially through the casing and coupled at its inner end to the wedge block and means exteriorly of the casing for moving the rod axially thereof.

2,451,119
TOWING HITCH
Maynard Thomas Regan, Lansing, Mich.
Application March 11, 1946, Serial No. 653,485
3 Claims. (Cl. 280—33.05)

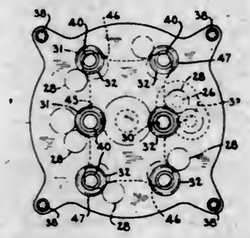


1. A vehicle towing hitch comprising a plurality of inclined walls forming the sides of a truncated pyramidal box-shaped support, means on said support for removably attaching the same to a body of a towing vehicle, means pivotally secured to the truncated end of said support for receiving a front axle of a towed vehicle, and additional walls forming with said inclined walls a receptacle, one of said additional walls being removably attached to at least two others of said additional walls.

2,451,120
CABINET HAVING MEANS FOR MOVING COMPARTMENTS VERTICALLY AND HORIZONTALLY
Charles F. Rossetter, Los Angeles, Calif.
Application August 21, 1944, Serial No. 550,377
27 Claims. (Cl. 312—151)

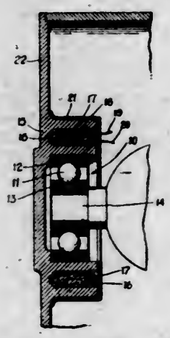
13. In a storage and dispensing cabinet including a generally rectangular housing provided with internal, vertically extending corner guides and vertical intermediate guides adapted to define two adjacent wells, said wells being in open communication with each other in the upper portion of the housing; a main, vertically movable compartment in each well guided by said vertical guides; a doorway in the front of the housing at a position above the level of the vertically movable compartments when they are at the bottom of the wells, said doorway being adapted to provide access to compartments in both wells; a compartment movable laterally from one well to the other in the upper portion of the housing and vertically in either well with the main vertically movable compartment therebelow, a driving means for moving said laterally movable compartment, and means for translating vertical motion of the laterally movable compartment in either well into vertical motion of the main compartments.

2,451,121
ILLUMINATING FLARE
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England
Application April 8, 1947, Serial No. 740,213
In Great Britain April 15, 1946
8 Claims. (Cl. 102—7)



1. A flare device adapted to burn while floating on water comprising a casing, a flare candle in the upper part of said casing, a buoyancy chamber on said casing, a weighted cover surrounding the lower end of said casing, an ignition fuse in said cover, a separating charge in said cover for separating said cover from said casing, means for igniting said separating charge from said ignition fuse, and a candle ignition train leading from a point adjacent said ignition fuse to the lower end of said candle and adapted to be ignited by said ignition fuse.

2,451,122
MEANS FOR ATTACHING TRANSPARENT ENVELOPES TO BILLFOLDS
Lester L. Sherwood, Los Angeles, Calif.
Application August 17, 1945, Serial No. 611,090
1 Claim. (Cl. 150—39)



Means for attaching transparent envelopes to billfolds, comprising a flexible member adapted to be removably positioned in a billfold and provided adjacent its side edges with longitudinally disposed rows of apertures arranged parallel with each other and with the sides of said flexible member, flexible strips threaded through the apertures of the respective rows, one end of each strip having an aperture through which the strip passes to form an envelope receiving loop which projects upwardly through a pair of the apertures in the flexible member, the side edges of each strip being provided with opposed notches disposed in longitudinally spaced transverse pairs and the distance between the inner ends of each pair of notches being less than the diameters of the apertures in said member.

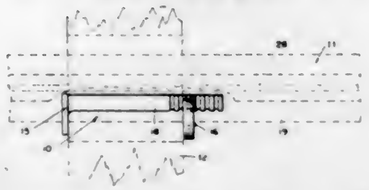
2,451,123
MULTIPLE DRILL TEMPLATE
Henry O. Schultz, Milwaukee, Wis., assignor to H. O. Schultz, Inc., Milwaukee, Wis., a corporation of Wisconsin
Original application November 29, 1944, Serial No. 565,628, now Patent No. 2,441,722, dated May 18, 1948. Divided and this application February 28, 1948, Serial No. 12,031
7 Claims. (Cl. 77—62)

1. A template assemblage for use with a drill head wherein a plurality of drill spindles are adjustable laterally of each other, said template assemblage comprising, a template having a common opening defining a predetermined pattern, means for rigidly positioning said template with respect to said drill head whereby all of said spindles are freely laterally movable within the common opening of said template for adjustment purposes, and a second template having a series of independent holes defining the same pattern and within which said spindles are snugly confinable but freely rotatable.

2,451,124
BEARING FOR ELECTRIC MOTORS
Floyd T. Smith, Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application July 10, 1944, Serial No. 544,259
1 Claim. (Cl. 308—77)

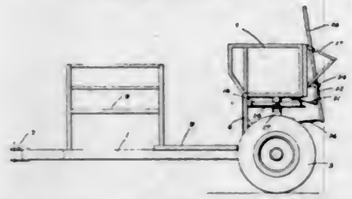
A bearing assembly comprising a shaft, a bearing for the shaft, a support for the bearing having a hub provided with an open-sided annular recess extending about the bearing, a unitary annular heating element secured in said recess for lateral removal and comprising a heating coil set in electrical insulation, means to supply current to said heating element, and means to retain said heating element in said recess and to prevent the loss of heat, comprising a removable cup-like heat insulating shield covering said hub and closing the open side of said annular recess.

2,451,125
TUBULAR CONTAINER FOR ELECTRICAL CONDENSERS OR OTHER APPARATUS
Percy Archibald Sporing, Hampton Hill, and Charles Piercy Johnson, Hanwell, England, assignors to The Telegraph Condenser Company Limited, North Acton, England, a British company
Application June 27, 1945, Serial No. 601,835
In Great Britain May 8, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires May 8, 1964
1 Claim. (Cl. 174—50)



In combination, an electrical condenser unit of stacked form, a tubular container of flattened cross section enclosing said condenser unit, sheets of insulation interposed between said condenser unit and said container, the container having a reduced portion at each end, each reduced portion having a circular aperture, a bung of resilient material in each of said apertures, an inturned edge to each of said apertures compressing said inserted bung around the zone intermediate of its length, and a leading-out wire extending from said condenser unit through each of said bungs.

2,451,126
TRANSLUCENT SHEET FOR REPRODUCTION PURPOSES
Raymond B. Stringfield, Los Angeles, Calif., and Thomas R. Miles, Fort Worth, Tex., assignors to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
No Drawing. Application January 15, 1945, Serial No. 572,984
2 Claims. (Cl. 260—37)

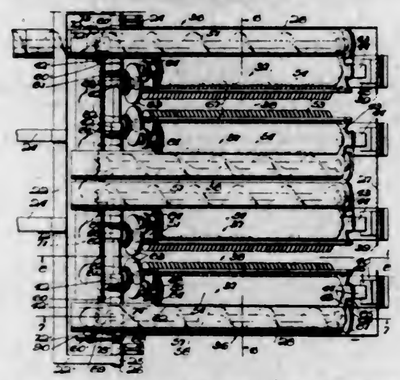


2. A translucent sheet adapted for use in making templates, and comprising a mixture of from 54–86% by weight of polyvinylidene chloride with the remainder glass fibers.

2,451,127
RAIL ANCHOR
Lawson Tarwater, Redlands, Calif., assignor of one-half to Earl G. Witmer, Redlands, Calif.
Application September 20, 1946, Serial No. 698,315
2 Claims. (Cl. 238—327)

1. A device for anchoring a rail to a cross tie on which it is supported, comprising a flat bar adapted to lie longitudinally along the upper surface of one side of the lower flange of a rail adjacent the web thereof and a platelike head at one end of said bar extending at right angles thereto, said head having a slot to receive the lower flange of said rail and being adapted to extend therebelow adjacent one side of a tie supporting the rail, said bar being provided with a plurality of transverse grooves in its upper surface at the end opposite said head, and a second member adapted to extend under said rail and engage both sides of said lower flange of the rail and the other side of said tie, said member being provided with a projecting tooth adapted to be selectively positioned in one of said grooves of said bar for securing said member and bar together.

2,451,128
MATERIAL DISTRIBUTOR
Carl E. Thiesse, Porterville, Calif.
Application July 24, 1945, Serial No. 606,856
4 Claims. (Cl. 275—8)

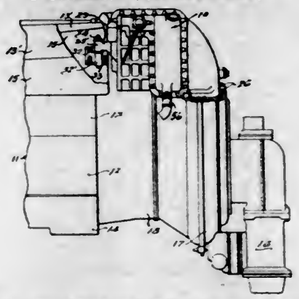


1. A material distributing mechanism for an implement which includes a material hopper having a feed opening in the bottom thereof; said mechanism comprising a driven upstanding shaft extending through the bottom of the hopper to one side of said opening, a sleeve surrounding the shaft and extending above and below the bottom of the hopper, a rotary agitator mounted on the sleeve in the hopper, and a material distributing rotor mounted on the sleeve below the hopper and traveling under said feed opening; there being means releasably coupling the sleeve in driving relation to the shaft, the sleeve being closed at its upper end, such end being supported on the upper end of the shaft when the sleeve is released from driving relation with the shaft.

2,451,129
TELEMETERING APPARATUS OF THE IMPULSE-DURATION CLASS
Gustave M. Thynell, Naugatuck, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut
Application March 31, 1944, Serial No. 528,846
5 Claims. (Cl. 177—351)

1. In a telemetric receiver adapted to respond to cyclically transmitted electrical impulses each of a duration corresponding to a value of a variable, the combination of an element settable to positions corresponding to values of said variable, clutch means, continuously operable motor means, means for engaging said clutch means with said motor means in response to the beginning of an impulse for effecting operation of said clutch means in a given direction, other clutch means, means for engaging said other clutch means and said motor means in response to termination of said impulse for effecting operation of said other clutch means in the opposite direction, contact means controlled by the respective clutch means, and reversible motor means controlled by said contact means for positioning said element.

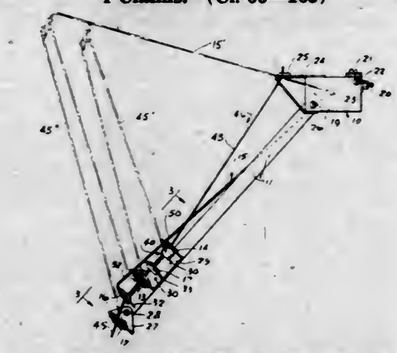
2,451,130
COTTON-PICKING MACHINE
Sidney A. Townsend, Bennettsville, S. C.
Application March 31, 1945, Serial No. 585,936
2 Claims. (Cl. 56—40)



2. In a cotton picking machine, a support, a set of spaced upstanding ribs mounted upon the support to be disposed upon one side of the plants, a gin saw cylinder mounted upon the support upon the outer side of the ribs remote from the plants and including spaced gin saws projecting into the spaces between the ribs and extending beyond the inner side of the ribs next to the plants, all gin saws having saw teeth which face in the direction of rotation of the gin saw, a conveyor casing extending longitudinally of the gin saw cylinder at an elevation above the axis of rotation of the gin saw cylinder and spaced laterally from the gin saw cylinder, the conveyor casing having a longitudinal opening in its side next to the gin saw cylinder, a guide plate leading from the opening and terminating in close relation to the gin saw cylinder at an elevation above the axis of rotation of the gin saw cylinder, a rotary brush disposed between the gin saw cylinder and conveyor casing and arranged above the gin saw cylinder and guide plate and including bristles having overlapping relation with the teeth of the gin saw, driving means to rotate the gin saw cylinder so that its upper portion is turned toward the guide plate and to rotate the brush in an opposite direction to the gin saw cylinder so that the lower portion of the brush is traveling toward the guide plate and in the same direction in which the teeth of the gin saws are facing and traveling, and a conveyor element within the conveyor casing.

2,451,131
METHOD OF MAKING REINFORCED STRUCTURES
Eugene L. Vidal, Washington, D. C., and Laurence J. Marhoefer, Haddon Heights, N. J., assignors to Vidal Corporation, Camden, N. J., a corporation of Delaware
Original application September 6, 1940, Serial No. 355,554. Divided and this application November 11, 1943, Serial No. 509,846
2 Claims. (Cl. 154—110)

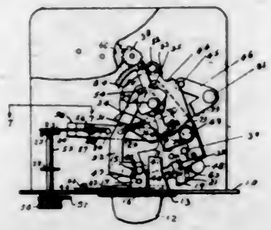
1. The method of molding a hollow structural member which includes the steps of superposing a plurality of adhesively treated laminations on the interior of a hollow mold having the contour of said member, positioning said mold with said laminations thereon between the inside and outside walls of a double-walled flexible container, said inside wall being adapted to engage the laminations covering the interior of the mold and said outside wall being adapted to engage the exterior of the mold applying fluid pressure to the outside of said container to cause the container walls to closely engage the mold and the laminations thereby forming the laminations to the desired shape, and activating the adhesive to cause the laminations to adhere to each other.



2,451,132
INTERNAL-COMBUSTION ENGINE
Jesse G. Vincent, Grosse Pointe Park, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application October 22, 1943, Serial No. 507,279
8 Claims. (Cl. 123—119)

1. In a V type engine, a fuel supercharger fixed rigidly to the engine, spaced cylinder head blocks, an aftercooler fixed rigidly at one end to the supercharger and in open communication therewith, means through which fuel flows from the aftercooler to the cylinder head blocks, and means flexibly suspending the top portion of the aftercooler on the cylinder head blocks.

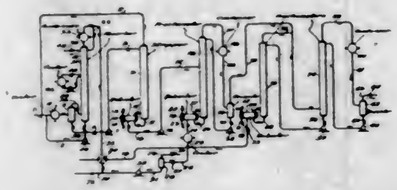
2,451,133
YARN CARRIER STOP MOTION
Edward Vossen, Brooklyn, N. Y., assignor to Stop-Motion Devices Corp., Brooklyn, N. Y., a corporation of New York
Application January 23, 1948, Serial No. 4,040
4 Claims. (Cl. 66—163)



1. The combination with a yarn carrier stop motion having an arm provided with a plurality

of spaced yarn guiding elements and a fly-wire switch operator provided with a yarn guiding element normally between a pair of said yarn guiding elements for pulling a loop of said yarn when said yarn slackens, of an additional yarn guiding element on said fly-wire switch operator and normally disposed between a pair of said first mentioned yarn guiding elements other than said pair for pulling an additional loop of said yarn when said yarn slackens.

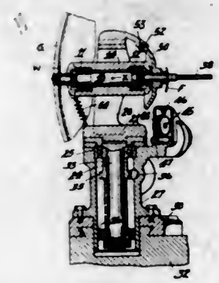
2,451,134
POULTRY FOOD
Gustav A. Walldov, Marlboro, N. J.
No Drawing. Application April 4, 1944, Serial No. 529,491
6 Claims. (Cl. 99—4)



1. A food for poultry comprising gelatine in the form of short noodles mixed with a mash.

2,451,135
TIME SWITCH
Frank A. Ward, Baltimore, Md.
Application April 6, 1945, Serial No. 586,845
2 Claims. (Cl. 200—39)

2. A combined instantaneous and time delay electrical switch comprising in combination, a face plate having a slot therein, a button recriprocating in said slot, a slide positioned under the button and moving therewith, an underslide having an extension piece at right angles mounted on the opposite side of the wall plate and connected with said slide and button, said extension having pins projecting therefrom, a knob having a pointer positioned on said face plate, a shaft attached to said knob and having a pawl attached thereto for timing the mechanism, a plurality of levers having shoulders thereon, one of the pins attached to said underslide extension piece for actuating said levers, an operating plate having a pin attached thereto for contacting said levers, spring means for said levers, a combined hook and catch plate pivotally attached to said face plate, means for tensioning said hook and catch on said face plate, a pin attached to said operating plate for contacting the end of catch plate and releasing said hook, a back plate projecting from said face plate, a shaft projecting through said back plate for supporting the operating plate on one side and a cam on the other, a plurality of bowed arms pivotally mounted on said operating plate, tensioning means for said bowed arms, the lower ends of said bowed arms bent to form a bearing plate for contacting one of the pins attached to said underslide extension piece, said cam mounted on a shaft and rotated in an accurate manner depending on the position of said pawl against the end of the element and setting of said pointer, a ratchet gear, a pawl pivotally attached to said operating plate for contacting said ratchet gear and rigidly connecting the operating plate and gear together at predetermined intervals, means for raising said pawl from the ratchet gear teeth, and means for controlling the travel of said operating plate.



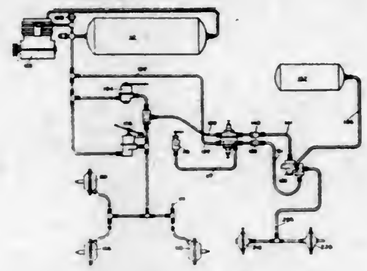
2,451,136
TREATMENT OF NORMALLY GASEOUS MIXTURES
Herman H. Wenzke, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application May 29, 1944, Serial No. 537,934
5 Claims. (Cl. 183—115)

2. A process for separating a desired gaseous hydrocarbon fraction from a hydrocarbon mixture also containing lighter and heavier components which comprises commingling said hydrocarbon mixture with a liquid absorbent under superatmospheric pressure, cooling the resultant mixture of hydrocarbons and liquid absorbent to a temperature sufficiently low that said desired gaseous hydrocarbon fraction and a small amount of lighter gases are retained in said liquid absorbent, separating the resultant rich absorbent from the undissolved gases, comprising a small amount of said desired gaseous hydrocarbon fraction, stripping the lighter gases from the rich absorbent by heating and fractionating the same, commingling the stripped lighter gases with said hydrocarbon mixture and said liquid absorbent prior to said cooling, fractionating the stripped rich absorbent to separate the desired gaseous hydrocarbon fraction therefrom, contacting the resultant lean absorbent with said undissolved gases in a countercurrent absorption zone to absorb the small amount of said desired gaseous hydrocarbon fraction therefrom, and supplying the resultant solution as said liquid absorbent.

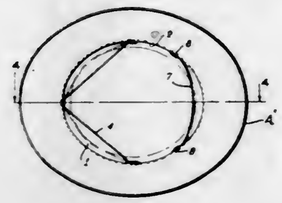
2,451,137
CONTOUR GRINDING MACHINE FOR WORK PIECES EACH HAVING A HOLLOW SPHERICAL SECTION
Charles E. White, Ashburnham, Mass., assignor, by mesne assignments, to Van Norman Company, Springfield, Mass., a corporation of Massachusetts
Application October 9, 1947, Serial No. 778,934
9 Claims. (Cl. 51—101)

1. A contour grinding machine for work pieces each having a hollow spherical section comprising a grinding wheel, a work spindle, means to mount a work piece on said spindle, a bearing member in which said spindle is rotatably mounted, means to rotate said spindle, a frame member in which said bearing member is mounted to swing about a horizontal axis perpendicular to the axis of said spindle, a support in which said frame member is mounted to swing about a vertical axis perpendicular to the axis of said spindle, pattern means effective to swing said spindle horizontally to move the work piece toward the grinding wheel, means to move the work piece away from the grinding wheel, and

additional pattern means to shift said work piece vertically with respect to the grinding point.



2,451,138
TRUCK LOADER
Graham Whitehurst, Glendale, Vernon E. Slater, Los Angeles, George F. Bruno, Montebello, and Joseph M. Hubbard and Gustave P. Krawitz, Los Angeles, Calif.
Application October 7, 1946, Serial No. 701,742
3 Claims. (Cl. 214—85)

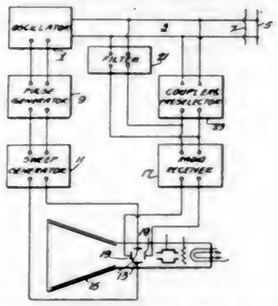


1. In a truck loader, channel members adapted to be attached to a truck bed, a pair of spaced guides attached to said members, and sloping at an angle thereto, a second pair of spaced guides attached to said members and parallel to the first pair, a loading platform, means attached to said platform, and mobile on said guides to permit said platform to be raised or lowered in a horizontal position, said second pair of guides having telescopic ends thereon to permit contact with the ground when in loading position and retractable when said truck is traveling, said first pair of guides pivotally attached to said channel members, and link means carried by said second pair of guides to support said first mentioned guides and to lift said first guides when said platform is raised.

2,451,139
AUTOMATIC CONTROL INSTRUMENT
Norman C. Williams and Rollin W. Fishwood, Portland, Oreg., assignors to Power Brake Equipment Co., Portland, Oreg.
Application June 1, 1946, Serial No. 673,734
15 Claims. (Cl. 188—3)

1. In an automatic air line control, a plural valve instrument for placement between two supply conduits and two connecting conduits, a spring loaded valve assembly in said instrument effective to open only on a predetermined supply pressure that terminates one of said supply conduits, a spring loaded valve terminating the other supply conduit, unopenable by pressure therethrough, and means operable by air pressure above the predetermined set pressure that passes through said first named valve and effective to open said second valve and establish full pressure flow therethrough.

2,451,140
HEADWEAR
Edward Wittcoff, University City, Mo., assignor to Caradine Hat Company, St. Louis, Mo., a corporation of Missouri
Application June 22, 1945, Serial No. 600,955
3 Claims. (Cl. 2—185)



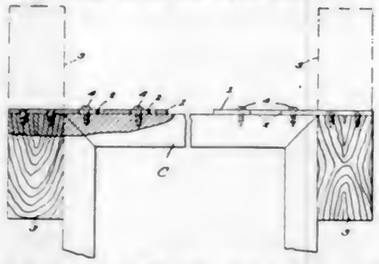
3. A helmet having a crown and brim joined to form a head opening substantially larger than the normal head size of the wearer, an elastic band secured upon the inside face of the crown adjacent the head opening at its ends and at a point intermediate its ends so as to extend across the head opening in the shape of a V for engaging the forward head portion of the wearer, and a non-elastic flexible band secured chord-wise across the rearward arcuate portion of the crown for engagement with the back center portion of the head of the wearer.

2,451,141
OBJECT DETECTING DEVICE
Irving Wolff, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 29, 1938, Serial No. 237,606
2 Claims. (Cl. 343—13)

1. In an object detector, the combination of means for radiating a carrier wave, means for frequency modulating said wave for discrete periods, means for receiving said frequency modulated carrier after reflection, means for passing currents of said carrier wave frequency directly to said receiving means, means associated with said last mentioned means for attenuating currents of frequencies other than said passing

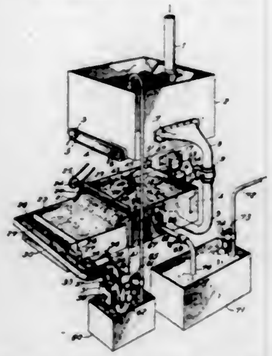
frequency, means for combining currents corresponding to said received modulated carrier and

said directly applied currents, and means for indicating said combined currents.



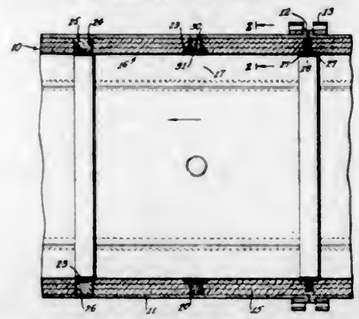
2,451,142
BAG
Benno Zimmern, New York, N. Y.
Application June 30, 1945, Serial No. 602,508
2 Claims. (Cl. 224—8)

2. A handbag comprising a pillow section and a folded blanket section, one of said sections having a pocket therein positioned on an exposed side thereof so as to make said pocket accessible from the outside of the handbag, and supporting means secured to one of said sections to facilitate carrying of the handbag; said blanket section being foldable to substantially conform with a side of the pillow section and releasably connected thereto forming a unitary assembly whereby the unitary assembly may be carried by said supporting means; said blanket section being unfoldable and displaceable to an extended position from said pillow section with the pillow section in position on one end thereof.



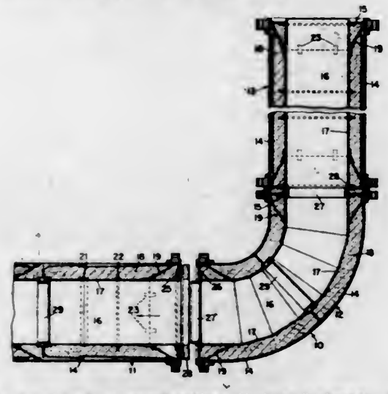
2,451,143
WINDOW BRACKET
Harry E. Ammerman, Silver Spring, Md.
Application October 29, 1945, Serial No. 625,346
1 Claim. (Cl. 248—252)

As an attachment to one upper corner of a window casing, a reversible and detachable bracket comprising a flat strip of metallic material having longitudinally aligned screw-receiving keyhole slots near one end, means for attaching the strip to the casing, comprising fastening elements permanently affixed to the casing, the fastening elements being receivable in the keyhole slots, the end of the strip being extended part way toward the opposite corner of the casing, the other end of the strip having screw-receiving openings, a block screw-attached at one end to the latter end of the strip and extended at a right angle from the strip, one face of the



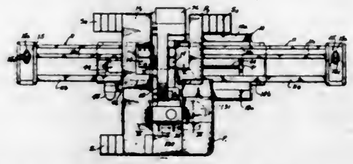
block being flush with the face of the casing to which the strip is attachable, the strip being proportioned for removal from its connection with the casing, for reversed connection thereto.

2,451,144
FROTH LEVEL CONTROLLING DEVICE
William Maynard Aubrey, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut
Application February 17, 1945, Serial No. 578,513
5 Claims. (Cl. 210—53)



1. In combination, a chamber; aerating and agitating means therein; means adapted to continuously feed frothable fluid into said agitating and aerating means, whereby a supernatant froth layer is formed in said chamber; means adapted to continuously remove fluid from the underlying layer; means to remove substantially all the froth standing above a fixed overflow level and a froth level control comprising a movable receptacle, said receptacle being open at the top to permit unrestricted entry of fluid material thereinto and having at least one restricted discharge opening adapted to retain an appreciable weight of fluid material in said receptacle; pivoted lever support means for said receptacle, said support means being adapted to permit motion of the receptacle in a vertical plane along a fixed path only; means to conduct at least a portion of fluent material removed from said froth layer into said receptacle; means to control the volume of fluid in said underlying layer; means to communicate motion of said movable receptacle along said fixed path, resultant from variation in the weight of fluid retained in said receptacle, to said fluid volume controlling means; and counterbalance means to overcome the weight of said receptacle and the weight of at least a portion of the fluid therein, said counterbalance means being adapted to position said receptacle on said fixed path at that level determined by the weight of the fluid retained therein.

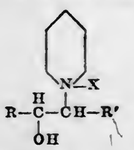
2,451,145
LINED PIPE
Albert L. Baker, Summit, Arthur R. C. Markl, Teaneck, and Anthony Blahut, Trenton, N. J., assignors to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application June 2, 1944, Serial No. 538,432
10 Claims. (Cl. 138—64)



1. A vessel adapted to contain material, an insulating lining positioned against the inner wall of said vessel providing a heat barrier between said inner wall and the interior of said vessel, said lining including a depth of insulating material covering the inner wall of said vessel and a jacket between said insulation and the interior of the vessel, said jacket being made up of separate units and means united to the vessel wall supporting each of said units individually for free longitudinal and radial expansion.

2,451,146
INTERNALLY INSULATION LINED VESSEL
Albert L. Baker, Summit, William H. Hill, Pennington, and Arthur R. C. Markl, Teaneck, N. J., assignors to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware
Application June 5, 1944, Serial No. 538,854
13 Claims. (Cl. 138—64)

12. A vessel, a protective lining between the central space of said vessel and the vessel walls, and impervious means surrounding said lining and united thereto and to the vessel walls, said impervious means preventing flow of the material handled in said vessel through the space between said lining and the vessel walls while permitting radial and longitudinal expansion thereof.



2,451,147
ROTATING TOOL LATHE
Edward D. Beachler, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a corporation of Wisconsin
Application April 21, 1944, Serial No. 532,069
3 Claims. (Cl. 82—9)

1. In a rotary tool lathe, a lathe bed, a carriage slidable on said bed, a nut secured on said carriage, a screw rod threaded through said nut, a worm wheel threaded on said screw rod, means carried by said carriage holding said worm wheel against shifting movement on the screw rod, a worm for rotating said wheel, manual means for rotating said worm to shift said carriage, and mechanical means for rotating said screw rod to shift said carriage.

2,451,148
PROCESS OF SPINNING VISCOSE ARTIFICIAL SILK, FILAMENTS COMPRISING THREADS, STAPLE FIBERS, BANDS, AND THE LIKE
Theeuwis Albertus Hendrikus Blaas, deceased, late of Nimeguen, Netherlands, by Johanna Geertrui Blaas, nee Westendorp, widow, Epse, Gorssel, Netherlands, assignor to Naamlooze Vennootschap Kunstzijdespinnerij Nyma, Nimeguen, Netherlands
No Drawing. Application January 30, 1946, Serial No. 644,440
In the Netherlands June 29, 1943
8 Claims. (Cl. 18—54)

1. In the spinning of viscose, employing spinning nozzles which tend to become clogged, the process which comprises preventing such clogging by adding to at least one of the liquids which come into contact with said nozzles during spinning a small amount of a pyridin compound which is not surface active of the general formula:

wherein R represents an aromatic radical containing no more than 6 carbon atoms, R' represents a substituent selected from a class consisting of hydrogen, aliphatic hydrocarbon groups containing no more than 2 carbon atoms and aryl groups containing no more than 6 carbon atoms, and X represents a substituent selected from a group consisting of OH and a monovalent acid radical.

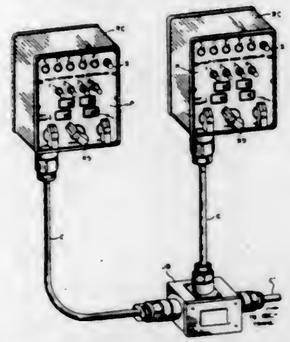
2,451,149

MANUFACTURE OF MATERIALS RESISTANT TO OR ACTIVE AGAINST MICROORGANISMS

Erich Boehm, Cardiff, Wales, assignor of one-half to Nipa Laboratories, Limited, Cardiff, Wales, a company of Great Britain and Northern Ireland

No Drawing. Application November 27, 1943, Serial No. 512,062. In Great Britain November 16, 1942

5 Claims. (Cl. 167—30)



1. The manufacture of materials resistant to micro-biological decomposition which comprises the mono p-chlorophenylether of ethyleneglycol in a material liable to micro-biological decomposition.

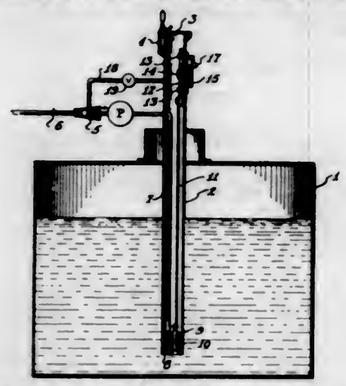
2,451,150

RADIO REMOTE-CONTROL SYSTEM

Joseph M. Brian, Westmount, Quebec, Canada, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware

Application October 28, 1944, Serial No. 560,820
In Canada June 2, 1944
4 Claims. (Cl. 175—320)

1. In combination, a plurality of remote control devices for controlling the operation of radio apparatus from a plurality of remote points, each control device comprising a plurality of push-button operated switches, means associated with the several push-buttons at each control device whereby operation of a selected one of the push-buttons at any one of the control devices effects the release of a previously operated push-button at said one control device, and circuit means interconnecting the plurality of remote control devices whereby operation of said selected push-button at said one control device effects the release of a previously operated push-button that may have been operated at one of the other control devices without effecting anew the operation of any of the remaining push-buttons at any of the other control devices.



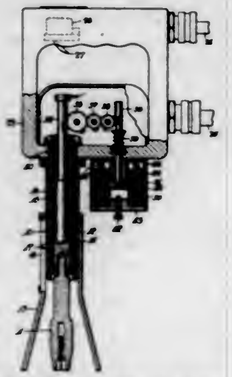
2,451,151

PUMPING VOLATILE LIQUIDS

Frederick Cameron Byram, Springfield, Ohio

Application May 13, 1946, Serial No. 669,263
10 Claims. (Cl. 62—1)

10. In combination with an underground, uninsulated storage tank for liquefied gaseous material, a pumping device for suction lifting of said liquefied gaseous material therefrom, which comprises a pump having an intake pipe having a part to extend into said tank, and means arranged to communicate with the interior of said tank and with a zone of lower pressure than the tank



into which the liquefied gas from the tank may flow, said means being in heat interchange relation with the said portion of the intake pipe.

2,451,152

STUD WELDING GUN

Albert M. Candy, La Grange, Ill., assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill., a corporation of Delaware

Application October 4, 1945, Serial No. 620,295
7 Claims. (Cl. 219—4)

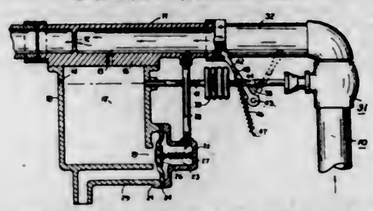
1. A stud welding gun having a plunger adapted to carry a stud, an electromagnet having an armature, and gearing between said armature and said plunger and having a portion thereof out of mesh when said magnet is not energized.

2,451,153

REACTION OF AN ETHERIFIED MELAMINE-FORMALDEHYDE CONDENSATION PRODUCT WITH AN ETHERIFIED PHENOL-FORMALDEHYDE CONDENSATION PRODUCT

William Charlton and Jack Blatchley Harrison, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application January 2, 1945, Serial No. 571,123. In Great Britain February 2, 1944
8 Claims. (Cl. 260—45.1)



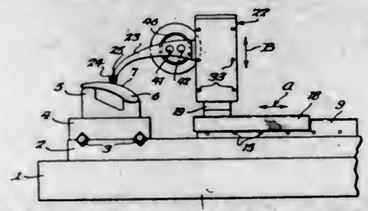
1. The process of manufacturing new resinous condensation products which comprises heating together in the presence of an acidic condensing agent (1) a soluble melamine-formaldehyde condensation product etherified with a monohydric alcohol and (2) a soluble phenol-formaldehyde condensation product etherified with a monohydric alcohol, the phenol and formaldehyde having been condensed in an alkaline condensing medium, the phenol being monohydric and having a hydrocarbon radical of 1–6 carbon atoms in one only of the o, o and p positions to the phenolic group, the remaining two of the said o, o and p groups being unsubstituted.

2,451,154

LIQUID MEASURING DEVICE

Archibald H. Davis, Jr., University Heights, Ohio, assignor to The Apex Electrical Manufacturing Co., Cleveland, Ohio, a corporation of Ohio

Application November 21, 1945, Serial No. 630,023
8 Claims. (Cl. 137—139)



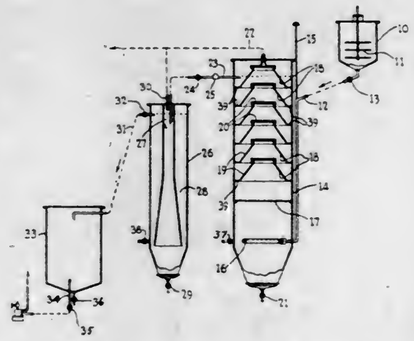
1. The combination with a conduit adapted to transmit liquid under pressure, of a measuring chamber, the conduit having a restricted orifice therein, passage means between the conduit and chamber at the upstream side of the orifice having a cross-sectional area substantially less than the cross-sectional area of the orifice, a valve controlling liquid flow through the conduit disposed at the upstream side of the passage means, the valve being arranged so that liquid pressure in the conduit tends to open the valve, liquid pressure responsive means communicating with the chamber and adapted to move the valve towards closing position when the chamber is filled with liquid, and supplemental means automatically operative upon a predetermined movement of the pressure responsive means in a given direction to close the valve and maintain the valve closed despite movement of the pressure responsive means in a reverse direction.

2,451,155

OPTICAL PROJECTION CONTOUR COMPARISON DEVICE

Willis De Boer, Williamsville, Gilbert A. Betts, Eggertsville, and Edward C. Polidor, Rochester, N. Y., assignors, by mesne assignments, to Precision Methods Co., Inc., Buffalo, N. Y., a corporation of New York

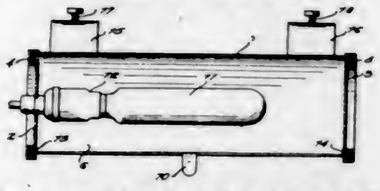
Application March 23, 1946, Serial No. 656,596
18 Claims. (Cl. 88—24)



1. In an optical comparing device of the type in which a magnified image of some portion of an object created by a beam of light is projected upon a screen for comparison of the image with a chart carried by the screen, that improvement by which an optical comparison with a chart may be made of a surface of such object for which no direct silhouette may be formed, which comprises a support for said object with said surface exposed, a carriage, means mounting said carriage and support for relative movement generally in the direction of progression of the surface to be compared considered in a transverse plane through said surface, an element mounted on said carriage for movement thereon in a direction crosswise of the carriage travel and parallel to said plane, a roller carried by said element in a position to roll on said surface as said carriage moves and to control the movements of said element as it follows said surface, said element having a circular aperture of the same diameter as said roller, whereby when the apertured portion of said element is disposed across the light beam of the comparing device, and is also movable across the beam during said relative movement, with the roller engaging said surface, relative movement of said support and carriage will cause movements of said apertured portion across said beam to cause the projection of a moving circular area of light across the chart of said screen, the path of said circular area on said beam representing the magnified path of said roller as it rolls over said surface.

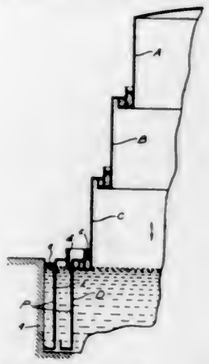
2,451,156

PROCESS AND APPARATUS FOR PRODUCING ALCOHOL BY FERMENTATION



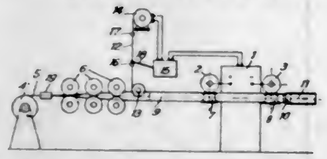
Annibal Ramos de Mattos, Recife, Brazil

Application June 19, 1945, Serial No. 600,243
In Brazil June 19, 1944
12 Claims. (Cl. 195—141)



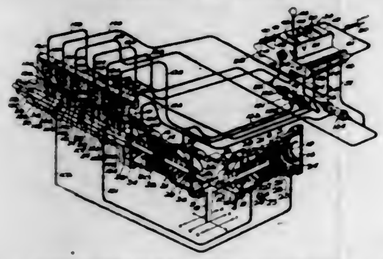
1. A process for producing alcohol from a nutrient medium by fermentation with yeast comprising flowing the nutrient medium into a main zone of high yeast concentration and actively fermenting the same with yeast to alcohol in said main zone, continuing the fermentation by flowing the fermenting medium successively upwardly through a series of superimposed zones of decreasing yeast concentration until a zone of high alcohol concentration and low yeast concentration is reached, precipitating yeast from said medium progressively as it ascends through said zones, and returning yeast so precipitated to said main zone, and removing alcohol-containing nutrient medium from said zone of high alcohol concentration.

2,451,157
BED LAMP
Ralph E. Dike, McCook, Nebr.
Application August 23, 1946, Serial No. 692,585
1 Claim. (Cl. 240—52)



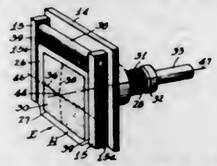
A lamp comprising a tubular body, disk shaped cap members secured at the opposite ends thereof, inwardly directed peripheral guide channels formed in the cap members, a longitudinal opening constructed and arranged in the body and extending the longitudinal length of the body, an arcuate elongated closure member slidably received in the guide channels, a forwardly extending tab on said closure member, arcuate spring tensioning arms secured to the inner surface of the outer wall of the guide channels and engaging the guided surface of the closure member, a pair of inverted U-shaped brackets integrally formed on the side wall of the tubular body, locking set screws positioned therein for detachably clamping the lamp on a support, a centrally disposed opening in one of the end caps, and a lamp socket supported therein for positioning within the tubular body.

2,451,158
PAINTING OF GAS HOLDERS
Lewis B. Donovan, White Plains, N. Y., assignor to Consolidated Edison Company of New York, Inc., New York, N. Y., a corporation of New York
Application March 30, 1945, Serial No. 585,609
4 Claims. (Cl. 117—94)



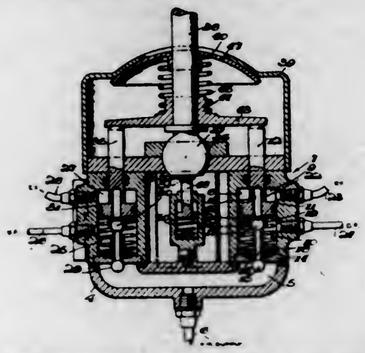
1. Method for painting the exterior wall surfaces of a gas holder of a type having a plurality of telescoping sections, each provided with a water seal adjacent its lower edge and adapted to be raised and lowered by gas compressing and exhausting equipment cooperating with the holder, which method comprises the following steps starting with the sections in elevated position and with their external surfaces substantially dry: first delivering a layer of floating paint onto the water seal for a lower section, exhausting sufficient gas to lower the sections whereby paint is drawn from such water seal onto the outside dry wall surfaces of said lower section, delivering a layer of such paint onto the water seal for a higher section, exhausting sufficient gas whereby such higher section is lowered and paint is drawn from the last named water seal onto the outside dry wall surfaces of such higher section, thereafter introducing sufficient compressed gas to elevate such higher section whereby paint is again drawn onto the outside surface thereof, then removing the excess paint from the last named water seal, thereafter further introducing sufficient compressed gas to elevate said lower section whereby another layer of paint from the first named water seal is drawn onto the outside surface of such lower section, and finally removing excess paint from the first named water seal.

2,451,159
APPARATUS FOR THE CONTINUAL PRODUCTION OF ELECTRICALLY WELDED TUBES
Albert Dreyer, Lucerne, Switzerland, assignor to Metallschlauchfabrik A. G., Lucerne, Switzerland
Application March 6, 1945, Serial No. 581,230
In Switzerland February 11, 1944
4 Claims. (Cl. 219—6)



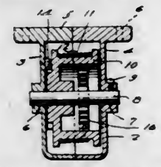
2. In apparatus for the continuous production of resistance welded tubes from a thin gauge metal band, means for bending the band to tubular form with a longitudinal split in one side thereof, two longitudinally spaced roller electrodes engaging the split side of the tube, an elongated cylindrical contact member within the tube and movable with it, said member having a length greater than the spacing of the electrodes and serving as a current bridging means between said electrodes, means controlled by forward movement of said contact member for periodically retracting it, and other means controlled by movement of the contact member for controlling the supply of current to the electrodes.

2,451,160
FLUID PRESSURE CONTROL MECHANISM
Wilfred A. Eaton, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application May 31, 1945, Serial No. 596,963
8 Claims. (Cl. 74—335)



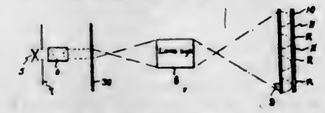
1. A power-operated control mechanism for a transmission gearing of the type having a combined selector and shifter member having a neutral position and movable from one selected plane to another selected plane and movable in either direction in either of said planes to establish a selected gear ratio comprising power means for moving said member from one plane to the other, a separate power means for effecting shifting movement of the member from neutral position in either direction in each of said planes to a gear ratio establishing position, and means for controlling the supply of power to both said power means including separate pairs of power control devices for controlling the supply of power to said power means to effect movement of said member to each of said gear ratio establishing positions, and means controlled by the operation of the first named power means for controlling the operation of one device of each pair.

2,451,161
PRESSURE DEVICE FOR CAMERA MECHANISM AND FILLER INSERTS THEREFOR
Jerry Fairbanks, Hollywood, Calif.
Application December 19, 1945, Serial No. 635,882
17 Claims. (Cl. 88—17)



11. In a pressure device for a camera mechanism, a master plate mounted in a camera gate and having a pair of film-guiding rails thereon, the rails having film-engaging faces, a pressure plate disposed between the rails and formed with a film-pressing surface crowned both vertically and horizontally, means for moving the pressure plate away from the master plate to bear against a pair of superimposed films guided in the gate during periods of exposure, means for moving the pressure plate into retracted positions relative to the films during periods of film movement, and a crowned roller extending between the rails, the crown of the roller projecting beyond the film-engaging faces of the rails.

2,451,162
VALVE MECHANISM
Charles E. Gates, Elyria, Ohio, assignor to Bendix-Westinghouse Automotive Air Brake Company, Elyria, Ohio, a corporation of Delaware
Application December 8, 1943, Serial No. 513,424
12 Claims. (Cl. 277—20)



1. The combination in a fluid pressure control valve having a casing and a pair of control valve mechanisms mounted in said casing each provided with inlet and exhaust valves and a pressure responsive element movable for actuating said valves, of means for selectively controlling the operation of said valve mechanisms including a lever mounted on the casing for rocking movement with respect thereto, a member carried by the lever for actuating said elements and mounted for movement with respect to the lever, and means including a resilient member interposed between said first named member and casing for opposing movement of said member with respect to said lever, whereby the degree of pressure delivered by each valve mechanism is proportional to the degree of movement of said lever.

2,451,163
IMPLEMENT ANCHOR
Everett Goin, Weatherford, Okla.
Application November 23, 1945, Serial No. 630,250
1 Claim. (Cl. 242—109)

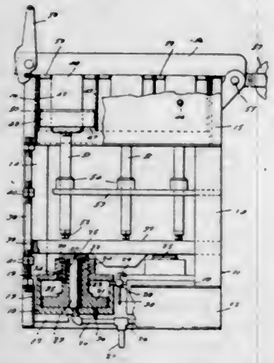
In a self-winding spool, a casing, comprising a pair of substantially identical cup-shaped members each having a circular end wall and an integral cylindrical side wall, means rigidly mounting a shaft in said end wall of one member axially thereof, a coil spring concentrically disposed around said shaft and having an inner end fixed to said shaft, a substantially cup-shaped spool having a circular end wall and a cylindrical side wall, a journal in said spool end wall axially thereof, said spool being revolvably mounted on said axle in opposed facing relation to said member with the side wall of said member overlapping the side wall of said spool in spaced concentric relation thereto, the other end of said spring being fixed to a side wall of said spool, said other cup-shaped member being formed to provide an axial bore through said end wall and adapted for a sliding fit over said axle, a ratchet formed on said spool, a pawl carried by said second member and engageable with said ratchet, and each of said cup-shaped members having a substantially identical base flange to permit separate mounting and dismounting of the same on a support.

2,451,164
PHOTOGRAPHY IN ADDITIVE COLOR BY THE CONTROLLED UTILIZATION OF CHROMATIC ABERRATIONS IN LENSES
Samuel B. Grimson, New York, N. Y., assignor to Color Research Corporation, New York, N. Y., a corporation of Delaware
Original application March 3, 1944, Serial No. 524,860. Divided and this application January 24, 1946, Serial No. 643,063
5 Claims. (Cl. 88—24)

1. A method of producing an original scene in colors from a plain base film having a black and white photographic image of that scene in the

form of a repeating series of lined color values, which comprises uniformly illuminating such an image with white light, projecting that image by means of a lens through a filled diffraction grating, adjusting the relative axial positions of said film, lens and diffraction grating until said image is focused through said diffraction grating, and relatively displacing said lens and grating axially with respect to each other and said film while maintaining said focus until the periodicity of the film image lines is the same as that of the grating, whereupon the original scene appears in original color.

2,451,165
SEALING OF CLOSURES FOR GUSSETED PAPER BAGS
Carl Henry Hartman, New Rochelle, N. Y., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York
Application April 27, 1946, Serial No. 665,439
1 Claim. (Cl. 229—62)



In a paper bag formed with a flattened multi-wall gusseted tubular body portion, end closure means comprising a longitudinally folded paper strip of generally U-shaped cross section extending from side-to-side of the bag and positioned astride the end edges thereof, a line of stitches passing through said strip and said end edges as embraced thereby, and extending the length of said strip and securing same in place, and a coating of waxy material covering said strip and stitching, the fold line of said strip at points adjacent the gusset areas being perforated at spaced points, some of said waxy material extending through said perforations into contact with and substantially completely covering said end edge portions of the gusset areas and tightly sealing same with respect to each other and said closure means, the perforated strip protecting said edge portions and the waxy material thereon against disruption of the seal.

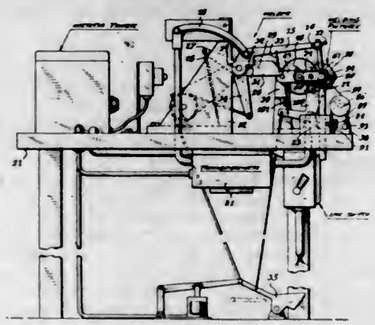
2,451,166
TIRE PRESSURE ALARM SWITCH
Howard L. Hull, Anderson, Ind.
Application January 30, 1946, Serial No. 644,291
7 Claims. (Cl. 200—58)

1. In a pressure operated switch adapted for placement between a wheel rim and inner tube of a pneumatic tire thereon for indicating excessive and deficient pressure conditions of tube inflation, a switch device wholly concealed within the rim comprising a pair of contact leaves secured together in electrically insulated relation at one end, a return bend portion at the other end of each of said leaves, the returned portion of at least one leaf being spaced from the body portion thereof, and a second outwardly directed leaf bent from the returned portion of one leaf and spaced from its supporting returned portion and interleaved between the first mentioned and spaced returned portion and its supporting leaf, the first mentioned returned portion being interleaved between the second mentioned returned portion and the outwardly directed leaf.

2,451,167
BLOCK MOLDING MACHINE
Andrew T. Johnson, Las Vegas, Nev.
Application June 3, 1947, Serial No. 752,119
5 Claims. (Cl. 25—45)

1. A pressure molding machine for forming building blocks comprising a rectangular box-like frame, a pair of cylinders secured vertically in the lower portion of the frame, a main piston in each cylinder, an auxiliary piston telescoped in said main piston and vertically slidable therein, the main piston having a stem portion slidably fitting the top wall of the cylinder, an enlarged head on the top end of each auxiliary piston, a bar member overlying the piston heads, means guiding said bar member for vertical movement, a mold box secured in the upper portion of the frame, an upwardly movable plunger slidably fitting said mold box, and a depending vertical push rod carried by said plunger and engaging the bar member at its bottom end.

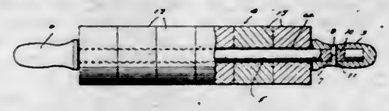
2,451,168
WELL PUMPING SYSTEM
Herman E. Lauman, Garden City, N. Y.
Application August 3, 1943, Serial No. 497,227
3 Claims. (Cl. 103—219)



1. In a pumping system, the combination of a well casing, a pump column extending into the well casing, means for pumping fluid upwardly through said pump column, and means for sealing the space between the casing and pump column, said sealing means including a resilient sleeve surrounding the pump column in position for bearing relation against the casing, rings surrounding the pump column and rigidly fixed thereto, means telescoped with opposite ends of the sleeve and securing said sleeve in sealed relation with the rings, said sleeve being spaced outwardly from the pump column forming a hydraulic chamber within the sleeve, said pump column having an opening through a side thereof to the chamber for admitting fluid under the

pressure of the pumping means into said chamber and in pressure relation against the sleeve

to force the sleeve in sealing relation against the casing.

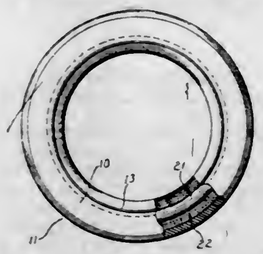


2,451,169
WIRE WINDING AND WELDING DEVICE
Frederick T. May, Verona, and Richard A. Rehberg, Livingston, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 23, 1943, Serial No. 515,342
15 Claims. (Cl. 219—4)

1. In a winding device, a pivoted sleeve, a driving pinion carried thereby, a pivoted driven gear shaft, a driven gear carried by said shaft and meshing with said pinion, a windable article holder turnably carried by said sleeve and having limited longitudinal movement with respect thereto, a feed screw carried by said driven gear shaft, means carried by said screw for moving said holder longitudinally during winding, means mounted at each end of said holder for clamping an end of a wire at the beginning of the wire-winding operation, and means on said sleeve for turning said holder to wind said wire on any article carried thereby.

2,451,170
ROLLING PIN
William McDowell, Glendale, Calif.
Application July 19, 1946, Serial No. 684,738
1 Claim. (Cl. 107—50)

A rolling pin, comprising a shaft, a plurality of roller sections, each of said sections being formed with an axial bore of slightly larger diameter than said shaft, and means mounting said sections on said shaft for free limited lateral



movement and free rotational movement relative to each other and to said shaft.

2,451,171
OLEO STRUT FOR AIRPLANE LANDING GEARS
Milton R. Mullen, Philadelphia, Pa., assignor of one-fourth to Wm. Steell Jackson and Joseph Gray Jackson
Application December 14, 1942, Serial No. 468,942
3 Claims. (Cl. 267—64)

1. In an oleo strut, a pair of telescopic members arranged one above the other, the lower member having an apertured upper end and a compartment beneath the apertures in the upper end, an apertured bulkhead in the upper member, liquid in the lower member adapted to be forced through the apertured bulkhead by closing telescoping movement of the members and trapping air above the bulkhead, one-way valve mechanism providing free passage of liquid into said compartment and less free passage from it and an hydraulic accumulator air cell located in said compartment.

2,451,172
CUSHION TIRE
Hans C. Nies, Passaic, N. J.
Application June 14, 1946, Serial No. 676,793
3 Claims. (Cl. 152—310)

1. A cushion tire for vehicles comprising an annular rubber casing of tubular construction, an

annular metallic core of tubular construction uniformly spaced from the inner surface of the casing, a coating of rubber surrounding said core, a plurality of hard rubber balls filling the space between said core and the wall of the casing, said balls being vulcanized together and to the core and to said wall to form a cohesive unit.

2,451,173

RUBBEROID TALL OIL POLYMERS AND PROCESS FOR MAKING THE SAME

Richard Richter, Irvington, N. J., and John J. Miskel, Brooklyn, N. Y., assignors to Nopco Chemical Company, a corporation of New Jersey

No Drawing. Application December 24, 1943, Serial No. 515,600
14 Claims. (Cl. 260—97.5)

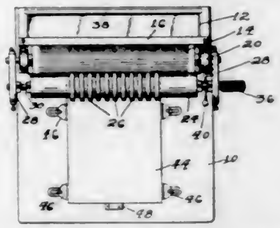
1. A rubber-like polymer produced by polymerizing a hydroxy-acetylated tall oil by condensation by means of heat in the presence of an esterification catalyst serving as a catalyst for the condensation polymerization reaction.

2,451,174

VULCANIZATION OF VINYL RESIN

Louis F. Reuter, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application October 14, 1943, Serial No. 506,271
3 Claims. (Cl. 260—88)



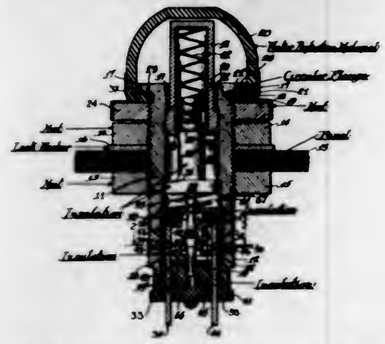
1. The method of vulcanizing a plasticized polymer composition having as a base a polymer prepared by the polymerization of a monomeric material consisting predominantly of a halogenated ethylene containing from one to two halogen atoms on one only of the carbon atoms, which comprises incorporating in said plasticized polymer composition from 2.0 to 10%, by weight of the polymer, of polymerized 2,2,4-trimethyl dihydroquinoline, and heating said composition at a temperature from 300° to 350° F. for 10 to 100 minutes.

2,451,175

WRAPPING, BANDING, AND TIPPING MACHINE

Fred A. Risberg, Chicago, Ill.

Application September 1, 1945, Serial No. 614,025
11 Claims. (Cl. 91—50)



1. A wrapping, banding and tipping machine comprising a base, a paste-containing trough at the rear of the base, a paste-distributing roller rotatively mounted in the trough, another paste-distributing roller mounted above the base in contact with the first roller, movably mounted bearings for supporting the second roller, means for lifting the second roller from the base, and means on the base for supporting a plurality of sheets of paper with one edge beneath the second roller.

2,451,176

MOISTURE-PROOFED PLUNGER SNAP SWITCH

Joseph H. Schellman, Ridley Park, Pa., assignor to Robert Hetherington & Son, Inc., Wilmington, Del., a corporation of Delaware

Application March 27, 1945, Serial No. 585,060
4 Claims. (Cl. 200—168)

1. In a switch, an automatically retractable switch having a threaded exterior and an outwardly flaring flange upon the front and a spring-retracted operating member moving forward and back at the front, a waterproof, flexible and elastic cup surrounding the flange and operating member and engaging the rear of the flange and a nut mounted upon the casing and pressing the edge of the cup against the rear of the flange.

2,451,177

TREATMENT OF ACRYLIC ESTER POLYMERS

Stephen T. Semegen, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application October 25, 1945, Serial No. 624,584
9 Claims. (Cl. 260—41)

1. The process of curing a plastic polymer of a monomeric material consisting of a saturated aliphatic monohydric alcohol ester of acrylic acid, which comprises heating said polymer with from 25 to 500% by weight of an oxide of lead.

2,451,178

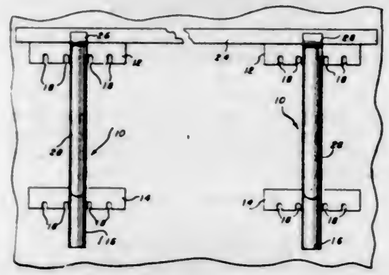
TREATMENT OF ACRYLIC ESTER POLYMERS

Stephen T. Semegen, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application October 25, 1945, Serial No. 624,585
5 Claims. (Cl. 260—83)

1. The process of curing a solid plastic polymer of a monomeric material consisting solely of an alkyl ester of acrylic acid, which comprises heating the said solid polymer at a temperature of 250 to 325° F. with from 2 to 25% by weight based on said polymer of a solid alkali metal hydroxide.

2,451,179



HANDY SCAFFOLD BRACKET

Henry J. Steffes, Great Falls, Mont.

Application February 20, 1946, Serial No. 648,950
2 Claims. (Cl. 248—235)

1. A device of the character described, comprising parallel relatively spaced strap hangers,

a vertical tubular member secured to the center of said hangers, and angle iron secured to the top of said member and extending at right angles therefrom means on the end of said iron for retaining a plank thereon, a tubular member se-

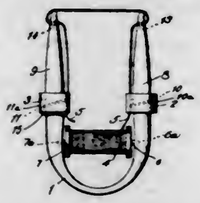
cured to the vertical member and to the undersurface of said angle iron in diagonal relation thereto, and elongated open ended vertical parallel spaced slots in the lower longitudinal edges of said hangers for receiving means for securing said hangers to a wall.

2,451,180

CATALYSTS FOR THE POLYMERIZATION OF BUTADIENE-1,3 HYDROCARBONS

William D. Stewart, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application February 13, 1943, Serial No. 475,795
14 Claims. (Cl. 260—84.5)



1. The method which comprises preparing an aqueous emulsion containing water and a lesser amount of polymerizable material comprising a butadiene-1,3 hydrocarbon, adding to the water of said emulsion from about 0.00001 to 0.05% by weight based on the total polymerizable material present of a simple ionizable salt of a metal occurring in group VIII of the periodic table, the said salt being one which is capable of dissolving in water at least to the extent of 0.1 g. in 100 cc. of water at 20° C., and polymerizing the butadiene-1,3 hydrocarbon in the aqueous emulsion in the presence of the added salt, whereby the rate of polymerization is substantially increased.

2,451,181

DENTAL FLOSS HOLDER

Morris Swartzman, Brooklyn, N. Y.

Application September 11, 1945, Serial No. 615,661
3 Claims. (Cl. 132—92)

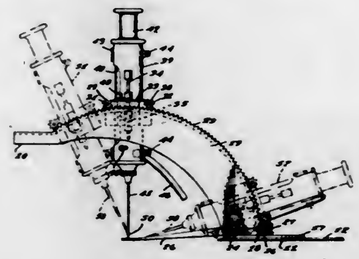
1. In a dental floss holder of the kind including a yoke integrally carrying a pair of opposing arms across the upper limits of which a length of dental floss is to be drawn taut, the combination of means including mutually facing formations on the holder near the lower ends of the arms for detachably mounting on the holder a spool of dental floss by engagement of opposite portions of such spool with said formations, and means for holding a length of floss in taut condition spanningly of the arms near their upper ends while said length is unsevered from a length of floss running along the exterior of said arms and over the major length of one of said arms and exteriorly of the latter, the last-named length of floss coming from said spool, said holding means comprising a thread on each arm, a ring on each arm having a thread engageable with the thread on its arm, each ring being axially movable along its arm after disengagement of its thread thereby to permit insertion through the ring of a length of floss, whereby on again engaging the threads of an arm and its ring and thereupon turning said ring on its arm the floss will be pinched by and anchored between said arm and its ring.

2,451,182

COMPOSITE ARTICLE

George H. Taft, Hudson, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

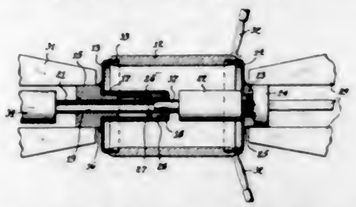
No Drawing. Continuation of application Serial No. 400,097, June 27, 1941. This application September 8, 1943, Serial No. 501,561
9 Claims. (Cl. 117—139)



7. A method for forming a composite article which comprises introducing into a sheet of vulcanized rubber at room temperature a substantial amount of butyl phthalyl butyl glycollate insufficient to saturate the rubber, chlorinating the surface of the rubber sheet, applying to the surface a solution in methyl ethyl ketone of gamma polyvinyl chloride plasticized with butyl phthalyl butyl glycollate, and evaporating the solvent.

2,451,183

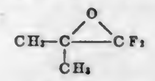
BLOOD EXTRACTING APPARATUS



Leonardo Tantimonaco, West Haven, Conn.

Application July 22, 1947, Serial No. 762,566
5 Claims. (Cl. 128—133)

1. A blood extracting apparatus, comprising an arm splint, a support plate adjustably secured to said arm splint, a pair of parallel arcuate bars carried by said support plate, a block member, means movably securing said block member to said arcuate bars for movement along the arcuate surfaces thereof, a vein piercing syringe movably mounted on said block member and directed radially inwardly with respect to the axis of said arcuate bars, the syringe having its needle tip slightly angled with respect to the main portion of the needle, and means for guiding the syringe in a radial path with respect to said axis.

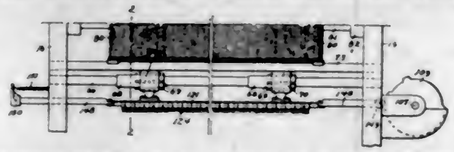


2,451,184
PROTECTIVE DEVICE AND THE MANUFACTURE THEREOF
Ward W. Watrous, Jr., Chatham, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 16, 1942, Serial No. 462,258
9 Claims. (Cl. 250—27.5)

1. The method of positioning electrodes in a discharge device comprising closely fitting a spacing tube of limited longitudinal movement within one of said electrodes, closely fitting the other electrode within said tube, while said spacing tube is positioned with respect to said one electrode nearest said other electrode, and withdrawing said tube from said other electrode to the opposite extreme position of limited movement, leaving said electrodes spaced apart the desired distance.

2,451,185
FLUORINATED PRODUCTS AND PROCESS
Atherton M. Whaley, Columbia, S. C.
No Drawing. Application March 25, 1946, Serial No. 657,071
5 Claims. (Cl. 260—348)

2. The product 1,1 - difluoro - 1,2 - epoxy - 2 - methylpropane, having the formula:



2,451,186
GLUE COMPOSITION CONTAINING VETCH SEED MEAL
Gustave Widmer, Basel, and Wilhelm Hertner, Pratteln, Switzerland, assignors to Ciba Limited, Basel, Switzerland, a Swiss firm
No Drawing. Application April 24, 1945, Serial No. 590,125. In Switzerland May 16, 1944
3 Claims. (Cl. 260—6)

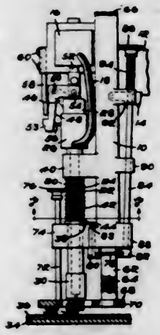
1. A glue composition containing a thermosetting synthetic resin of the group consisting of urea-formaldehyde resin and melamine-formaldehyde resin and also containing as an extender a meal from vetch seeds substantially freed from foreign seed material, which meal has such a high degree of fineness that at least 65 per cent of it passes through a sieve having a mesh of at the most 0.17 millimetre (clear opening).

2,451,187
THREAD GUIDE BAR MOUNTING FOR KNITTING MACHINES
George Ostrom Young, Robesonia, Pa., assignor to Vanity Fair Mills, Inc., Reading, Pa., a corporation of Pennsylvania
Original application October 15, 1945, Serial No. 622,321. Divided and this application September 10, 1946, Serial No. 695,920
2 Claims. (Cl. 66—86)

1. In a knitting machine the improvement which includes: a stationary shaft; at least two arms swivelly mounted on said shaft; a thread guide bar carried by said arms; thread guides on said thread guide bar; means holding said arms

against swivelling; and means by virtue of which said thread guides may be racked, said first mentioned means including splines on said stationary shaft and spline grooves in said arms.

2,451,188
PYROPHORIC LIGHTER
Hermann Konrad, Moutier, Switzerland
Application November 28, 1945, Serial No. 631,300
In Switzerland November 27, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires November 27, 1964
9 Claims. (Cl. 67—7.1)

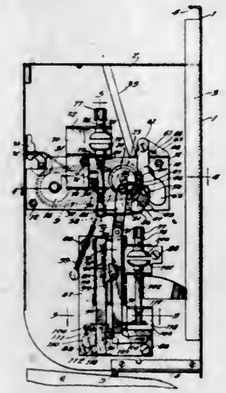


2. In a pyrophoric lighter, the combination of an inner casing and an outer casing telescopically arranged, a sparking mechanism comprising a milling wheel assembly and an ignition stone, said wheel assembly being carried by the outer casing and disposed within said casing, said inner casing having a transverse web and a closed outer end providing a fuel reservoir therebetween, means attached to the web and engageable with the wheel assembly for rotatably actuating the latter upon compression of the casings, a wick supported by said web, said inner casing having a longitudinal slot, and a transverse pin carried by the wheel assembly and engaged in said slot to limit relative movement of the casings.

2,451,189
ELECTRIC FREQUENCY TRANSFORMATION SYSTEM
Ernst F. W. Alexanderson and Albert H. Mittag, Schenectady, N. Y., and Marion W. Sims, Fort Wayne, Ind., assignors to General Electric Company, a corporation of New York
Application October 18, 1947, Serial No. 780,618
17 Claims. (Cl. 172—281)

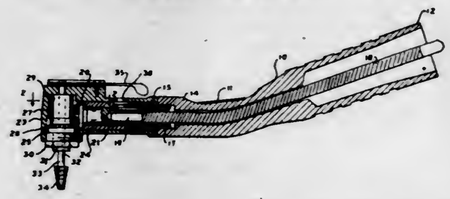
1. A frequency transformation system comprising, an alternating voltage input circuit and an output circuit for operation at a frequency which is a multiple of the frequency of the input circuit, resonant circuit means interconnecting said input and output circuits and tuned substantially to the multiple frequency of the output circuit, and electric impulsing means interposed between said input circuit and said resonant circuit means for periodically impressing electric impulses upon said resonant circuit in predetermined positive and negative half cycles of the voltage of the output circuit.

2,451,190
STUD WELDING GUN
Frank W. Anderson, North Weymouth, Mass.
Application April 22, 1947, Serial No. 743,028
5 Claims. (Cl. 219—4)



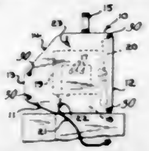
1. A welding device of the character described comprising a frame, a stud holder movable longitudinally of the frame, means yieldingly urging the stud holder toward the work so that a stud received in said holder is pressed against the work when the bottom of the frame rests thereon, an electro-magnet mounted on said frame and having a movable armature, a dog pivotally connected to said holder and said armature for retracting the holder and stud when the magnet is energized, said dog having a latch, a stop member engaged by said latch when the bottom of the frame rests on the work and the magnet is deenergized, said latch being moved out of engagement with said stop member by movement of said armature upon energization of the magnet, whereby the holder is retracted and the stud moved a predetermined distance from the work.

2,451,191
STOP MECHANISM AND MEANS FOR MOUNTING
Rudolph G. Birr, Lombard, Ill., assignor, by mesne assignments, to American Linen Supply Co., Carson City, Nev., a corporation of Nevada
Application June 20, 1945, Serial No. 600,620
17 Claims. (Cl. 271—2.3)



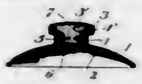
1. A stop mechanism and a timer therefor, means movable by a step-by-step motion by said stop mechanism to set the timer, including a pawl which holds a timer-setting part against retrograde motion, and a second timer adapted to be set by said stop mechanism and having a part which trips said pawl as soon as timing action of said second timer is completed.

15. A device of the class described comprising, a stop mechanism, a settable first timer adapted when set to prevent opening of the stop mechanism until the end of its timing period, first and second movable elements, the second adapted to set the first timer, means by which the first element advances the second element toward timer-setting position for each movement of the stop from open position to closed position, means by which the stop operates the first element to obtain a step-by-step advance of the second element toward timer-setting position, latch means



adapted to positively hold the second element against retrograde motion after advance by the first element, a second timer adapted to release said latch means at the end of its timing period, and means on the first element for setting the timer during operation of the stop mechanism.

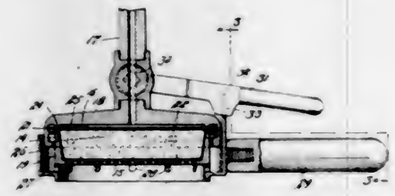
2,451,192
DENTAL TOOL ATTACHMENT
James H. Blair, Prince Bay, Staten Island, N. Y., assignor to Chayes Dental Instrument Corporation, New York, N. Y.
Application November 5, 1945, Serial No. 626,801
1 Claim. (Cl. 32—27)



An attachment of the character described including a dental tool, a tapered tubular casing having an end housing in which a pinion gear drive is disposed at 90° from the main drive shaft in the tapered tubular casing, said main shaft being made up of a solid portion which is affixed to a pinion gear and a flexible shaft extending from the solid portion through said casing into position to be engaged by a rotatable driving means, said first pinion gear having a butt end to bear against a flat side of the bushing holding said second pinion gear said tapered tubular casing being bent in elbow form but the inner periphery of the tubular form centering said flexible shaft to insure a concentric drive of said pinion gear, a second pinion gear in said end housing rotatably mounted to mesh with said first mentioned pinion gear, said second mentioned pinion gear having a bore to hold and drive the shank of a dental tool, means to retain said pinion gears in mesh during any back lash in the flexible portion of said drive shaft.

2,451,193
PORTABLE AIR CLEARING FAN
Joseph L. Brandenburg, Brooklyn, N. Y.
Application June 21, 1945, Serial No. 600,816
1 Claim. (Cl. 98—94)

In an air clearing fan having a casing rectangular in cross-section and formed with open ends closed by screens and a motor driven fan disposed centrally within said casing for drawing air into the casing through one screen and exhausting the air through the other screen, said casing having its rear portion tapered to extend over the outer portion of a window stool when said casing is rested on a window sill, means securely supporting the motor of the motor driven fan in the casing with the least resistance to the movement of air through the casing by the support, comprising a U-shaped frame having its intermediate arm securely attached to the bottom wall of the casing, said frame having its side arms extended vertically and spaced a distance equal to the width of the motor to extend along diametrically opposite sides of the motor, said side arms having their top ends formed with lines of openings, and screws passing through said openings and threadedly engaging complementary threaded openings in the sides of the motor securely mounting the motor on the top ends of said side arms, said side arms being relatively thin and having their widths extended parallel to the path of travel of the air through the casing.

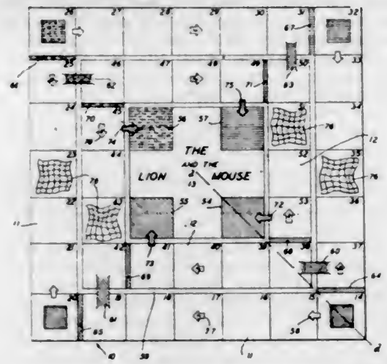


2,451,194
ADHESIVE-CONTAINING SUCTION CUP
Frank Conrad Braun, New York, N. Y.
Application October 3, 1945, Serial No. 620,065
3 Claims. (Cl. 248—206)

2. A suction cup made of resilient material and comprising a cupped disc, a projecting portion on the convex side of the disc, said projecting portion being hollow to form an adhesive reservoir, adhesive in said reservoir, and a slit in said disc communicating with the adhesive reservoir and opening through the concave suction face of the disc, said adhesive reservoir extending upwardly to near the top end of said projecting portion whereby the top wall of the projecting portion is thin enough to yield under pressure applied to it by the thumb or finger to extrude some of the adhesive through said slit to the concave side of the disc.

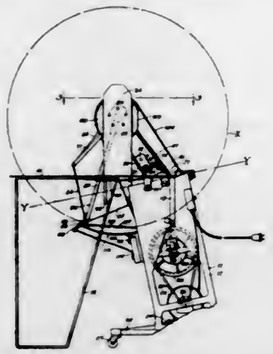
2,451,195
BEVERAGE PACKAGE AND APPARATUS
William F. Brown, Flushing, N. Y.
Application September 19, 1944, Serial No. 554,834
3 Claims. (Cl. 99—295)

2. Beverage extracting and dispensing apparatus comprising in combination with a dispensing head having a fluid supply passage and a separable holder having a rotative coupling engagement with said head, a soft, flexible beverage material containing cartridge seated in said holder and providing a pressure holding liquid-tight seal between the dispensing head and holder, said cartridge composed only of a bottom layer of filter paper having a shallow central truncated cup formation to contain the material and a surrounding continuous laterally projecting annular flange about the edge of the same and a top layer of filter paper covering the cup formation and laterally extending flange of the lower layer, the overlying rim portion of said cover layer being sealed to the projecting flange of the lower layer and forming therewith a flat annular continuous compressible sealing flange of substantially uniform double thickness surrounding and disposed exteriorly of the material containing cup formation, said holder having a truncated socket receiving and closely conform-



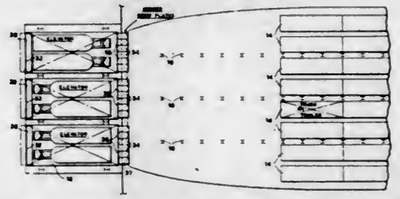
ing to said cup formation of the cartridge, with a perforate bottom wall supporting the bottom of the cartridge and a closed, inclined annular side wall for supporting the side portion of the cup formation, said holder and the dispensing head with which it is separably connected having opposed companion annular clamping portions substantially conforming to and engaging between them the projecting annular compressible sealing flange of the cartridge, means for enabling adjustable coupling of the holder to the dispensing head to apply variable compressive pressure to said sealing flange of the cartridge to seal the holder to the dispensing head with the cartridge in place between the two and means within the dispensing head in line with the supply passage for spreading entering liquid substantially uniformly over the top of the cartridge held in position sealing the holder to the dispensing head.

2,451,196
BOARD GAME DEVICE
Michael Bruck, New York, N. Y., assignor, by mesne assignments, of one-half to Robert Frankfield, New York, N. Y.
Application September 10, 1946, Serial No. 695,982
8 Claims. (Cl. 273—134)



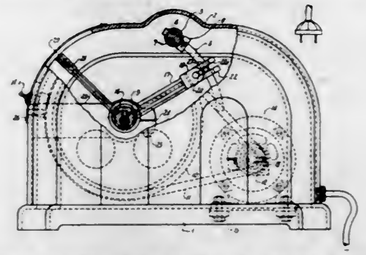
8. A square game board, having an outer circumferential zone, an inner circumferential zone and a central field, the zones being divided in corner squares and intermediate squares, said central field having distinctive corner areas, a barrier marking on one side of each corner square of each zone, the barrier marking of each outer corner square and the barrier marking of the adjacent inner corner square being located on the same half-diagonal of the board through said outer and inner corner squares, a passage marking between the barrier markings of each pair from the outer to the inner zone, and trap markings on selected ones of said intermediate squares,

the outer corner square and the corner area located on the same half-diagonal, and the ad-



jacent passage marking being equally colored but differently from the other outer corner squares.

2,451,197
TYING MACHINE
Benjamin H. Bunn, Chicago, Ill., assignor to B. H. Bunn Company, Chicago, Ill., a corporation of Illinois
Original application February 10, 1942, Serial No. 430,253. Divided and this application February 7, 1945, Serial No. 576,653
18 Claims. (Cl. 100—31)

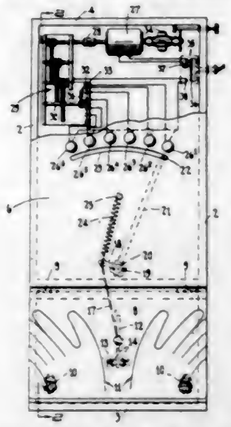


1. A package tying machine comprising in combination with a frame, a fixed package support mounted on the frame, pivoted island table carried by the frame, a rotatable twine arm pivotally mounted co-axially with the island table, anchor means mounted to anchor the island table against pivotal movement, and cyclical operating means mounted to move the parts through a predetermined cycle on an operation thereof; a brake pivoted on the frame adjacent the path of rotation of the twine arm during a rotation thereof, spring means mounted normally to hold the brake beyond the path of rotation of the twine arm, and cam means operatively connected to the cyclical operating means to move the brake into the path of the twine arm at a predetermined point adjacent the end of its cycle, the cam means being positioned to release the brake prior to the completion of an operating cycle.

2,451,198
MEANS FOR LOADING SHIPS
Richard L. Burke, Swarthmore, Pa., assignor to Sun Shipbuilding & Dry Dock Company, Chester, Pa., a corporation of Pennsylvania
Application February 7, 1947, Serial No. 727,135
5 Claims. (Cl. 214—14)

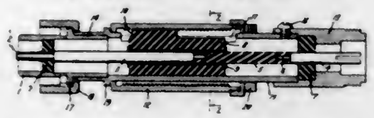
1. In combination a moored ship having a vehicle deck provided with a plurality of vehicle lanes which extend from the stern of the ship and which are approximately parallel to the centerline of the ship, and a bank of elevators at a shore loading point, said elevators comprising platforms and a plurality of brow plates individually hinged to the ship side of each platform affording a plurality of separate relatively narrow surfaces connecting each platform to said deck of the ship at the stern.

2,451,199
POWER SHAKER
George W. Carlson, Bridgeville, Pa., assignor to Burrell Technical Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1944, Serial No. 569,331
2 Claims. (Cl. 74—42)



1. In a shaker mechanism, a shaker shaft, a counter-shaft, drive mechanism for the latter, a rocker arm secured to said shaker shaft, an eccentric on said counter-shaft, a connecting rod mounted to be actuated by said eccentric, a connecting link pivoted to the connecting rod and having sliding engagement with the rocker arm, said link having a pin extending therefrom and an adjustment arm having a bifurcated end disposed around said pin to change the relative position of the connecting link and rocker arm to thereby vary the rocking movement of said arm, said adjusting lever being provided with a prony brake to hold said adjustement arm in any given position.

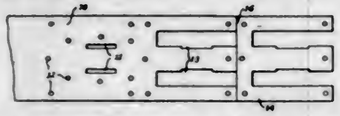
2,451,200
ARTIFICIAL RESPIRATION TRAINING DEVICE
Harry Church, Esquimalt, British Columbia, Canada
Application April 16, 1945, Serial No. 588,535
6 Claims. (Cl. 35—17)



1. An artificial respiration training device comprising a series of electric lamps, means for sup-

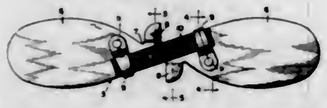
plying electric current to said lamps, a constant speed prime mover, a commutating device driven by said prime mover and arranged to cause said lamps to flash in succession at a predetermined speed first in one direction and then in the other, followed by a predetermined pause in the flashing,

a movable indicating device, spring means, and a member manually operable against the action of said spring means to cause movement of the free end of said movable indicating device along a line parallel to that of said successively flashing lamps.



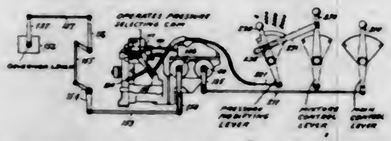
2,451,201
ATTENUATOR FOR ULTRA HIGH FREQUENCIES
Stephen C. Clark, Jr., Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application April 15, 1944, Serial No. 531,224
8 Claims. (Cl. 178—44)

1. An attenuator for a high frequency electromagnetic wave comprising a transmission line having a pair of conductors, one of said conductors being continuous in character, the other of said conductors consisting of two sections separated by an insulating spacer, the opposed ends of said sections and said spacer constituting a capacitance connecting said sections and providing attenuation of said wave, and a conductive member movable along said spacer to vary said capacitance and the amount of said attenuation.



2,451,202
LAMINATED MAGNETIC CORE AND METHOD OF MAKING
James A. Comstock, Clyde, N. Y., assignor, by mesne assignments, to Acme Electric Corporation, a corporation of New York
Application February 21, 1945, Serial No. 579,128
3 Claims. (Cl. 175—356)

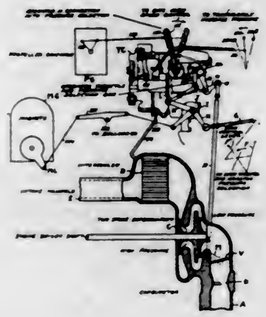
1. The method of constructing E-shaped laminations and endpiece laminations from a strip of material in the successive steps of punching spaced elongated openings in the strip of material, punching endpiece laminations from the strip of material with a part of the elongated openings disposed in and thereby forming air gap recesses in a side edge of the endpiece laminations, and cutting the E-shaped laminations from the strip of material with the remainder of the elongated openings disposed in the middle leg of the E-shaped lamination.



3. In a laminated core, an E-shaped lamination having a base and having side arms and a center arm of equal length with an edge of one of said arms having a recess therein, and an endpiece lamination having a side edge abutting against the ends of the side arms of the E-shaped lamination and having an air gap recess in said side edge positioned to form an air gap between said center leg of the E-shaped lamination and said endpiece lamination, each of said laminations having flat surfaces on each side thereof, said endpiece lamination having dimensions substantially equal to the dimensions of the open space between two next adjacent arms of the E-shaped lamination.

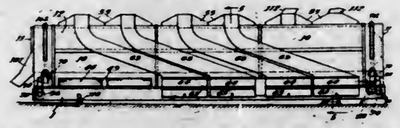
2,451,203
SCISSORS SHARPENER
George E. De Tray, Independence, Mo.
Application December 31, 1946, Serial No. 719,463
3 Claims. (Cl. 76—82.2)

1. A sharpener comprising a handle having a pair of hand grips and a narrow intermediate shank connecting said grips, tool guides at opposite edges of the shank and disposed laterally with respect to each other, and an abrasive element secured to the shank in a position diagonal with respect to the longitudinal dimensions of the shank and intermediate the tool guides.



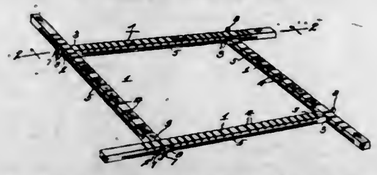
2,451,204
ENGINE CONTROLLER
John Dolza, Donald P. Croisant, Arthur W. Gaubatz, and Peter W. Perish, Indianapolis, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 17, 1943, Serial No. 498,968
19 Claims. (Cl. 123—103)

1. Apparatus for controlling the power output of a supercharged internal combustion engine comprising a manually operated member, means adjusted thereby for controlling engine fuel intake pressure, means operated by the manually operated member for adjusting the governed



speed of the engine in predetermined relation to the intake pressure whereby a predetermined schedule of relations between the pressure and speed factors of engine power output is maintained with respect to movements of the manually operated member, a second manually operable member, means actuated by movements of the second member from normal position for modifying the schedule of engine power output factors while the first manually operable member remains in set position and means actuated by the movement of the first manually operable member to a certain low pressure position for nullifying the effect of the modifying means while the second manually operable member remains in a position away from normal.

2,451,205
ENGINE CONTROLLER
Clarence H. Jorgensen and William H. Taylor, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 16, 1943, Serial No. 502,598
29 Claims. (Cl. 123—103)

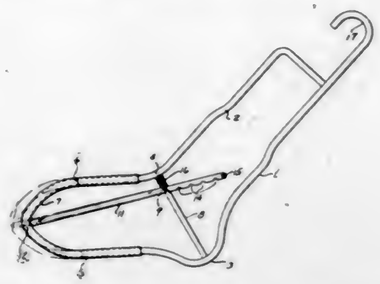


1. Apparatus for controlling the power output of a supercharged internal combustion engine comprising a manually operated member, means adjusted thereby for controlling engine fuel intake pressure, means operated by the manually operated member for adjusting the governed speed of the engine in predetermined relation to the intake pressure whereby a predetermined schedule of relations between the pressure and speed factors of engine power output is maintained with respect to movements of the manually operated member, a second manually operable member, means actuated by movement of the second member in one direction from normal position to increase one of the power output factors to a value above the normal schedule and by movement of the second member in the opposite direction from normal position to decrease one of the power output factors to a value below the normal schedule while the first manually operable member remains in set position and means actuated by the movement of the first manually operable member to a certain low pressure position for nullifying the effect of the second manually operable member to increase a power output factor above the normal schedule while the second manually operable member remains in the power output factor increasing position

2,451,206
METHOD AND DEVICE FOR DRYING WOVEN FABRIC MATERIAL
Hubert C. Ellis, Evanston, Ill., assignor to The Ellis Drier Co., Chicago, Ill., a corporation of Illinois
Application January 10, 1945, Serial No. 572,193
2 Claims. (Cl. 34—133)

1. A device for drying woven fabric material which comprises, an elongated upper cylindrical chamber the wall of which has diametrically related superposed upper and lower openings which are circumferentially narrow but which extend substantially the full length of the chamber, a perforated tumbler drum rotatable in said chamber between the openings, a plurality of consecutive adjacently disposed separate zone chambers under and arranged lengthwise of said upper chamber, heating means within each zone chamber, air-enforcing means within each zone chamber having delivery conduit means delivering through said lower opening, said forcing means being adapted to move air through the heater of that chamber and then through a corresponding zone of the drum and conduit means for receiving air from the upper opening after its passage through a corresponding zone of the drum and for delivering the air to the next consecutive zone chamber for passage through the heater of that chamber.

2,451,207
WEAVING FRAME
Albert Clinton Ferguson, Jacksonville, Fla.
Application March 26, 1948, Serial No. 17,130
3 Claims. (Cl. 139—34)

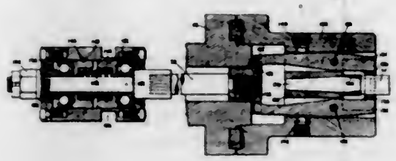


1. A hand loom frame comprising a plurality of bars, elongated transverse openings in said bars, each bar having one of its ends in end engagement with a side of an adjacent bar, said engaging ends of the bars having reduced portions extending through elongated transverse openings in the adjacent bars, threaded members extending longitudinally through the reduced portions of the bars and projecting beyond the outer sides of the adjacent bars and means threaded on said threaded members for drawing the engaging ends of the bars into close engagement with the sides of the adjacent bars.

2,451,208
SOCK DRIER
George W. Fouke, St. Louis, Mo., assignor to Lee-Rowan Company, St. Louis, Mo., a corporation of Missouri
Application August 26, 1946, Serial No. 693,022
4 Claims. (Cl. 223—77)

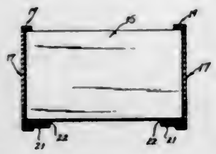
4. A sock dryer comprising a leg portion and a foot portion slidably mounted thereon, an ap-

ertured bracing member extending transversely of said dryer and connecting its heel and instep portions, a rigid adjusting rod detachably secured to said foot portion and extending through the aperture of said bracing member and adapted to institute sliding movement of said foot portion to extend the same, said adjusting rod be-



ing provided with retaining means for engagement with the apertured portion of said bracing member, and a coil spring extending between said adjusting rod and the instep portion of said dryer and surrounding said bracing member and adapted to hold all of said parts in adjusted position through pressure exerted upon said adjusting rod.

2,451,209
HOLLOW-WALLED CARTON
William P. Frankenstein, Cincinnati, Ohio
Original application July 21, 1941, Serial No. 403,376. Divided and this application March 15, 1943, Serial No. 479,155
5 Claims. (Cl. 229—34)

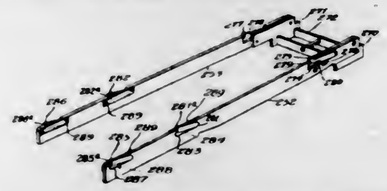


1. In a carton part of the class described comprising a base, side walls upstanding from said base, end walls from opposite ends of the base each formed from an extension subdivided by paralled score lines into portions adapted to form an outer wall member, an inner wall member and a top wall member, said inner and outer wall members being respectively of dissimilar dimension whereby the inner wall members are, respectively, disposed at an angle to the top wall members and carton base other than the angle of the outer wall members thereto, said inner wall members extending at angles to one another that are substantially supplementary, means projecting from said side walls engaged by an inner wall member to hold said inner wall member in position, and a corner tab hingedly connected to each end of each side wall adapted to be disposed across the base between the inner and outer end wall members.

2,451,210
CHUCK FOR AUTOMATIC MACHINE TOOLS
Ralph M. Gamble, Springfield, Vt., assignor to Jones & Lamson Machine Company, Springfield, Vt., a corporation of Vermont
Application February 7, 1947, Serial No. 727,071
10 Claims. (Cl. 279—1)

7. In combination, a chuck comprising a body member, a pair of work-engaging jaws rockably mounted in said body member, relatively weak spring means pressing said jaws toward work-releasing position, an actuating rod longitudinally reciprocable with respect to said body member, cam means in said body member operable by rearward movement of said actuating rod to cam said jaws to work-gripping position, a work ejector slidably mounted in said body member for ejection of work pieces from between said jaws and operable by forward movement of said actuating rod, and a relatively strong spring link on said actuating rod whereby movements of the actuating rod are stiffly resilient.

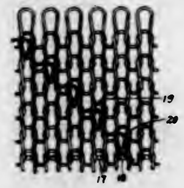
2,451,211
CABINET, CHEST, AND SIMILAR ARTICLES
Lee Gersten, New York, N. Y.
Application April 24, 1947, Serial No. 743,587
7 Claims. (Cl. 229—23)



1. In a container of the character described, a paperboard body member having walls forming a channel, a separate paperboard end member, a perimetric flange angularly disposed on said end member whereby said end member is adapted to be telescopically set onto the body member to cover an end thereof, a component carried by said end member and extending beyond said flange, a slat carried by said component, a second slat carried by the body member; said second slat being positioned between the first slat and the end member when said end member covers an end of the body member; each of said slats presenting a bevelled edge; said slats being adapted to be set with said bevelled edges in contact with each other whereby said end member is hooked to the body member while the end member is in position covering said end of the body member, and detachable therefrom by a motion including a swinging movement of said end member with respect to the body member, and distortion of the component.

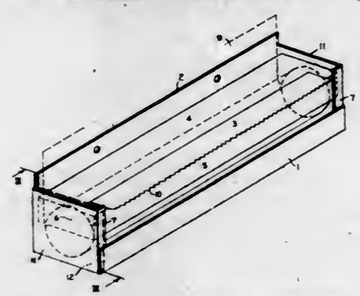
2,451,212
THERMOPLASTIC COATING COMPOSITION
Leon J. Gold, Shorewood, Wis., assignor to Milprint, Inc., Milwaukee, Wis., a corporation of Delaware
No Drawing. Application November 26, 1945, Serial No. 630,988
6 Claims. (Cl. 106—287)

1. A thermoplastic coating composition comprising 10 to 60 per cent by weight of Norelac, 2.5 per cent to 30 per cent by weight of a plasticizer consisting of a mixture of ortho and para toluene ethyl sulfonamides, and .1 to 15 per cent by weight of paraffin, all dispersed in a volatile solvent.



2,451,213
RECIPROCABLE FEED MEANS FOR PRINTING MACHINES
Walter T. Gollwitser, Euclid, Ohio, assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio, a corporation of Delaware
Original application October 16, 1941, Serial No. 415,317, which is a division of application Serial No. 221,841, July 28, 1938. Divided and this application September 15, 1944, Serial No. 554,258
3 Claims. (Cl. 271—44)

1. In a printing machine, means affording a printing device guideway along which such printing devices may be advanced, a pair of carrier bars connected together in laterally spaced relation and supported and guided in said guideway for reciprocating movement, said carrier bars each having a plurality of elongated recesses formed in their upper edges and affording overhanging lugs at each end of each recess, a plurality of pawls, one of which is allocated to and disposed in each of the recesses, one end of each pawl and the corresponding end of the respective recess in which such pawl is mounted being formed to afford complemental arcuate surfaces affording a pivotal mounting for the pawl, spring means in each recess operable to pivot the related pawl upwardly, a lug formed on the other end of each pawl and disposed beneath the overhanging lug at the adjacent end of the related recess to limit upward pivotal movement of such pawl, and means including retaining plates on the inner side surfaces of said carrier bars operable to hold said pawls laterally in position in said recesses.

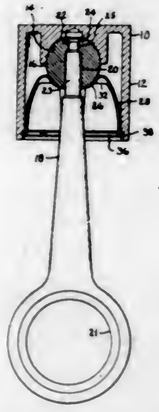


2,451,214
METHOD OF KNITTING
Isaac H. C. Green, Pawtucket, R. I., assignor to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts
Application February 13, 1946, Serial No. 647,301
2 Claims. (Cl. 66—135)

1. A method of knitting which includes the steps of feeding a body yarn to needles, raising at least two needles to a wrap yarn receiving height, feeding the same wrap yarn to the hooks of all of said raised needles, further raising the leading one of said raised needles to clear its latch and thereafter causing all of said needles to pass through the knitting wave whereby said

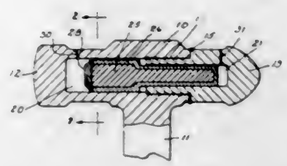
wrap yarn is cast off by the leading needle and knit by the remainder of the needles that were raised to wrap yarn receiving height.

2,451,215
HOLDER-DISPENSER FOR ROLL SHEET MATERIAL
Gordon L. Hall, Old Lyme, Conn.
Application February 28, 1947, Serial No. 731,585
1 Claim. (Cl. 242—55.5)



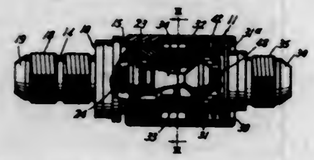
In a device of the character described, a container adapted to hold roll sheet material, a cover freely, slidably and detachably mounted therein so that it will move freely in a vertical direction, and may be lifted free of the container, and when in place in the container is adapted to rest on a contained roll of sheet material, said cover having down turned sides one of which last is adapted to bind a portion of the sheet against a wall of the container to assist the downward pressure of the cover in preventing its further unrolling when the sheet is being severed, and said cover having a metal strip with a serrated tearing edge attached to its upper front edge.

2,451,216
PISTON AND CONNECTING ROD
Gustaf A. Halfvarson, Springfield, Mass., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 18, 1946, Serial No. 684,521
5 Claims. (Cl. 309—20)



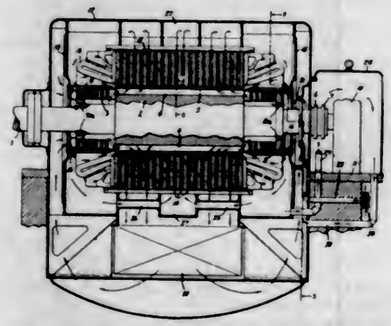
4. A piston and connecting rod assembly comprising a piston having a dependent skirt, a spherical socket in said piston, a shoulder on the interior of said skirt, said shoulder being located below the center of curvature of said socket a distance equal to at least one-half the diameter of said piston, a connecting rod having a spherical head, the upper portion of said head lying in said socket, and a retainer comprising a unitary stamping of sheet metal, said stamping having a socket formed in a side of said sheet metal which socket engages the under side of said spherical head, an opening in the center of said

socket through which opening said connecting rod extends, a downwardly-turned flange portion at the outer edge of and surrounding said socket,



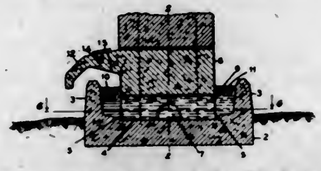
and a plurality of legs at the outer edge of said flange portion, said legs extending diagonally downwardly and resting on said shoulder.

2,451,217
SHOCK ABSORBING HAMMER
August H. Heinrich, Euclid, Ohio, assignor to The Auto Diesel Piston Ring Company, Cleveland, Ohio, a corporation of Ohio
Application April 6, 1945, Serial No. 586,891
3 Claims. (Cl. 145—29)



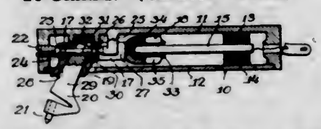
2. In a hand hammer, a handle, a head extending normal to the axis of the handle and disposed at one end thereof, said head being composed of two members one screwing into the other, each member being integrally closed across its exposed end, to form a work striking end and each having a bore therein, the bores being in communication and axial alignment with each other the bore in the member which screws into the other having a smaller cross-sectional area than the other bore, a reaction member having a portion thereof occupying the larger bore and another portion thereof occupying the larger bore and another portion thereof occupying the smaller bore, said reaction member being freely slidable in said bores and confined within the head by the walls of said bores and there being a vent through the wall of each of said two members adjacent to the closing end thereof and leading outwardly from the corresponding bore to the atmosphere, whereby the said reaction member cooperates with either work-striking end of the hammer head to absorb the energy which tends to make the hammer rebound whenever a working surface is struck.

2,451,218
QUICK DISCONNECT COUPLING
Walter D. Hengst, Roscoe, Calif., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application July 13, 1946, Serial No. 683,400
5 Claims. (Cl. 284—19)



1. A fluid-conduit coupling comprising: two detachably connectable conduit members; one of said members having an inwardly movable spring-seated valve and an annular sealing surface surrounding said valve; the other member having internal and external elements; said external element having a sealing surface for contacting and sealing with said sealing surface of said one member and having a passage terminating in a cylindrical surface adjacent its outer end; means supporting said external element in reciprocal, sealing relation with respect to said other conduit member between an extended position and a retracted position; means for moving said conduit members together whereby said external element is shifted from its extended to its retracted position by force thereagainst of said sealing surface of said one member; means supporting said internal element for reciprocal movement with respect to said other conduit member; said internal element having a piston adjacent its outer end that seals with said cylindrical surface of said external element when the latter is in its extended position and that extends beyond and is clear of said cylindrical surface when said external element is in retracted position.

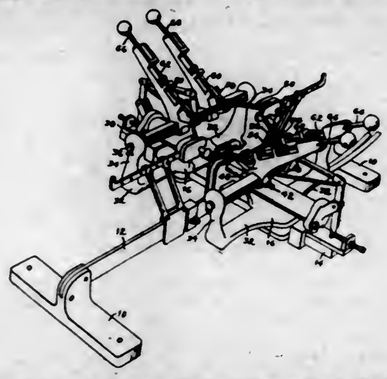
2,451,219
DYNAMOELECTRIC MACHINE
Viking R. Holmgren, Lynn, Mass., assignor to General Electric Company, a corporation of New York
Application May 28, 1947, Serial No. 750,908
5 Claims. (Cl. 171—252)



1. A dynamoelectric machine having a stationary member, a rotatable member, ventilating passages through at least one of said members, a housing inclosing said machine, a main impeller rotatable with said rotatable member for circulating ventilating medium through said ventilating passages, an air shield located within said housing near one end thereof to guide ventilating medium to the intake side of said main impeller, and an auxiliary impeller rotatable with said rotatable member for providing at the intake side of said main impeller and said air shield a pressure greater than that of the atmosphere surrounding said machine.

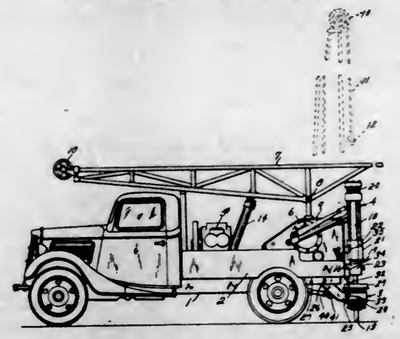
2,451,220
WALL CONSTRUCTION
Floyd E. Hunt, St. Petersburg, Fla.
Application October 13, 1944, Serial No. 558,490
2 Claims. (Cl. 43—131)

1. A wall construction of the kind described, comprising a masonry riser provided with crosswise passages in its lowermost area, and a masonry foundation of substantially U-shape in cross-section having the riser counterseated therein at the longitudinal center of such foundation to effect trough-like spaces at opposite sides of such riser thus providing communication between the passages and spaces.



2,451,221
WEDGED NEEDLE TYPE PHONOGRAPH PICKUP
William H. Hutter, Chicago, Ill.
Application October 30, 1944, Serial No. 561,061
10 Claims. (Cl. 179—100.41)

1. In a pick-up unit, two vibration transmitting members, one of which comprises an elongate member provided with a chuck portion having an inwardly tapering bore, said bore being disposed at an angle to the axis of said elongate member, and the other of which comprises a member provided with a record engaging point and provided with an outwardly tapering shank portion, said members being wedged one within the other.



2,451,222
COIL FORMER
Robert B. James, Cincinnati, Ohio
Application September 5, 1946, Serial No. 694,934
13 Claims. (Cl. 153—11)

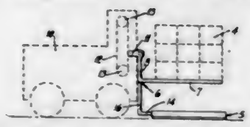
1. A coil spreading device for use in spreading a flatly wound coil so as to fit into radially directed slots arranged in angular spaced relation, said device including floating means for supporting the ends of the coil, a pair of carriages mounted for movement in opposite directions and located on opposite sides of the coil, two pairs of brackets pivotally mounted upon the carriages, there being one pair of brackets mounted upon one carriage and the other pair of brackets mounted upon the other carriage, means mounted upon the brackets for clamping the sides of the coil to be formed, means for actuating the carriages in opposite directions away from the plane of the coil so as to pull the sides of the coil laterally, and means for oscillating the brackets with respect to the carriages

so as to deflect the sides of the coil so that the sides of the coil are radially disposed with respect to a common axis.

2,451,223
DRILLING APPARATUS
Harry C. Johansen, Michigan City, Ind., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application April 7, 1944, Serial No. 530,006
5 Claims. (Cl. 255—19)

1. In a drilling apparatus, the combination comprising a portable base adapted to travel over a ground surface, a rotary table adapted to rotate a drill, means for mounting said table in a relatively low horizontal position on said base with the bottom of said table relatively near the ground surface, feeding means for the drill mounted on said base and shiftable laterally in horizontal planes between a drill feeding position above said table and an inoperative transport position at one side of said table, said mounting means embodying means whereby said table may be raised relative to said base and said feeding means while the latter remains stationary in its inoperative transport position, to locate the bottom of said table a subsantial distance above the ground surface thereby to increase ground clearance during transport, said table mounting means so constructed and arranged that said rotary table, as it is raised into its elevated transport position, moves into a portion of the space previously occupied by said feeding means when the latter was in its operative feeding position.

2,451,224
PUSH-PULL SELECTOR SWITCH
David W. Johnson, New Britain, Conn., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a corporation of Connecticut
Application February 5, 1945, Serial No. 576,270
29 Claims. (Cl. 200—4)

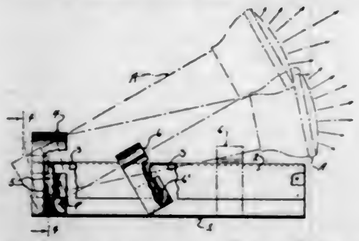


1. In a push-pull selector switch, a base, operating means movable axially and rotatably, means associated with said operating means and base and interlocking to prevent rotation of the operating means, said interlocking means becoming ineffective on predetermined axial movement of said operating means, contact means operated by rotary movement of said operating means, self-acting means acting normally to move said operating means into one axial position from which said operating means may be moved into at least two other axial positions, a plurality of contact means operable by movement of said operating means into certain of said axial positions.

2,451,225
SELECTOR SWITCH
David W. Johnson, New Britain, Conn., assignor to The Arrow-Hart & Hegeman Electric Co., Hartford, Conn., a corporation of Connecticut
Application January 14, 1946, Serial No. 641,070
14 Claims. (Cl. 200—4)

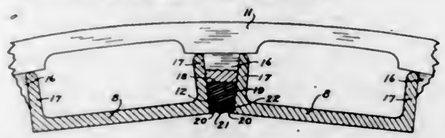
7. In a push-pull switch, a shaft, means mounting said shaft for axial and rotational movements, means compelling an axial movement of said shaft prior to a rotational movement of said shaft from a predetermined position, electrical contacts operated upon axial and rotational movements of said shaft from said predetermined position, and spring means for returning said shaft through said rotational and axial movements to said predetermined position.

2,451,226
APPARATUS FOR HANDLING LOADS
John H. Kemp, Jr., San Carlos, Calif.
Application December 10, 1946, Serial No. 715,175
6 Claims. (Cl. 214—113)



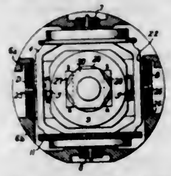
1. In apparatus for depositing a load on a support having a load receiving surface provided with parallel grooves, the combination with a lifting fork having load-carrying tines dimensioned and spaced for reception in said grooves, whereby the load may be transferred to said surface when said tines are located in said grooves, an element displaceable with respect to and in advance of said tines to a position in proximity to said surface to denote the position of said tines with respect to said grooves, a common mount for said fork and said element, and operating mechanism on said mount for effecting independent displacement of said element and said fork and for positioning said tines in said grooves.

2,451,227
SELF-CLEANING SCREEN OR FILTER
Norman R. Krause, Racine, Wis.
Application October 23, 1944, Serial No. 559,871
6 Claims. (Cl. 183—53)



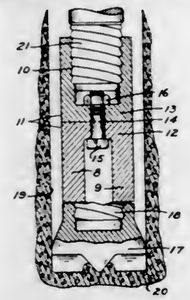
1. In a device of the character described, the combination with a plurality of chambers provided with intake screens exposed to the atmosphere and positioned to arrest foreign matter entrained in air admitted through said screens to the respective chambers, said screens being arranged to discharge such matter by gravity when the flow of air through the respective screens is cut off, an air exhaust passage, a fitting leading to said passage from the respective chambers and provided with valve seat means, and a single valve in the path of air leaving said chambers via said fitting and controlling flow from said chambers to said passage, said valve being provided with means for mounting it for movement from one seat to the other for effecting such control.

2,451,228
POSITION HOLDER FOR FLASHLIGHTS
Joseph L. Lemerond, Green Bay, Wis.
Application July 24, 1947, Serial No. 763,180
1 Claim. (Cl. 248—176)



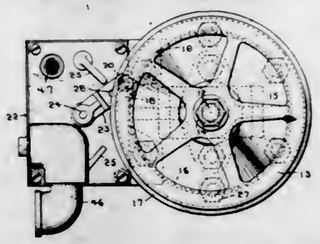
A flashlight holder comprising a sheet metal trough having the edges of its side walls folded inwardly and downwardly to form tracks, an upturned bowed band at one end of the track, feet extending from the lower ends of the band into the tracks, means for securing the band feet and trough side walls together, an underslung loop having upturned feet slidably adjustable within the trough tracks for varying the angle of a flashlight casing which is adopted to be supported at the butt end under the band, and at its lighting end over the loop.

2,451,229
LOG BARKING DRUM
Lawrence H. Lemke, Wausau, Wis., assignor to D. J. Murray Manufacturing Co., Wausau, Wis., a corporation of Wisconsin
Application September 4, 1944, Serial No. 552,675
2 Claims. (Cl. 189—36)



1. In a barking drum, an annular series of elongated parallel channel bars each having outwardly directed integral opposite parallel flanges, a ring surrounding said bar series and having inwardly directed integral radial tapered lugs extending between and snugly engaging the outer side surfaces of the adjacent bar flanges but terminating short of the innermost flange edges to provide grooves between the successive bars spanning the inner ends of said lugs, each of said lugs having therein a pair of relatively deep recesses opening into the adjacent groove a considerable distance inwardly of the opposite sides of the lug and spanning the space between the adjacent bar flanges, and a weld substantially filling the medial portion of each groove and the adjoining recesses, each of said welds terminating at the outer sides of the corresponding pair of transverse recesses so as to leave the opposite ends of each groove unoccupied.

2,451,230
DIRECTIONAL GYRO
John E. Lundberg, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application September 24, 1947, Serial No. 775,809
10 Claims. (Cl. 74—5)

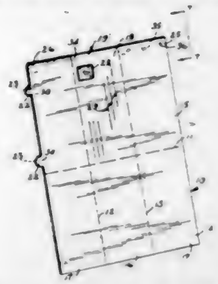


1. In combination, a directional gyro comprising a gyro rotor bearing frame mounted in a gimbal for rotation about vertical and horizontal gyro axes, and a torque motor for precessing said gyro about its vertical axis, said torque motor comprising one or more magnets mounted on said bearing frame to produce a vertically extending magnetic field and a plurality of fixed precession coils arranged around said bearing frame in a circle concentric with said vertical axis and oriented with their flux axes extending in directions of radii of said circle.

2,451,231
MAGNET
Robert L. Manegold, Milwaukee, Wis., assignor to Dings Magnetic Separator Co., Milwaukee, Wis., a corporation of Wisconsin
Application December 11, 1944, Serial No. 567,602
5 Claims. (Cl. 294—65.5)

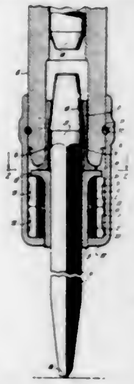
1. A drill bit removing magnet, comprising, a U-shaped powerful magnet having a flat end surface and an opening therethrough between the magnetic poles thereof, an internally threaded socket having a flat end surface coacting with said magnet surface and being provided with an opening alineable with said magnet opening, and a fastener rigidly uniting said magnet and socket at said openings.

2,451,232
SWITCH CONTROL DEVICE
Claudius Russell McCauley, New Orleans, La.
Application June 29, 1945, Serial No. 602,308
6 Claims. (Cl. 200—53)



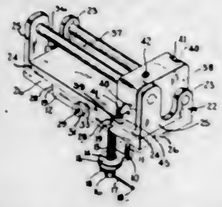
1. In combination, a rotatable and axially displaceable valve operating screw, a switch operating lever, means movable axially and rotatably with said screw to engage and operate the switch operating lever when the screw has reached a predetermined axial position, and stop means for said switch operating lever movable with said screw effective in all other positions of said screw for preventing operation of said switch operating lever.

2,451,233
COMBINED ENVELOPE AND LETTER SHEET
Santiago M. Menocal, Habana, Cuba
Application January 11, 1946, Serial No. 640,504
3 Claims. (Cl. 229—92.1)



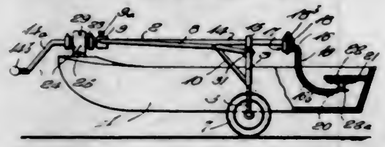
3. In a combined envelope and writing sheet having a sheet of paper formed with a transverse score line along which the sheet can be folded substantially in half and spaced longitudinal score lines along which the sheet can be folded substantially in thirds after being folded in half, a strip portion along one end of the sheet, a line of perforations dividing said strip portion

from the sheet, a score line dividing said strip portion into an inner section and an outer section and along which said strip portion may be folded in half to superimpose said outer section on the inner face of said inner section, and spaced adhesive areas on the outer face of said strip section, one at the end of said outer section and the



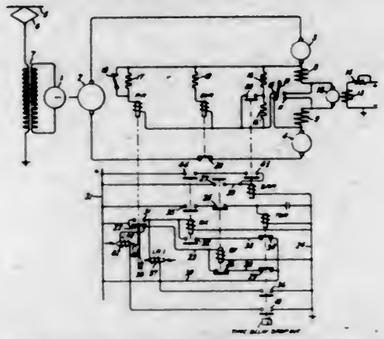
other at the opposite end of said inner section, whereby when the sheet is folded in half, said strip portion may be folded in half and the sheet may then be folded into thirds to superimpose said adhesive areas to be used to seal the sheet folded, and spaced sealing tabs formed along the side of the sheet adjacent the end of said outer section formed with said one adhesive area.

2,451,234
COMPRESSION MEMBER
Walter G. Mitchell, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a corporation of Delaware
Application November 20, 1944, Serial No. 564,338
8 Claims. (Cl. 279—19.6)



1. The combination with the barrel of a percussive tool having a power operated hammering piston reciprocable therein, of a chisel with shoulders insertible into the barrel to receive the blows of the piston, a retatiner device for the chisel having an outer sleeve secured to the barrel and an inner or mounting sleeve for the chisel in the path of said shoulders, bumper means in the form of a mass of resilient material supported by the outer sleeve about the mounting sleeve for absorbing the impact of the shoulders on the mounting sleeve when struck thereby, the outer surface of the bumper means being concave, and means extending continuously of the bumper means to substantially the full axial extent thereof and responsive to the expansion and compression of the bumper means in flexing from the impact of the shoulders on the mounting sleeve to create a flow of air over the bumper means to cool the same, said last named means opening outwardly through said outer concave surface.

2,451,235
DEVICE FOR RESURFACING GRINDING WHEELS
Milo J. Nagy, Richmond Hill, and Louis Belz, Brooklyn, N. Y.
Substituted for application Serial No. 639,202, January 5, 1946. This application December 10, 1947, Serial No. 790,780
4 Claims. (Cl. 125—11)

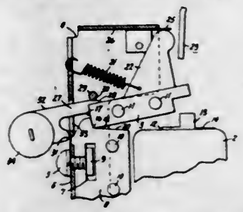


1. A device for re-surfacing the grinding faces of grinding wheels comprising a clamp for mounting said device in position for said re-surfacing, said clamp having a vertical rear wall, a bottom wall having a threaded bore, a screw in said bore, and a top wall having downwardly converging side edges, a central smooth bore and a chamber interrupting said smooth bore at its middle, a guide slidably mounted on said top wall and having inclined edges corresponding to and engaging said top wall converging edges, upstanding side walls, two parallel bars mounted in said side walls, and a block movably mounted on said parallel bars, a boss secured to said guide and disposed in said chamber, said boss having a threaded bore, a screw in said top wall bore threaded through said boss threaded bore and having shoulders abutting the front and rear edges of said top wall whereby rotation of said last mentioned screw will move said guide along said top wall, said block having a forwardly and downwardly inclined bore, a tool in said block bore and means for adjustably securing said tool in said block bore, said tool being movable in two directions by movement of said guide along said top wall and movement of said block along said bars.

2,451,236
TRAILER FOR BOAT HANDLING
Earl William Oeth, Evansville, Ind., assignor of one-third to Ruby A. Oeth, Evansville, Ind.
Application November 5, 1946, Serial No. 707,898
5 Claims. (Cl. 280—33.4)

2. A trailer for handling boats comprising in combination with a boat having supporting hardware extending in a substantially horizontal plane thereon, a wheeled support straddling the boat and including a single centrally disposed longitudinally extending beam, a yoke mounted adjacent the bow of the boat, said hardware comprising a bearing plate mounted adjacent the stern of the boat, a spring member fastened to the end of said beam and extendible beneath the horizontal plane of said hardware and detachably engageable with said bearing plate, and shock absorbing means carried by said beam and detachably engageable with said yoke adjacent the bow of the boat.

2,451,237
TRACTION MOTOR CONTROL SYSTEM
Harold S. Ogden, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application September 18, 1947, Serial No. 774,721
15 Claims. (Cl. 318—84)



1. A traction motor control system for direct current locomotives comprising, a pair of traction motors each having an armature and a field winding connected in series with each other and with a main source of power, a direct current exciter for supplying energy to said field windings, an adjustable stabilizing resistance, switching means for connecting said field windings in series with said exciter and said resistance and for inserting said resistance in series with said motor armatures, and means responsive to the ratio of current in said armature circuit to the current in said series field winding circuit for changing the value of said stabilizing resistance.

2,451,238
VAPORIZER
Herbert E. Pritchard, New Orleans, La.
Application May 20, 1946, Serial No. 671,086
6 Claims. (Cl. 21—117)

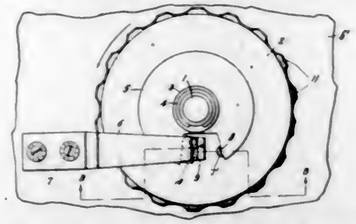
1. In a pocket vaporizer, an outer casing, a container for vaporizable material supported in the casing, a baffle means in the casing, a wick and fuel cartridge, a wick in the cartridge and projecting therefrom toward the baffle, the baffle having an opening through which the wick may project, and interengageable adjustable means between the casing and the cartridge whereby movement of the cartridge may regulate the projection of the wick through the opening in the baffle and thereby regulate the flame size.

2,451,239
SHOCKPROOF ELECTROMAGNET WITH ARMATURE
Paul J. Reifschneider, Springfield, Pa., assignor to General Electric Company, a corporation of New York
Application January 26, 1948, Serial No. 4,403
4 Claims. (Cl. 175—336)

1. In an electromagnetic device comprising a generally U-shaped core, an energizing winding, and an armature having a pivotal edge at one end, means mounting the pivotal edge of the armature adjacent one end of the core for angular movement of the armature toward and away from the other end of the core comprising two intersecting plane surfaces on the one end of the core forming a notch within which the pivotal edge of the armature is seated substantially coincidently with the line of intersection of the plane surfaces of the notch, resilient means tending to turn the armature away from the other end of the core and having a force component tending to move the pivotally supported edge of the armature out of said notch, and means for preventing such movement of the armature including an arm on the armature having a portion of circular configuration with its center in the pivotal edge of the arm and of an angular extent at least equal to the angular movement of the armature, and a blocking member positioned adjacent the notch intersection and having a confining surface in engagement with the circular configuration of said arm during the angular movement of the armature.

2,451,240
ELECTRON DISCHARGE DEVICE EMPLOYING CAVITY RESONATOR APPARATUS
Charles A. Rosencrans, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application February 17, 1945, Serial No. 578,467
5 Claims. (Cl. 315—39)

1. An electron discharge device having a cathode, grid and anode, and a resonator device for said electron discharge device including a hollow conducting elongated member having one side coupled to said cathode and the other side coupled to said anode, and a partition extending through said hollow conducting member longi-



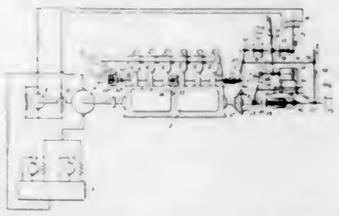
tudinally thereof whereby two resonant chambers are provided, and electrical connections between said grid and said partition, said hollow conducting member having adjacent apertures opening into said chambers, and hollow conducting means telescoped with said hollow conducting member and provided with a partition, said partition providing an opening between opposite sides of said hollow conducting means.

2,451,241

SHIELDED VOLUME CONTROL AND SWITCH

Ernest W. Rosentreter, De Witt, N. Y., assignor to General Electric Company, a corporation of New York

Application November 21, 1946, Serial No. 711,343
6 Claims. (Cl. 201—48)



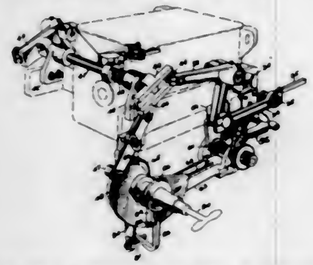
1. A variable resistance comprising a rotatable member and a substantially parallel stationary member, an annular resistance element attached to one of said members and a cooperating contact slider attached to the other of said members for contacting different portions of said resistance element in accordance with the relative rotational positions of said members, a conductive shield member attached to said rotatable member for rotation therewith, a stationary resilient switch member for normally making electrical contact with said shield member, a limited area of insulation interposed in the path of contact of said switch member and arranged to be contacted thereby to break said circuit at a predetermined rotational position of said rotatable member.

2,451,242

ELECTRIC GENERATING PLANT FOR THE DRIVE OF VEHICLES

Oskar Schläpfer, Winterthur, Switzerland, assignor to Sulzer Freres, Societe Anonyme, Winterthur, Switzerland

Application October 2, 1945, Serial No. 619,797
In Switzerland January 15, 1945
7 Claims. (Cl. 290—40)



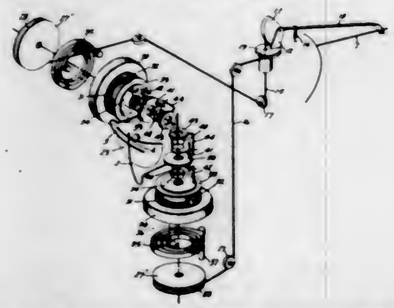
1. An electric generating plant for vehicle propulsion including an internal combustion engine, an electric generator driven by said engine, and an automatic regulating device that includes a speed governor driven by said engine, a control device influenced by said governor, a fuel regulator controlling the admission of fuel to said engine and influenced by said control device in the region of higher engine speeds only to admit a definite amount of fuel for each speed in that region, a field current regulator controlling the field current of said generator and influenced by said control device in the region of lower engine speeds only to provide a definite field current for each speed in that region, and output adjusting means that include a device for setting said governor to the desired speed and means for regulating the range of influence of said control device over said fuel regulator, said governor-setting-device and said influence-range-regulating means being adjusted in common by manipulation of said output adjusting means.

2,451,243

TRAVERSE MOTION

Otto W. Schlums, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a corporation of Massachusetts

Application April 24, 1945, Serial No. 589,965
3 Claims. (Cl. 242—43)



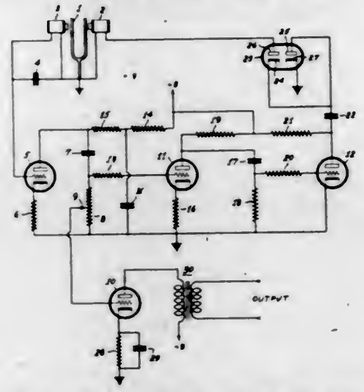
1. In a yarn traverse motion, a traverse rod, a traverse block having a fixed straight-line reciprocating motion, a lever mounted on said block and connected to said rod, a guide-block for said lever, a cam controlling the angular setting of said guide-block, means including a gear for feeding said cam progressively as the winding of the yarn package proceeds, and said gear having certain teeth omitted and being thereby rendered effective to stop the feed of the cam at a predetermined point.

2,451,244

GLIDER TOW INDICATOR

Carl F. Scott, Milford, George Carlson, Trumbull, and Edward H. Rugg, Bridgeport, Conn., assignors to General Electric Company, a corporation of New York

Application March 22, 1945, Serial No. 584,210
11 Claims. (Cl. 33—1)



1. A tow rope indicator for aircraft comprising, in combination, a member adapted to engage a tow rope and respond to horizontal and vertical deflections of an aircraft with respect to a tow rope, indicating means including two pointers, means interconnecting said member with said pointers whereby said pointers indicate vertical and lateral variations in position of an aircraft with respect to a tow rope, and a separate means associated with each of said pointers for adjusting the pointers to zero position in accordance with the desired position of an aircraft with respect to a tow rope.

2,451,245

LOW FREQUENCY OSCILLATOR

Eugene R. Shenk, Brooklyn, and Alfred Kahn, Queens Village, N. Y., assignors to Radio Corporation of America, a corporation of Delaware

Application March 23, 1944, Serial No. 527,756
11 Claims. (Cl. 250—36)

1. In a low frequency oscillation generator wherein the frequency is controlled by a mechanical vibrator, a system of electron discharge devices including an amplifier stage, two limiter stages and a full wave rectifier stage, magnetic driving and pick-up means associated with said vibrator, the input circuit of said amplifier stage being subject to control by potentials induced in said pick-up means, capacitors each intercoupling the output and input circuits of successive stages, resistive impedances in circuit with each said capacitor, one of said capacitors being connected between the anode of the second limiter stage and certain electrodes of said rectifier stage, this particular capacitor in combination with one of said impedances forming a time constant circuit the charging time of which is limited to a minor fraction of a cycle of the oscillations to be generated, and this capacitor being arranged to discharge rapidly through a circuit which includes the space path of said second limiter stage, one portion of said rectifier stage, and said magnetic driving means, and a circuit for feeding unilateral pulses of the other polarity from the rectifier means to ground.

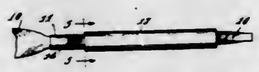
2,451,246

TOOL BIT AND HOLDER THEREFOR

Henry M. Sheridan, Erie, Pa., assignor to Apex Tool & Cutter Company, Shelton, Conn., a corporation of Connecticut

Application June 1, 1945, Serial No. 597,077
2 Claims. (Cl. 29—96)

1. A tool holder comprising a shank having an extended portion providing a flat seat with a terminal wall extending in a single plane from said seat, said plane being inclined rearwardly from the plane of the seat and also extending diagonally across said seat, a bit clamp mounted over said seat having a rear wall snugly embracing and conforming to said terminal wall and



having an open sided bit receiving recess therein extending inwardly in the direction of said diagonal wall and forming in combination with said seat a bit pocket having a top, bottom, inner end and side wall, and means for forcing said clamp towards said seat.

2,451,247

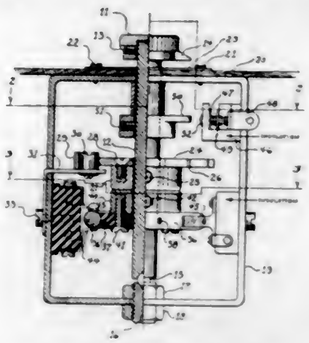
ADJUSTABLE LOCKING SHOE LACE TIP

Herman Sims, Brooklyn, N. Y.

Application July 29, 1944, Serial No. 547,185
1 Claim. (Cl. 24—117)

A shoe lace having adjustable locking telescopic tips on the ends thereof for fastening the lace with varying degrees of tightness in the shoe of a wearer without tying a knot in the lace, one of said tips being hollow and adapted to telescope the other tip to enable the latter to be slid therein a varying distance, the inner surface of the larger tip and the outer surface of the smaller tip comprising complemental serrated strips extending longitudinally along the tips releasably to lock the ends together in overlapping relation when one of the tips is rotated relative to the other, said serrated strips comprising positive locking means for holding the ends interlocked against the tension exerted on the lace when the shoe is worn, said complemental serrated strips extending a sufficient distance relative to each other to enable them to be thus interlocked in a plurality of overlapped positions of the tips to adjust the tension of the lace in the shoe, at least one of said tips being sufficiently small in cross-section to enable it to pass through the eyelets of the shoe.

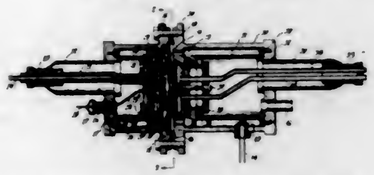
2,451,248



PHONOGRAPH-RADIO SWITCH

Joseph L. Slatin, Berwyn, Ill.

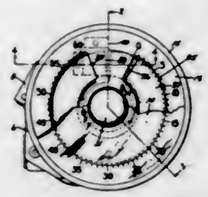
Application June 14, 1945, Serial No. 599,370
8 Claims. (Cl. 200—11)



6. In a single pole triple throw switch comprising a rotatable shaft and a ratchet wheel operatively associated with said shaft and a catch arm adapted to engage said ratchet wheel thus rotating said shaft, the combination of a contact ring having a plurality of equally spaced notches disposed on its circumference, a positive brush having resilient prongs engaging and resting in the aforesaid notches on said contact ring to transfer current into said contact ring and to cause the contact ring to stop in a definite and proper position, brushes to contact said contact ring to distribute current away from said contact

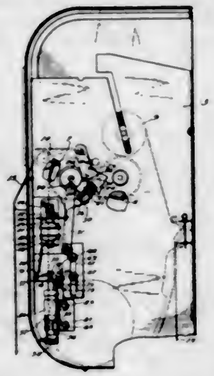
ring, a cam means carried by said shaft, and electrical contacts, said cam means having portions thereof adapted to engage and disengage portions

of said contacts at predetermined times, thereby respectively to change the relative relationship of said contacts.



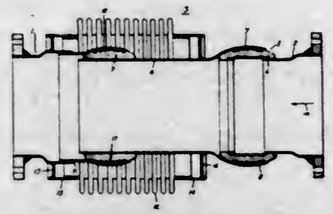
2,451,249
ELECTRON DISCHARGE DEVICE FOR ULTRA HIGH FREQUENCIES
Philip T. Smith and Howard R. Hegbar, Princeton, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application March 18, 1943, Serial No. 479,550
17 Claims. (Cl. 315—6)

1. An electron discharge device having a cathode and an oppositely disposed anode, a conducting partition positioned between said cathode and said anode and including a grid, a resonator coupled between said partition and cathode, and a second resonator coupled between said partition and anode, said cathode having emitting and substantially non-emitting areas, the grid portion of said partition being provided with apertures registering with said emitting areas and said partition having another aperture providing a passageway between said resonators for providing electromagnetic coupling, said grid having another aperture to provide anode-cathode capacity feedback coupling, said last aperture registering with a non-emitting portion of said cathode.



2,451,250
ELAPSED TIME INDICATOR
Hans Springer, Ashland, Mass., assignor to Telechron, Inc., a corporation of Maine
Application November 22, 1946, Serial No. 711,682
5 Claims. (Cl. 161—23)

1. An elapsed time indicator comprising a timer motor, a rotary shaft, a driving connection between said motor and shaft including a slip friction clutch and a mutilated gear through which said shaft may be driven in one direction an amount limited to less than one complete revolution by reason of the mutilated gear, manual means for turning said shaft in either direction, such manual turning being permitted when the shaft is in driving relation with the timer motor by reason of the slipping of said clutch, an alarm, a cam on said shaft, a cam follower bearing against said cam for controlling the operation of said alarm, an indicator on said shaft, a graduated time dial on which said indicator indicates to show the rotary position of said shaft, the cam surface of said cam having a long raised surface, a short depressed surface, and a short raised surface extending about the cam in the order named in the direction opposite to that in which the cam is adapted to be driven by the timer motor, and a stop projection on the cam between the long and

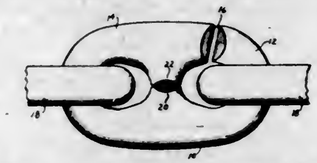


short raised surfaces which prevents movement of such stop projection past the cam follower in either direction, said timer motor being in driving connection with said rotary shaft only when the cam follower is resting on the long raised portion of said cam, said indicator indicating at the zero end of said scale when the cam follower is in the short depressed portion of said cam and at the other end of the graduated scale when the cam follower is on the long raised portion of said cam and adjacent the stop projection and said cam follower permitting the alarm to sound only when in the short depressed portion of said cam.

2,451,251
TOWEL DISPENSING DEVICE
Frank G. Steiner, Miami Beach, Fla., and Rudolph G. Birr, Lombard, Ill., assignors, by mesne assignments, to American Linen Supply Co., Carson City, Nev., a corporation of Nevada
Application July 14, 1944, Serial No. 544,920
11 Claims. (Cl. 271—2.3)

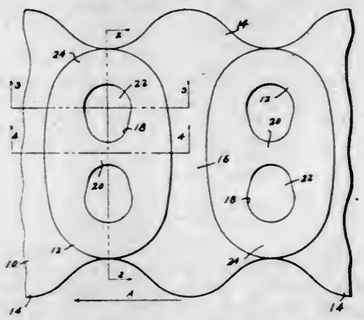
1. A dispenser for sheet material having a stop mechanism operable through force applied to a dispensing means, to assume stopping position and then be promptly automatically released when the application of dispensing force ceases, timing means adapted during timing action to prevent automatic release of the stop mechanism, and means to initiate timing action of said timing means, after a plurality of forced operations and automatic releases of said stop mechanism.

2,451,252
FLEXIBLE CONDUIT JOINT
Eugene E. Stoeckly, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application February 1, 1945, Serial No. 575,621
4 Claims. (Cl. 285—90)



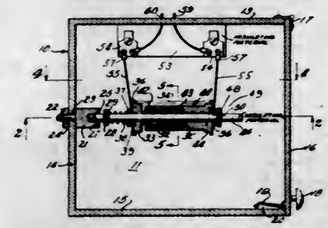
1. In a sealed flexible joint for a conduit adapted to carry fluid at a pressure different from ambient pressure, the combination of a first and a second conduit, an intermediate conduit, a combined ball and slip joint between one end of the intermediate conduit and the first conduit, a ball joint between the other end of the intermediate conduit and the second conduit, both of said joints having clearance spaces forming leakage paths, a bellows surrounding and spaced from the ball and slip joint, and means sealing the ends of the bellows to the first conduit and to the intermediate conduit respectively, whereby leakage through the ball and slip joint produces a biasing force between the second conduit and the intermediate conduit to minimize the clearance spaces between the parts of the ball joint.

2,451,253
METHOD OF MAKING CHAIN LINKS
Henry St. Pierre, Worcester, Mass.
Application October 14, 1943, Serial No. 506,232
2 Claims. (Cl. 59—12)



1. The method of forging a chain link from a block of metal having a substantially straight flow line formation, including the step of upsetting the block in a direction parallel to said flow line formation and thereafter forging the link from the upset block.

2,451,254
CHAIN LINK
Henry St. Pierre, Worcester, Mass.
Application May 18, 1944, Serial No. 536,084
5 Claims. (Cl. 59—84)



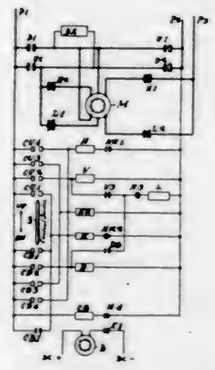
1. A one-piece chain link having a solid side and a single split in the other side, spaced plain ends defining the split side and being located adjacent an end of the link, and means forming a stud centrally of the link removed from the split.

2,451,255
CHAIN LINK AND METHOD OF MAKING SAME
Henry St. Pierre, Worcester, Mass.
Application May 7, 1945, Serial No. 592,303
3 Claims. (Cl. 59—35)

1. Process of making chain links of generally ellipsoidal form by embossing a series of link blanks in a length of steel in a manner to position the blanks generally transverse of the rolled length of steel, so that the grain of the steel will be transverse of the blanks, hot forging each blank to final link form, and separating.

2,451,256
FILM SPOOL SWITCH
Howard L. Strickland, Clinton, S. C.
Application March 12, 1947, Serial No. 734,076
2 Claims. (Cl. 200—52)

1. An electrical circuit closing switch for use in connection with a film having a notch in its longitudinal edge, said switch comprising a rotatable spool, said spool including electrical conducting axially arranged rollers having flanges



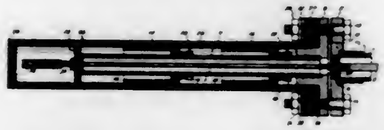
at their outer ends, the film being arranged between the flanges, said rollers including inner and outer sleeves disposed axially inwardly of the flanges and telescoping, the sleeves being radially insulated, the free end of the inner sleeve engaging the companion roller at the closed end of the outer sleeve for closing the circuit, a spring to effect a relative axial movement between the rollers when the flange of one roller enters the notch in the film, and elements having permanent electrical contact with the rollers.

2,451,257

HOISTING MOTOR CONTROL SYSTEM

Ernest B. Thurston, Toledo, Ohio, assignor to The Haughton Elevator Company, Toledo, Ohio, a corporation of Ohio

Application April 4, 1944, Serial No. 529,457
8 Claims. (Cl. 318—258)



1. In a hoist device, a hoist motor of the multi-speed alternating current type having a plurality of stator windings with different synchronous speeds and a drooping characteristic in its low speed, an eddy current brake, and a control switch having at least 4 positions through which it is movable in succession from off position to and from high speed position, such positions being, in the order named, an off position, a position in which the brake and the low speed of the motor are energized, a position in which the low speed of the motor is energized and the brake is de-energized, and a position in which the high speed of the motor is energized and the brake remains de-energized.

2,451,258

SEALED ANTENNA

Bertram Trevor, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application December 1, 1943, Serial No. 512,441
2 Claims. (Cl. 250—33)

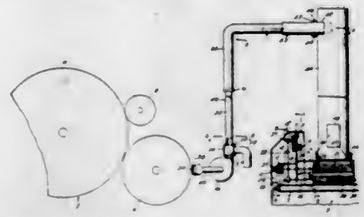
1. An antenna system including a section of coaxial line including an outer shell and in inner conductor, said inner conductor extending from one end of said outer shell a distance equal to approximately one quarter of the operating wave length, the other end of said outer shell bearing a coupling flange for hermetic connection to a further coaxial transmission line, a tubular insulating casing closed at one end and carrying a coupling flange at the other end, and coaxially arranged with respect to said outer shell, said outer shell and inner conductor being maintained in coaxial relationship by insulating spacing washers, said spacing washers having perforations therein to permit the flow of a fluid from said further coaxial line between said outer shell and said inner conductor and between said outer shell and said casing, and means for clamping the coupling flange of said casing in a fluid-tight relationship to the coupling flange of said outer shell.

2,451,259

SLEEVE BOARD HAVING A LOWERED INOPERATIVE POSITION AND HAVING A RAISED AND LOCKED OPERATIVE POSITION

Max Tronic, Worcester, Mass.

Application March 9, 1946, Serial No. 653,323
1 Claim. (Cl. 38—114)



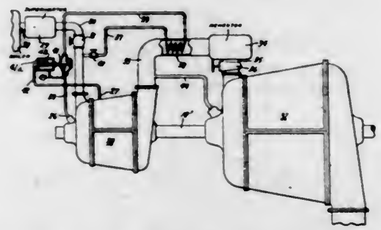
A folding sleeve board comprising a base, a top, links spaced longitudinally of said board and each pivotally connected to both the base and the top, a brace rod pivoted to said top and having a down-turned lower end, said base having a longitudinal groove formed in its upper surface which retains and guides said down-turned brace end, and said base having a vertical locking recess formed therein at the end of said groove which receives and holds said brace end, a coil spring centered on a transverse pivotal part of said brace rod and having an extended arm hooked over said brace rod and effective to hold said brace rod with its down-turned end continually pressed into said groove or recess, and an undercut locking member pivotally secured to said base and manually rotatable to engage and hold said down-turned end in said recess and to thereby lock said top in raised ironing position.

2,451,260

INTERMEDIATE FEED FOR CARDING MACHINES

William G. Tucker, Ludlow, Vt.

Application June 7, 1945, Serial No. 598,103
2 Claims. (Cl. 19—105)



2. The combination with the doffer cylinder of a carding machine, and traverse mechanism of a second carding machine including a pair of feed rolls movable back and forth across the second machine, of an intermediate feed for transferring carded staple from said doffer cylinder to said feed rolls comprising a stationary suction and blower fan, a suction nozzle directly opposed to said doffer cylinder and connected to the suction side of said fan, a tubular drop upstanding from said traverse mechanism over said feed rolls and movable by said mechanism to follow said pair of rolls, and means establishing communication between the blower side of said fan and the upper end portion of said drop while said drop follows said pair of rolls including pipe sections rotatable and slidable one on another, one of said sections having a valved discharge line branching therefrom for by-passing carded staple out of the same directly at said fan.

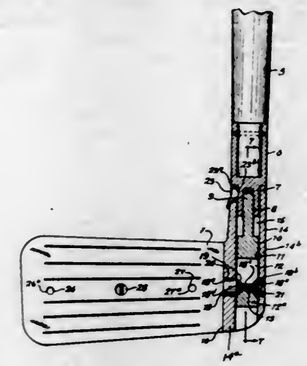
2,451,261

HIGH AND LOW PRESSURE TURBINE ROTOR COOLING ARRANGEMENT

Glenn B. Warren and Arthur R. Smith, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

Application October 29, 1946, Serial No. 706,310
3 Claims. (Cl. 60—64)

3. In an elastic fluid turbine powerplant, the combination of a high pressure turbine and a low pressure turbine each having a casing with an operating medium inlet port and an exhaust port and a cooling fluid inlet port, a cross-over conduit connecting the exhaust port of the high pressure turbine with the inlet port of the low pressure turbine, a reheater in said cross-over conduit, and second conduit means for supplying comparatively low temperature fluid to the cooling fluid inlet of the low pressure turbine from said cross-over conduit between the reheater and the exhaust port of the high pressure turbine.



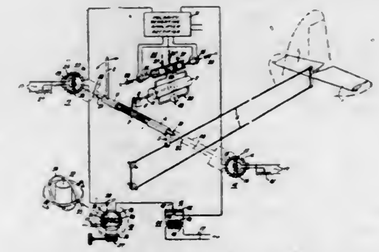
2,451,262

ADJUSTABLE GOLF CLUB

William B. Watkins, Norfolk, Va.

Application April 4, 1945, Serial No. 586,497
2 Claims. (Cl. 273—79)

2. A golf club which includes a handle shaft, a ferrule on one end of said handle shaft, an internally screw threaded boss projecting axially from the ferrule, a housing rotatably mounted on the boss, a bolt slidable longitudinally in said housing, said bolt having a longitudinal elongated slot extending therethrough, the housing having an opening in one side wall communicating with the slot in the bolt, a blade, a stud extending axially from one end of the blade, said stud entering the opening in the housing and extending through the slot in the bolt, peripheral teeth on the stud, teeth on one end wall of the slot for cooperation with the teeth on the stud in holding the blade against turning movement relative to the housing and a threaded shank on the bolt threadedly engaged in the threaded boss whereby when the handle shaft is rotated relative to the housing the bolt will be moved to engage or disengage the teeth thereon with those of the stud and a latch releasably to lock the shaft against turning movement relative to the housing.



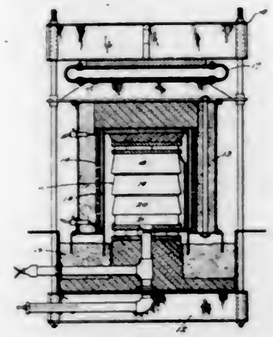
2,451,263

POWER BOOST CONTROL SYSTEM

Donald R. Webb, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application July 3, 1947, Serial No. 758,791
17 Claims. (Cl. 121—41)

2. A control system comprising a control device, a servomotor, an elastic link interconnecting said servomotor and a load to be actuated, means responsive to movement of said control device for producing a first control signal voltage, means responsive to deformation of said elastic link for producing a second control signal voltage, means for algebraically adding said first and second control voltages to produce a resultant voltage and means for controlling said servomotor in accordance with said resultant voltage.



13. In a control system for operating a control surface of an aircraft, a servomotor, an elastic linkage interconnecting said control surface and said servomotor, a first electric signal generator adapted to be actuated by a gyroscope, a second electric signal generator arranged to be actuated in accordance with the elastic deformation of said linkage when force is transmitted thereby between said control surface and said servomotor, and an electric-responsive device responsive to the differential output of said signal generators for controlling said servomotor.

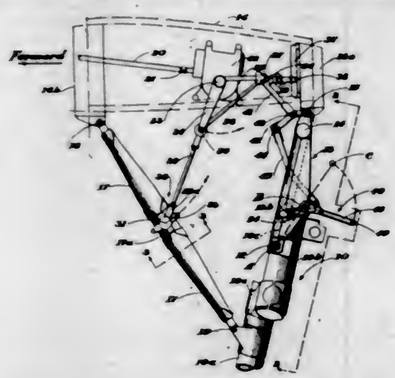
2,451,264

METHOD OF APPLYING POWDERED METAL BRIQUETTES TO CURVED METALLIC SURFACES

Samuel K. Wellman, Cleveland Heights, Ohio, assignor to The S. K. Wellman Company, Cleveland, Ohio, a corporation of Ohio

Original application September 13, 1943, Serial No. 502,226. Divided and this application March 14, 1945, Serial No. 582,756
2 Claims. (Cl. 29—152.2)

1. A method of attaching brake liners to the surface of the flange of a brake drum which comprises forming powdered metal into flat briquets, sintering and bonding each briquet to a thin sheet steel reinforcing member, curving the sintered and reinforced briquets to a shape conforming to the curvature of the surface of the flange, placing said briquets adjacent said surface with each powdered metal briquet disposed between the surface of the flange and its steel reinforcing member, applying opposed pressures to opposite sides of said briquets and flange while simultaneously heating said drum and briquets to the sintering temperature of the latter for bonding said briquets to the surface of the flange and then removing said thin steel reinforcing members from the briquets.



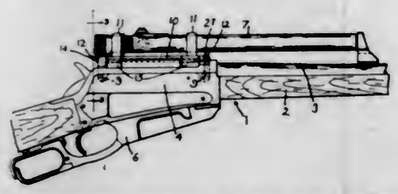
2,451,265

AIRCRAFT LANDING GEAR LOCK

John E. Wescott, Hagerstown, Md., assignor to Fairchild Engine and Airplane Corporation, a corporation of Maryland

Application July 17, 1945, Serial No. 605,523
9 Claims. (Cl. 244—102)

3. In an aircraft landing gear strut, the combination of pivotally connected strut members adapted when aligned to assist in the support of said aircraft, one of said strut members extending to a terminal longitudinally displaced from said pivotal connection to the other said strut member, a locking device comprising pivotally connected links of equal length each pivotally mounted respectively on one of said strut members on the same transverse axis in the region of said extended strut member terminal with their pivotal axes in alignment when the said strut members are aligned, and means for moving the said links to displace the axis of their pivotal interconnection thereof from the plane defined by the axis of pivotal interconnection of the said strut members and the pivotal connection of the remaining link terminals thereto for the locking of the strut members, and for placing the axis of their pivotal interconnection in the same said plane but remote from the axis



of pivotal interconnection of said strut members for the unlocking of said strut members.

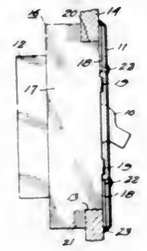
2,451,266

TELESCOPE SIGHT MOUNT FOR SHOULDER ARMS

Leslie E. Whittemore, Dorchester, Mass.

Application June 20, 1945, Serial No. 600,479
3 Claims. (Cl. 42—1)

1. A top ejecting breech loading fire arm having a barrel, a receiver open at the top for the ejection of empty shells, a reciprocating bolt, a telescope holding member having means to support a telescope sight and provided with an elongated hub portion, means pivotally connecting said hub portion to the receiver to turn about an axis parallel to the barrel, said hub portion having a cam groove which has a length no less than the distance the bolt travels in either direction, and a finger carried by the bolt and confined and operating in said groove whereby movement of the bolt in either direction operates through said finger and groove to turn the telescope holding member positively about its axis.



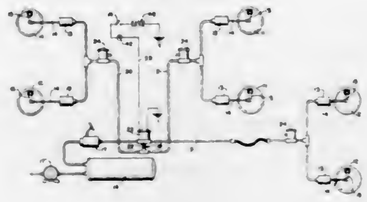
2,451,267

LOCKING SPIDER FOR WALL SWITCHES AND THE LIKE

James W. S. Wilder, Levelland, Tex.

Application April 21, 1947, Serial No. 742,771
3 Claims. (Cl. 174—48)

1. A locking spider for wall switch or outlet boxes and the like comprising a flat plate engageable with a side of the outlet box, said plate having end notches engageable with the wall material beyond the ends of the box and the opening provided therefor in the wall; lateral ears extending from the front edge at the ends of the flat plate engageable with the front surface of the wall material and for holding the back edge of the notch in engagement with the inner surface of the wall material; and an outwardly extending



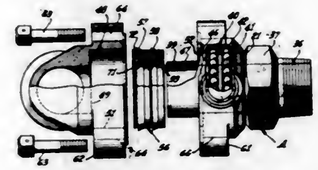
lug on the front edge of the plate bendable inwardly over the outer edge of the outlet box.

2,451,268

FINGER-TIP CONTROL FOR TRACTOR-TRAILER AIR BRAKE SYSTEMS

Theodore H. Affleck, North Hollywood, Calif., assignor, by mesne assignments, to William A. Cooke, Hollywood, Calif.

Application May 13, 1944, Serial No. 535,520
13 Claims. (Cl. 188—3)



1. In an air brake system for a vehicle and trailer having vehicle brake actuating means and trailer brake actuating means adapted to be actuated by air, the combination of: a source of air supply; air valve means for controlling the flow of air from said supply; first conduit means for conducting air from said valve means to said vehicle brake actuating means; second conduit means for conducting air from said valve means to said trailer brake actuating means; a magnetic valve in said first conduit means comprising an inlet port and an outlet port through which the air passes, a closure for said inlet port to prevent a flow of air therethrough, means to normally hold said closure in its open position, an armature connected to said closure, and an electric coil to move said armature in a direction to close said closure; a support projecting from the steering post of the vehicle; electric circuit means having therein said coil and a source of electric current; and switch means at the outer end of said support for closing said circuit so as to energize said coil whereby said closure will be moved into closed position so as to prevent a flow of air through said first conduit to said vehicle brake actuating means so that the operation of said air valve means will result only in the operation of said trailer brake actuating means or whereby air may be trapped in said first conduit means to lock said vehicle brake actuating means in applied condition.

2,451,269

FLEXIBLE TUBING JOINT

Frank M. Allen, Azusa, and Robert E. Snyder, Pasadena, Calif., assignors to The All-Flex Corporation, Los Angeles, Calif., a corporation of California

Application September 22, 1944, Serial No. 555,278
11 Claims. (Cl. 285—97.3)

1. A flexible joint for interconnecting a pair of tubes, comprising a tubular female joint section affixed to one of said tubes and a tubular male joint section revolubly fitted thereinto and affixed to the other of said tubes, bearing means interconnecting said joint sections for relative rotary motion and restraining them against relative axial motion, said sections having an interstice therebetween and at least one of said joint sections having a relieved portion defining an annular recess of predetermined fixed size from which said interstice leads to the exterior of said joint, packing within said recess making fluid-sealing engagement with both of said joint sections, one of said joint sections comprising two portions separable to give access to said packing recess, and means releasably interconnecting said separable portions comprising cooperating flanges on said separable portions, and quickly releasable means rigidly interconnecting said flanges.

2,451,270

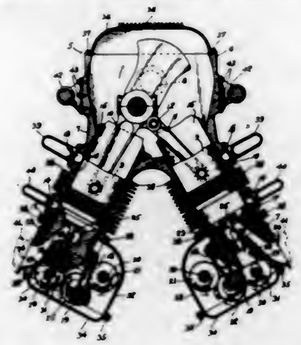
PRINTING WITH VAT COLORS

Chester Albert Amick and Roy Herman Kienle, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application July 31, 1944, Serial No. 547,512
6 Claims. (Cl. 8—70)

1. A color composition comprising essentially a vat-dye, a quinonyl monoamide of a dicarboxylic acid, the quinonyl radical being selected from the group consisting of the beta-naphthaquinonyl and alpha- and beta-anthraquinonyl radicals, and a urea.

2,451,271



V-TYPE INTERNAL-COMBUSTION ENGINE

George L. Balster, Seward, Nebr.

Application August 18, 1945, Serial No. 611,340
1 Claim. (Cl. 123—55)

An internal combustion engine of inverted V-type design comprising a crankcase open at its top, a cover removably secured to the crankcase over the opening therein, a crank-shaft journalled in the crankcase, radially and downwardly disposed cylinders on the crankcase and having longitudinally spaced ports of different areas therein, the larger ones being disposed at points above the heads of pistons in the cylinders when at the limit of their working strokes and the smaller ones being at points above the piston heads when at the limit of their scavenger strokes, sleeve-valves slidably disposed in the cylinders and having main and scavenger exhaust ports aligned with the ports in the cylinders, plugs having their inner portions disposed in the

lower ends of the cylinders in spaced relation to the walls thereof and surrounded by outer portions of the sleeve-valves, said plugs having fuel inlet ports therein leading from their outer sides to the center of their inner ends, piston rings surrounding the inner ends of the plugs and bearing against the inner walls of the sleeve-valves, poppet-valves including stems disposed over the inner ends of the inlet ports with their stems slidably extending into enlarged recesses in the outer surfaces of the plugs, cushioning means disposed in the recesses of the plugs and bearing against the outer ends of the valve-stem,

connecting rods securing the pistons to the crank-shaft, counter-shafts journalled on one side of the plugs, cam-shafts journalled on the plugs over the cushioning means of the poppet-valves, cams on the counter-shafts and bearing on said cushioning means, crank-shafts mounted on the plugs between the cam-shafts and counter-shafts, links connecting said last mentioned crank-shafts to the outer ends of the sleeve valve, casings enclosing the aforesaid elements on the outer ends of the cylinders, and caps removably secured over openings in said casings.

2,451,272

ACTIVATION OF ANION EXCHANGERS IN SUGAR PURIFICATION

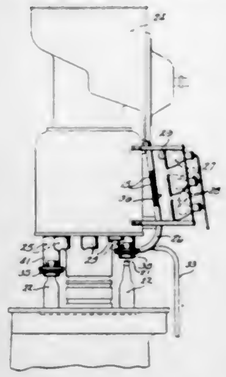
William A. Blann, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application October 27, 1945, Serial No. 625,101

3 Claims. (Cl. 127—46)

1. In a process which comprises removing anions from an aqueous solution containing a sugar by passing said solution through an anion active resin until said resin no longer removes ions to the desired degree, the steps which include thereafter contacting said resin with an aqueous solution containing about 0.1–20% of a strong acid selected from the group consisting of hydrochloric acid and sulfuric acid and regenerating said resin with an alkaline substance.

2,451,273



METHOD OF APPLYING BOTTLE CAPS

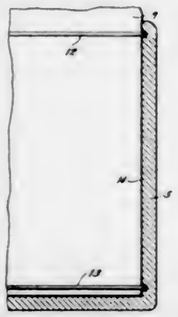
Elvin M. Bright, Whitefish Bay, Wis., assignor to Bright Laboratories, Inc., Whitefish Bay, Wis., a corporation of Wisconsin

Application January 8, 1943, Serial No. 471,782

2 Claims. (Cl. 226—86)

1. The method of sealing a bottle having a bead adjacent its mouth with a cap blank having a disk and an annular flange providing a cavity at one side of said disk, said cap blank being prefabricated from thermoplastic molding material, said method including the steps of inserting a sealing gasket within the cap blank so as to cover the exposed inner surface of the disk, exposing the margin of the flange of said blank to radiant heat directed toward said margin while protecting the top of said blank from heat by the sealing gasket of thermally insulating material positioned in the cavity of the blank, continuing the applica-

tion of radiant heat to the blank flange until the marginal portions of such flange are softened, the top of the blank remaining unsoftened, applying the blank to the mouth of the bottle to be sealed, pressing the top portion of the blank toward the bottle mouth sufficiently to compress the gasket to seal the bottle mouth, and molding about the bead of the bottle the softened marginal portions of the blank while maintaining the sealing pressure on the gasket.



2,451,274

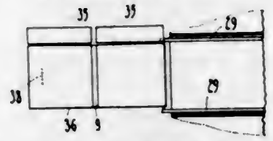
HANDBAG CASING STRUCTURE

Lorena B. Carder, Orlando, Fla.

Application November 7, 1946, Serial No. 708,252

2 Claims. (Cl. 150—28)

1. A holder for handbags comprising a rigid container of transparent material, a handbag of flexible material, positioned in the container, and expanding means in the handbag securing the sides of the bag to the inner walls of the container, said container having an open top and said handbag including carrying means extending outwardly of the top of the container for carrying the container and handbag as a unit.



2,451,275

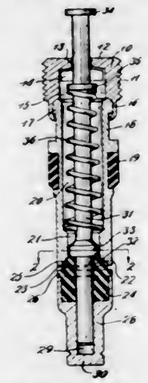
TABLE ASSEMBLY FOR AUTOMOBILES

John M. Cercownay, Fort Lauderdale, Fla.

Application January 30, 1947, Serial No. 725,295

3 Claims. (Cl. 311—21)

2. The combination with a storage compartment, of a pair of laterally-spaced guide rail channels arranged therein, a pair of complementary shafts slideable in said channels, a main panel carried by said shafts and movable therewith for withdrawal from said compartment, a pair of guide shoes secured to said panel and adapted to slideably engage said channels in movement therealong, flanges formed on said shoes, limit stops formed on said channels and engageable by said flanges to limit the movement of said panel in withdrawal from said compartment, a shelf panel pivoted to said main panel along the side edge thereof and foldable thereover, means to support said shelf panel at the outer end thereof, a cover panel pivotably connected to said main panel endwise thereof, a link panel interposed intermediate said cover and said main panels, means carried by said cover and main panels and co-operating with said link panel to rigidly support said panels in substantially a common plane when in extended position, said guide rail channels having upwardly inclined terminal portions at the outer ends thereof to effect the elevation of said main panel upon withdrawal thereof from said compartment and said terminal portions being hingeably connected to said channels to permit the pivotable retraction thereof in relation to said channels.



2,451,276

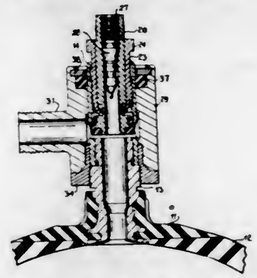
VALVE INSIDES

John C. Crowley, Cleveland Heights, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

Application April 27, 1944, Serial No. 532,963

4 Claims. (Cl. 251—27)

1. A valve insides or core comprising a barrel having at one end a conical valve seat, a valve pin movable through said barrel, and a valve member formed of rubber-like material mounted on said pin and having at one end a conical portion adapted to engage said seat, said valve member having a central opening therein extending from the small end of said conical portion inwardly of the member and which opening increases in diameter from its inner end toward the small end of said conical portion with its minimum diameter substantially equal to the external diameter of said pin, said pin extending into said opening with clearance normally existing between it and said conical portion of said member thus increasing the flexibility of said portion, said portion having a degree of taper so related to the degree of taper of the valve seat that it has a small area contact with said seat in low pressure installations of said insides or core and a large surface area contact with said seat in high pressure installations of said insides or core, at which latter time said conical portion of the valve member is flexed into contact with said valve pin substantially throughout the length of said opening.



2,451,277

VALVE STEM AND VALVE

John C. Crowley, Willoughby, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

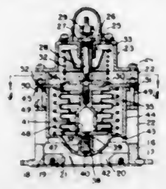
Application March 18, 1946, Serial No. 655,085

6 Claims. (Cl. 152—415)

1. A device of the character described comprising, a tubular stem means having a passageway extending longitudinally therethrough and an opening extending through the wall thereof and communicating with the passageway, means on the inner end of said stem means for connection thereof to an inflatable article with the passageway therethrough in communication with the interior of said article, a tubular member extending into the outer end of the passageway through said stem means and movable longitudinally therein, sealing means on a portion of the exterior surface of said tubular member within said stem means, a sleeve member surrounding a portion of said tubular member and extending into the outer end of the passageway in said stem means, means on the outer end of said sleeve member for rotating it, and means interconnecting said stem means, sleeve and tubular member so constructed and arranged that rotation of the sleeve produces longitudinal movement of the tubular member within the stem means to selectively seal and unseal the opening in the stem means.

2,451,278

CABIN PRESSURE REGULATOR VALVE



Harold Cruzan, Los Angeles, Calif.

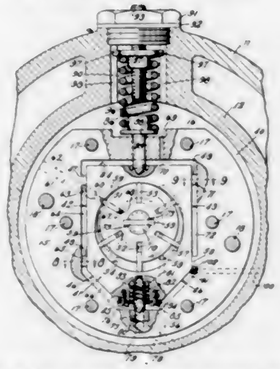
Application July 12, 1944, Serial No. 544,599

13 Claims. (Cl. 98—1.5)

6. In mechanism for controlling and maintaining pressure within a cabin having an outlet port for connecting the cabin interior with the exteri-

or: a valve member in movable relation to said port externally thereof; yielding means urging the valve toward closed position and yielding to permit the valve to open under pressure of air on the port side thereof; and pressure responsive means directly connected to said valve member

independently of said yielding means and disposed externally of said cabin and responding to variations in pressure of the air outside of said cabin for varying the position of said valve relative to said port as the pressure of air outside said cabin varies.



2,451,279

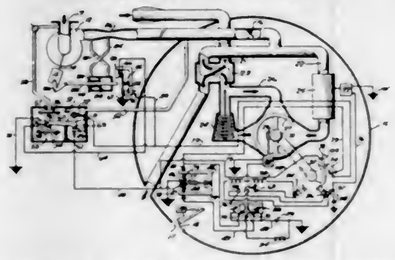
VARIABLE CAPACITY VANE PUMP FOR OIL BURNERS

Warren H. De Lancey, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, Springfield, Mass., a corporation of Massachusetts

Application August 4, 1944, Serial No. 548,021

3 Claims. (Cl. 103—120)

1. A variable capacity pump, comprising, a casing having a cylinder formed by a peripheral wall and two parallel end walls, a pump stator slidably mounted in said cylinder and engaged with said end walls, said stator having a cylindrical opening therethrough, a cylindrical rotor mounted in said opening, the end faces of said rotor being rotatably engaged one with each of said end walls, vanes movably mounted in the rotor and contacting the periphery of said opening, a drive shaft extending through one end wall into said opening and fixed to said rotor, a spring for moving said stator in said cylinder in one direction and tending to hold the stator in a position such that said opening and rotor are in eccentric relation, said stator having top, bottom and two side walls and the peripheral wall of the cylinder including top, bottom and two side walls each spaced from the corresponding wall of the stator, and inlet and outlet ports in said opening located one near one side wall and one near the opposite side wall of the stator, means for admitting liquid under inlet pressure to the space between the top walls and the space between the side walls adjacent the inlet port, means for admitting liquid under outlet pressure to the space between the other pair of side walls and to the space between the bottom walls, means preventing communication from the space between the top walls to the space between the side walls adjacent the outlet port, and means preventing communication from the space between the bottom walls and the space between the side walls adjacent the inlet port.



2,451,280

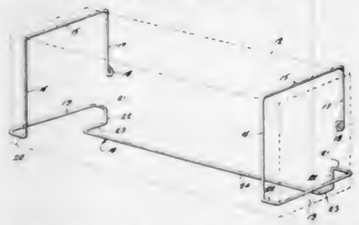
CONTROL SYSTEM

Bruce E. Del Mar, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif.

Application June 10, 1946, Serial No. 675,795

18 Claims. (Cl. 257—3)

9. In an aircraft having a cabin adapted to be pressurized: an air compressor; a duct leading from said compressor, said duct being formed with a plurality of branches leading to said cabin; an expansion turbine in one of said branches; a normally inoperative heating means in another of said branches; a valve for selectively directing air through said branches; temperature responsive means for actuating said valve to direct air through one or the other of said branches depending upon the temperature of the air within the cabin; and means for rendering said heating means operative upon movement of said valve to a position in which air is directed through the branch containing said heating means.



2,451,281

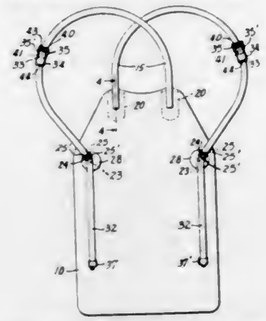
RETAINER AND DISPENSER FOR SANITARY TISSUES

Henry L. Elfner, Indianapolis, Ind., assignor of one-half to Emil H. Stein, Marion County, Ind.

Application March 29, 1946, Serial No. 658,043

4 Claims. (Cl. 248—311)

4. A universally adaptable retainer or holder for sanitary tissues, comprising a single strand of wire bent to provide a bottom portion formed of the intermediate portion of the strand and corresponding end portions forming the front, sides, top and rear portions of the retainer or holder, and means associated with said rear portions for attaching the retainer to a supporting surface.



2,451,282

X-RAY PROTECTIVE DEVICE

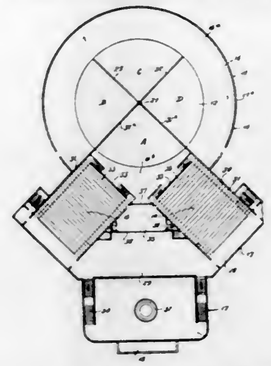
Adolph H. Feibel, Cincinnati, Ohio, assignor to The Kelley-Koett Manufacturing Co., Inc., Covington, Ky., a corporation of Ohio

Application December 16, 1943, Serial No. 514,473

15 Claims. (Cl. 250—108)

5. An X-ray protective apron comprising a body portion composed of a flexible material resistant to X-ray penetration, straps for supporting said apron from the shoulders of the operator, each strap having one end thereof connected adjacent one side of the upper end of the apron, a strap supporting loop member connected adjacent each side of the apron, each of said attached straps passing across the other and being looped through the supporting loop member at the opposite edge of the body whereby the straps cross the operator's back diagonally when in use, adjustable means carried by the end of each of the straps beyond the looped portion which is doubled through the supporting loop member therefor, and having means constructed for adjustably receiving the main portion of the strap and cooperating means for holding the main portion and said end portion of the strap in adjusted position to fit the body of the operator, a clasp member slidably mounted within the doubled portion of each of said straps said clasp members being constructed for cooperative connection to hold the doubled ends of the two straps together in substantially horizontal position across the back of the operator, and each clasp member being constructed to provide stop means for cooperating with a stop portion of the cooperating loop member for preventing the doubled end of each strap from passing through its said supporting loop member when the clasp members are unfastened.

2,451,283



BROADCASTING STUDIO

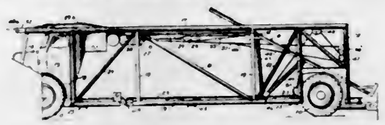
Joseph K. Gannett, Montclair, N. J., and Robert Smith, Jr., Richmond Heights, and Brown W. Saveland, Cleveland Heights, Ohio, assignors to The Austin Company, Cleveland, Ohio, a corporation of Ohio

Application November 12, 1943, Serial No. 509,996

7 Claims. (Cl. 20—1.12)

1. In a building of the character described, a stage having a substantially circular floor and upright walls dividing the same substantially into quadrants, said stage being rotatable for moving one of said quadrants to a viewing position, and a pair of observation rooms facing said viewing position and extending in diverging relation away from the stage, said observation rooms having front openings directed toward said viewing position and the latter being common to both rooms, the outer side walls of said observation rooms extending at substantially right angles to each other and being located for substantial alignment with the upright walls of the stage quadrant occupying said viewing position, and curtains at said front openings controlling the

view from the respective rooms of the stage set occupying said viewing position and enabling said rooms to be filled and emptied alternately in timed relation to the movement of the successive stage sets to the viewing position.

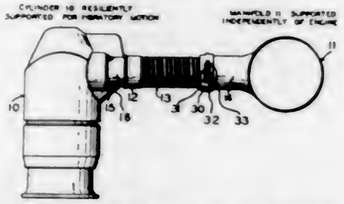


2,451,284

AUTOMOBILE TRANSPORTING TRUCK

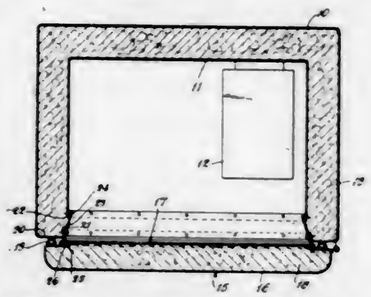
Edward V. Garnett, Denver, Colo.

Application March 10, 1947, Serial No. 733,534



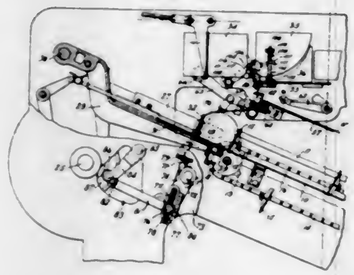
6 Claims. (Cl. 296—1)

4. An automobile transporting truck having a wheel supported chassis frame, means for supporting three automobiles comprising, an elongated frame supported from the chassis frame, two wheel ramps pivoted, at their front ends to the elongated frame, extending rearwardly towards the rear truck wheels, side frames extending vertically from the elongated frame, a plurality of transverse beams interconnecting the tops of the side frames near their front ends, two stationary wheel ramps secured to said beams, in spaced parallel relation, their rear ends terminating at the rearmost transverse beam, an assembly comprising, two spaced parallel wheel ramps, positioned to the rear of the stationary ramps, in alignment therewith, the front end of said ramp assembly being pivotally connected with the rearmost transverse beam, a beam interconnecting the rear ends of the ramp assembly, the ramp assembly and the beam being tiltable about the pivots, a second ramp assembly positioned to the rear of the upper tiltable ramp assembly and pivotally connected therewith at a point spaced from the ends of the said second ramp assembly, for movement from a downwardly and rearwardly inclined position to a substantially horizontal position in which the upper ends of the said second ramp assembly overlap the rear ends of the ramps of the first mentioned upper pivoted assembly, means for tilting the second mentioned upper ramp assemblies, means interconnecting the rearmost



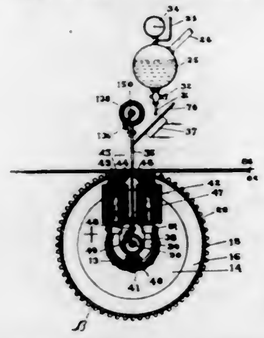
upper ramp assembly with the rear ends of the first mentioned pivoted ramps, whereby the further upward movement of the two upper pivoted ramp assemblies will impart a corresponding tilting movement to the ramp carried by the rectangular frame.

2,451,285
EXHAUST STRUCTURE FOR RESILIENTLY MOUNTED ENGINES
William C. Heath and Paul A. Pitt, San Diego, Calif., assignors to Solar Aircraft Company, San Diego, Calif., a corporation of California
Application December 3, 1943, Serial No. 512,814
3 Claims. (Cl. 138—51)



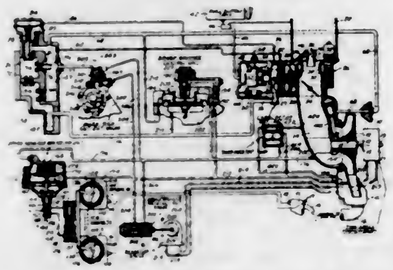
1. In an exhaust system of an internal combustion engine: a pair of spaced conduit members separately supported for relative vibratory motion and a flexible conduit interconnecting said two members, said flexible conduit consisting of a helical element, successive turns of which overlap and interlock in sliding relation with each other, the connection between said flexible conduit and one of said members including a slip joint providing free rotational and longitudinal movement of the flexible conduit relative to said one member.

2,451,286
REFRIGERATOR CONSTRUCTION HAVING MEANS TO RESTRICT MOISTURE IN THE WALLS OF THE CABINET
Clark C. Heritage, Cloquet, Minn., assignor to Wood Conversion Company, St. Paul, Minn., a corporation of Delaware
Application August 11, 1944, Serial No. 548,946
10 Claims. (Cl. 62—89)



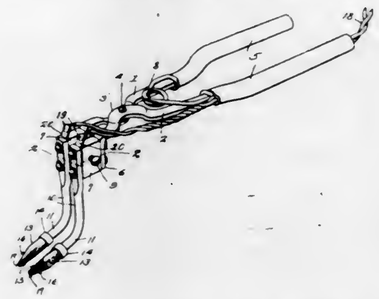
1. A refrigerator comprising a cabinet of material and construction which provides wall area substantially impervious to the transmission of water vapor, a food compartment located within said cabinet and spaced from the interior walls of the cabinet by a space for insulation, thermal insulation in said space of material capable of receiving condensation of water vapor which may be present in said space, said cabinet and said compartment having registering openings for access to said compartment from outside said cabinet, a door mounted on the assembly of said cabinet and compartment to swing for closing said opening in the cabinet, space-confining strip material serving as part of the confining wall area for said space and insulation therein and connecting the walls of said cabinet and said compartment at their openings, said material being in communication with the region within said compartment when said door is in closed position, and artificial refrigeration means within said compartment for cooling the interior thereof, the wall area confining said insulation and separating the same from communication with the food compartment being substantially impervious to the flow of air out of and into said insulation by the suction and pressure of respectively opening and closing said door, and at least a portion of said wall area being transmissive of water vapor for the flow of water vapor from said insulation to the interior of the compartment for effecting the dehydration of said insulation as to any water vapor leaking in said space, the cooling action of said refrigerating means effecting such dehydration when said door is closed.

2,451,287
WRAPPER FEED FOR WRAPPING MACHINES
William Hoppe, Longmeadow, Mass., assignor to National Bread Wrapping Machine Co., Springfield, Mass., a corporation of Massachusetts
Application April 8, 1944, Serial No. 530,152
8 Claims. (Cl. 93—2)



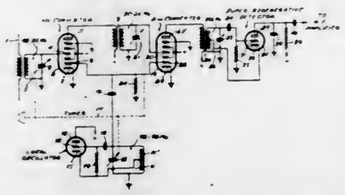
1. A wrapping machine having a substantially horizontal wrapping and discharge channel, an infeed conveyor located in substantially the same plane vertically below said channel and having an upwardly inclined terminal portion, a carrier pivotally mounted and driven to oscillate between the terminus of the conveyor and the terminus of the channel, a supply for a web of wrapping material located between the conveyor and the channel, a rotating web feeding roll mounted between the conveyor and the channel adjacent the carrier and operating to feed the web when the latter is drawn tightly around it, a second rotatable roll positioned between the feeding roll and the carrier to maintain the web in an arc surrounding the feeding roll during the movement of the carrier from the conveyor to the channel, flights on the conveyor positioned to convey an article therealong, means for driving the conveyor intermittently in such timed relation as to carry articles successively onto the carrier when the latter is adjacent the terminus of the conveyor and to hold the flight conveying each said article in position to act as an article guide as the carrier moves away from the conveyor.

2,451,288
METHOD OF AND MEANS FOR PRINTING MULTICOLOR IMAGES BY ELECTRIC DISCHARGE
William C. Huebner, New York, N. Y.
Application January 15, 1944, Serial No. 518,470
11 Claims. (Cl. 101—426)



1. The herein described improvement in the art of producing a predetermined printed design upon a surface of print receiving material and which includes moving said material relative to an ink discharging element with said surface of the material spaced therefrom, creating an electro field of force extending from said element through said material and simultaneously causing certain predetermined lines of force of said field of force to deposit ink directly on said surface of the material in areas corresponding to the image to be printed thereon while intercepting the remaining lines of force of said field of force adjacent the opposite and remote surface of the material to render the same ineffective and thus to cause no ink to be deposited on the remaining non-image areas of said surface of the material.

2,451,289
IGNITION CONTROL
Harold T. Jarvis, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application June 25, 1945, Serial No. 601,436
14 Claims. (Cl. 123—117)

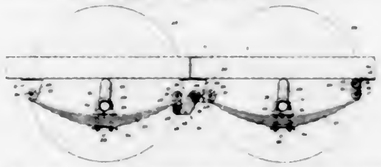


1. In an aircraft engine having an adjustable ignition timing system, timing means for automatically advancing and retarding the ignition timing in accordance with variations in engine power output, and means for rendering said timing means operative or inoperative to advance the timing in accordance with changes in the condition of the engine charging fluid and independently of variations in said engine power output.

2,451,290
ELECTRIC SOLDERING TOOL
C. Paul Kephart, Jersey City, and Walter Erich Jerichow, Far Hills, N. J.
Application July 27, 1945, Serial No. 607,280
3 Claims. (Cl. 219—26)

1. An electric soldering tool including levers pivotally connected between their ends, handles at one end of each lever, insulating blocks joined to the other ends of the levers, yielding means for holding the blocks normally pressed toward each other, arms of conducting material secured at one end to the blocks and extended therefrom perpendicularly to the levers, said arms being substantially parallel, the other ends of the arms being respectively formed as fingers, and extended from the arms at an oblique angle thereto, the tips carried by the respective fingers, and means for electrically connecting the arms to the respective sides of an electric circuit.

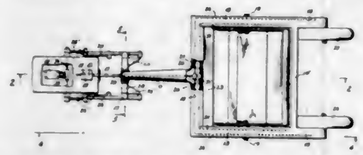
2,451,291
SUPERREGENERATIVE RECEIVER
Winfield R. Koch, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 8, 1943, Serial No. 501,538
5 Claims. (Cl. 250—20)



1. In combination with a pair of cascaded converters, a common source of locally-produced oscillations, means for supplying to the first of said converters signals of a predetermined high frequency, means for applying oscillations from said common source to both said converters for mixing with signals, said common source being tuned to a frequency which is different from the signal frequency by a predetermined frequency value, said second converter having an input circuit tuned to a frequency equal to the difference between said signal frequency and oscillation frequency, a super-regenerative detector having an input circuit coupled to the output of said second converter, the detector input circuit being tuned to a frequency equal to the sum of the frequency of said locally-produced oscillations and said difference frequency.

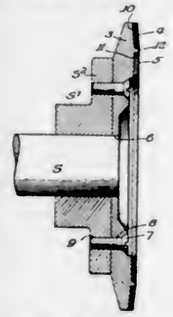
2,451,292
DARK TRACE SCREEN
Humboldt W. Leverenz, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
No Drawing. Application December 20, 1943, Serial No. 515,050
4 Claims. (Cl. 250—164)

1. An electric discharge device containing a film consisting of a mixture sensitive to the impact of electrons, said mixture consisting mainly of potassium chloride and a minor proportion of magnesium chloride.



2,451,293
SUSPENSION FOR TANDEM WHEELED VEHICLES
Leland E. Long, Dayton, Ohio, assignor to The Fayette Manufacturing Company, Fayette, Ohio, a corporation of Ohio
Application June 6, 1946, Serial No. 674,775
7 Claims. (Cl. 280—104.5)

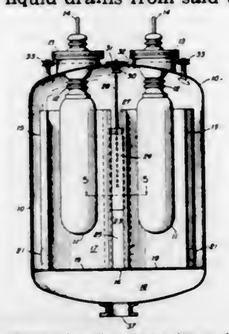
1. A suspension mechanism for a tandem-wheeled vehicle having a relatively rigid body structure and a pair of wheel-carrying axles arranged in parallel-spaced relation to one another and extending transversely of the body structure to provide forward and rear axles, comprising, an elliptical spring for each end of each axle thereby providing a forward and a rear spring for each side of the vehicle, means relatively rigidly securing each axle to and transversely of the mid-portion of each of its springs, means anchoring the forward ends of the forward springs to said body structure for pivotal movements on relatively fixed axes extending transversely of the body structure, a rocker arm pivotally secured intermediately of its ends to each side of said body structure between said forward and rear axles for rocking movements about axes extending transversely of the body structure, means anchoring the forward ends of the rear springs directly to their respectively adjacent rocker arms on axes extending transversely of said body structure and located rearward of the rocker arm pivots, means including shackles pivotally connected to the rear ends of the forward springs on axes normally lying in substantially the same horizontal plane as said rocker arm pivot and pivotally connected to the respectively adjacent rocker arms forward of the rocker arm pivots, and shackle means pivotally connecting the rear ends of the rear springs to said body structure on axes extending transversely of said structure.



2,451,294
POWER-OPERATED SCRAPER
Leland T. McGee, Los Angeles, Calif., assignor, by direct and mesne assignments, to Hydro-Speed Equipment Co., a corporation of California
Application August 8, 1944, Serial No. 548,596
8 Claims. (Cl. 37—129)

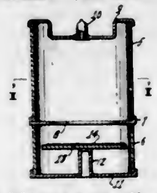
7. In combination with a power tractor having pulling and lifting members for coupling implements thereto, with means for raising and lowering the same, a power operated scraper having a tongue-like member to be coupled to said pulling and lifting members, and additional hitching means extending from the front of the scraper to the underside of said tractor and including a coiled spring therein, whereby to give toggle

action to said tongue-like coupling with said tractor, said coiled spring taking much of the pull strain.



2,451,295
ABRASIVE WHEEL
Leopold H. Metzger and Vincent J. Fantozzi, Chicago, Ill., assignors, by mesne assignments, to Super-Cut, Inc., Chicago, Ill., a corporation of Illinois
Application November 8, 1944, Serial No. 562,435
1 Claim. (Cl. 51—209)

As a new article of manufacture, an abrasive wheel adapted to grind the tips of cutting tools and comprising a rigid disc-like body adapted for connection to a power driven shaft, an outer annular band mounted fixedly on one side face of the body and having diamond particles of certain mesh, and an inner annular band mounted fixedly on said one side face of the body and having diamond particles of different mesh, the outer side face of one of the two bands being frusto-conical and disposed at an acute angle to the outer side face of the other band, and the outer edge of the outer side face of the inner band being spaced inwards a small distance from the inner edge of the outer side face of the outer band.

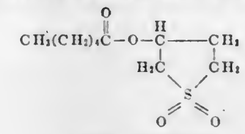


2,451,296
ELECTRIC HOT-WATER HEATER
Harvey C. Mittendorf, East Orange, N. J., assignor to Combustion Engineering Company, Inc., New York, N. Y., a corporation of Delaware
Application January 3, 1947, Serial No. 720,115
6 Claims. (Cl. 219—40)

1. In an electric heater, the combination of an enclosure having in the lower portion thereof an inlet for admitting liquid and further having in communication with a side portion thereof a vertically-extending passage through which liquid may flow out of the enclosure, a vertically extending electrode within said enclosure for passing through said liquid therein heating current which varies with the liquid level around the electrode, a gate for said outlet passage covering the lower portion thereof and being adjustable also to cover progressively higher portions, and means for adjusting said gate up or down whereby to select the effective level from which said liquid drains from said enclosure and

thereby control the temperature to which that liquid is heated by current from said electrode.

2,451,297
RUGGED GASEOUS DISCHARGE TRIODES
Arnold R. Moore, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application August 1, 1944, Serial No. 547,618
2 Claims. (Cl. 250—27.5)



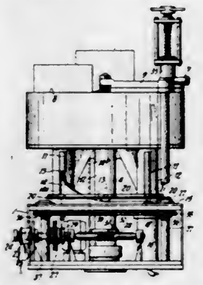
1. A controllable gaseous discharge tube comprising a cylindrical glass envelope containing gas at low pressure, a metal cap sealed to and hermetically closing each end of said envelope, one of said caps having a central pedestal projecting into said envelope and extending above the plane of the glass-to-metal seal of said cap, a flat oxide coated cathode comprising a flat rigid metal disc affixed to the inner end of said pedestal and extending substantially parallel to said cap and a coating of alkaline earth metal oxide on the side of said disc exposed to the other cap with fine particles of quartz distributed through and on the surface of said coating, and a control electrode comprising a metal ring embedded in the wall of said envelope and projecting into the interior of said envelope with its inner edge between said cathode and the other end of said envelope.

2,451,298
HYDROGENATION OF UNSATURATED CYCLIC SULFONES
Rupert C. Morris and Norten C. Melchior, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application November 27, 1943, Serial No. 512,048
7 Claims. (Cl. 260—329)

7. In a process for the production of sulfolane compounds wherein a sulfolene compound is brought in contact in the liquid state, with hydrogen in the presence of an active nickel hydrogenation catalyst and at a temperature below that at which said sulfolene compound undergoes thermal decomposition, the improvement which comprises effecting said catalytic hydrogenation in the presence of sodium hydroxide employed in an amount equal to between about 0.02% and about 5% by weight of the sulfolene compound treated.

2,451,299
SULFOLANYL ESTERS
Rupert C. Morris, Berkeley, and Edward C. Shokal, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application August 1, 1945, Serial No. 608,375
3 Claims. (Cl. 260—329)

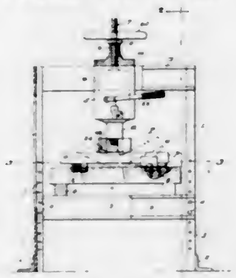
1. 3-sulfolanyl caproate having the structure



2,451,300
BABY GARMENT
Mary Lucile Neal, Baton Rouge, La.
Application July 15, 1946, Serial No. 683,644
11 Claims. (Cl. 128—284)

1. In a baby garment, the combination of a diaper and fasteners for securing the diaper in the wearing position, each including oppositely disposed fastening hooks, the diaper having provisions extending diagonally across its related corner portions for receiving the fastening hooks.

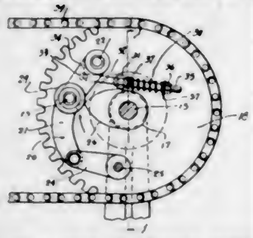
9. A diaper-type garment comprising a substantially rectangular fabric body, a pocket provided in each of the corners thereof, said pockets opening through the front face of the diaper and away from the corners and being arranged so that their mouths extend diagonally across said corners, whereby the pockets in the corners on the same sides of the diaper are oppositely disposed in the wearing position thereof.



2,451,301
APPARATUS FOR THE MOLDING OF BUTTER AND LIKE PRODUCTS
Joseph O'Connell, Kensington, Victoria, Australia
Application June 23, 1945, Serial No. 601,210
In Australia May 18, 1944
20 Claims. (Cl. 31—44)

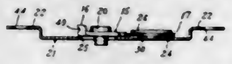
1. Apparatus for continuously and automatically moulding butter or like mouldable prod-

ucts, comprising a multiple number of moulds for the reception of the mouldable product, means for moving said moulds in unison and succession to and from mould filling and discharging positions, means at the filling position for charging each mould in sequence with a mouldable product under pressure, a movable element in each mould yieldingly opposing the charging of the mould and resultantly displaceable to a predetermined position commensurate with a required mould filling, and means actuatable by each movable element on assuming the displaced position to actuate said first mentioned means and thereby move the moulds to remove a filled mould from the filling position, to bring the successive empty mould to the filling position and to impel a previously filled mould to the discharging position.



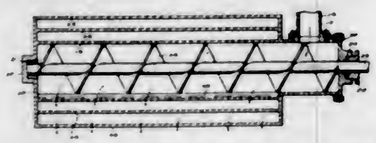
2,451,302
PIPE-BENDING MACHINE
Alva E. Peters, Olney, Ill.
Application March 14, 1946, Serial No. 654,265
2 Claims. (Cl. 153—38)

1. In a pipe bending machine, a frame, the frame including upstanding standards, spaced parallel die supporting members carried thereby, and means for effecting vertical adjustment of the die supporting members relative to the standards, bottom forming dies, cross-pins carried by said dies and resting upon the die supporting members, said cross-pins being non-connected to the die supporting members, whereby to permit free pivoting of the dies upon said members and free sliding movement of each die relative to said members, stop means adjustable longitudinally of the disc supporting members and adapted to engage the outer ends of the dies, whereby to limit movement of the dies away from each other, said dies having pipe receiving seats for supporting a pipe bridging the space between the dies, an upper forming die positioned over the space between the bottom forming dies and having a pipe receiving seat in its lower surface, and means for forcing the top forming die against the supported pipe to bend the pipe to the longitudinal configuration of the seat in said top forming die.



2,451,303
MECHANICAL MOVEMENT
Charles H. Petskeyes, Davenport, Iowa, assignor to Gellman Manufacturing Company, Rock Island, Ill., a corporation of Illinois
Application June 9, 1945, Serial No. 598,464
6 Claims. (Cl. 74—63)

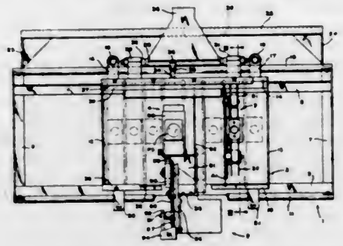
1. In a mechanical movement, the combination with a stationary shaft, of a driven member freely rotatable on the shaft, a driver member freely rotatable on the shaft, a cam fixed to said shaft means providing a connection between said members and including a cam engaging member adapted to engage said cam, said cam engaging member and said cam adapted to cooperate with each other whereby to advance said driven member with respect to said driver



member as said cam engaging member passes from the low point to the high point of said cam and to provide a period of dwell for said driven member as said cam engaging member passes from the high point of said cam to the low point thereof.

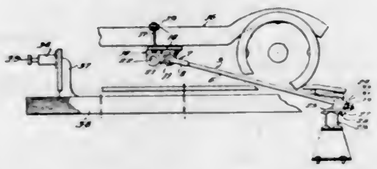
2,451,304
IDLER SYSTEM FOR PHONOGRAPH TURNTABLE DRIVES
Emmor V. Schneider, Alliance, Ohio, assignor to The Alliance Manufacturing Company, Alliance, Ohio, a corporation of Ohio
Application August 23, 1947, Serial No. 770,279
4 Claims. (Cl. 74—206)

1. In a phonograph turntable drive, a motor mounting plate having an aperture therein, a slightly raised area surrounding said aperture, a turntable provided with a depending annular flange, a motor suspended from the motor mounting plate, a shaft on the motor extending upward through the aperture in the motor mounting plate, a drive pulley upon the upper end of the motor shaft, a hollow rivet located in said aperture, a head on the rivet accurately spaced above said raised area, said shaft being located through said hollow rivet and spaced therefrom, a flat smooth idler plate having a portion accurately sized for a sliding fit between said raised area and the rivet head and slidably pivoted upon the rivet whereby the only contact between the idler plate and the motor mounting plate is at said raised area, an idler pulley journalled upon the idler plate and means for urging the idler pulley into contact with the drive pulley and the turntable flange.



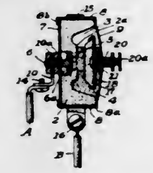
2,451,305
PRESSURE HEAD BOX FOR PAPER MACHINES
William P. Shannon, Port St. Joe, Fla.
Application September 12, 1945, Serial No. 615,866
8 Claims. (Cl. 92—44)

7. A pressure head device for a paper machine including a casing, a central chamber transverse



said casing, means for feeding paper pulp axially into said chamber, a longitudinal discharge slot in said chamber, power operated pressure means for delivering paper pulp from said chamber through said discharge slot, a spiral fin surrounding said chamber between said chamber and casing and forming a spiral delivery conduit communicating with said discharge slot, a longitudinal slot forming a discharge orifice from said conduit and an adjustable slice controlling the delivery from said orifice.

2,451,306
PICTURE FILM STRIP PROJECTION APPARATUS
Thomas U. Sisson, Detroit, Mich., assignor to Training Devices, Inc., Detroit, Mich., a corporation of Michigan
Application December 29, 1945, Serial No. 638,131
12 Claims. (Cl. 88—28)

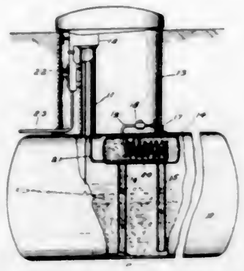


1. A multiple projection apparatus comprising in combination, a frame, a directional light source in fixed relation with the frame, a plurality of projection units, each unit comprising spaced film reels and a lens assembly and indexing means for moving a length of film across the path of the lens, connections joining the film reels with the indexing means for imparting increments of rotary motion to said reels, a carriage for supporting the projection units, a track attached to the frame for supporting the carriage, and means for moving the carriage along the track transversely of the directional light source for selectively positioning the lens of one of the projection units in alignment with the light source.

2,451,307
CLAMP FOR FRAME STRAIGHTENING MACHINES
Chester South, Rock Island, Ill., assignor to Bear Manufacturing Company, Rock Island, Ill., a corporation of Delaware
Application April 15, 1947, Serial No. 741,582
2 Claims. (Cl. 153—32)

1. In a clamp for use with frame straightening machines embodying side rails and a transverse abutment member, an abutment bracket, a hook portion provided on the outer end of said abutment bracket for detachable engagement with the transverse abutment member of a frame straightening machine, a pair of bosses disposed in spaced relation and projecting upwardly from said abutment bracket to define a recess, a strain bar having its one end threaded and mounted in said recess, a collar slidably mounted on the threaded end of said strain bar for engagement against said bosses, a pair of lugs projecting rearwardly from their respective bosses for engagement with said collar to prevent accidental outward displacement of said strain bar from said recess, an adjustment nut threaded onto said strain bar to move said collar into operative position against said bosses and under said lugs, and a frame clamp pivotally connected to the other end of said strain bar.

2,451,308
ELECTRICAL DEVICE
Werner I. Staaf, Rennerdale, Pa.
Application May 29, 1944, Serial No. 537,933
2 Claims. (Cl. 200—152)



1. A positive displacement mercury switch comprising a block of dielectric material and a housing member comprised of electrical conducting material assembled with the block to form an enclosed well, a recess formed in said block of dielectric material to open into said well, a body of mercury in said well and recess, said block including a portion forming a seat that encompasses said recess, an electric contact element exposed in said recess to said body of mercury and extending outward from the block to form a circuit terminal, and a plunger of dielectric material movable in said well into and from position on said seat and adapted when positioned on said seat to provide an electric barrier between said contact and the mercury in said well in contact with the electrical conducting material of said housing.

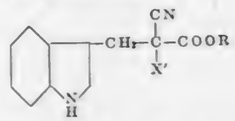
2,451,309
VAPORIZER FOR TWO-STAGE LIQUEFIED PETROLEUM GAS DISPENSING SYSTEMS
Loyd J. White, San Antonio, Tex., assignor to Southern Steel Company, San Antonio, Tex., a corporation of Texas
Application December 28, 1944, Serial No. 570,170
2 Claims. (Cl. 62—1)

1. In a liquefied petroleum gas dispensing system of the character described, an underground pressure storage tank adapted to be charged with a mixture of liquefied gases; a heat exchanging chamber, in the form of a small tank arranged in the vapor space of said storage tank; a pair of spaced depending pipes connected to the chamber and communicating with the bottom portion of the storage tank; an eduction pipe connected to the upper portion of the chamber and carrying a first-stage pressure reducing regulator; a vaporizing coil within the chamber connected to the eduction pipe to receive the educted fuel passing through said regulator; eduction pipe extending through the upper portion of said storage tank at spaced points and serving to hold

said small tank in place; a vapor outlet conduit connected to the coil; and a second-stage pres-

sure reducing regulator connected to said vapor delivering conduit.

2,451,310



ALKYL ESTERS OF α-ACYLAMINO, α-CYANO, β-(3 INDOLE)-PROPIONIC ACID

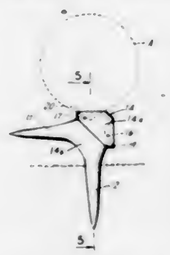
Noel F. Albertson, East Greenbush, and Sydney Archer and Chester M. Suter, Albany, N. Y., assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application March 2, 1944, Serial No. 524,776

1 Claim. (Cl. 260—319)

An ester having the formula

where X' is acylamino and R is lower alkyl.



2,451,311

GOLF TEE

Harry N. Andreasen, Sr., Chicago, Ill.

Application January 22, 1947, Serial No. 723,509

1 Claim. (Cl. 273—33)

A golf tee comprising a rigid one piece body including a head having rounded sides, spaced right angularly disposed ends and a rounded top between and spacing the ends from each other, the said ends having recessed tapering sockets therein, the area of said sockets being entirely within the head, said sockets terminating in apexes which are in spaced relation to one another within the head, a web having smooth exterior sides and of diminishing transverse cross sectional area and of less transverse cross sectional area than the transverse cross sectional area of the head, integral with the head and depending therefrom, the sides of the head projecting beyond the sides of the web, and right angularly disposed tapering legs integral with and extending from the said web in alignment with the sockets, one of said legs being longer than the other and the transverse cross sectional area of both legs diminishing toward their outer extremities in continuation of the diminishing transverse cross sectional area of the web, the solid area of the head between the sockets, and the said web integral with the head and the respective legs, respectively providing a strong reinforcing connection between the sockets and between the head and the respective legs.

2,451,312

DEHYDRATED FOOD PRODUCT AND METHOD OF MAKING THE SAME

Rhys W. Arengo-Jones, Toronto, Ontario, Canada, assignor to Thomas J. Lipton Limited, Toronto, Ontario, Canada, a company of Canada

No Drawing. Application June 4, 1945, Serial No. 597,579. In Canada April 17, 1945

4 Claims. (Cl. 99—204)

3. A method of preparing a stable fruit product from pieces of dehydrated raw fruit which comprises grinding said pieces under pressure to bring juice to the surface thereof, adding sugar and a sulphite preservative thereto to dissolve in the expressed juice, crushing the mixture to uniformly incorporate the solution into the tissue of each fruit piece, and further dehydrating the fruit to cause sugar to crystallize within the mass of each fruit piece.

2,451,313

DEHYDRATED FRUIT PIE FILLING

Rhys W. Arengo-Jones, Toronto, Ontario, Canada, assignor to Thomas J. Lipton Limited, Toronto, Ontario, Canada, a company of Canada

No Drawing. Application August 22, 1945, Serial No. 612,145. In Canada July 25, 1945

2 Claims. (Cl. 99—204)

1. A method of producing a fruit pie filling which comprises subjecting normally dehydrated fruit to pressure to expose juice in the surface of the fruit pieces, adding to the mass predetermined proportions of sugar, starch and a sulphite preservative, grinding the mixture to dissolve the sugar and sulphite in the exposed juice, incorporate the solution in the tissue of each fruit piece and uniformly distribute the starch, and thereafter dehydrating the mass to reduce the moisture content to less than 10% and cause the solutes to crystallize within the mass of each fruit piece.

2,451,314

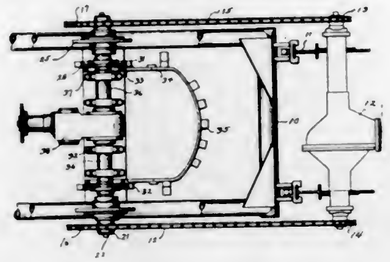
PRODUCTION OF ALKYL CYANIDES

Leland K. Beach, Mountainside, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application February 12, 1947, Serial No. 728,199

7 Claims. (Cl. 260—465.1)

1. The method of converting a beta hydroxy aliphatic nitrile into a lower molecular weight aliphatic nitrile and an aliphatic carbonyl compound which comprises subjecting the beta hydroxy aliphatic nitrile to thermal decomposition in a reaction zone at a temperature of 300–600° C, at a contact time of 1 to 20 seconds and in the absence of an active solid material.



2,451,315

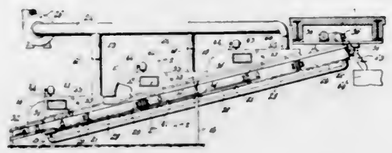
DIGGING WHEEL DRIVE FOR TRENCHERS

Robert N. Bennett, Findlay, Ohio, assignor, by mesne assignments, to Gar Wood Industries, Inc., Detroit, Mich., a corporation of Michigan

Application June 23, 1945, Serial No. 601,306

2 Claims. (Cl. 37—97)

1. In a ditching machine, a frame, a digging wheel mounted thereon having oppositely disposed rims secured to the side edges thereof, two axially aligned shafts having their inner ends spaced slightly from each other, a gear fixed to the outer end portion of each shaft, differential means for driving said gears, a bearing on the frame for the outer end portion of each shaft, gearing connecting the shafts individually to the respective rims, a conveyor transmission including a gear having an elongate tubular portion receiving the adjacent ends of said shafts, and a driving connection between one shaft and said tubular portion, the other shaft being rotatable relatively to said tubular portion.



2,451,316

APPARATUS FOR DESICCATION

Otto Bieber, New York, N. Y.

Application October 19, 1942, Serial 462,520

2 Claims. (Cl. 34—216)

1. In a drying apparatus the combination of: a tunnel having a substantially saw-toothed roof; an open work conveyor belt adjacent to the base line of the tunnel roof but spaced therefrom to form a plurality of throated sections thereby providing a series of connected narrow passageways to permit the passage of the material being dried and the gases above said material from one section to the next section; means at a plurality of positions in the tunnel below the conveyor belt for supplying hot drying gases to said sections; an exhaust duct situated adjacent the throat of one of the aforesaid sections; a fan within one of said throated sections between said roof and said conveyor belt for circulating said drying gases in contact with the material carried on the conveyor; and adjustable ports in the tunnel beneath the conveyor belt to permit the entrance of air at atmospheric temperature into the tunnel.

2,451,317

MICROPHONE ADAPTED TO BE ACTUATED BY A BONE STRUCTURE OF A USER

William R. Blair, Washington, D. C., and Albert E. Woodruff, Oak Park, Ill., assignors to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application May 16, 1945, Serial No. 594,058

9 Claims. (Cl. 179—156)

4. In a device for the transmission of speech; a pair of microphone cells; means supporting said cells on opposite sides of the speaker's nose so that the bone structure of his nose imparts vibratory energy to said cells; said supporting means including a base member affixed to the speaker's head, two auxiliary members movably mounted upon said base member, said members corresponding respectively to said microphone cells, a joint for each microphone cell pivotally supporting that cell upon its corresponding auxiliary member, whereby the angular position of that cell with respect to the speaker's nose is adjustable, and spring means acting upon said auxiliary members so as to urge said cells toward the speaker's nose.

2,451,318

CONFECTION PACKAGE

Jack Burstiner, New York, N. Y.

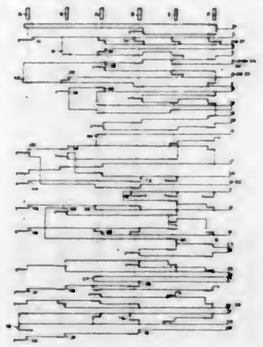
Application January 31, 1945, Serial No. 575,524

3 Claims. (Cl. 99—180)

1. A confection package comprising a spirally wound roll, said roll comprising an outer layer and an inner layer of flexible material, said inner layer having a plurality of spaced rows of recesses, said rows of recesses being spirally disposed in said roll, and confection pieces seated respectively in said recesses, an unrecessed portion of said inner layer overlying each of said confection pieces.

2,451,319

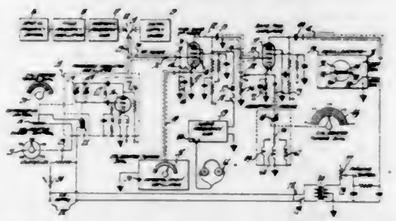
TOTALIZATOR INDICATOR CONTROL



Charles M. Candy, Chicago, and William Walter Owen, Elgin, Ill., assignors to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Application August 15, 1946, Serial No. 690,798

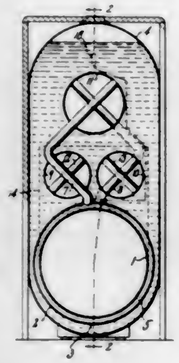
2 Claims. (Cl. 177—353)



1. In a display system for displaying numerals one to nine and naught inclusive, a set of lamps arranged so that all said numerals may be formed and displayed one at a time by lighting said lamps in different combinations, a group of six relays, circuits controlled by said relays for lighting said lamps in said different combinations, means for always operating only three of said relays neither more nor less in different combinations at a display period to complete said circuits to correctly display any one of all said numerals one to nine and naught inclusive whereby only one of any said numerals is displayed by said set

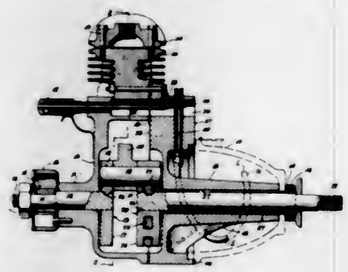
at a time and said circuits arranged to display a mutilated numeral in case less than three or more

than three of said relays are operated at any display period.



2,451,320
FREQUENCY MEASURING SYSTEM
Edward S. Clammer, Merchantville, and Milton J. Ackerman, Camden, N. J., and George A. Barton, Bridgeport, Conn., assignors to Radio Corporation of America, a corporation of Delaware
Application May 27, 1946, Serial No. 672,440
11 Claims. (Cl. 250—39)

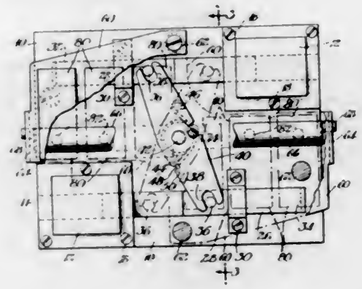
3. A frequency measuring system comprising, in combination, means for producing a frequency modulated signal having a predetermined deviation frequency, means for mixing said modulated signal and a second signal to be measured in frequency, to produce a beat frequency output, means for varying the frequency of the first named signal to provide zero beat between a harmonic thereof and the second signal, band pass circuit for deriving the corresponding deviation frequency harmonic of said first named signal from the beat frequency output of said mixing means, and means for determining the order of said last named harmonic as an index of the frequency of the second signal, said last named means including a circuit coupled to the band pass circuit and tunable to said deviation frequency harmonic, and a device coupled to the output of the band pass circuit for indicating the tuning response of said last named circuit at said deviation frequency harmonic.



2,451,321
BOILER
Michael C. Crotty, Flushing, N. Y.
Application November 29, 1946, Serial No. 712,847
7 Claims. (Cl. 122—136)

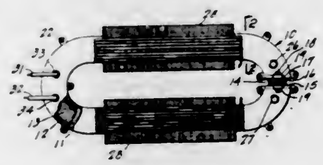
5. A boiler for water heating and steam generation comprising an outer chamber containing water, a combustion chamber horizontally disposed within said outer chamber and surrounded by a shell spaced from said combustion chamber; means for admitting water from said outer chamber to the space between said combustion chamber and said shell and pipe means to conduct hot

water and steam from the top of said shell to the upper part of said water in said outer chamber; and flues associated with said combustion chamber and traversing the water in said outer chamber back and forth, said flues being traversed by said pipe means for conducting water.



2,451,322
INTERNAL-COMBUSTION ENGINE
Rudolph Daub, West Caldwell, N. J.
Application December 22, 1944, Serial No. 569,317
5 Claims. (Cl. 123—73)

4. An internal combustion engine comprising a cylinder and crankcase housing formed by an integral casting and having a transverse face providing fuel passage openings, a cover means for said face forming a wall for a fuel passage of said casting and provided with a fuel supply reservoir around a portion of the crankshaft, and a crankshaft journaled in said casting and said cover means.

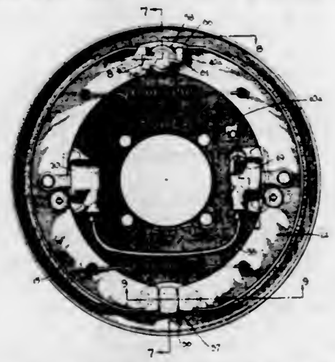


2,451,323
SHOCK RESISTANT RELAY
Leroy C. Doane, Essex, Conn., assignor to The Sight Light Corporation, Deep River, Conn., a corporation of Connecticut
Application May 11, 1946, Serial No. 669,026
5 Claims. (Cl. 200—98)

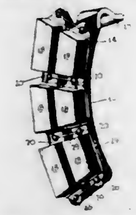
1. In a relay construction, a base, a pair of solenoids mounted thereon facing in opposite directions, plungers mounted to move into and out of the solenoids in opposite directions when the solenoids are energized or de-energized and a cross lever pivoted between its ends to a fixed pivot and pivotally connected at each of its ends

to the plunger of one of said solenoids, a switch on said relay and an operative connection from said cross lever to said switch, said operative connection including a rotary cam member engaging a portion of said switch and an arm projecting from said cam member engaging said cross lever.

2,451,324
SHIELD FOR TRANSFORMERS
Charles H. Dunton, Oakland, Calif.
Application October 16, 1945, Serial No. 622,508
4 Claims. (Cl. 175—356)



1. A shield for the secondary of a transformer consisting of two coaxial conductive members one within the other and having spaced walls and terminal ends with the secondary winding of the transformer enclosed in the inner of the two members, and with the two members conductively connected only at each terminal end to form a complete circuit through one member, across the connection at one terminal end, back through the other member, and across the connection at the other terminal end.

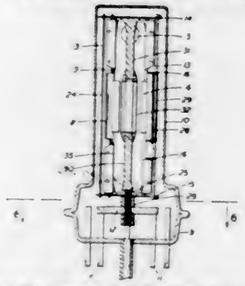


2,451,325
INTERNAL EXPANDING VEHICLE BRAKE
Carolus L. Eksergian, Detroit, Robert B. Temple, Grosse Pointe Park, and Karl C. Harle, Detroit, Mich., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 21, 1943, Serial No. 503,204
4 Claims. (Cl. 188—78)

1. A brake mechanism comprising a backing plate, a pair of brake shoes movably mounted on said backing plate for movement to operative and inoperative positions, normal actuating means for so moving the shoes, anchor means between adjacent ends of said shoes, said anchor

means including a unitary member engaging the adjacent shoe ends and movable endwise for adjusting the shoes and rotarily for providing an emergency actuation of the shoes.

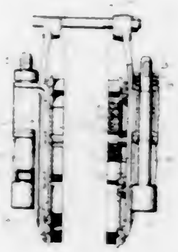
2,451,326
BRAKE SHOE ASSEMBLY
Carolus L. Eksergian and Paul W. Gaenssle, Detroit, Mich., assignors to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 3, 1946, Serial No. 700,948
7 Claims. (Cl. 188—234)



1. A brake shoe for cooperation with a brake rotor, comprising an arcuate backing member to receive the brake-applying thrust and having a flat face on the side thereof opposite the one receiving said thrust, and a pressed metal element removably secured to the flat face of said backing member and being formed with a shallow recess on the side thereof toward said flat face, and a rubber-like cushioning pad received in said shallow recess and compressed between said element and said flat face of the backing member, the side of said pressed metal element opposite said recessed side having secured thereto a composition brake lining, and said removable securing means including a projection from said flat face for transmitting the braking torque from said element to said backing.

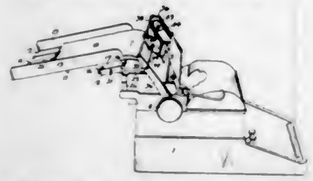
2,451,327
REMOVAL OF ACETYLENE FROM DIOLEFIN-CONTAINING MIXTURES
Egi V. Fasce, Baton Rouge, La., and William H. Wood, Warren, Pa.; Sarah Thomas Fasce, attorney-in-fact for said Egi V. Fasce, assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application November 30, 1944, Serial No. 565,839½
6 Claims. (Cl. 260—681.5)

1. A process for selective removal of acetylenes from a gaseous hydrocarbon fraction containing diolefins, which comprises passing said gaseous



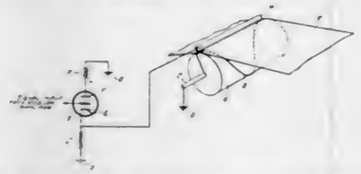
fraction in the absence of hydrogen at a temperature between 50° and 300° C. over a catalyst comprising an aluminum silicate selected from the group consisting of bentonite and montmorillonite and which has been previously treated with an acid selected from the group consisting of sulfuric acid, fluosilicic acid, and hydrofluoric acid whereby the acetylenes are selectively polymerized and withdrawing from the catalyst the diolefins substantially free of acetylenes.

2,451,328
ULTRA HIGH FREQUENCY ELECTRON DISCHARGE DEVICE
Christopher Henry Foulkes, London W. C. 2, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application September 9, 1942, Serial No. 457,795
In Great Britain February 14, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires February 14, 1961
4 Claims. (Cl. 250—27.5)



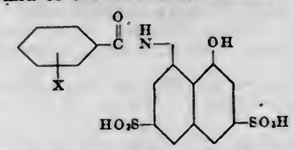
1. A coaxial resonator for an electron velocity modulated discharge tube comprising an outer tubular conductor and an inner conductor coaxial therewith, said outer conductor being formed of integral channel-shaped sections secured together at their edges, said sections having inturned fins integral therewith and forming the longitudinal boundaries of a pair of diametrically located slots in said outer conductor.

2,451,329
CUSHIONED DISK BRAKE SHOE ASSEMBLY
Paul W. Gaenssle, Detroit, Mich., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application October 3, 1946, Serial No. 700,947
6 Claims. (Cl. 188—234)



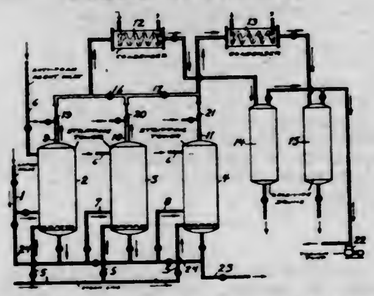
1. A brake shoe of arcuate form adapted to coact with a radial braking rotor, said shoe comprising a flat faced backing member, a plurality of spaced brake units secured to said backing member, said units each comprising at least one shallow sheet metal pan having a composition lining block connected to the outside of the pan, a rubber-like cushioning pad confined by the sides of the pan and compressed between the pan and the backing member and means for so compressing the pad and for securing the pan to the backing member so as to take the braking torque.

2,451,330
SHEET FEED FOR WRITING MACHINES
Joseph A. Gilbert, San Francisco, and Paul A. Johnson, Emeryville, Calif., assignors to Moore Business Forms, Inc., Emeryville, Calif., a corporation of Delaware
Application August 23, 1945, Serial No. 612,200
5 Claims. (Cl. 197—130)



1. In a device of the character described in combination, a writing platen, a supply magazine having a supporting surface for receiving a supply of record units at one side of said platen, feed initiating means including a friction member positioned for engagement with the record units in said magazine and operatively connected for operation in unison with said platen for initiating feed of the record units one at a time from said magazine toward said platen, a control step positioned adjacent to the forward ends of the record units in said supply and having a supporting surface angularly disposed to the forward part of the magazine supporting surface and adjacent to said friction member so as to prevent the starting by said friction member of more than one of said record units at a time, and a controlling roller positioned adjacent to said angularly disposed control step and in adjacent cooperative relation with said feed initiating friction member in controlling engagement with the opposite sides of the record units from the sides thereof engaged by said friction member.

2,451,331
ELECTROLYTIC RECORDING
Harold Grey Greig, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 3, 1945, Serial No. 632,547
12 Claims. (Cl. 204—2)

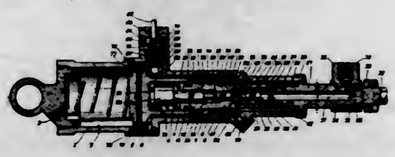


1. A process of producing colored image records simulating black on a light background on a traveling carrier which comprises treating the carrier with an alkaline solution containing as its essential components benzidine-3.3'-disulfonic acid in an amount ranging from .02 to .036 gram mol per liter of solution, an alkali metal nitrite in a sufficient amount to effect tetrazotization of

the benzidine-3.3'-disulfonic acid, a neutral electrolyte in a sufficient quantity to facilitate the passage of the electrolyzing current, and as coupling components .0292 to .05 gram mol per liter of solution of a diacetoacetyl alkylene polyamine and .0094 to .020 gram mol per liter of solution of a compound of the following formula:

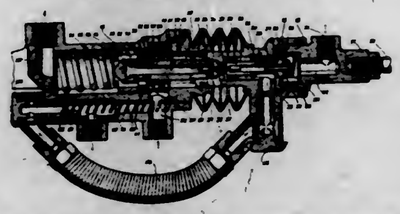
in which X is selected from the class consisting of hydrogen, acylamino, alkoxy, alkyl, halogen and aryloxy, and subjecting the treated carrier to the action of an electrolytic recording current.

2,451,332
STRIPPING OF POLYMER LATICES
Arthur Donald Green, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 5, 1942, Serial No. 467,931
4 Claims. (Cl. 202—46)



3. In the process of continuously stripping latices of emulsion polymerizates comprising an unpolymerized, normally liquid, unsaturated compound, the improvement comprising continuously passing a stream of said latex through several stripping zones in series, vaporizing the said unpolymerized unsaturated compound from the latex by applying vacuum to and passing a stripping gas through the latex, continuously removing the stripped latex from the last stripping zone, continuously removing the said vaporized unsaturated compound from each zone, passing the vaporized unsaturated compound through a vapor compressor in order to increase the pressure and the condensing temperature thereof, condensing and recovering the unsaturated compound and maintaining the total nominal hold-up time and temperature of the several stripping zones sufficiently low that the properties of the polymer product are not appreciably degraded.

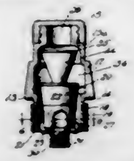
2,451,333
SYNTHESIS OF POLYHYDROXY COMPOUNDS
William F. Gresham and Richard E. Brooks, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 28, 1945, Serial No. 590,960
5 Claims. (Cl. 260—635)



1. A process for preparing organic polyhydroxy compounds which comprises heating a mixture of formaldehyde, carbon monoxide, hydrogen and a reduced cobalt oxide hydrogenation catalyst under a pressure in excess of 100 atmospheres at a temperature within the range of 80° to 300° C., the initial molar ratio of carbon monoxide to hydrogen being from 1:2 to 1:4, the sole catalyst present being the said hydrogenation catalyst, and thereafter separating organic polyhydroxy compounds from the resulting reaction product.

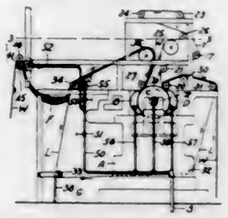
2,451,334
FLUID PRESSURE OPERATED ACTUATING DEVICE
Martin V. Groves, Brooklyn, N. Y., assignor of one-half to Arthur Wilde and Arthur Hull-Ryde, both of Bayside, N. Y., jointly
Application June 17, 1943, Serial No. 491,181
19 Claims. (Cl. 60—54.5)

6. In a compound hydraulic pressure device, the combination of a relatively large piston operatively disposed within a corresponding cylinder, said piston having a bore extending inwardly from one end, a relatively small piston operatively disposed within said bore as a cylinder, means for moving said small piston within the bore of said large cylinder to displace hydraulic fluid therefrom, means for passing said displaced hydraulic fluid into said large cylinder to the rear of said large piston for moving said large piston forwardly under hydraulic advantage, means for supplying supplemental hydraulic fluid under pressure within said large cylinder to the rear of said large piston, and valve means for controlling the flow of said supplemental hydraulic fluid into said large cylinder, said valve means being operable by the displacement stroke of said small piston.



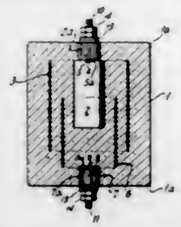
2,451,335
CONTROL VALVE MEANS FOR POWER-OPERATED HYDRAULIC MOTIVE MEANS
Martin V. Groves, Brooklyn, N. Y., assignor of one-half to Arthur Wilde and Arthur Hull-Ryde, jointly, both of Bayside, N. Y.
Application March 10, 1944, Serial No. 525,854
21 Claims. (Cl. 121—41)

13. In control means for a hydraulic actuating system, the combination of a hydraulic cylinder, a piston operatively disposed therein, means for placing said cylinder in communication with hydraulic motive means to be operated for imposing on said piston pressure fluid from said hydraulic motive means, manual actuating means rigidly attached to and movable with said piston for moving said piston in a direction opposite to



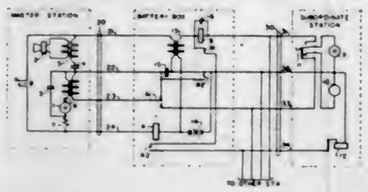
said imposed hydraulic pressure, a valve housing mounted for movement with said piston and providing means of interconnection between a pressure source and said motive means, a first valve disposed in said valve housing, means also movable with said piston for controlling the operation of said valve upon predetermined movement of said piston and a second valve movable and with respect to said piston for venting said cylinder.

2,451,336
NONREFILLABLE BOTTLE CLOSURE
Harry W. Hagen, Decatur, Ill.
Application August 29, 1946, Serial No. 693,705
In Canada April 1, 1946
8 Claims. (Cl. 215—25)



1. A bottle closure comprising a tubular housing the bottom of which is bounded by a cup having apertures therein, a core member secured to said cup and spaced from said housing and forming therewith an annular path for fluids, said member also having valve-guiding recesses along its longitudinal axis, and a plurality of valves capable of closing the apertures in said cup, said cup having an upwardly extending skirt surrounding the lower part of said housing and secured thereto.

2,451,337
SEMIDECATING MACHINE
Edward F. Hayes, Pelham, N. H., assignor to Talbot Mills, Inc., North Billerica, Mass., a corporation of Massachusetts, as trustee
Application June 12, 1944, Serial No. 539,867
8 Claims. (Cl. 26—18.5)

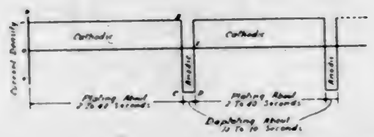


1. In a continuous semi-decating machine for finishing woolen cloth; the combination of a revoluble heated cylinder; and means to positively drive such cylinder; with a heated bed having an adjoining face concentric with the curved surface of the cylinder; an upper endless apron and a lower endless apron to receive and carry the cloth between them between the bed and part of the cylinder said aprons being more resistant to stretching than is the woolen cloth; means to spread each apron transversely before it engages the heated cylinder; cloth feed rolls to deliver the woolen cloth to a cradle and to the apron; a cloth receiving cradle positioned between part of the lower endless apron and said cloth feed rolls; means to drive the cloth feed rolls at a greater surface speed than the surface speed of the cylinder; a pipe for spraying steam on the woolen cloth as it leaves the cloth feed rolls; and a perforated steam pipe for spraying steam on the lower apron where it receives the woolen cloth and before it engages the heated cylinder.

2,451,338
ELECTRICAL CONDENSER
Harold P. Heller, Palmyra, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 11, 1944, Serial No. 563,005
6 Claims. (Cl. 175—41)

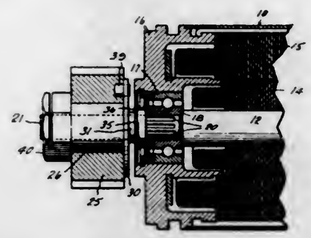
2. An electric condenser comprising a central electrode, an outer electrode and an intermediate electrode both of which are hollow open ended right circular cylinders, external end terminal members each having a strip support for electrically connecting and supporting said electrodes at one of the base centers of each cylinder to provide a support in the horizontal plane which is narrow relative to the diameters of said electrodes to permit the casting of a solid dielectric without the formation of internal voids due to unrelieved shrinkage.

2,451,339
INTERCOMMUNICATING SYSTEM
Roswell H. Herrick, Chicago, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application February 8, 1945, Serial No. 576,787
9 Claims. (Cl. 179—1)



1. In an intercommunicating system, a pair of stations each including a transmitter and a receiver, a four conductor line extending between said stations, the first and second conductors of said line defining a signal channel for coupling the transmitter at one station to the receiver at the other station, the second and third conductors of said line defining a signal channel for coupling the transmitter at the other station to the receiver at said one station, said one signal channel being normally disabled, means controlled over the second and third conductors of said line by said other station for energizing the transmitter at said one station over the second and fourth conductors of said line, and means controlled over the second and fourth conductors of said line by said one station for enabling said one signal channel.

2,451,340
ELECTROPLATING
George W. Jernstedt, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application March 6, 1948, Serial No. 13,531
4 Claims. (Cl. 204—43)

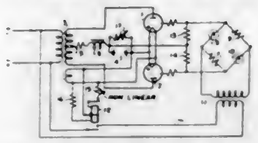


1. In the method of electroplating a metal from the group consisting of iron, lead, indium, platinum, osmium, rhodium, iridium, palladium, ruthenium and alloys in which these metals predominate, on a base member from an aqueous electrolyte having the metal to be plated dissolved therein, the steps comprising applying a plating electric current to the base member for a period of time of not more than 40 seconds to electroplate an increment of the metal thereon, then applying a deplating electric current to the base member for a shorter period of time to deplate a substantial portion of the previously plated increment, the deplating electric current being of a magnitude and applied for a period of time sufficient to deliver from $^1/_{20}$ to ½ of the coulombs delivered during the preceding plating period, and continuing the alternate plating and deplating until a desired thickness of the metal is applied to the base member.

2,451,341
ELECTROPLATING
George W. Jernstedt, Belleville, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 10, 1945, Serial No. 610,107
10 Claims. (Cl. 204—44)

1. The process of electroplating metal from the group consisting of copper, brass, silver, zinc, tin, cadmium and gold on a base member from an electroplating electrolyte in which the deposited metal is readily soluble on the passage of electric current when the base member is the anode, comprising the steps of connecting the base member to be plated into an electroplating circuit including the electrolyte, causing electric current to flow in the plating circuit while the base member is in contact with the electrolyte, the electric current flowing in the plating circuit being periodically reversed so as alternately to electroplate metal on and then deplate metal from the base member, the current for plating metal on the base member being caused to flow for a period of time of not over 40 seconds until a layer of metal is deposited when the current is reversed in direction for a period of time of not over 10 seconds to deplate metal from the base member to remove a portion of the layer of plated metal, the deplating current being of a magnitude and applied for a sufficient period of time to deliver at least 10% of the coulombs delivered during the preceding plating period so that a substantial amount of the plated metal is removed, and repeating the cycle of plating and deplating to cooperate in building up on the base member an electrodeposit in small increments to produce a smooth, sound, homogeneous plate.

2,451,342
GEAR MOUNTING
Henry J. Kent, Teaneck, N. J., assignor to Kearfott Company, Inc., New York, N. Y., a corporation of New York
Application June 7, 1947, Serial No. 753,334
6 Claims. (Cl. 287—53)



1. A gear assembly comprising a rotatable shaft having a series of axially extending splines formed therein, a gear journalled on said shaft, a driving disk for said gear having a projecting split hub formed with teeth registering with said splines, clamping means contracting the split hub to secure the same rigidly to said shaft, and a member connecting said disk to said gear.

2,451,343
WEB GUIDING DEVICE, PARTICULARLY FOR TENTERING FRAMES
August Künzle, Wattwil, Switzerland, assignor to Heberlein Patent Corporation, New York, N. Y., a corporation of New York
Application March 1, 1946, Serial No. 651,242
In Switzerland March 5, 1945
9 Claims. (Cl. 26—57)

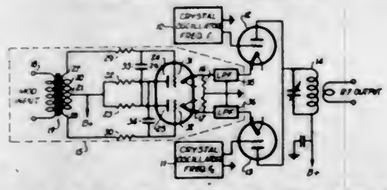
1. In apparatus for controlling the lateral alignment of a marginal edge of a longitudinally traveling web of textile fabric or the like flexible material, the combination of a pair of rotatable guide rollers constructed and arranged to grip said marginal edge therebetween and pivotally mounted for angular movement about a torque axis substantially normal to said web travel, electro-magnetic motive means exerting a continuous torque force when energized, for progressively angularly moving said rollers in one direction only about their torque axis to any desired torque position within the range of movement, a counter-torque spring urging said rollers in an opposite direction of angular movement, and photoelectric means for controlling said motive means, said photoelectric control means comprising a photoelectric cell and means for projecting a beam of light across the path of travel of said web edge and onto said photoelectric cell said electro-magnetic motive means and photoelectric cell control means being so constructed and arranged that the angular movement of said pair of guide rollers about said torque axis increases proportionately with the increasing deviation of fabric from its desired course.

2,451,344
GRID-CONTROLLED RECTIFIER CIRCUIT
Harold J. McCreary, Lombard, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application February 8, 1945, Serial No. 576,817
1 Claim. (Cl. 315—271)

In a converter, a battery, a load circuit connected across said battery, said load circuit requiring direct current of varying strength at substantially constant direct current potential, a source of alternating current potential which varies appreciably in magnitude, a thermionic gas-filled tube having a cathode, a control grid, and an anode, an anode circuit including said battery and circuit means for inducing from said source an alternating current potential between said cathode and said anode, a Wheatstone bridge circuit in which each branch comprises a linear and a non-linear resistor connected in series, a control grid circuit connecting said control grid to one diagonal of said bridge circuit and also to said battery, the connection to said battery and to said control grid circuit biasing said grid negatively with respect to said cathode, means for inducing from said source an alternating current potential across the other diagonal of said bridge circuit to thereby superimpose upon the direct current bias of said control grid an alternating current potential, the magnitude of the alternating current potential applied to said control grid from said bridge circuit varying inversely with the magnitude of the alternating current potential of said source, the resultant potential applied to said grid controlling the firing time of said tube and thereby the duration of rectified current flow in said anode circuit during alternate half cycles of the induced alternating current potential, and said controlled rectified current flow maintaining the direct current potential across said load and the battery substantially constant regardless of the variations in said source and in the current requirements of said load.

2,451,345
COMPOUNDED LUBRICATING OIL
John G. McNab, Cranford, and Dilworth T. Rogers, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application October 24, 1944, Serial No. 560,192
24 Claims. (Cl. 252—32.7)

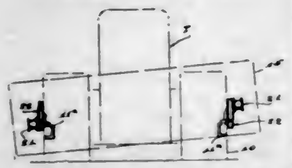
1. A hydrocarbon material subject to deterioration by atmospheric oxygen containing a stabilizing amount of a product obtained by reacting a sulfide of phosphorus with a divalent group II metal salt of a compound having the characterizing structure



$$R—Ar(XH)—Y_x—R'$$

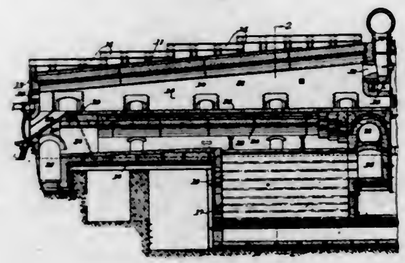
in which the groups R, XH and Y_x—R' are all connected to the aromatic nucleus Ar, and in which R represents at least one alkyl group of 4 to 24 carbon atoms and R' represents an aryl group, X is an element of the group consisting of oxygen and sulfur, Y is a member of the sulfur family of elements, and x is an integer from 1 to 4, at a temperature of 100–200° C. for a period of at least 10 minutes, the proportions of reactants being such that from 0.03–2 atomic proportions of phosphorus are present for each atomic proportion of metal.

2,451,346
COMPOUNDED LUBRICATING OIL
John G. McNab, Cranford, and Dilworth T. Rogers, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application March 3, 1945, Serial No. 580,916. In Canada December 13, 1943
14 Claims. (Cl. 252—32.7)



1. A petroleum hydrocarbon material containing a stabilizing amount of a product obtained by reacting a sulfide of phosphorus with a basic polyvalent metal salt of an acidic organic compound at a temperature of about 100° C.–180° C., for a period of at least 10 minutes, in the ratios of 0.05–2 atomic proportions of phosphorus for each metal atomic proportion of metal in the salt and 0.75–2.5 atomic proportions of sulfur for each atomic proportion of phosphorus.

2,451,347
FREQUENCY SHIFT PULSE TIME MODULATION
Clarence H. McShan, Newark, N. J.
Application January 17, 1947, Serial No. 722,579
15 Claims. (Cl. 179—171.5)



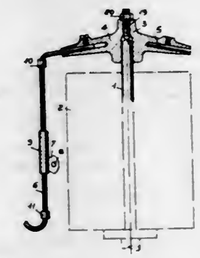
1. In a radio frequency system, the steps of alternately producing radio frequency carrier signals of two different frequencies in the form of consecutive pulses of given time duration, and modulating said carrier pulses in accordance with a modulating signal.

2,451,348
ADJUSTABLE TRUNNION MOUNTING FOR BULLDOZERS AND THE LIKE
George E. Miller, Findlay, Ohio, assignor, by mesne assignments, to Gar Wood Industries, Inc., Detroit, Mich., a corporation of Michigan
Application March 15, 1945, Serial No. 582,929
3 Claims. (Cl. 37—144)

1. A bulldozer comprising rigid spaced side beams, a rigid blade support to which the side beams are connected at their forward ends, means for pivotally connecting the beams at their rear ends to the side frames of a tractor, said connecting means including a single bearing member on each side beam, a trunnion for receiving each bearing member, and a mounting for each trunnion adapted to be secured to the adjacent side frame of a tractor and enabling the trunnion to be selectively adjusted in a vertical direction to one of a number of positions, said mounting being curvilinear in a vertical direction thereby to enable the axis of the trunnion to be inclined in accordance with the vertical adjustment.

2,451,349
CONTINUOUS HEATING FURNACE AND METHOD OF OPERATING THE SAME
William A. Morton, Mount Lebanon, Pa., assignor, by mesne assignments, to Amsler Morton Corporation, Pittsburgh, Pa., a corporation of Delaware
Application January 12, 1943, Serial No. 472,098
15 Claims. (Cl. 263—39)

13. In a continuous furnace for heating billets and the like, the combination of a chamber defined by side and end walls, a roof and a continuous solid hearth extending from the charging end of the chamber to adjacent the discharge end of the same and along which the billets are caused to travel from the charging end of the chamber to the discharging end of the same, means for introducing heating gases at the charging end of the chamber to travel therein toward the discharge end concurrently with the billets, means for withdrawing all the heating gases at the discharge end of the chamber, and means for returning all the heating gases toward the charging end of the furnace in contact with the under surface of the hearth to heat the latter and maintain a low temperature differential between the top and bottom of the billets.



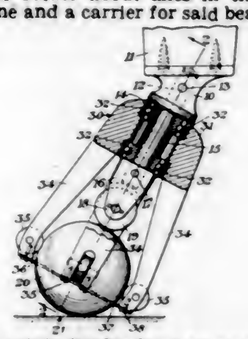
2,451,350
PREPARATION OF UNSATURATED KETONES
Henry O. Mottern, Hillside, and Vincent F. Mistretta, Fanwood, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 13, 1945, Serial No. 634,883
13 Claims. (Cl. 260—586)

1. A process for the reaction of two molecules of a ketone selected from the group consisting of alkyl, saturated cycloaliphatic and aralkyl ketones, which comprises preparing a vaporous mixture consisting of the ketone and hydrogen, reacting the vaporous mixture in the presence of a catalyst consisting of an oxide of a metal selected from group II and an oxide of a metal selected from group V of the periodic table, and cooling the resultant reaction products containing unsaturated ketone.

2,451,351
PRODUCTION OF UNSATURATED KETONES
Henry O. Mottern, Hillside, and Vincent F. Mistretta, Fanwood, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 13, 1945, Serial No. 634,884
11 Claims. (Cl. 260—593)

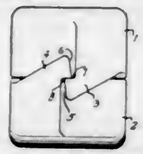
1. A process for the reaction of a saturated aliphatic methyl ketone with a saturated aliphatic aldehyde which comprises preparing a vaporous mixture consisting of the ketone, the aldehyde and hydrogen, reacting the material in the presence of a catalyst consisting of an oxide of a metal selected from group II and an oxide of a metal selected from group V of the periodic table and cooling the resultant reaction materials containing unsaturated ketone.

2,451,352
REVOLVING THREAD GUIDING FLIER
Albert Nau-Touron, Le Vesinet, France, assignor to Societe a responsabilite limitee Fonderie De Precision, Nanterre, France
Application September 21, 1945, Serial No. 617,879
In France October 1, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires October 1, 1961
11 Claims. (Cl. 57—116)



1. Revolving thread guiding flier for textile machines provided with spindles for rotating bobbins having a body, means adapted to mount rotatably said body on the spindle, arms projecting from said body, a rod secured to one of said arms and adapted to be parallel to the axis of the spindle, a traveller freely mounted on said rod, and means carried by said traveller and adapted to guide the thread through said traveller.

2,451,353
BALL CASTER
William H. Newell, New York, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application March 10, 1945, Serial No. 582,075
9 Claims. (Cl. 16—27)

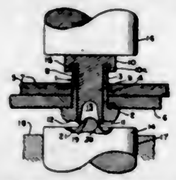


1. A caster comprising a support to be attached to a pedestal, a ball positioned to roll on a surface, a roller mounted on said support to roll about a fixed horizontal axis and engaging said ball to carry the weight of said pedestal, the roller being so positioned that the line passing through the center of the ball and the point of contact of the ball and roller is inclined to the vertical, and a set of bearing rollers disposed about said ball to contact the surface of said ball in the same diametric plane thereof, said bearing rollers being

mounted to rotate about axes in the said diametric plane and a carrier for said bearing rollers

mounted to rotate freely about an axis normal to said plane.

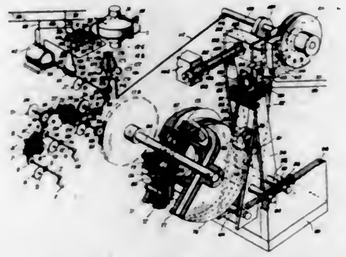
2,451,354
PIPE COUPLING
Robert L. Ohls, Houston, Tex.
Application October 8, 1945, Serial No. 621,087
14 Claims. (Cl. 285—194)



1. In a pipe coupling, a housing formed of two similar sections, a pair of side hooks on each section having side faces which are substantially parallel with the longitudinal axis of the assembled coupling and also having end faces which are at an acute angle to the corresponding side faces.

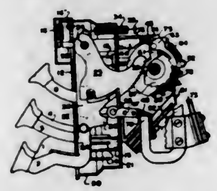
2,451,355
METHOD OF MAKING IDENTIFICATION TAGS
Joseph S. Pecker, Upper Darby, Pa., assignor to Dennison Manufacturing Company, Framingham, Mass., a corporation of Massachusetts
Application September 2, 1944, Serial No. 552,467
5 Claims. (Cl. 93—91)

1. In making tags of the type having an aperture and strand attaching means extending through the aperture with portions of strand extending along opposite sides of the tag from the location of the aperture to a location at the edge of the tag, the method which comprises holding said strand portions along opposite sides of the tag and fusing the two portions together at both of said locations.



2,451,356
HOLLOW RIVET FOR PRESSURAL UPSETTING, METHOD OF UPSETTING, AND RESULTING JOINT
George D. Rechton, Los Angeles, Calif., assignor to Douglas Aircraft Company, Inc., Santa Monica, Calif., a corporation of Delaware
Application May 29, 1944, Serial No. 537,797
4 Claims. (Cl. 218—29)

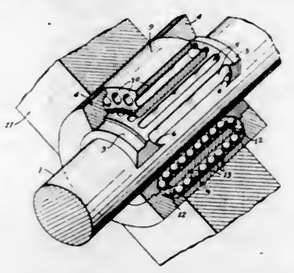
3. A method of securing a rivet in aligned holes in a structure comprising: providing a continuous sleeve member of ductile material having a centrally disposed bore of substantially uniform diameter and having a relatively narrow wall and a head integral with one end thereof, inserting said sleeve member in said openings with the unheaded end projecting a substantial distance beyond said structure, providing a stem member formed from a ductile material substantially harder than that of the sleeve member and having at one end an integral head with an annular recess in its underside, and having at the other end a centrally disposed axial depression of substantial depth, the diameter of said stem member being substantially the same as the bore of said sleeve member and the length thereof being slightly greater than the length of said sleeve, inserting said stem member in said sleeve member so that the unheaded end of the latter bottoms in the recess in the head of the stem member with the opposite end of the stem member projecting slightly beyond the head of the sleeve member and with the stem-head spaced from the structure approximately three times the thickness of the wall of the sleeve, applying axially directed compressive forces to the two ends of said stem member to shorten it axially and expand it radially, and continuing the application of said forces to produce axial shortening and radial expansion of said sleeve to set up radial compressive forces between said stem and sleeve and between said sleeve and the walls of said openings and to cause outward buckling of the portion of the sleeve extending beyond the structure and shouldering of said buckled portion against the stem-head and the surface of said structure and also to flare the walls of said axial depression into forcible contact with the adjacent head of said sleeve member and enlarge the head end of the bore of said sleeve to lock the stem member to the sleeve member.



2,451,357
DIRECTOR FIRING SYSTEM
Elliott P. Ross, Forest Hills, and Harry S. Marsh, Great Neck, N. Y., assignors, by mesne assignments, to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application March 31, 1932, Serial No. 602,373
Renewed February 25, 1935
18 Claims. (Cl. 89—28)

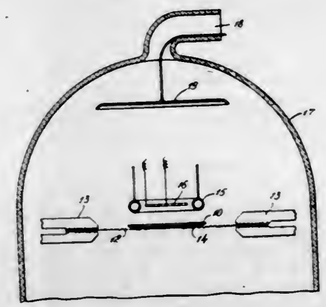
1. In a firing mechanism for a gun mounted on an angularly movable platform, the combination of a gyroscope mounted on the platform to measure the angular motion of the platform relative to a fixed datum, a firing switch, a computing mechanism for determining the angle of the platform relative to a horizontal datum with respect to which the gun is angularly set to be fired, a switch actuating means operatively con-

nected to said computing mechanism adapted to be set to close the switch at the computed value of said angle, means operatively connecting said switch actuating means with the gyroscope, and means operated by said gyroscope for advancing the closing of the switch in accordance with the velocity of the angular movement of the platform.



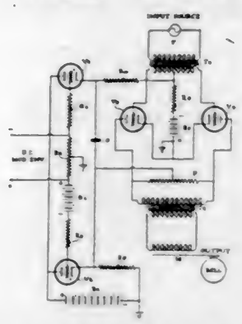
2,451,358
IMPULSE TRANSMITTER
Robert L. Sargisson, Berwyn, Ill., and Herbert F. Obergfell, deceased, late of River Forest, Ill., by Amanda Obergfell, executrix, River Forest, Ill., assignors to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application August 24, 1944, Serial No. 551,010
23 Claims. (Cl. 177—380)

1. In an impulse transmitter, a plurality of push keys corresponding to different digits, a shaft, a segment operated in response to the operation of any of said keys, a clutch assembly loosely mounted on said shaft, teeth on said segment meshing with teeth on said clutch assembly for moving said segment and clutch assembly in unison, a spring for returning said segment and said clutch assembly, means for operating said shaft only in response to the return movement of said segment and clutch assembly, an impulse wheel on said shaft operable therewith, and impulse contacts controlled by said impulse wheel for transmitting impulses.



2,451,359
ROTARY AND SLIDING BALL BEARING
Theodore F. Schlicksupp, Long Island City, N. Y.
Application November 2, 1946, Serial No. 707,465
5 Claims. (Cl. 308—6)

1. A rotary and sliding ball bearing comprising a race member having a race sleeve adapted to surround a shaft, an outer sleeve surrounding the race sleeve, said race member and outer sleeve being relatively rotatable, the race sleeve having a number of longitudinally extending slots and said outer sleeve having a number of longitudinal ball-return passages, means at opposite ends of the race member for establishing a ball-guiding path from opposite ends of each longitudinal slot



in the race sleeve to opposite ends of a ball-return passage in said outer sleeve to thereby provide an endless ball circuit, and antifriction balls completely filling each of such endless ball circuits, at least some of the balls in the longitudinal slots in the race sleeve constituting load-carrying balls adapted when the bearing is assembled on a shaft to make rolling contact with the surface of the shaft and the inner surface of the outer sleeve.

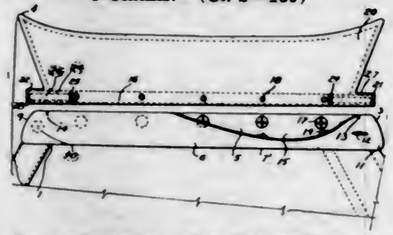
2,451,360
METHOD OF MAKING GRIDS
Joseph W. Skehan, Stamford, Conn., assignor to Machlett Laboratories Incorporated, Springdale, Conn., a corporation of Connecticut
Application January 24, 1947, Serial No. 724,077
4 Claims. (Cl. 29—25.14)

1. A method of making a grid including a rigid metallic annulus and a metallic mesh secured to the annulus to extend across the opening therethrough, which comprises subjecting the strands of the mesh in at least one dimension to tension, placing an annulus of a high melting point solder against one face of the mesh, placing the rigid annulus against the exposed surface of the solder, and, while maintaining the tension on the strands, heating the assembly to cause the solder to melt and wet the mesh and rigid annulus, and then discontinuing the heating of the solder to allow it to cool, while continuing the heating of the portion of the mesh exposed within the rigid annulus, until the solder has set.

2,451,361
OVERMODULATION ALARM
James Ernest Smith, Jackson Heights, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application March 31, 1944, Serial No. 529,007
4 Claims. (Cl. 250—17)

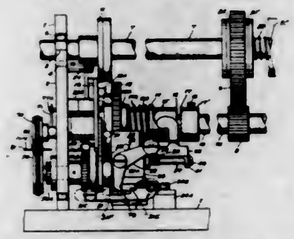
1. In an overmodulation indicator, a source of modulated energy, an amplifier stage tube having a control grid and cathode coupled to a source of voltage and having an anode and cathode coupled to an indicator, a resistor wherein a potential drop is developed which changes when the magnitude of the modulated energy changes, a first gas tube of the control grid type having output electrodes in circuit with a resistor for biasing the control grid of said amplifier, the arrangement being such that when the gas tube is conductive the amplifier tube is biased to cut off, a coupling between the control grid of said first gas tube and said first resistor such that said gas tube is conductive in the absence of overmodulation of said energy, a second gas tube of the control grid type having output electrodes including a resistor in a potential supply circuit for the anode of said amplifier, the arrangement being such that the potential on said anode is low when said last named gas tube is non-conductive, a coupling between the control grid of the last named gas tube and said first resistor such that said last named gas tube is non-conductive in the absence of overmodulation of said energy, and a charging capacitor intercoupling said gas tubes to help extinguish said first gas tube when said second gas tube is made conductive.

2,451,362
LINING COMPOSITION AND CONTAINER WALL LINED THEREWITH
Rudolph M. Snyder, Kansas City, Mo., assignor to Henry A. Johnson, Kansas City, Mo.
No Drawing. Application March 28, 1945, Serial No. 585,391
8 Claims. (Cl. 106—271)



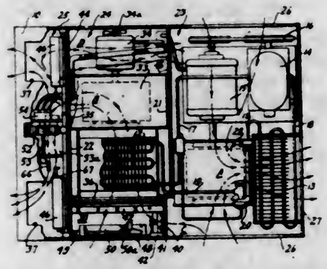
1. A coating composition adapted particularly for lining fiber containers to prevent the sticking thereto of asphalt and the like when the same is poured hot into the container and permitted to cool, said composition consisting essentially of water, dispersed particles of wax, bentonite and graphite, and a plasticizer of the hygroscopic type, said constituents being in homogeneous admixture and being present in proportions to provide a pasty, spreadable mass, with the bentonite present therein in substantially greater proportions than the graphite and the wax in substantially the same proportions as the bentonite, the said bentonite and graphite serving as the barrier constituents.

2,451,363
FISHING ROD HOLDER AND BAIT DIGGING APPARATUS
Edwin W. Sonner, Jr., Queens Village, N. Y.
Application August 21, 1947, Serial No. 769,893
1 Claim. (Cl. 248—38)



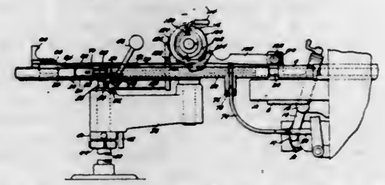
A combined fishing pole holder and bait digging device comprising, in combination, a tubular member and a spike, said tubular member being made with a bent-over flange at one end thereof, the circumferential edge of said flange being offset to form a narrow space between said edge and the tubular member, the latter being at the other end formed with oblong holes enlarged at their lower ends, whereby to permit a retraction of and sidewise movement of the spike in folding the latter upon the tubular member, said spike being semi-cylindrical and tapered at one end into a sharp point, the other end of said spike being formed with tubular enlargements upon each side thereof and having holes therein, a pin inserted through said holes and oblong openings whereby to secure the spike and tubular member, hingedly together, the tubular enlargements of the spike being formed upon each side with substantially flat surfaces extending beyond a vertical center line of the tubular member, whereby to secure a rigid engagement of the latter to the spike, when in extended position, said tubular member and spike being adapted to move a limited distance up and down relative to each other, when in said extended position, the point of the spike being adapted to be received in the space between the edge of the flange and the tubular member when the spike and said tubular member are folded upon each other.

2,451,364
GARMENT AND COLLAR COMBINATION
Ralph Spector, Kansas City, Mo.
Application October 25, 1946, Serial No. 705,622
5 Claims. (Cl. 2—139)



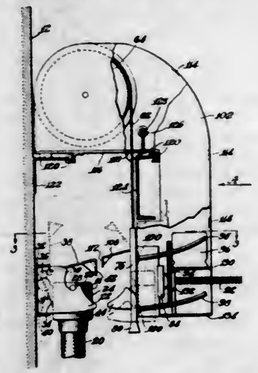
1. In combination with the neck band of a shirt having a pocket, a reversible collar having a band adapted to engage in said pocket and a collar portion, said band having portions extending beyond the collar portion, means in said pocket for engaging said collar band for retaining said collar on said shirt, and pockets in the respective ends of the neck band of the shirt for receiving the ends of the collar band for supporting said bands.

2,451,365
RECORD TAPE ADVANCING DEVICE
James A. Spencer, Teaneck, N. J., and James C. Warwick, Jr., Beechhurst, Long Island, N. Y., assignors to Radio Corporation of America, a corporation of Delaware
Application October 22, 1943, Serial No. 507,272
6 Claims. (Cl. 346—79)



1. A printing tape space-out mechanism for tape printers comprising a tape feed wheel, a driven rotatable shaft, a recording shaft coupled to said driven rotatable shaft, a tape feed shaft secured to said tape feed wheel, clutch means coupled to said tape feed shaft to intermittently couple it with said driven rotatable shaft to space out a predetermined length of tape, and means including a cam on said clutch means and a clutch pawl adapted to engage said clutch means for uncoupling said recording shaft from said driven rotatable shaft when the clutch means on said tape feed shaft causes it to be coupled to said driven rotatable shaft.

2,451,366
AIR CONDITIONING APPARATUS
Matson C. Terry, Rydal, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application March 16, 1946, Serial No. 654,923
9 Claims. (Cl. 62—129)



1. In air-conditioning apparatus: an air-conditioning-chamber; means operable to provide refrigeration in said chamber; control means adjustable to start and to stop the operation of the refrigeration-providing means; means including a damper structure selectively adjustable to direct the air from said chamber either to the inside or to the outside of a room; and mechanism including means operable to stop operation of the refrigeration-providing means upon adjustment of said structure to direct air from said chamber to the outside of the room, and also operable to adjust said structure to direct air from said chamber to the inside of the room upon adjustment of said control means to start operation of the refrigeration-providing means.

2,451,367
FEED MECHANISM
William E. Twamley, Providence, R. I., assignor to Brown and Sharpe Manufacturing Company, a corporation of Rhode Island
Application April 17, 1945, Serial No. 588,829
10 Claims. (Cl. 29—59)

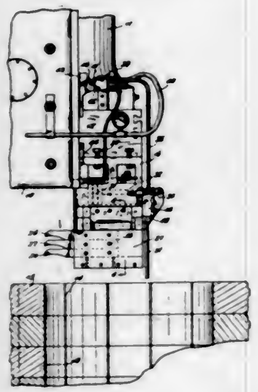
1. A mechanism for feeding bar stock into an automatic screw or similar machine having a hollow work receiving spindle, which comprises a stock tube, supporting means on which the leading end of the tube is shiftable between an operative position in alignment with the spindle and a loading position out of alignment with the spindle, a pusher mounted within the stock tube, a drum and cable feeding device supported integrally with the stock tube and connected to advance the pusher, a step feeding device actuated in timed relation with the operation of the machine, a friction driving connection therefrom for advancing the drum, manual means for rotating the drum, a checking device normally operative to prevent a reverse cable unwinding movement of the drum, and a device for locking the tube in the operative position shiftable to release the tube and also to render the checking device inoperative.

2,451,368
HOSE HANDLING APPARATUS
Le Roy J. White and John F. White, Wilmington, Del.
Application October 11, 1945, Serial No. 621,810
10 Claims. (Cl. 214—95)

1. Hanging apparatus, for hanging a section of hose and the like which has a pair of round

lugs projecting outwardly for a substantial distance from opposite sides of one end thereof, comprising a stationary rack adapted to be fastened to a wall of a tower near the top thereof and including a pair of spaced outwardly extending stationary rack arms having transverse lug-receiving notches in their upper surfaces and lug-engaging surfaces sloping upwardly and backwardly to the notches, the rack arms being spaced apart by a distance slightly greater than the outer diameter of a hose but less than the distance between the outer ends of the lugs; and elevator and transfer means comprising a pair of spaced elevator arms having transverse lug-receiving notches in their upper surfaces and lug-engaging surfaces sloping upwardly and backwardly to the notches, the elevator arms being spaced apart by a distance slightly different than the rack arms but greater than the outer diameter of a hose, means for raising and lowering said elevator arms to and from a position opposite to but spaced from the rack arms, and means for moving the elevator arms forwardly until the notches thereof are in the transverse vertical plane of the notches of the rack arms and for returning the elevator arms to a position beyond the ends of the rack arms.

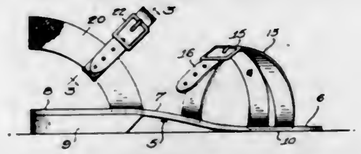
2,451,369
IGNITER
Irving H. Yarin, Chelsea, Mass.
Application May 2, 1945, Serial No. 591,555
4 Claims. (Cl. 175—115)



1. A combined conductor and sparking electrode for use in an igniter and comprising an elongate conductor element designed to be located within the bore of an insulating tube, the conductor having an enlargement at one end for engagement with one end of the tube and being screw threaded for a substantial portion of its length adjacent to its opposite end for the reception of a clamping nut engageable with the opposite end of the tube, the conductor having a bore extending inwardly from the outer surface of said enlargement, a sparking electrode having an end portion seated in the bore in the conductor, the inner end of said end portion being enlarged in diameter, the conductor being swedged thereby to reduce its internal diameter between its enlargement and the enlarged end of the sparking electrode, thereby firmly and permanently securing the sparking electrode in place.

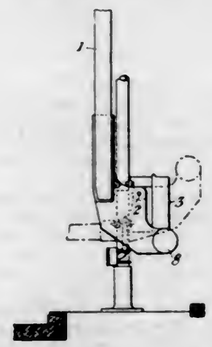
2,451,370
LONG-CHAIN SECONDARY ALKYL N-SUBSTITUTED POLYMERIC STYRENE/MALEAMIC ACIDS AND DISPERSIONS CONTAINING THEM
Witty Lysle Alderson, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 30, 1946, Serial No. 666,176
9 Claims. (Cl. 260—78)

1. A process for the preparation of N-substituted polymeric amic acids which comprises reacting one mole equivalent of a styrene/maleic anhydride interpolymer, having a viscosity from 0.2 to 650 centipoises at 25° C. measured as a 15% solution in methyl ethyl ketone, in a solvent at a temperature of 20 to 150° C., with from 0.2 to 0.6 mole equivalent of a long chain secondary alkyl amine having a total of at least 18 carbon atoms in the combined alkyl groups, then adding to the reaction products from 0.8 to 0.4 mole equivalent of at least one of the substances selected from the class consisting of ammonia and lower primary amines containing less than seven carbon atoms.



2,451,371
CUTTING TOOLHOLDING MEANS FOR MACHINE TOOLS
John A. Backstrom, Euclid, Ohio, assignor to The Breck Company, a corporation of Ohio
Application July 28, 1943, Serial No. 496,458
10 Claims. (Cl. 90—55)

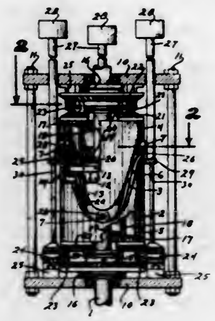
2. In a machine tool of the type having a support, a reciprocable ram slidable on said support and adapted to carry a cutting tool, a work table, and means for reciprocating said ram to move the cutting tool carried thereby relative to the work on said table with a cutting stroke in one direction and an idle stroke in the opposite direction; holding means for the cutting tool comprising a tool carrying member supported by said ram to move relative thereto from an inactive position wherein the tool will be disengaged from the work during the idle stroke to an active position wherein the tool will engage the work with a cutting action during the cutting stroke, means for automatically moving said member to said active position at the end of the idle stroke, separate means acting to hold said member in said active position during the cutting stroke, and means carried by said ram and cooperating with said table substantially at the end of the cutting stroke to release said separate means and free said member for movement from its active position to its inactive position.



2,451,372
SANDAL WITH ADJUSTABLE FRONT AND REAR STRAPS
Clarence Eugene Ballenger, Spartanburg, S. C.
Application February 12, 1946, Serial No. 647,111
2 Claims. (Cl. 36—11.5)

1. A sandal having a vamp zone and a heel zone with independent foot-retaining assemblies thereat, the vamp zone having strap means partially concealed in the direction of sole width, the upper portion of said strap means being exposed, means for adjustably connecting said exposed upper portions together, said sandal being further characterized in that the heel assembly has a heel strap having its ends permanently connected to opposite sides of the sole at points approximating the front portion of the heel, the strap body being exposed and formed with a mid-zone spaced from the sole and adapted to lie above the heel of the wearer, the side portions of the heel strap extending upwardly and rearwardly in an arcuate path between the mid-zone and the end securing zones, said heel assembly also including a divided ankle-strap having loops each embracing a side portion of the heel strap with each loop freely movable

in the direction of length of the heel strap, the free ends of the ankle-strap extending forwardly and upwardly and carrying complemental means for adjustably varying the effective length of the ankle-strap, whereby the vamp and heel zone assemblies are each adjustable to compensate for growth of the foot of the wearer with a single adjustment for the vamp strap and dual adjustments for the ankle-strap of the heel assembly, the heel strap being formed of fabric material cut on the bias to thereby permit self-compensating shifting of the position of the mid-zone portion of the heel strap as needed by the foot growth.



2,451,373
SPEED CONTROLLED MOTOR-DRIVEN GATE
Charles R. Beall, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Original application January 1, 1943, Serial No. 471,069. Divided and this application November 17, 1944, Serial No. 563,943
5 Claims. (Cl. 39—7)

1. In a highway crossing gate comprising a gate arm movable by motor means between raised and lowered positions, the combination of a governor of the friction brake type connected with the gate arm and including means effective to apply a brake to the motor at one speed when the gate is being lowered and at another speed when the gate is being raised.

2,451,374
ENGINE DRIVE
Joseph D. Bell, San Francisco, Calif.
Application December 5, 1944, Serial No. 566,765
6 Claims. (Cl. 74—57)

1. In an engine drive of the character described, a shaft, a cylinder mounted upon the shaft and having two axially spaced and symmetric cam tracks, two separate sleeves revolvable upon opposite ends of the cylinder in closely spaced relationship therewith and having corresponding axially spaced cam tracks registering with and of substantially the same pitch as the

cam tracks of the cylinder and forming crotches with said cylinder cam tracks upon relative turning movement, and a push pin extending from the outside of the sleeves through the space between the sleeve cam tracks and into the space between the cylinder cam tracks and in driving relation with all of the cam tracks.

2,451,375
CONVERSION OF HYDROCARBONS
Richmond T. Bell, Highland Park, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application April 17, 1944, Serial No. 531,488
5 Claims. (Cl. 196—52)

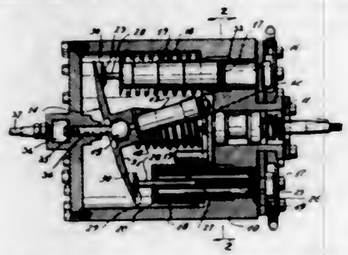
1. The method of cracking hydrocarbons comprising subjecting said hydrocarbons to suitable cracking conditions of time, temperature and pressure in the presence of an ester of an oxygen-containing phosphorus acid and a substance selected from the group consisting of halogens, hydrogen halides, carbon tetrahalides and organic halogen compounds.

2,451,376
SEPARATION OF OLEFINS FROM HYDROCARBON MIXTURES
George G. Bernard, Evanston, and Donald C. Bond, Northbrook, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application November 14, 1945, Serial No. 628,654
10 Claims. (Cl. 260—677)

10. A method of concentrating olefinic gases in a hydrocarbon gas mixture comprising contacting the mixture with a composition compris-

ing an aqueous solution containing in solution an acid, a cuprous salt, and a salt of a tertiary amine under super-atmospheric pressure, separating non-absorbed gas from the composition and then separating the absorbed gas from the composition.

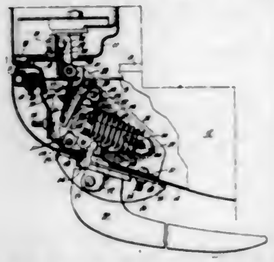
2,451,377
HYDROGENATION OF TALL OIL
Harding Bliss, Hamden, Conn., and William C. Sussky, Little Rock, Ark., assignors to Dictaphone Corporation, New York, N. Y., a corporation of New York
No Drawing. Application May 18, 1945, Serial No. 594,605
7 Claims. (Cl. 260—97.5)



1. A method of producing a hard, fatty product from tall oil which comprises forming a mixture of tall oil and 1,4-dioxane containing from 0.3 to 2.0 parts of dioxane by weight per part of tall oil, hydrogenating the mixture in the presence of a finely divided metal catalyst at an elevated temperature and pressure, cooling the resulting product to cause said product to separate into a resin-containing liquid phase and a fatty, solid phase and separating said fatty solid from said resin-containing liquid.

2,451,378
PRECISION CANNON PINION TIGHTENER
Sven F. Bloom, Rutland, Mass.
Application August 18, 1947, Serial No. 769,512
5 Claims. (Cl. 81—6)

1. A bumping device comprising a base, a pair of spaced arms thereon, an element in each arm, interengaging means on the respective arms and elements for controlled adjustment of said elements toward each other, the elements being alined, a collet on the base, a longitudinally adjustable spindle in the collet and frictionally held therein for movement of the spindle against the friction of the collet, said spindle being pointed and disposed intermediate the elements and arms for holding an apertured workpiece between the elements, one of the latter being a bumping tool and the other acting as an anvil to resist deflection of the spindle under the action of the bumping tool and to position the workpiece.



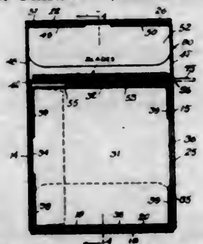
2,451,379
COMPRESSOR PUMP
Byron R. Burke, Los Angeles, Calif.
Application May 26, 1945, Serial No. 595,985
7 Claims. (Cl. 103—173)

1. A compressor or pump comprising means providing a wobble plate, means for driving the wobble plate, a plurality of cylinders arranged about the wobble plate, pistons reciprocable in the cylinders, spring means urging the pistons toward the wobble plate and connectors between the pistons and the wobble plate slidable toward the wobble plate relatively to their respective pistons and spring means urging said connectors

toward said wobble plate relatively to their respective pistons.

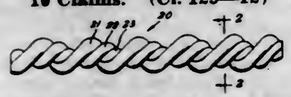
2,451,380
LATCH
George E. Curtiss, Jr., Penn Wynne, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application October 27, 1943, Serial No. 507,839
9 Claims. (Cl. 292—336)

1. In a door latch, a movable latching member, a toggle having one of its links anchored and its other link pivotally connected to said latching member and movable between an extended substantially straight line position and a retracted terminal position to move said latching member into and out of latching position, and spring means impinging against the knuckle of said toggle for moving said member into extended position.



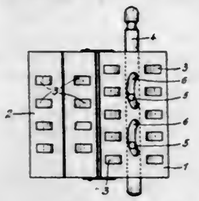
2,451,381
REFRIGERATOR DOOR LATCH
George E. Curtiss, Jr., Penn Wynne, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 24, 1943, Serial No. 515,570
11 Claims. (Cl. 292—332)

1. A door latch comprising a movable latching member adapted to engage a keeper, a support, toggle means movable to extended and retracted positions to move said member into and out of latching engagement with said keeper respectively, said toggle means comprising a first link having one end pivoted on said support and a second link having one end pivoted on said latching member, said links being pivoted together at their other ends to form a knuckle, spring means interposed between said toggle means and a reaction point removed therefrom effective to move said toggle to its extended position with the said knuckle disposed at one side of the line of thrust of the spring with respect to the pivot of the first link on said support, and manual means for moving said toggle to its retracted position with the knuckle disposed at the opposite side of said line,



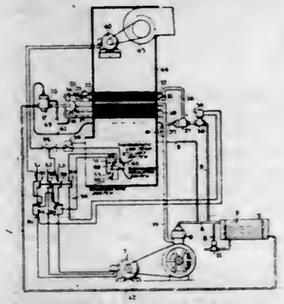
said toggle being resiliently held in said retracted position by said spring means.

2,451,382
COMBINED DISPENSING AND BLADE HOLDING BOX
Albert G. Davis, Newton Center, Mass., assignor to The Nevins-Church Press, New York, N. Y., a corporation of New York
Application October 31, 1945, Serial No. 625,835
2 Claims. (Cl. 206—16)



1. A container for razor blades, or the like, comprising an outer container having a slot in one wall thereof, a used blade container within said outer container having a slot in register with said slot in the outer container, a projection on said used blade container, a new blade container positioned above said used blade container within said outer container and slidably mounted for limited movement within said outer contaainer, the bottom of said new blade container defining an opening at one end thereof through which said projection on said used blade container extends, a slot in one wall of said new blade container at the opposite end thereof whereby the movement of said new blade container in one direction will cause a blade to be engaged by said projection and ejected through said slot and whereby movement of said new blade container in the opposite direction will deliver said blade extending through said slot.

2,451,383
WIRE SAW STRAND
Pierre de Vitry d'Avaucourt, Bainbridge, Pa.
Application December 7, 1945, Serial No. 633,430
10 Claims. (Cl. 125—12)

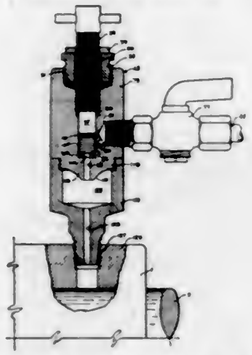


1. A twisted wire saw strand comprised of a plurality of intertwisted wires all of different diameters.

2,451,384
RAZOR BLADE SHARPENING APPARATUS
Thorbjörn Fjeld, Oslo, Norway, assignor to Rolf Arboll, Oslo, Norway
Application February 27, 1946, Serial No. 650,551
In Norway June 29, 1943
2 Claims. (Cl. 51—158)

1. In a sharpening device for razor blades, the combination of a casing consisting of two portions which are hinged together along one edge, sharpening members on the inner surface of both portions for sharpening the opposite edges of both sides of a razor blade when the latter is arranged therebetween, a pin reciprocably and turnably mounted in one of the said portions, studs carried by and engageable with the razor blade for holding the latter in position between the sharpening members during the sharpening, the said pin projecting outside the casing to provide an operating handle for facilitating the movement of the pin, that portion of the casing housing the pin having longitudinal arched slots on the inside wall thereof adapted to guide the said studs during the sharpening so as to impart to the latter and thus to the blade a reciprocating and at the same time a transverse movement.

2,451,385
CONTROL OF CONVERTIBLE EVAPORATOR-CONDENSERS FOR USE IN REFRIGERATIVE CIRCUITS
Keith P. Groat, York, Pa., assignor to York Corporation, York, Pa., a corporation of Delaware
Application July 22, 1946, Serial No. 685,436
4 Claims. (Cl. 62—115)



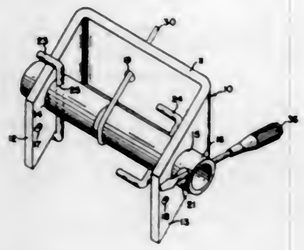
1. The combination of a refrigerative circuit including an evaporator having an inlet for volatile refrigerant and a suction connection; flow controlling means at said inlet adapted to permit free flow into the evaporator and restricted flow in the reverse direction; valve means controlling said suction connection; yielding means normally maintaining said valve means open; a combined expansible chamber motor and flow controller adapted to close said valve means when said motor is subjected to pressure, and so arranged that as the motor moves in valve closing direction it first throttles flow through said valve means and then

opens a passage from the expansible chamber motor to the evaporator; a source of warm refrigerant gas under pressure; and a valve controlling flow therefrom to said motor.

2,451,386
ISOMERIZATION OF 1,4-DICYANO-2-BUTENE
Glenn F. Hager, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 20, 1947, Serial No. 756,097
6 Claims. (Cl. 260—465.8)

1. A method for isomerizing 1,4-dicyano-2-butene to 1,4-dicyano-1-butene which comprises maintaining a solution of 1,4-dicyano-2-butene in a non-hydrolyzing reaction medium having a dielectric constant at 18° C. above 10 in liquid phase contact with a hydrogenating metal at an elevated temperature between 50° and 175° C. until 1,4-dicyano-1-butene is formed.

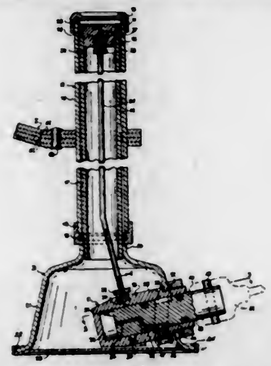
2,451,387
LUBRICATOR
Frank B. Harvuot, Fort Wayne, Ind., assignor to Bowser, Inc., Fort Wayne, Ind., a corporation of Indiana
Original application July 27, 1942, Serial No. 452,513. Divided and this application February 18, 1944, Serial No. 522,936
7 Claims. (Cl. 138—46)



1. In a lubricant feeding device, an inlet duct, an outlet duct, a chamber connecting said ducts, a helical rate of flow control element in said chamber, disposed to separate said ducts, said element being so positioned in said chamber as to cause lubricant to pass through the element in substantially a radial direction.

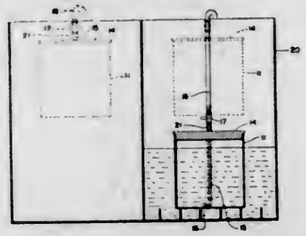
2,451,388
SHEET POSITIONING AND FEEDING DEVICE FOR PRINTING PRESSES
Richard D. Hawes, Los Angeles, Calif.
Application September 10, 1947, Serial No. 773,097
11 Claims. (Cl. 271—60)

10. A sheet feeding device for tilting printing press transfer boards, which device comprises a box member having an open front, a flap suspended within said open front to feed a sheet upon movement by gravity, a lip protruding from said flap to overlie the contacting edge of a sheet, a slot in the bottom of said box member, a tongue extending downwardly into said slot to limit movement of said flap, and a ball within said box for gravity movement against said flap to impel movement thereof.



2,451,389
LINE STRETCHER
Earl L. Howe, Dayton, Ohio
Application July 24, 1946, Serial No. 685,805
8 Claims. (Cl. 254—161)

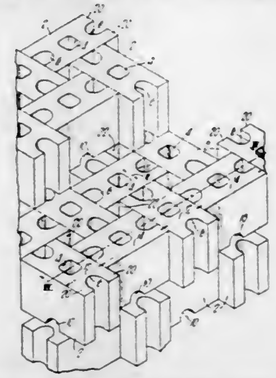
8. A line-stretching device comprising a substantially U-shaped body member, a rod-like member extending through and journaled in the side walls of said U-shaped member, said rod-like member having means for attachment of a line thereto and further having means for engagement by a tool for rotation of said rod-like member in said U-shaped member, a U-shaped detent member extending radially through said rod-like member adjacent each of the side walls of said U-shaped member and freely rotatable therein and disposed angularly relative to one another for alternate engagement with the walls of said U-shaped member thereadjacent, an opening through the base portion of said U-shaped member through which a line passes for engagement to said rod-like member, and an opening through each of the sides of said U-shaped member closely adjacent the ends thereof to receive means for attaching said U-shaped member to an object.



2,451,390
HYDRAULIC JACK
Marion W. Humphreys, Euclid, Ohio, assignor to Euclid Production Development Corp., Euclid, Ohio, a corporation of Ohio
Application August 22, 1946, Serial No. 692,205
1 Claim. (Cl. 103—157)

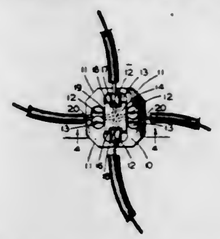
A liquid pump comprising a member having an annular aperture therein closed at one end and annularly spaced inlet and outlet ports opening into said aperture adjacent to but spaced from said closed end, a piston rotatable in said aperture, valving means associated with said piston for alternately connecting said ports with the portion of said aperture intermediate the closed end thereof and said piston upon rotation of said piston, and means comprising a cooperating cam groove and roller associated with said member and said piston for reciprocating said piston through a predetermined stroke upon rotation thereof, said cam groove having a recess or aperture in one side thereof permitting movement of said piston beyond said predetermined stroke and said piston having an aperture therein effective upon axial movement of said piston beyond said

predetermined stroke for connecting said ports together.



2,451,391
APPARATUS FOR SURFACE TREATING SMALL OBJECTS
Andrew Keck, Gahanna, Ohio, assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application May 6, 1944, Serial No. 534,468
2 Claims. (Cl. 91—46)

1. Apparatus for use in coating manufactured objects of the character described, comprising a container into which said objects are introduced, said container having a perforated bottom through which coating material containing a liquid solvent may be introduced into the container to coat said objects and may thereafter drain to remove excess material from said objects, and means for directing a jet of a gaseous medium into the container in such manner as to elevate said objects and thereby increase the effectiveness of the gaseous medium in evaporating the solvent of the coating material on said objects.

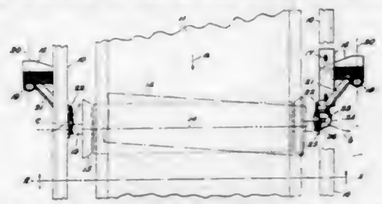


2,451,392
CHECKERWORK AND BRICK THEREFOR
Truman H. Kennedy, McKeesport, Pa., assignor to National Tube Company, a corporation of New Jersey
Application August 10, 1945, Serial No. 610,023
10 Claims. (Cl. 263—51)

10. A checkerbrick comprising a refractory rectangular parallelepiped having at least one vertical flue therethrough and having at least one open-ended flue on each end thereof, the number of said central flues being the square of the number of open-ended flues on either end thereof, said central flues being so disposed that the flues in superposed right angularly disposed bricks will be in alignment, the side walls of said brick being substantially flat throughout their

length whereby the open-ended flues of a right angularly disposed brick in contact therewith will be closed by said flat side walls.

2,451,393
BRIDGE FOR JUNCTION BOXES
Henry Kershaw, Belleville, N. J.
Application November 4, 1947, Serial No. 783,932
4 Claims. (Cl. 173—324)

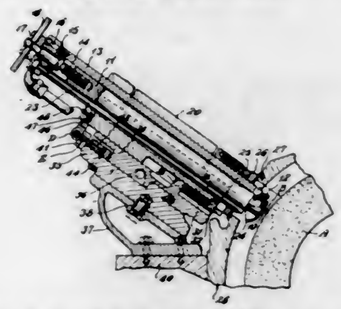


2. A bridge for connecting a plurality of wires, said bridge being formed of conducting material and including a face and having lugs stamped therefrom forming openings adjacent to the lugs, the ends of the wires being adapted to be arranged upon the face of the bridge and the lugs bent over the same, and a plate formed of conducting material to cover the ends of the wires and having arms to be extended through certain of the openings for interlocking engagement with the bridge.

2,451,394
SELF-ALIGNING CONVEYER ROLL MOUNTING
Robert E. Klein, West Allis, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application July 12, 1945, Serial No. 604,601
7 Claims. (Cl. 198—202)

1. In belt conveyor and like apparatus, having spaced frame members, and a belt arranged to travel between them in a normal path from which it may deviate laterally at times: an arm pivotally mounted on each frame member for swinging movements transversely of the direction of belt travel, the pivotal axes of the arms being inclined in a direction longitudinal of the belt; a shaft engaging and supported by the free ends of said arms, the length of said shaft being less

than the distance between the pivotal axes of the arms, whereby to dispose the latter in converging relation; and a belt engaging roll carried by the shaft.

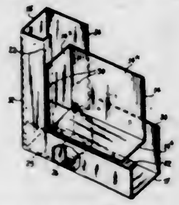


2,451,395

TRUING MECHANISM FOR GRINDING WHEELS

Joseph Frank Klukan, Garfield Heights, Ohio, assignor to Chandler Products Corporation, Euclid, Ohio, a corporation of Ohio

Application August 21, 1945, Serial No. 611,726
5 Claims. (Cl. 125—11)



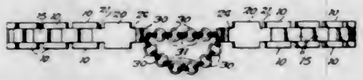
1. In a grinding wheel profiling device, the combination of a diamond holder, means adapted to support said diamond holder for movement toward and from a grinding wheel, a cam, a cam follower having a surface of varying width adapted to engage said cam for limiting the movement of said diamond holder toward the grinding wheel, means for producing relative movement between said cam and said cam follower, and means for adjusting said cam follower whereby different portions of said surface of varying width are caused to engage said cam.

2,451,396

METAL DOOR AND PANEL CONSTRUCTION

Donald Keith Macleod, Wooster, Ohio, assignor to United Steel Fabricators, Inc., Wooster, Ohio, a corporation of Ohio

Application July 13, 1945, Serial No. 604,739
4 Claims. (Cl. 189—46)



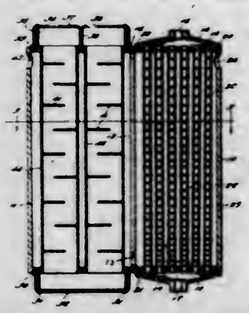
1. A metal door comprising, a polygonal sheet metal frame extending around a polygonal frame opening, and a polygonal sheet metal panel disposed in said frame opening, said frame being of a substantially channel-shaped integrally formed cross-section and having spaced flanges extending therealong on the side adjacent the frame opening, one of said flanges projecting laterally toward the frame opening and beyond the other flange and said other flange having an in-turned edge portion extending toward said one flange, said panel having a body portion connected directly to said one flange and also having a marginal flange extending therearound and connected directly to the in-turned edge portion of said other flange.

2,451,397

APPAREL BELT OR CHAIN

Carl G. Marquardt, Chatham, N. J., assignor to Sterling Injection Molding, Inc., Buffalo, N. Y.

Application September 28, 1945, Serial No. 619,211
7 Claims. (Cl. 2—338)



1. An ornamental article comprising a plurality of alternately disposed main and connecting links, said main links each having longitudinally extending bar portions formed integral near their opposite ends with pivot portions, said connecting links having a pair of outwardly extending ribs at each end thereof which are spaced apart to receive between them said pivot portions of adjacent links, the outer edges of said ribs extending toward each other to retain said pivot portions in place between said ribs, to permit turning of said main and connecting links relatively to each other.

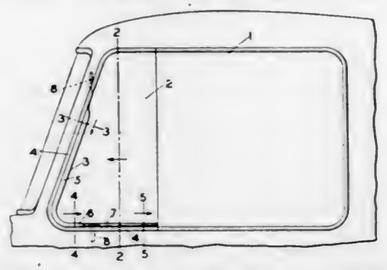
2,451,398

HEAT EXCHANGER

Ernest D. Marquette, St. Albans, Vt.

Application November 9, 1944, Serial No. 562,687
1 Claim. (Cl. 257—220)

A heat exchange unit for simultaneously preheating air and fuel carried to the carburetor of an internal combustion engine by the water heated in cooling the engine, comprising two juxtaposed shells having a common wall formed with a port extending through the lower end thereof, one of said shells having an inlet port at its upper end for receiving heated water from the engine-cooling system and the other shell having an outlet port at its upper end for discharging the water back to said engine-cooling system, common upper and lower apertured cover plates for said shells, a plurality of pipes having



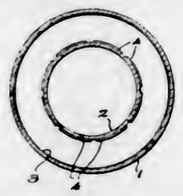
internally formed, alternately arranged baffles circumferentially and concentrically disposed in one shell between said closure plates therefor, a pair of enlarged pipes having internally formed alternately arranged baffles disposed in said other shell between the portions of the closure plates at the opposite ends thereof, upper and lower centrally ported outlet and inlet caps secured to said plates at the ends of said first-mentioned shell adapted for connection with the fuel supply line leading to the engine carburetor, combined inlet and outlet caps removably secured on the plate overlying said second-mentioned shell for connection with the air inlet supply to the engine carburetor and a single cap removably secured on the plate at the lower end of said last-mentioned shell forming a return or bypass for the air passing through the enlarged pipes in said shell.

2,451,399

RAIN GUTTER FOR AUTOMOBILE WINDOWS

Ralph V. Martin, Philadelphia, Pa.

Application October 3, 1945, Serial No. 620,081
1 Claim. (Cl. 296—44)



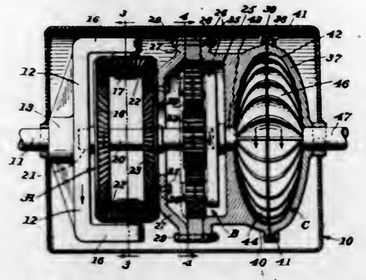
Gutter for vertically pivoted wing type auto window comprising a strip bent longitudinally to conform in shape with the forward and bottom edges of the window with means for securing said strip to the window, that portion of the strip extending along the forward edge being bent transversely to form a rearwardly open gutter and merging into a tubularly bent closed gutter from a point forward of the pivot line of the window, said tubular form extending to the rear edge of the window and opening rearwardly.

2,451,400

PHOTOELECTRIC TUBE

Oran T. McIlvaine, St. Charles, Ill.

Application September 9, 1944, Serial No. 553,411
2 Claims. (Cl. 250—168)



1. A photo-electric tube comprising a double-walled vessel having an unobstructed longitudinal passageway therethrough and having a transparent window, an open-ended tubular cathode having a continuous photo-sensitive surface and mounted within the vessel substantially concentric with said passageway, and a plurality of circumferentially spaced anodes extending about the passageway and within the cathode, said anodes having peripheral surfaces in opposed relation to the cathode and substantially parallel with the electron emitting surface thereof in positions for electronic discharge from the cathode to the several anodes through substantially parallel paths.

2,451,401

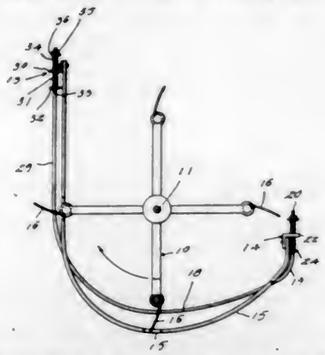
TRANSMISSION

Hubert R. Mitchell and Charles M. Sobotka, Hartselle, Ala.

Application June 10, 1947, Serial No. 753,748
1 Claim. (Cl. 74—189.5)

A power transmission unit comprising a housing, a rotary fluid coupling case in said housing, a planetary gear case in the housing and fixed to said coupling case, a drive shaft extending at one end into said housing, a yoke member in said housing and connected to said drive shaft, said yoke member having inwardly extending bearing studs, a differential gear mechanism in said housing including an intermediate shaft, a bevel gear keyed to said intermediate shaft, pinions carried by said bearing studs and meshing with said bevel gear, a complementary bevel gear fixed to said planetary gear case and having a central opening through which extends said intermediate shaft, a planetary gear set in said planetary case including a carrier member having spaced bearing studs, said carrier member and said yoke member having aligned recesses into which extend the ends of said intermediate shaft, a sun gear keyed to said intermediate shaft, pinions carried by the bearing stud on said carrier member and meshing with said sun gear, an internal ring gear carried by the planetary case and meshing with said last mentioned pinions, said carrier member having a stub shaft extending into said fluid coupling case, vanes in said coupling case and connected to said stub shaft so as to be rotatable therewith, co-acting vanes fixed to the interior wall of said coupling case, and a driven shaft connected to the rotary coupling case and the fixed vanes.

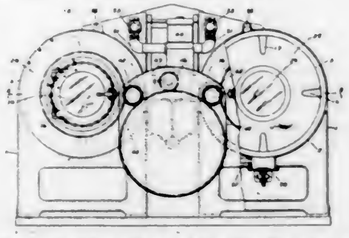
2,451,402



RAKE

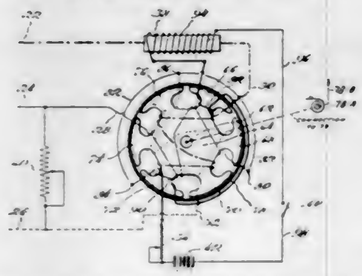
John H. Myers, Tornillo, Tex.

Application August 18, 1944, Serial No. 550,064
5 Claims. (Cl. 56—377)



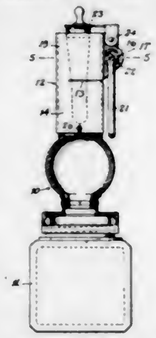
1. In a rake having a frame formed of horizontal bars and a rotary raking reel, a stripper means for the reel comprising a substantially U-shaped member having the legs thereof upright, the rear leg of said member being substantially shorter than the front leg thereof, said legs slidingly engaging through said horizontal

bars, and yieldable means engaging the free ends of the legs of said member holding said mem-



ber against vertical sliding movement in at least one direction.

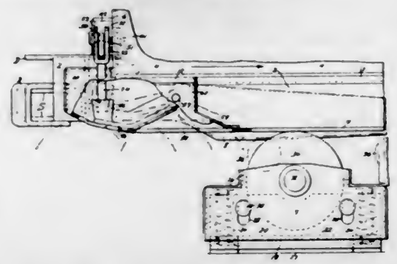
2,451,403
MACHINE USED IN LAUNDRIES FOR WASHING OR DRYING ARTICLES
Stanley Newbery, Peterborough, England, assignor of one-half to James Armstrong & Company Limited, London, England, a body corporate of Great Britain
Original application December 9, 1944, Serial No. 567,335. Divided and this application February 8, 1946, Serial No. 646,424. In Great Britain December 14, 1943
1 Claim. (Cl. 68—27)



A laundry machine of the kind set forth, comprising in combination a main frame mounting a pair of drums with their axes horizontal and parallelly disposed, an access aperture in each end of each drum, a cage with an access aperture in each end revolubly mounted in each drum with its said apertures concentric with the periphery of said cage and aligned with the respective apertures in such drum, a door at each end of each drum operative to close fluid-tightly the aperture in said end and also to substantially close the aligned aperture in the respective cage while permitting the latter to rotate, bearing rings fast with the end walls of said drums and cages and surrounding the access apertures therein, antifriction bearings between said rings at each end of each cage, a main driving shaft rotated by a source of power, a ring gear fast with each cage and disposed within the respective drum concentric with the cage and surrounding its respective bearing rings, a driving pinion in each drum meshed with the respective ring gear and having its driving shaft extending outside the drum through a bearing in the respective end wall thereof, said ring gears and driving pinions being positioned to leave unobstructed the said access openings, and a main driving gear common to the said cages and arranged externally of the drum at one end of the machine with its axis horizontally disposed in the central longitudinal vertical plane of the machine, said main gear being driven by said main driving shaft through reduction gear and being operative to drive the shafts of said driving pinions meshed with the ring gears through transmission gears fast with said shafts.

2,451,404
INDUCTIVE ELECTRICAL INDICATOR WITH COMPENSATED DAMPER
Horace M. Norman, Skokie, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application August 20, 1943, Serial No. 499,329
4 Claims. (Cl. 171—95)

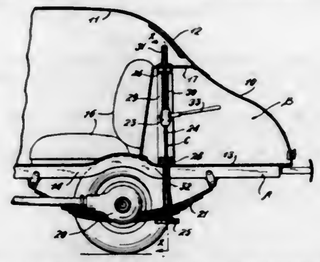
1. An electrically operated indicating unit for a speedometer or the like of the type comprising an induction rotor and revolving magnetic field producing means for moving said rotor, including in combination, a source of electrical energy, means energizable from said source for producing a stationary magnetic field acting upon said rotor to damp said rotor, and means associated with said revolving field producing means providing compensation for the heating of said revolving field producing means by the energy flowing through said stationary magnetic field producing means.



2,451,405
COMBINATION CLAMP AND CLOSURE
George W. Oakes, Crystal City, Mo.
Application November 1, 1944, Serial No. 561,411
3 Claims. (Cl. 138—89)

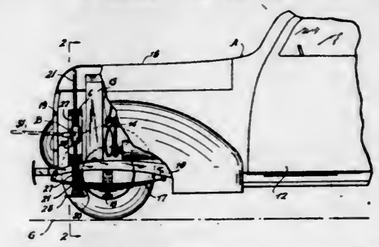
1. A device of the character described comprising a tubular part adapted to surround a conduit made of resilient material, said tubular part having a transverse slit providing an attaching

section and a clamping section, said attaching section serving for attaching the device to said conduit, said clamping section being split longitudinally and inherently resilient so as to be expansible and contractible, and actuating means to contract the clamping section for the purpose of compressing said conduit into a fluid-tight connection with an article to be filled with fluid, and to allow the clamping section to expand to decompress the conduit for the purpose of releasing said article, said actuating means consisting of lugs on said clamping section, a screw extending loosely through said lugs, nuts on said lugs respectively, and a handle connected with said screw to rotate it causing the nuts to bear on the lugs to contract the clamping section and to withdraw the nuts to allow the clamping section to expand, for the purposes stated.



2,451,406
MINE CAR LATCH ASSEMBLY
Herman H. Pancake, Huntington, W. Va., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application December 16, 1943, Serial No. 514,467
14 Claims. (Cl. 214—58)

1. In a drop bottom mine car having load retaining side walls and side sill members, a drop bottom door hingedly carried by the car, and a latch assembly carried by the car and including a part mounted for swinging movement transversely of the car and normally engaging the door to retain the same in raised position and movable to release the door for opening, said latch assembly also including an operator part carried by a side sill member and extending longitudinally of the car and located wholly within the area defined by the outermost boundary planes of the side sill member.



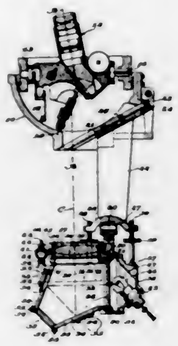
2,451,407
VEHICLE ATTACHED JACK OPERATED FROM LUGGAGE COMPARTMENT
Vincent R. Paolucci, Cleveland Heights, Ohio
Application April 27, 1945, Serial No. 590,596
3 Claims. (Cl. 254—86)

1. In a motor-driven vehicle, a frame having spaced side members, a body secured to said frame, reenforcing means attached to said spaced side members of the frame adjacent one end of the latter and extending transversely thereof, a vertically extending elongated hollow member attached to said reenforcing means at substantially the mid-point of the latter, and a jack mechanism including two relatively movable members one of which is elongated and disposed in said hollow member with a sliding fit and the other of which is operatively connected to said reenforcing means, non-rockable means on the lower end of said elongated movable member adapted to engage the ground, and manually operable mechanism disposed within the confines of said body and adapted to be actuated through an opening in the latter to produce relative movement between said relatively movable members.

2. In a motor-driven vehicle including a frame having a body attached thereto and provided with a luggage compartment, the combination of a reenforcing means within said luggage compartment extending transversely thereof and attached to said frame, an elongated vertically extending hollow member attached to said reenforcing means at substantially the mid-point of the latter, and a jack mechanism including two relatively movable members one of which is elongated and disposed in said hollow member with a sliding fit and the other of which is operatively connected to said reenforcing means, the said elongated movable member extending through an opening in said luggage compartment and being provided with non-rockable means on its lower end adapted to engage the ground, and manually operable mechanism disposed within the confines of said luggage compartment and adapted to be actuated through an opening in the latter to produce relative movement between said relatively movable members.

2,451,408
LIFTING DEVICE FOR AUTOMOBILES
Vincent R. Paolucci, Cleveland Heights, Ohio
Application November 28, 1945, Serial No. 631,310
3 Claims. (Cl. 254—86)

1. In a motor-driven vehicle including a frame having a radiator and an ornamental grill mounted adjacent the forward end of said frame with the grill having an opening therethrough, a transversely extending supporting member attached to said frame between said radiator and grill, a vertically extending elongated hollow member attached to said supporting member at substantially the mid-point of the latter and of the width of said vehicle, and a jack mechanism including two relatively movable members one of which is elongated and disposed in said hollow member with a sliding fit and the other of which is operatively connected to said supporting member, non-rockable means on the lower end of said



elongated member adapted to engage the ground, and manually operable means disposed between said radiator and grill and adapted to be actuated through the opening in the latter to produce relative movement between said relatively movable members.

2,451,409

PORTABLE COLLIMATOR APPARATUS FOR TESTING THE GYROSCOPE AND OPTICAL SYSTEM OF BOMBSIGHTS

Stanton H. Petry, Evanston, and Hartland S. Snyder, Chicago, Ill., assignors to Victor Adding Machine Co., Chicago, Ill., a corporation of Illinois

Application February 19, 1945, Serial No. 578,774
7 Claims. (Cl. 88—1)

1. An instrument for testing and checking the telescope and static balance of a gyro-stabilized bombsight comprising, in combination, a bracket having means for detachably securing it to a fixed part of the bombsight; a collimator housing universally connected to said bracket; a pair of spirit levels carried by the housing and disposed at a right angle relative to one another; a plurality of levelling screws arranged to adjust said housing relative to said bracket to bring the bubble of said levels to a neutral position; a reticle mounted within said housing; a light source to one side of said reticle; and an objective lens positioned to receive light from the reticle and foused upon said reticle whereby a vertical column of light having parallel rays is emitted from the collimator, said ray of light being vertical when said spirit levels are in neutral position and being used in checking various positions of the bombsight telescope cross hairs with respect to said reticle, substantially as described and for the purposes set forth.

2,451,410

THERMOSETTING LAMINATING SIRUPS

Edgar M. Queeny, Kirkwood, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Missouri

No Drawing. Application November 19, 1947, Serial No. 787,022
6 Claims. (Cl. 260—38)

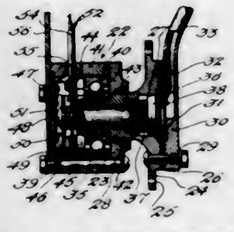
1. A laminating syrup comprising from 1 to 15 parts of silica areogel and 100 parts of a thermosetting resin taken from the group consisting of phenol-aldehyde, melamine-aldehyde, urea-aldehyde, dicyandiamide-aldehyde resins, melamine-urea-aldehyde and melamine-dicyandiamide-aldehyde resins.

2,451,411

SATURATED POLYHALOALKYL SULFIDES AND METHODS FOR THEIR PREPARATION

Maynard S. Raasch, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 7, 1946, Serial No. 652,825
12 Claims. (Cl. 260—608)



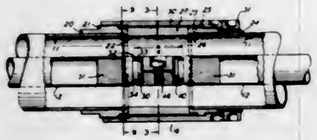
1. A bis(2-chloropolyhaloethyl) disulfide containing five halogen atoms attached to each ethyl group of which at least three are fluorine atoms.

2,451,412

PRESSURE SWITCH

James W. Richbourg, Vidalia, Ga., assignor of two-fifths to G. H. Gibson, Vidalia, Ga.

Application January 14, 1946, Serial No. 641,058
4 Claims. (Cl. 200—58)



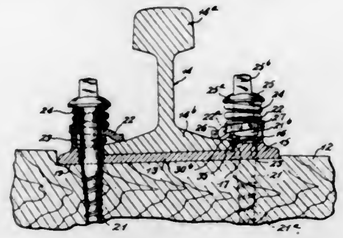
1. An air pressure indicator comprising a tubular body, a cover plate on one end of the body having an air chamber aligning with the bore in said body, a diaphragm between the air chamber and the body, a plunger slidable in the tubular body, means yieldingly to urge the plunger against the diaphragm, means establishing communication between the air chamber and a pressure chamber, an anti-friction bearing on the tubular body, a housing mounted on the anti-friction bearing, a contact on the plunger within the housing and spaced contacts carried by the housing adapted to be engaged by the contact on the plunger for closing an electrical signaling circuit.

2,451,413

COUPLING DEVICE FOR CONCENTRIC CONDUCTOR LINES

Albert L. Robinson, South Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application December 20, 1943, Serial No. 514,947
7 Claims. (Cl. 178—44)



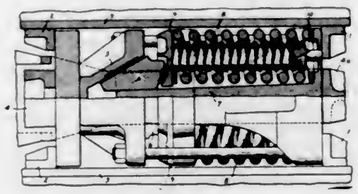
1. In combination in a transmission line including a plurality of sections of outer and inner conductors, means for maintaining concentric spacing between said conductors, means for connecting adjacent sections of outer conductor, and means for connecting each pair of adjacent sections of inner conductor subject to variations in length, comprising means attachable to one end of each pair of said sections of inner conductor being connected, a perpiheral depression provided in a portion of each of said attachable means, and further means slidable in said depressed portions of said attachable means for enabling said last-mentioned connecting means to be of variable over-all length to compensate for the variations in the lengths of said sections of inner conductor being connected.

2,451,414

RAIL HOLDING DEVICE

Jacob Rush Snyder, Cleveland, Ohio

Application November 8, 1946, Serial No. 708,594
13 Claims. (Cl. 238—349)



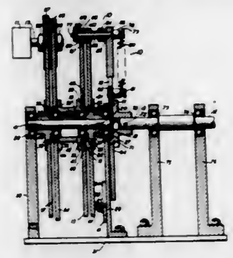
1. In a fastening for a rail having a base flange, a two-piece clamp comprising a lower clamp member having a fulcrum portion thereon and an upper clamp member rockable on said fulcrum portion and having a bearing portion in overlapping engagement with said flange, said upper and lower clamp members having substantially aligned openings therethrough, a fastening member extending through said openings, and a spring on said fastening member and acting on said upper clamp member to apply downward pressure therethrough to said flange, said lower clamp member being of a shape such that the fulcrum portion thereof is located wholly on the side of said fastening member remote from said rail.

2,451,415

RAILWAY CAR DRAFT GEAR

Hubert L. Spence, East Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a corporation of Ohio

Application July 19, 1943, Serial No. 495,239
6 Claims. (Cl. 213—36)



3. A friction draft gear comprising a friction member, a wedge member, a friction shoe interposed between said friction member and wedge member, spring means reacting at one end on said shoe for urging said member and shoe into frictional contact, abutment means engaging the other end of said spring means and slidably associated with said friction member, said abutment means being normally adapted for engagement with the rear draft lug of a car, and means for moving said friction member relatively to said abutment means in draft so as to cause said spring means to act with a constant force against said shoe during a portion of the travel of said gear in draft, said abutment means being adapted to engage the rear draft lug throughout the travel of said gear in buff to cause said spring means to act with increasing force against said shoe during travel of said gear in buff.

2,451,416

INTERMITTENT DRIVE DEVICE

Frank M. Thomas, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application July 6, 1946, Serial No. 681,653
8 Claims. (Cl. 74—125.5)

1. A drive device comprising a plurality of notched wheels driven at relatively different speeds, means for driving said wheels, a rotatable member and a connecting member extending from said rotatable member and into contact with said wheels and operable to engage in the notches in said wheels when the notches in said wheels are in register, said connecting member operating to transmit rotational movements of one of said wheels to said rotatable member when the notches in said wheels are in register with each other and with said connecting member.

2,451,417

STEEL WOOL

James R. Thompson, Shaker Heights, Ohio, assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey

No Drawing. Application August 31, 1945, Serial No. 613,955
6 Claims. (Cl. 75—125)

1. Steel wool containing from about 0.10 to about 0.15 per cent carbon, from about 0.65 to about 0.95 per cent manganese, a maximum of about 0.11 per cent phosphorus, a maximum of about 0.06 per cent sulphur, from about 0.20 to about 0.50 per cent copper, from about 0.10 to about 0.50 per cent nickel, from about 0.001 to about 0.005 per cent boron, and the remainder substantially all iron.

2,451,418

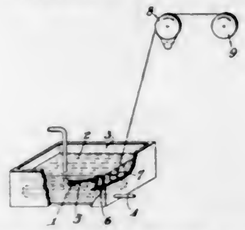
METHOD OF AND APPARATUS FOR REDUCING VISIBLE VAPORS ABOVE OPEN VATS AND THE LIKE

George Tree, Gary, Ind., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey

Application April 2, 1947, Serial No. 739,026
4 Claims. (Cl. 98—1)

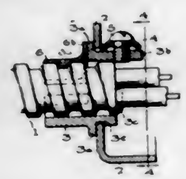
1. The herein described method of reducing visible vapors above open vats and the like containing aqueous liquids, consisting in heating the

air above the level of said liquid adjacent the upper edges of the vat to a temperature prevent-



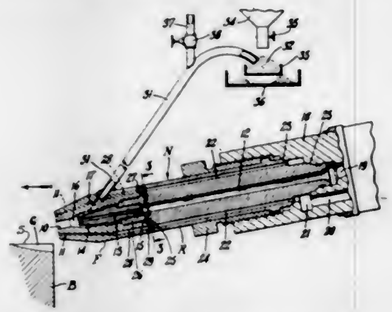
ing appreciable condensation of the moisture content of the vapors arising from said liquid.

2,451,419
DUPLEX MICROMETER GAUGE
Roy M. Vinyard, Portland, Oreg.
Application September 2, 1947, Serial No. 771,648
3 Claims. (Cl. 33—181)



1. A gage set for measuring alined internal parts of a device having an enclosing housing and cap threaded on the housing with stop means limiting their threaded engagement, said set comprising two micrometer gages, each having a body and a micrometer screw, said bodies having threads by which they may be screwed together and stops for limiting their threaded engagement, said threads being dimensionally the same as the threads on the housing and cap and coaxial with the micrometer screws, and said stops being adapted to engage the stop means of the housing and cap to define gaging positions when the bodies are separated from each other and screwed to the housing and cap respectively.

2,451,420
ARTIFICIAL YARNS AND PROCESS OF PRODUCING THE SAME
William W. Watkins, Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application March 19, 1947, Serial No. 735,666
4 Claims. (Cl. 18—54)

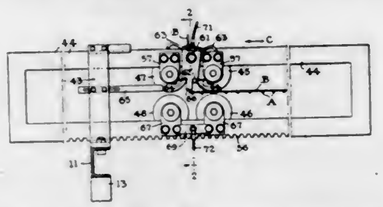


1. A process for wet-spinning of acrylonitrile polymer yarn which comprises extruding a solution, in a volatile organic solvent, of acrylonitrile polymer containing a major portion of acrylonitrile, through a shaped orifice into a spinning bath consisting of an aqueous 30% to 50% (by weight) solution of calcium chloride.

2,451,421
COUPLING DEVICE
Albert J. Wayman, Youngstown, Ohio
Application July 5, 1945, Serial No. 603,335
9 Claims. (Cl. 285—6.5)

1. A conduit coupling comprising a sleeve having a radial flange formed intermediate the ends thereof, a longitudinally extending lug formed on one end of said sleeve, a bowed clamping piece mounted on said lug and having one end thereof extending towards said flange, and a screw having threaded engagement with said lug transversely thereof and arranged to flatten out said clamping piece, whereby said end of said clamping piece moves closer to said flange.

2,451,422
THERMOCHEMICAL REMOVAL OF METAL WITH A FLUX-FORMING POWDER IN THE OXYGEN CUTTING STREAM
Robert L. Wagner, Niagara Falls, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio
Application March 24, 1945, Serial No. 584,715
19 Claims. (Cl. 148—9)



1. Thermochemical metal-removing apparatus comprising, in combinaiton, a nozzle having an oxygen passage therein provided with an outlet for discharging a stream of oxygen into the atmosphere and against successive preheated portions of a metal body; said nozzle also having a plurality of combustible gas mixture passageways therein extending lengthwise of and spaced apart around said oxygen passage, said mixture passageways having outlets adjacent but spaced apart around such oxygen outlet, for discharging combustible mixture jets to produce preheating flames in the atmosphere outside said nozzle and separate from but alongside and around such discharging oxygen stream to preheat such successive portions of said metal body; a powder container separate from said nozzle, for holding a supply of adjuvant powder; and a powder supply conduit leading from said container to said nozzle but non-communicating with said mixture passageways, said conduit having a powder

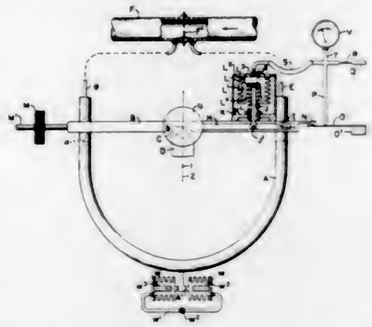
inlet communicating with said container and a part connected to said nozzle and provided with a powder outlet having its axis intersecting the axis of said oxygen passage and disposed in a plane extending lengthwise of said nozzle between two adjacent combustible mixture passageways, said powder outlet being constructed and arranged to discharge adjuvant powder laterally into an oxygen stream passed through said oxygen passage and produce a powder-carrying oxygen stream flowing within and lengthwise of the flames produced by the combustible mixture jets discharging from the outlets of said mixture passageways.

10. A process of substantially uniformly, steadily and progressively thermochemically removing metal on a path extending along a surface of a metal or alloy body which is substantially immune to such thermochemical metal removal by the conventional procedure of steadily and concurrently advancing only a heating flame and an oxygen stream along said path while concurrently impinging only said flame and said oxygen stream against successive areas of said surface, said process comprising progressively, steadily and concurrently advancing along said path and impinging against successive areas thereof both a heating flame and a powder-carrying oxygen stream distinct from but flowing alongside said flame; the powder in said powder-carrying stream consisting of finely-divided adjuvant material substantially all finer than 50 mesh and characterized by its ability to flux refractory metallic oxide and provide a removable fluid mixture of oxides along said path while said powder-carrying oxygen stream and said flame are so impinging against said successive areas; and, during such advancing of said flame and said powder-carrying oxygen stream, continuously producing said powder-carrying stream by introducing such finely-divided material into a flowing oxygen stream in a proportion of one pound of such material for from 15 cubic feet to 100 cubic feet of oxygen.

2,451,423
ART OF WELDING WIRE-MESH FABRICS
Charles C. Wickwire, Cortland, N. Y., assignor to Wickwire Brothers, Inc., Cortland, N. Y., a corporation of New York
Application September 25, 1945, Serial No. 618,461
6 Claims. (Cl. 140—112)

1. Means for welding a continuous weft wire in crossed relation to a warp made up of a series of wires, comprising in combination, warp-sustaining means; a reciprocable carrier adapted to embrace a warp sustained by said means; two pairs of welding rolls mounted on said carrier on parallel adjacent axes so that either pair may lead and the other trail according to the direction of motion of the carrier, the rolls of each pair being opposed to each other, one above and the other beneath the embraced warp, and so spaced as to exert welding pressure on a warp and weft crossing; means for reciprocating said carrier to traverse said rolls back and forth across and beyond the embraced warp; a guide for confining a continuous weft strand to passage through the interval between similar rolls of respective pairs, whereby the weft must pass from said guide into contact with whichever one of said rolls is trailing; connections for supplying welding current; selector means operable reversely by the carrier near its opposite limits of reciprocation to interchange the pairs of rolls in the welding circuit and energize the trailing pair; intermittent warp feeding means; and means for operating said warp feeding means as the carrier reverses its motion.

2,451,424
ENDLESS-TYPE CONVEYER FOR COAL AND THE LIKE
Ernest Williams, Edwight, W. Va.
Application October 10, 1945, Serial No. 621,556
3 Claims. (Cl. 198—168)

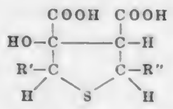


1. In a conveyor construction of the class described, a frame embodying vertical parallel side walls having upper and lower generally horizontal partitions mounted therebetween, said partitions defining upper and lower delivery and return troughs, sprocket wheels mounted at the outer ends of said troughs, an endless sprocket chain trained over said sprocket wheels and having its upper run movable through the upper trough and its lower run movable through the return lower trough, and a plurality of load-pushing and scraper flights attached at longitudinally spaced points to the runs of said chain, each flight being centrally attached to the chain and having at opposite ends outstanding scraping blades, and said scraping blades being obliquely inclined in respect to the longitudinal axes of said flights to facilitate pushing and discharging the material from the upper trough, and said blades being provided with concavo-convex central portions defining pronounced pockets, and said pockets being adapted to function as loose material-retrieving and returning scoops.

2,451,425
FLOWMETER
Aloysius F. Allwein, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 18, 1946, Serial No. 717,007
4 Claims. (Cl. 73—405)

1. A differential pressure gauge comprising a supporting structure pivoted to turn about a horizontal axis and including a U tube manometer having uprising legs with their upper portions displaced from one another in a direction transverse to said axis whereby the displacement of the manometer sealing liquid from one leg to the other tends to turn said structure about said axis, a rebalancing weight pivotally connected to said structure to turn about a second horizontal axis parallel to said first horizontal axis and laterally displaced from the center of gravity of said weight, a weight adjusting mechanism mounted on said structure and comprising an expansible pressure chamber and a spring acting between said structure and weight to turn the latter about said second axis downwardly and upwardly as the

pressure in said chamber is varied, means actuated by tilting movements of said structure to vary the pressure in said chamber and thereby turn the weight about said second axis as required to return said structure to an approximately constant normal position when turned out of said

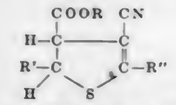


position by the displacement of sealing liquid from one to the other of the manometer legs, and means responsive to and indicating the varying pressure in said chamber and thereby providing a linear indication of the square root of the difference between the pressure in the upper end of said legs.

2,451,426
BRIGHT ZINC PLATING
Robert R. Bair and Harry L. Benner, Niagara Falls, and Joseph Frederic Walker, Lewiston, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 25, 1943, Serial No. 511,686
4 Claims. (Cl. 204—55)

1. The process of electrodepositing zinc from an aqueous zinc cyanide electroplating solution having a pH above 9.0 which comprises electrodepositing said zinc from said solution containing dissolved therein about 0.1 to 2.0 ounces per gallon of the condensation product of sodium cyanamide and formaldehyde obtained by reacting substantially equimolecular amounts of sodium cyanamide and formaldehyde in aqueous alkaline solution at a temperature below 35° C.

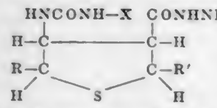
2,451,427
HYDROXYTHIOPHANE CARBOXYLIC ACIDS AND ESTERS AND METHODS OF PREPARING SAME
Bernard R. Baker, Nanuet, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 16, 1945, Serial No. 605,465
9 Claims. (Cl. 260—329)



9. Chemical compounds having the following formula:

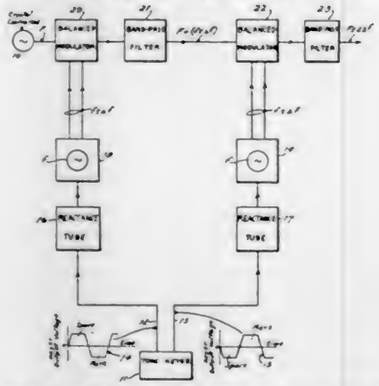
wherein R' and R'' are members of the group consisting of hydrogen, alkyl, phenoxyalkyl and carboxyalkyl radicals.

2,451,428
DIHYDROTHIOPHENES AND METHOD OF PREPARING SAME
Bernard R. Baker, Nanuet, N. Y., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application July 16, 1945, Serial No. 605,466
10 Claims. (Cl. 260—329)



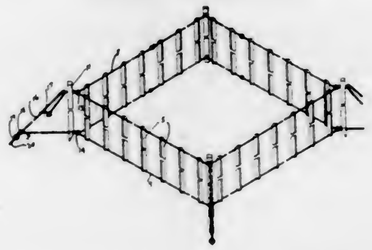
1. Chemical compounds having the general formula:

wherein R is an alkyl radical and R' and R'' are members of the group consisting of hydrogen, alkyl, carbalkoxy and carbalkoxyalkyl radicals.



2,451,429
THIOPHANE CARBOXYHYDRAZIDES AND METHOD OF PREPARING THE SAME
Bernard R. Baker, Nanuet, and Merle V. Querry, Pearl River, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 13, 1945, Serial No. 610,682
11 Claims. (Cl. 260—329)

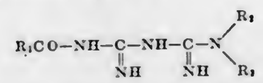
1. Chemical compounds having the general formula:



in which X is a member of the group consisting of hydrogen, alkyl and aryl radicals and R and R' are members of the group consisting of hydrogen, N-alkyl carbamylalkylene radicals and N-aryl carbamylalkylene radicals.

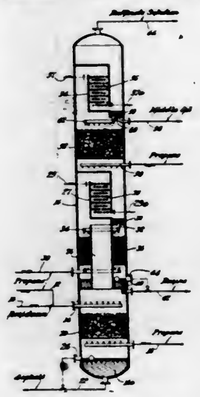
2,451,430
CARRIER FREQUENCY SHIFT SIGNALING
Salvatore A. Barone, Freeport, N. Y., assignor, by mesne assignments, to Jefferson Standard Broadcasting Company, a corporation of North Carolina
Application April 23, 1946, Serial No. 664,168
7 Claims. (Cl. 250—8)

1. The method of signalling which comprises, generating a master frequency F, generating a pair of local auxiliary frequencies each of frequency f, frequency-modulating both said local frequencies by the same signal but in opposite respects to produce respective side bands $(f\pm\Delta f)$ and $(f\mp\Delta f)$, mixing the $(f\pm\Delta f)$ frequency from one local oscillator with said master frequency F, and selecting one side band alone, mixing the said selected side band with the frequency $(f\mp\Delta f)$ from the other local oscillator, and selecting therefrom a side band component $(F\pm2\Delta f)$.



2,451,431
PORTABLE PLAY PEN
Milbert D. Bible, Mosheim, Tenn.
Application December 5, 1944, Serial No. 566,718
1 Claim. (Cl. 256—25)

A portable play pen comprising flexible upper and lower endless runners, palings supporting the runners in spaced apart relation, and supporting means for said runners shaping the same into rectangular form to provide an enclosure comprising corner posts with hooks thereon through which said runners slidably extend, stakes embedded in the ground, eye forming members attached to the stakes, and guy lines connected to the upper and lower ends of the posts and forming loops slidable through said members, the connection of said guy lines to the upper ends of the posts being slidably adjustable to tighten the guy lines.



2,451,432
HIGH MOLECULAR GUANAMINES AND A PROCESS FOR THEIR MANUFACTURE
Jakob Bindler, Basel, Switzerland, assignor to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm
No Drawing. Application August 24, 1942, Serial No. 455,957. In Switzerland August 18, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires August 18, 1961
7 Claims. (Cl. 260—249.5)

1. A process for the manufacture of a high molecular guanamine which comprises heating an acyl biguanide of the formula

wherein R_1 represents an alkyl radical containing from 8 to 18 carbon atoms, R_2 represents a member of the group consisting of alkyl, aralkyl, aryl, cycloakyl and heterocyclic radicals, and R_3 represents a member of the group consisting of hydrogen and alkyl, aralkyl, aryl, cycloakyl and heterocyclic radicals, to a temperature above 170° C.

2,451,433
HYDROCARBON EXTRACTION APPARATUS
Hyman R. Davis, Jackson Heights, N. Y., assignor to The Lummus Company, New York, N. Y., a corporation of Delaware
Application July 24, 1946, Serial No. 685,831
2 Claims. (Cl. 196—14.52)

1. A countercurrent extractor comprising a tower having lower, intermediate and upper sections, means for introducing a high molecular weight oil mixture and a liquefied normally gaseous solvent into the tower between the lower and intermediate sections, a packing in said lower section whereby a heavy component precipitated from said mixture is deposited thereon, means to introduce solvent to said tower below said packing and upwardly in countercurrent relation to the precipitated heavy component to further wash the same, means to draw off the heavy component at the bottom of the tower, an annular body of packing in the intermediate section of the tower, a heat exchanger above said packing, arranged so that all ascending fluids must pass through said heat exchanger, a reflux trap for collecting a precipitated light component, means to distribute said light component on the annular packing, means to wash said light component with some of the ascending solvent, means to collect and discharge the washed light component from the tower, a heat exchanger in the upper section of said tower, a reflux collecting trap below said heat exchanger, and a reflux distributing means below said collecting trap, means to wash said reflux for precipitating a still lighter component from said mixture and solvent flowing through the top section, and means to discharge a refined raffinate solution from the top of said tower.

2,451,434
ENOL-THIOETHERS OF KETOSTEROIDS AND METHOD OF PREPARING THE SAME
Louis Dorfman, New York, and Seymour Bernstein, Pearl River, N. Y., assignors, by mesne assignments, to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 26, 1945, Serial No. 585,010
3 Claims. (Cl. 260—397.5)

1. The method of producing the enol lower alkyl thioethers of testosterone-17-propionate which comprises reacting testosterone-17-propionate with a lower alkyl mercaptan in the presence of a dehydrating agent.

2,451,435

PLASTIC COMPOSITIONS AND PROCESS OF MAKING THE SAME FROM AN UNSATURATED KETONE AND AN UNSATURATED NITRILE

William E. Elwell and Richard L. Meier, Berkeley, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware

No Drawing. Application June 11, 1945, Serial No. 598,904
11 Claims. (Cl. 260—63)

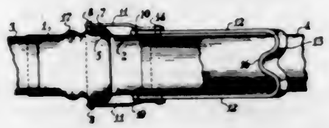
1. A synthetic resin consisting of a copolymer of a ketone wherein the carbon of the carbonyl radical is directly joined to a radical from the group consisting of vinyl and isopropenyl radicals and to a radical from the group consisting of alkyl and phenyl radicals, said alkyl radical containing from 1 to 4 carbon atoms, with a nitrile from the group consisting of acrylonitrile and methacrylonitrile, said copolymer containing from 60 to 85 per cent by weight of said ketone and from 40 to 15 per cent by weight of said nitrile, and further characterized by being clear, homogeneous, thermoplastic, readily flexible to hard substantially inflexible, and soluble in 2-nitropropane.

2,451,436

METHOD OF PREPARING N-ALKYL ACRYLAMIDES

John G. Erickson, Greenwich, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application January 3, 1947, Serial No. 720,103
5 Claims. (Cl. 260—561)



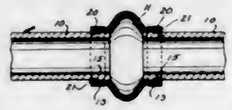
1. A method of preparing an N-alkyl acrylamide which includes the steps of heating an N-alkyl-β-alkylaminopropionamide in the presence of an acidic material having a dissociation constant greater than 1.0×10^{-2} and which forms a stable amine salt with a primary or secondary alkyl amine at elevated temperature to produce an N-alkyl acrylamide and an alkyl amine salt, and distilling the thus formed N-alkyl acrylamide from the alkyl amine salt.

2,451,437

PIPE COUPLING

Hugh Francis Fenlon, Pelham, N. Y., assignor of one-half to John J. Dougherty, St. Albans, N. Y.

Application January 25, 1946, Serial No. 643,240
5 Claims. (Cl. 285—93)



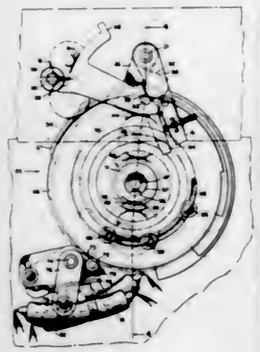
2. A pipe coupling comprising a section having oppositely projecting studs near its end, a second section having an enlarged end embracing the end of the other section and having open notches in the opposite sides of its enlarged end to receive said studs and studs projecting from its opposite sides in line with its open notches, a pair of links hinged to said first-mentioned studs, a pair of lever arms hinged between their ends to said links and having means at one end of each adaptable to engage the studs on the second-mentioned section and means for limiting the movement of said lever arms when the hinges of said lever pass the center lines of the respective studs and means for limiting the angular movement of one section with respect to the other about the axis of the first-mentioned studs.

2,451,438

FASTENING DEVICE

Richard A. Hartman, Cleveland, Ohio, assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio

Application November 13, 1944, Serial No. 563,287
3 Claims. (Cl. 285—90)



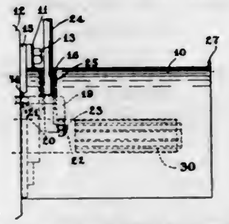
1. The combination with a sleeve and a member which it embraces having a shoulder adjacent the end of said sleeve of a fastening device comprising a partial ring of resilient material embracing the sleeve and by its own resilience clamping it on the member and having an edge flange extending inwardly across the end of the sleeve and having its outer face engaging the shoulder on said member.

2,451,439

CONTROL INSTRUMENT

Arthur H. Jordan, Norristown, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania

Application January 15, 1946, Serial No. 641,387
5 Claims. (Cl. 200—56)



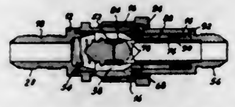
1. In a control instrument, a control switch, means to mount said switch for tilting movement between open and closed positions, a cam mounted for rotation and operative to tilt said switch mounting means, differential gearing to rotate said cam including a normally stationary but manually adjustable portion to adjust initially the position of said cam, and a portion rotatable to positions corresponding to the variable values of a condition under control, and resilient means to bias normally said gearing in one direction to take up back lash in the gears thereof.

2,451,440

PROTECTIVE GUARD FOR POWER TAKE-OFF SHAFTS OF TRACTORS

Robert W. Lidington, Rochester, N. Y., assignor to The Ohio State University Research Foundation, Columbus, Ohio, a corporation of Ohio

Application April 4, 1946, Serial No. 659,517
3 Claims. (Cl. 74—609)



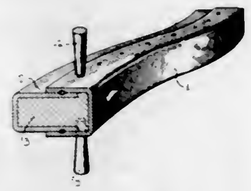
1. A protective guard attachment for tractors of the type provided with an exposed power take-off shaft and a socketed rotatable clutch-actuating element for engaging and disengaging said shaft for rotation, said attachment comprising an open-ended shield for detachable installation upon a tractor in longitudinally extending and spaced parallel order around its exposed power take-off shaft, said shield when so installed extending beyond the exposed end of the power take-off shaft and enclosing the socketed clutch-actuating member of the tractor, a crank lever integrally carried by said shield interiorly thereof and engageable with the clutch-actuating element of the tractor upon installation of the shield thereon, said lever being operable to rotate the clutch-actuating element of the tractor to control the rotation of the power take-off shaft, and a manually operable lever connected with said crank lever and extending exteriorly of said shield, whereby actuation of said crank lever and the clutch-actuating element of the tractor may be effected remotely of the power take-off shaft and exteriorly of said shield.

2,451,441

SELF-SEALING COUPLING

Benjamin A. Main, Jr., Jackson, Mich., assignor, by mesne assignments, to Aeroquip Corporation, Jackson, Mich., a corporation of Michigan

Application March 28, 1945, Serial No. 585,308
1 Claim. (Cl. 284—18)



In a self-sealing coupling of the class described, a pair of separable tubular body parts, a fixed valve part in one of said body parts, a movable valve part in the other of said body parts, the latter having a cylindrical nose portion telescoping into the other body part when the two parts are connected, said valve parts having abutting complementary faces, said fixed valve part having a cylindrical outer head portion having radial ports defined therein, a cylindrical sleeve slidable over said cylindrical outer portion to close said ports and having a plain cylindrical outer surface, the latter being co-extensive with said cylindrical nose portion of the other body part when the two parts are connected and the abutment of said nose portion with said sleeve serving to force the sleeve rearwardly to uncover said radial ports upon such connection, the sleeve having a piston fit within its body part, a spring for restoring the sleeve to its port closing position when the body parts are disconnected, a peripheral groove located in said cylindrical head, a sealing ring in said groove to provide a seal between said sleeve and head portion, a shoulder back of said head portion, an inwardly directed shoulder on said sleeve engaging with said first shoulder to limit outward movement of said sleeve, a peripheral groove on the interior surface of the body part carrying said sleeve and adjacent the end of this body part containing its fixed valve part, and a sealing ring in said groove adapted to seal about said sleeve, when the parts are disconnected, or to seal about said nose portion when the two body parts are connected.

2,451,442

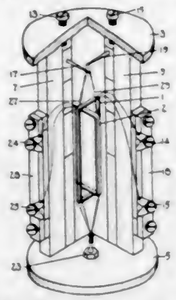
METHOD OF SPOT WELDING HOLLOW SECTIONS

Clarence E. Meissner, Washington, D. C., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania

Application March 21, 1946, Serial No. 656,077
1 Claim. (Cl. 219—10)

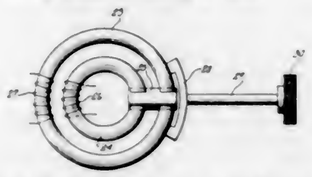
The method of effecting electrical resistance welding upon metallic workpieces having hollow portions which are subject to deforming electrode pressure and which hollow portions are irregular in shape, which comprises, entirely filling the hollow portions which are to come between the electrodes during welding with molten metal of a very low melting temperature point as compared to the melting point of the workpiece, whereby injury to the workpiece by surface melting is avoided, allowing the filler metal to harden, the filler metal being of such character that it is not appreciably plastic under electrode pressure, applying electrode pressure and current through the hollow portions and the filler metal therein to make the welds, the filler metal being of such character and mass that it transmits welding current efficiently without softening or melting whereby to maintain efficient current flow directly therethrough without permitting deformation of the workpiece, and finally removing the filler metal from the workpiece by melting it and causing it to flow out of the hollow portions.

2,451,443



APPARATUS FOR ORIENTATION

Eugen Merten, Houston, Tex., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware



Application November 27, 1945, Serial No. 631,055
12 Claims. (Cl. 177—352)

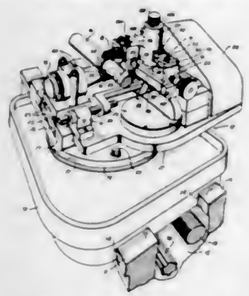
1. In a system for orientation with regard to the earth magnetic field, two coils each mounted for independent oscillation about a vertical axis in said field, means for adjusting the angular position of said coils about said axis, means for in-

itiating an oscillation of said coils, and means for simultaneously and separately recording the voltages produced by the oscillation of said coils in the earth magnetic field.

2,451,444
ADJUSTABLE WAVE COUPLING SYSTEM
Leslie Norde, Hempstead, N. Y., assignor, by mesne assignments, to Jefferson Standard Broadcasting Company, a corporation of North Carolina
Application April 5, 1946, Serial No. 659,995
1 Claim. (Cl. 171—119)

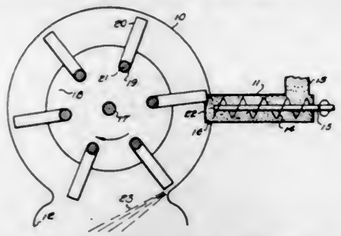
A variable magnetic core transformer, comprising a first toroidal magnetic core, a second toroidal magnetic core, the second core being of smaller diameter than the first core and located within the inner periphery of the first core, a magnetic member coupling the two cores to complete a magnetic circuit therebetween said member being fastened to one core and passing through the other core to provide a rotational bearing for said other core as it is rotated, said member being mounted in alignment with the common diameter of both cores to maintain them concentric, each of said cores having a separate magnetizing winding and means to rotate said cores relatively to each other to vary the effective coupling coefficient between said windings.

2,451,445
MANUFACTURE OF DENSE PRODUCTS FROM CEMENT MATERIAL
Joseph R. Parsons, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application September 6, 1943, Serial No. 501,428
2 Claims. (Cl. 106—110)



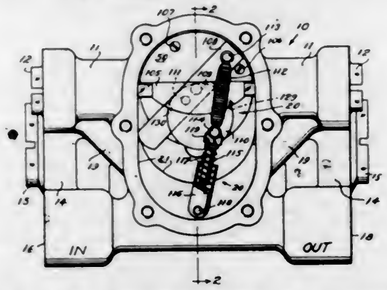
1. Process of producing dense castings from a cement and a liquid capable of combining with said cement to produce a set product which comprises mixing a given quantity of dry cement with an amount, by weight, of said liquid far less than the amount corresponding to that of the normal consistency of said cement, said liquid containing dispersed therein a sufficient quantity of gaseous evanescent and readily collapsible bubbles to give said weight of liquid an apparent effective volume substantially equal to that of the quantity of liquid corresponding to the normal consistency of said cement, thereby to impart to the mixture a degree of flowability substantially as great as that of the same amount of cement when mixed with an amount of liquid equal in amount to that of its normal consistency, casting the resulting mixture into shape with concomitant destruction of said bubbles while the casting is still plastic, and permitting it to set and harden.

2,451,446
LIGHT-WEIGHT FIBER CONTAINING PRODUCT
Joseph R. Parsons, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application September 6, 1943, Serial No. 501,429
3 Claims. (Cl. 106—88)



1. Process of producing semi-rigid insulating bats which comprises preparing a solution of a farinaceous material and a surface-tension reducing agent in water, incorporating a large number of small discrete air bubbles with said solution to form an emulsion of gas and water, incorporating dry water-insoluble fibers with the emulsion thus produced, thereupon blending the resulting mixture with an asphalt emulsion and with dry calcined gypsum, forming the final mixture thus produced into the desired shape without the application of substantial pressure thereto, and drying the thus shaped product.

2,451,447
HOBBING MACHINE
Stafford M. Ransome, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a corporation of Illinois
Application February 13, 1942, Serial No. 430,780
6 Claims. (Cl. 90—4)



1. In a hobbing machine, in combination, a base, a saddle, means for feeding said saddle longitudinally of said base, a swivel mounted on said saddle for angular adjustment relative thereto, a slide mounted on said swivel for adjusting movement transversely thereof, a hob spindle rotatably mounted in said slide, a hob, a tailstock adjustable with respect to said spindle for supporting said hob between said spindle and said tailstock, a second hob, a support for said second hob movably mounted on said slide for adjusting movement axially, vertically, angularly and laterally with respect to said first hob, and a common drive for said hobs from said hob spindle.

2,451,448
TREATMENT OF PIGMENT COMPRISING CALCIUM CARBONATE
Harold R. Rafton, Andover, Mass., assignor to Raffold Process Corporation, a corporation of Massachusetts
Application April 11, 1947, Serial No. 740,831
12 Claims. (Cl. 23—66)

11. In the treatment of a pigment comprising calcium carbonate, the method of modifying said pigment to effect an improvement in at least one of the properties of adhesive requirement, oil absorption and gloss-imparting quality of said pigment, which comprises directing paste comprising said pigment into the path of travel of teeth of a circular saw rotating at a peripheral velocity of not less than 100 feet per second, said paste being directed from beyond the periphery of said saw toward the center of rotation thereof, said paste being in coherent condition when at atmospheric pressure and capable of being conveyed by a screw conveyor, subjecting said paste to percussions from said teeth, said circular saw at the time of subjecting said paste to the action of said teeth being free from contact with said paste except in respect to said teeth, said paste being free for movement upon, and at the points of, said percussions, said paste being propelled by said teeth away from and out of the path of travel of said teeth.

2,451,449
SHAFT ACTUATED SNAP ACTION MECHANISM FOR RECIPROCATING EXPANSIBLE CHAMBER MOTORS
Columbus R. Sacchini, Willoughby, Ohio, assignor to The Marquette Metal Products Company, Cleveland, Ohio, a corporation of Ohio
Application October 23, 1945, Serial No. 624,072
16 Claims. (Cl. 121—164)

8. In a fluid operated motor, a reciprocating fluid operable power member and reversing valve means operated thereby to divert fluid alternately into operative contact with the power member, a valve actuating mechanism comprising an oscillating arm driven by the power member and a toggle member pivotally connected to the arm and additionally connected therewith by a snap action compression spring which assumes a dead center position when the arm and toggle member are in one relative position, and a second compression spring having a stationary pivoted support at one end and a support carried by the toggle member at the other end.

16. A fluid operated motor comprising a body having a cylinder and reciprocatable piston therein, a pair of valve chambers aligned on an axis parallel to said cylinder, a pair of fluid ports on an axis parallel to said cylinder, an inlet passage axially aligned with one of said ports and terminating substantially at the central axis of said body, a pair of divergent passages extending from the terminus of said inlet passage to said valve chambers respectively, and a pair of divergent passages extending from said valve chambers respectively to opposite ends of said cylinder.

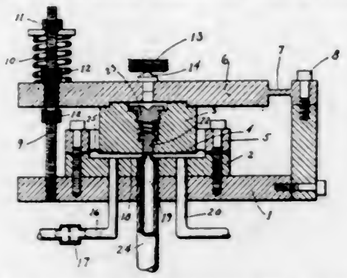
2,451,450
WEATHER STRIP
Louis Spraragen, Bridgeport, Conn., assignor to Bridgeport Fabrics, Inc., Bridgeport, Conn., a corporation of Connecticut
Application November 5, 1943, Serial No. 509,021
5 Claims. (Cl. 20—69)

1. A sealing strip comprising an attaching strip; and a hollow bead carried thereby and having an internal rib substantially perpendicular to the contacting portion of the bead; another internal rib carried by the strip within the bead, said ribs having a combined depth less than the depth of the bead and positioned to engage one another after a limited inward movement of the contacting portion of the bead to support and hold the bead in sealing relation.

2,451,451
WEIGHING SYSTEM
Malcolm C. Tate, Stamford, Conn., assignor to Baldwin Locomotive Works, a corporation of Pennsylvania
Application July 20, 1944, Serial No. 545,780
1 Claim. (Cl. 137—139)

A load sensitive system comprising, a capsule having a base, a movable column connected by a diaphragm to said base to form a hydraulic diaphragm chamber, means for supplying hydraulic fluid directly to said chamber under pressure sufficient to maintain a continuous flow through the system at all times, a nozzle directly connected to said chamber for discharging fluid directly therefrom, means for controlling flow of fluid into said nozzle by the position of said column whereby variations in the position of the column from a substantially predetermined position causes either an increase or decrease of discharge through said nozzle thereby to cause the pressure within the diaphragm chamber to decrease or increase and accordingly maintain the column in a substantially constant position throughout either variations in applied load force or in the volume of hydraulic fluid arising from temperature changes, a load plate having a reduced flexure section rigidly secured at one end with respect

to said base and its other end being secured to the column to move therewith for guiding the same, and preloading means for biasing said load



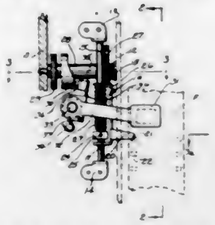


plate and column in a direction tending to close said nozzle thereby to cause an increased pressure to be present in the diaphragm chamber prior to applying a load force to said plate.

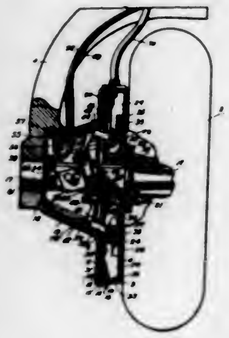
2,451,452

FEED CLAW AND SHUTTER MOVEMENT FOR MOTION-PICTURE MECHANISMS

Leander Olov Thunberg, Johnson City, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application November 20, 1946, Serial No. 711,052
4 Claims. (Cl. 88—18.4)

1. A combined feed claw and shutter mechanism for motion picture apparatus which includes a guide means, a member slidable on said guide means, said member having as a part thereof a film engaging claw, a pivoted shaft and a shutter blade fixed thereon, a shaft adapted to be driven by a source of motive power and having rotatable therewith two cams, one said cam engaging with the slidable member for moving it and the claw for advancing the film from frame to frame during exposure, a spring fixed against rotation at one end and being connected at its other end to the slidable member, said spring being under torsion to press the claw against the film for engaging perforations therein, and further being longitudinally loaded to maintain the member in engagement with its actuating cam, an operating lever fixed to said pivoted shaft for movement with said shutter and having a follower engaging the cam surface of the other of said cams, and resilient means for maintaining said follower in engagement with the said other cam.



2,451,453

APPARATUS FOR CONTROLLING ROTATION OF VEHICLE WHEELS

Blaine M. Tuxhorn, Kansas City, Mo.

Application August 14, 1944, Serial No. 549,409
10 Claims. (Cl. 244—103)

1. An apparatus of the character described including a stator having an annular rotor chamber and a housing extending from one side thereof, a rotor in said chamber, means rotatably supporting the rotor eccentrically within the rotor chamber for providing a passageway between said rotor and stator, blades movably carried by the rotor and movable through said passageway when the rotor rotates within the stator, means for supplying a pressure medium to one end of the passageway to act on said blades, means for discharging the pressure medium from the other end of the passageway, means in said housing for

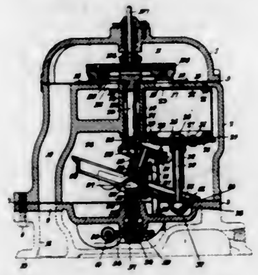
shifting the blades in said passageway to vary the effective area of said blades exposed to the action of said pressure medium, a member having a race-way, means mounting said member for axial and tilting movement with respect to the axis of the rotor, levers connected with the blades and having engagement with the race-way of said member for moving the blades transversely of the passageway to vary the effective area exposed to said pressure medium, and means for moving said member.

2,451,454

METHOD OF FABRICATING AIRFOILS

Michael Watter, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania

Application June 28, 1943, Serial No. 492,492
5 Claims. (Cl. 29—148.2)



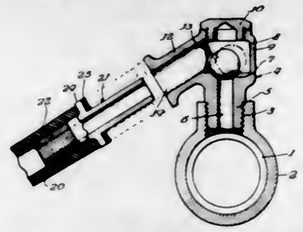
1. The method of fabricating an interiorly-framed skin-covered structure which is too small for the entrance of a workman's body, such for example as an airfoil or the like, which comprises, forming a skin-covered frame-supported leading edge sub-assembly which has frame connections accessible from the rear, forming a skin-covered frame-supported central section sub-assembly of laterally spaced ribs and skin blankets secured on the ribs which is covered on both sides and open completely between ribs and skin blankets interiorly through the rear to the front, and securing the framing of the leading edge and central section sub-assemblies together interiorly of the covering skins by working inside between the ribs and skin blankets through the central section from the rear.

2,451,455

CRANK ARM AND DRIVING BLOCK MEANS

David S. Willson, Muskegon Heights, Mich., assignor to John Wood Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Delaware

Application June 23, 1945, Serial No. 601,180
13 Claims. (Cl. 74—60)



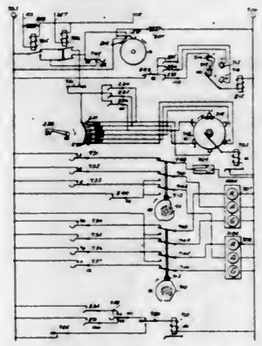
1. A crank arm and driving block assembly comprising a driving block in which a drive shaft is adapted to be journalled; a crankshaft; a crank arm operatively connected to said crankshaft; means connecting said driving block to said crank arm with freedom of sliding movement about a fixed pivot; and spring loading means for said driving block wherein the forces of said spring loading means are exerted on said drive shaft substantially at right angles to the axis of said drive shaft.

2,451,456

STALL COCK

Emanuel Rawson, Chicago, Ill., assignor to Rite-Way Products Company, Chicago, Ill., a corporation of Delaware

Application July 20, 1945, Serial No. 606,162
13 Claims. (Cl. 284—18)



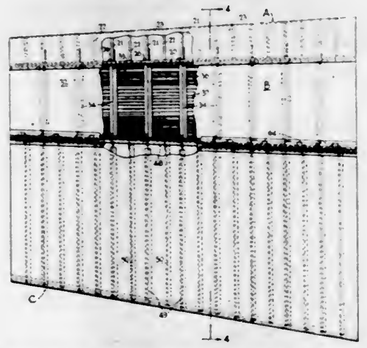
1. A device for establishing a plug-in type of severable connection between a vacuum pipe line and a portable hose, comprising a fitting one end of which is adapted to be connected to a vacuum line, said fitting having an open tubular portion constituting a part of the fitting, a hose connector tube slidable lengthwise in said tubular portion, a valve seat in said fitting between said one end and said connector tube, a movable closure for said valve seat, said closure being movable in the fitting to its open position by a movement in a direction parallel to the longitudinal axis of the open tubular portion and being movable in a direction towards pressure engagement with the seat and being exposed to atmospheric pressure on the surface thereof opposite the surface which is in engagement with the valve seat when in the valve closed position whereby it is pressed towards said seat by the atmospheric pressure, said closure being moved by said connector tube to its unseated position.

2,451,457

TRAFFIC SIGNAL CONTROL SYSTEM

Judson O'D. Shepherd, Atlanta, Ga.

Application September 16, 1940, Serial No. 357,022
23 Claims. (Cl. 177—337)



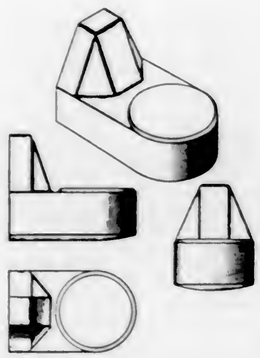
22. In a traffic signal controller, the combination of a rotatable signal control switch, a single timing dial, means including actuators upon said dial to effect an intermittent rotation of said control switch in accordance with any one of a plurality of adjustable sequences, and means for maintaining said dial in a predetermined synchronous relationship with said control switch at one common instant of each revolution irrespective of which sequence is in effect.

2,451,458

AIRCRAFT AIRFOIL CONSTRUCTION

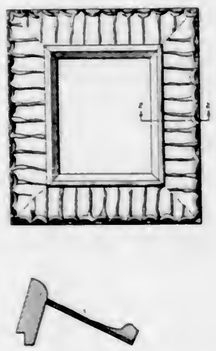
Michael Watter, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania

Original application June 28, 1943, Serial No. 492,492. Divided and this application October 23, 1945, Serial No. 624,080
4 Claims. (Cl. 244—124)



1. An airfoil or the like comprising in combination, mating bipartite sub-assemblies, each including a skin covering and spaced inter-skin frame web elements which overlap on their sides in transverse planes throughout their length in final assembly, said sub-assemblies having unobstructed openings therethrough between the web elements, an associated sub-assembly having a covering and interior frame elements with joint surfaces lying alongside the web elements of the bipartite sub-assemblies in final assembly, and shear means securing said webs together and securing the webs to the frame elements of the associated sub-assembly.

DESIGNS

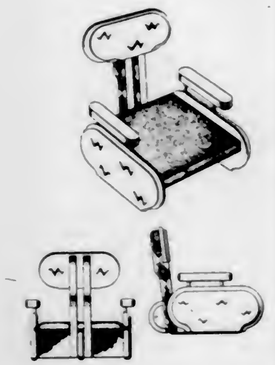


OCTOBER 12, 1948

151,314
DESIGN FOR AN ANGLE SOCKET
Charles J. Adams, Park Ridge, and Harold Z. Benton, Woodstock, Ill.
Application November 12, 1946, Serial No. 134,720
Term of patent 14 years
(Cl. D26—1)

The ornamental design for an angle socket, as shown.

151,315
DESIGN FOR A PICTURE FRAME
George R. Arons, New York, N. Y.
Application October 1, 1946, Serial No. 133,672
Term of patent 3½ years
(Cl. D29—20)



The ornamental design for a picture frame, as shown.

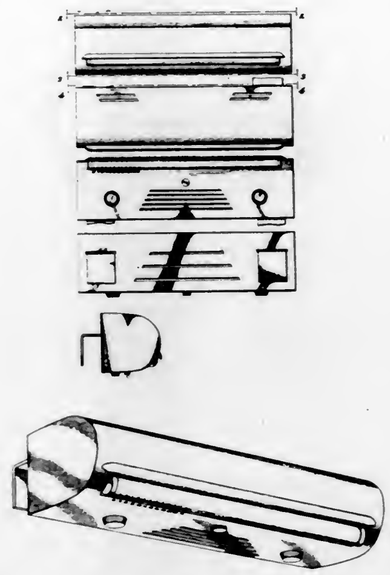
151,316
DESIGN FOR A DRESS
J. Leah Asteroff, New York, N. Y.
Application January 13, 1948, Serial No. 143,717
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a dress, substantially as shown.

151,317
DESIGN FOR A CHILD'S CHAIR
Donald O. Benson, Racine, Wis., assignor to Ira Milton Jones, Milwaukee, Wis.
Application November 4, 1946, Serial No. 134,493
Term of patent 14 years
(Cl. D15—8)

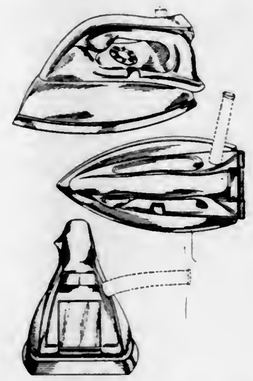
The ornamental design for a child's chair, as shown.

151,318
DESIGN FOR A MECHANICAL TOY
Samuel I. Berger, Newark, N. J.
Application May 17, 1947, Serial No. 139,113
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a mechanical toy, substantially as shown and described.

151,319
DESIGN FOR A DENTURE BRUSH
Paul B. Brandt, Augusta, Kans.
Application August 27, 1947, Serial No. 141,086
Term of patent 14 years
(Cl. D9—2)

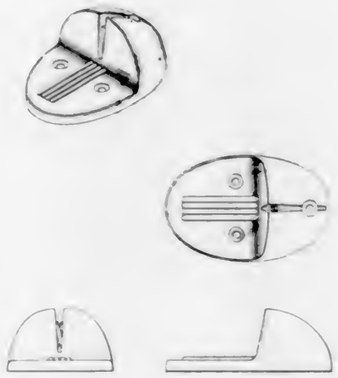


The ornamental design for a denture brush, substantially as shown.

151,320
DESIGN FOR A COMBINED RADIO AND BED LAMP
Lewis R. Brothers, North Hollywood, Calif.
Application July 21, 1947, Serial No. 140,426
Term of patent 14 years
(Cl. D56—4)

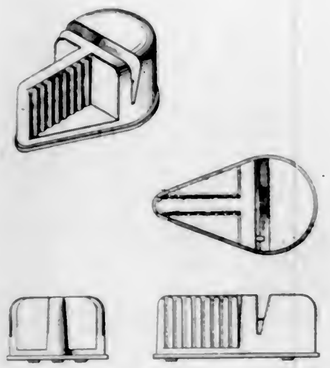
The ornamental design for a combined radio and bed lamp, as shown.

151,321
DESIGN FOR AN ELECTRIC IRON
Fred W. Busch, Milwaukee, Wis., assignor to Milsteel Products Co., Milwaukee, Wis., a corporation of Wisconsin
Application October 28, 1946, Serial No. 134,324
Term of patent 14 years
(Cl. D49—6)



The ornamental design for an electric iron, substantially as shown and described.

151,322
DESIGN FOR A DOUGH EXTRUSION DEVICE OR LIKE ARTICLE
Salvatore Cenci, Kansas City, Mo.
Application July 24, 1947, Serial No. 140,482
Term of patent 14 years
(Cl. D44—29)

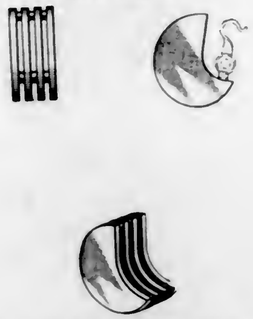


The ornamental design for a dough extrusion device or like article, substantially as shown.

151,323
DESIGN FOR A SCISSORS SHARPENER
Bernard L. Chapin, Winchester, Noble L. Davis, Melrose, and Thomas H. Cabot, Jr., Boston, Mass., assignors to New England Carbide Tool Company, Inc., Cambridge, Mass., a corporation of Massachusetts
Application November 14, 1947, Serial No. 142,543
Term of patent 14 years
(Cl. D37—1)

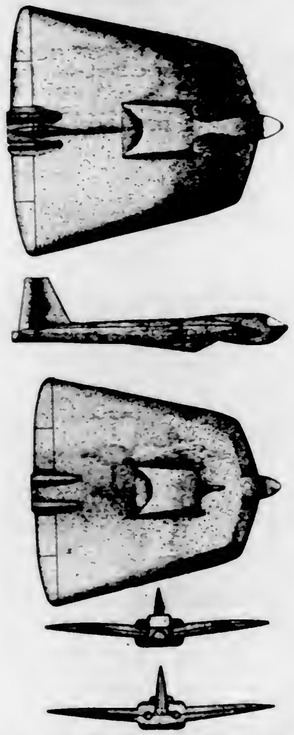
The ornamental design for a scissors sharpener, substantially as shown.

151,324
DESIGN FOR A KNIFE SHARPENER
Bernard L. Chapin, Winchester, Noble L. Davis, Melrose, and Thomas H. Cabot, Jr., Boston, Mass., assignors to New England Carbide Tool Company, Inc., Cambridge, Mass., a corporation of Massachusetts
Application November 14, 1947, Serial No. 142,544
Term of patent 14 years
(Cl. D37—1)



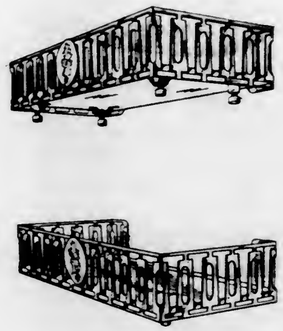
The ornamental design for a knife sharpener, substantially as shown.

151,325
DESIGN FOR AN EARRING OR THE LIKE
Michael Chernow, New York, N. Y.
Application April 8, 1947, Serial No. 138,239
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or the like, substantially as shown and described.

151,326
DESIGN FOR AN EARRING OR THE LIKE
Michael Chernow, New York, N. Y.
Application April 8, 1947, Serial No. 138,240
Term of patent 7 years
(Cl. D45—9)

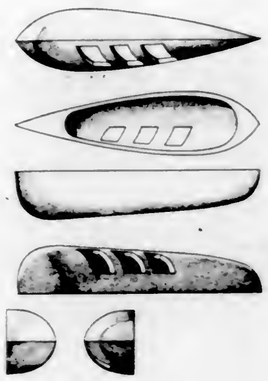


The ornamental design for an earring or the like, substantially as shown and described.

151,327
DESIGN FOR AN AIRPLANE
Raymond C. Coates, Wesleyville, Pa.
Application April 2, 1947, Serial No. 138,112
Term of patent 14 years
(Cl. D71—1)

The ornamental design for an airplane, as shown.

151,328
DESIGN FOR A TRAY
John S. Connors, Cleveland, Ohio
Application December 19, 1946, Serial No. 135,603
Term of patent 3½ years
(Cl. D44—10)

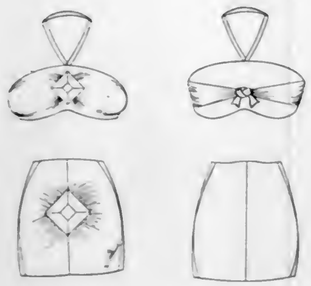


The ornamental design for a tray, as shown.

151,329
DESIGN FOR A DRESS
George Constantine, Brookline, Mass.
Application February 12, 1948, Serial No. 144,431
Term of patent 14 years
(Cl. D3—26)

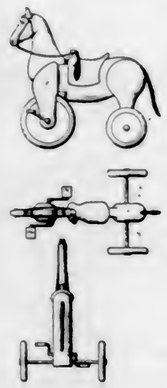
The ornamental design for a dress, substantially as shown.

151,330
DESIGN FOR AN AUTOMOBILE HOOD LOUVER
Neil J. De Sanders, Dallas, Tex.
Application October 2, 1947, Serial No. 141,719
Term of patent 3½ years
(Cl. D14—18)



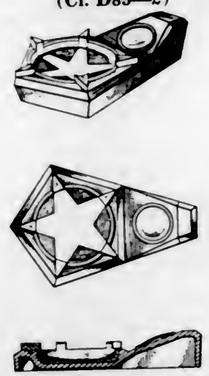
The ornamental design for an automobile hood louver, as shown.

151,331
DESIGN FOR A BATHING SUIT
Mary Ann De Weese, Glendale, Calif.
Application September 13, 1946, Serial No. 133,292
Term of patent 3½ years
(Cl. D3—17)



The ornamental design for a bathing suit, as shown.

151,332
DESIGN FOR A BATHING SUIT
Mary Ann De Weese, Glendale, Calif.
Application September 13, 1946, Serial No. 133,291
Term of patent 3½ years
(Cl. D3—17)

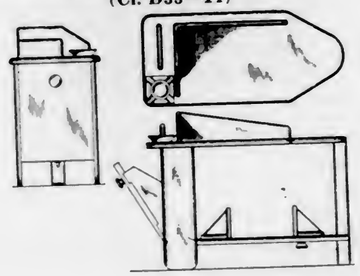


The ornamental design for a bathing suit, as shown.

151,333
DESIGN FOR A HOBBY HORSE
Clifford B. Dobson, Berkeley, Calif.
Application November 22, 1946, Serial No. 134,995
Term of patent 3½ years
(Cl. D34—15)

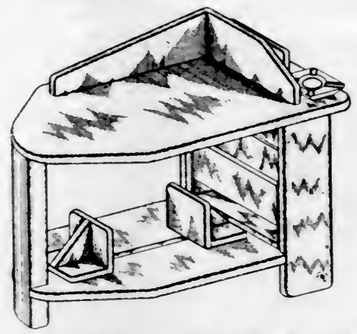
The ornamental design for a hobby horse, substantially as shown.

151,334
DESIGN FOR AN ASH TRAY
Alva L. Duckwall, Jr., Abilene, Kans.
Application October 15, 1946, Serial No. 133,966
Term of patent 3½ years
(Cl. D85—2)



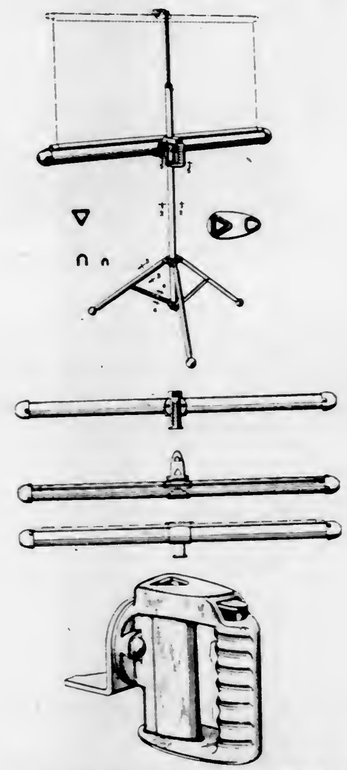
The ornamental design for an ash tray, substantially as shown.

151,335
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Maurice Duvalet, Congers, N. Y., assignor to Van Cleef & Arpels, Inc., New York, N. Y., a corporation of Delaware
Application April 2, 1948, Serial No. 145,496
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

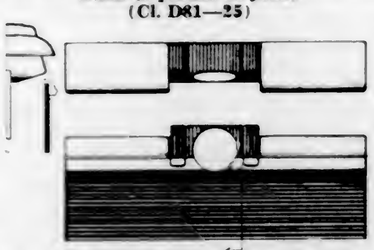
151,336
DESIGN FOR A COMBINED TABLE AND BOOKHOLDER
Meril L. Eckman, Canton, Ohio
Application March 6, 1947, Serial No. 137,396
Term of patent 7 years
(Cl. D33—14)



151,336—Continued

The ornamental design for a combined table and bookholder, substantially as shown.

151,337
DESIGN FOR A PORTABLE COLLAPSIBLE MOTION PICTURE PROJECTION SCREEN STAND
Harry E. Eller, Chicago, Ill.
Application November 18, 1946, Serial No. 134,867
Term of patent 3½ years
(Cl. D61—1)

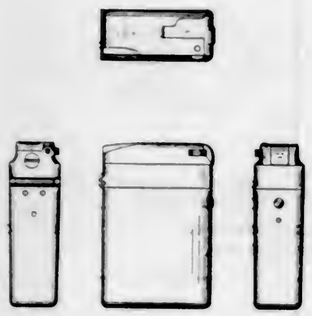


The ornamental design for a portable collapsible motion picture projection screen stand, substantially as shown and described.

151,338
DESIGN FOR A CHILD'S DOLL
Helen R. Farnam and Blanche S. Wheeler, Minneapolis, Minn.
Application May 31, 1947, Serial No. 139,378
Term of patent 14 years
(Cl. D34—4)

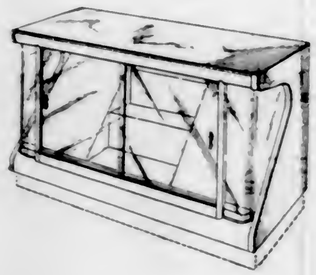
The ornamental design for a child's doll, substantially as shown.

151,339
DESIGN FOR A SPLASH PANEL ACCESSORY UNIT FOR COOKING STOVES
Richard I. Felver, Pittsburgh, Pa., assignor to Standard Gas Equipment Corporation, Baltimore, Md., a corporation of Maryland
Application September 26, 1946, Serial No. 133,599
Term of patent 14 years
(Cl. D81—25)



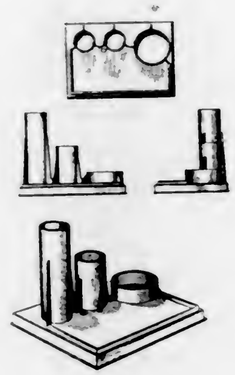
The ornamental design for a splash panel accessory unit for cooking stoves, as shown.

151,340
DESIGN FOR A CIGARETTE LIGHTER
Alfred J. Flauder, Trumbull, Conn., assignor to Weidlich Bros. Manufacturing Company, Bridgeport, Conn.
Application April 14, 1947, Serial No. 138,377
Term of patent 14 years
(Cl. D48—27)



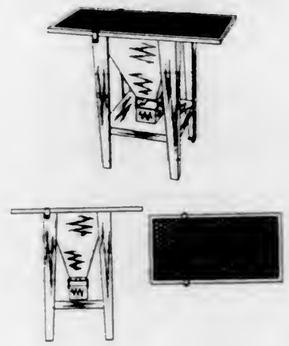
The ornamental design for a cigarette lighter, substantially as shown.

151,341
DESIGN FOR A COMBINED CIGARETTE CASE AND LIGHTER
Alfred Franck Fukal, Cambridge, Ohio, assignor to Franklin Sales & Manufacturers, Inc., Columbus, Ohio
Application October 15, 1946, Serial No. 133,957
Term of patent 3½ years
(Cl. D48—27)



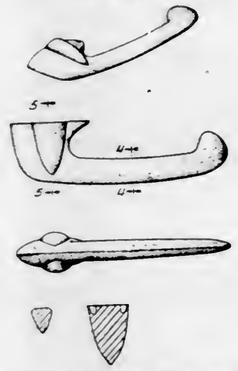
The ornamental design for a combined cigarette case and lighter, as shown.

151,342
DESIGN FOR A MERCHANDISE DISPLAY CASE
Henry Peter Glass, Chicago, Ill., assignor to Ekco Products Company, Chicago, Ill., a corporation of Illinois
Application March 2, 1946, Serial No. 127,059
Term of patent 14 years
(Cl. D80—11)



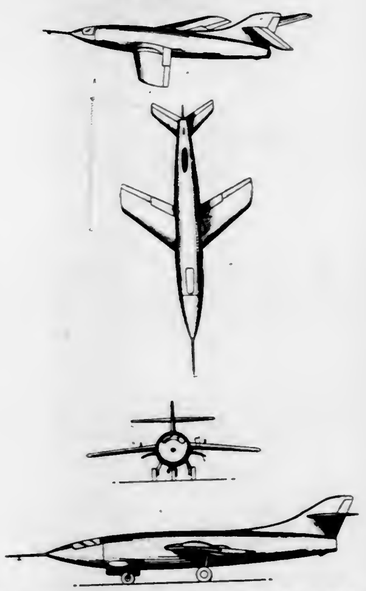
The ornamental design for a merchandise display case, as shown.

151,343
DESIGN FOR A TRAY FOR DESK ARTICLES
George G. Greger, Detroit, Mich.
Application July 15, 1946, Serial No. 131,581
Term of patent 14 years
(Cl. D80—9)



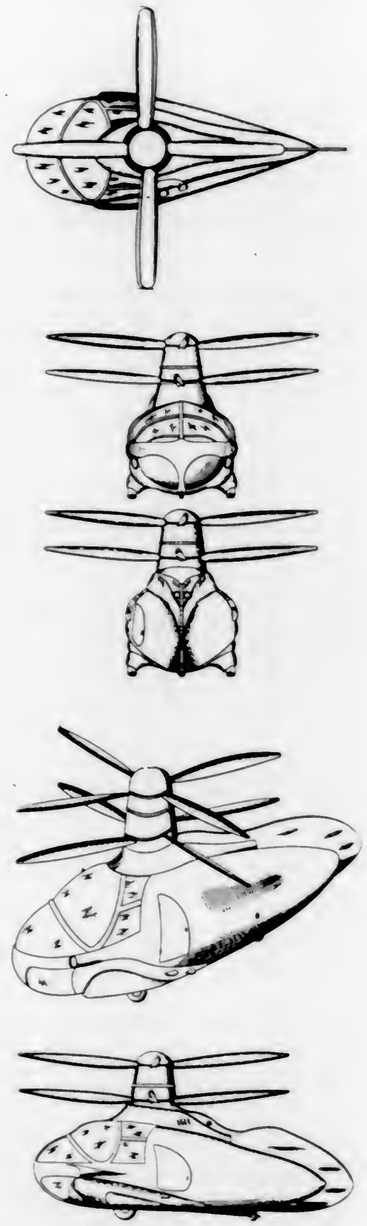
The ornamental design for a tray for desk articles, as shown.

151,344
DESIGN FOR A BARBECUE GRILL
William R. Hathaway, West Haven, Conn., assignor to United Advertising Corporation, New Haven, Conn., a corporation of New Jersey
Application December 6, 1945, Serial No. 124,418
Term of patent 3½ years
(Cl. D81—10)



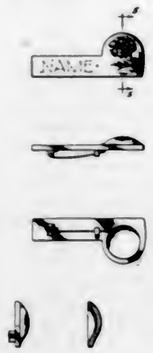
The ornamental design for a barbecue grill, substantially as shown.

151,345
DESIGN FOR AN OUTSIDE DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE
Glenford M. Haviland, Royal Oak, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 3, 1947, Serial No. 135,930
Term of patent 7 years
(Cl. D10—8)



The ornamental design for an outside door handle or similar article for an automotive vehicle, substantially as shown.

151,346
DESIGN FOR AN AIRPLANE
Edward H. Heinemann and Leo J. Devlin, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application May 5, 1947, Serial No. 138,823
Term of patent 7 years
(Cl. D71—1)

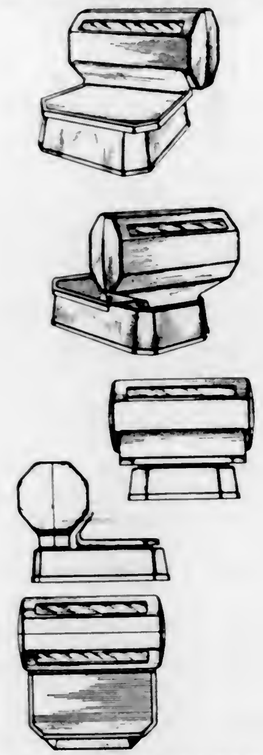


The ornamental design for an airplane, substantially as shown.

151,347
DESIGN FOR A HELICOPTER
Walter S. Hoover, South Newfane, Vt.
Application July 12, 1947, Serial No. 140,257
Term of patent 3½ years
(Cl. D71—1)

The ornamental design for a helicopter, as shown.

151,348
DESIGN FOR A PIN
William J. Jorgenson, Los Angeles, Calif.
Application May 27, 1946, Serial No. 130,133
Term of patent 14 years
(Cl. D45—19)

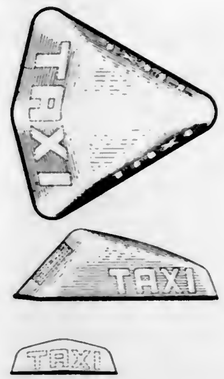


The ornamental design for a pin, as shown.

151,349
DESIGN FOR A TRAILER
William Josephian, Oakland, Calif.
Application July 19, 1947, Serial No. 140,392
Term of patent 14 years
(Cl. D14—3)

The ornamental design for a trailer, as shown.

151,350
DESIGN FOR A SCALE
Edward C. Karp, Belvidere, Ill.
Application August 5, 1946, Serial No. 132,293
Term of patent 14 years
(Cl. D52—10)



The ornamental design for a scale, as shown.

151,351
DESIGN FOR AN EXTERNAL DOME LIGHT FOR AUTOMOTIVE VEHICLES
Mathias J. Kately and Edward M. Peckwas, Chicago, Ill., assignors to Paul S. Ricchiuti, Chicago, Ill.
Application August 18, 1947, Serial No. 140,936
Term of patent 14 years
(Cl. D72—1)

151,351—Continued

The ornamental design for an external dome light for automotive vehicles, substantially as shown and described.

151,352
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,132
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,353
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,133
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,354
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,135
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,355
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,137
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,356
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,139
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,357
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 17, 1948, Serial No. 145,172
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,358
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,221
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,359
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,222
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,360
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,223
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,361
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,224
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

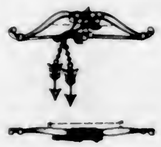
151,362
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,229
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

151,363
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,230
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

151,364
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 19, 1948, Serial No. 145,231
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a separable brooch or similar article, substantially as shown.

151,365
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 24, 1948, Serial No. 145,304
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,366
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 24, 1948, Serial No. 145,305
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,367
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application June 25, 1948, Serial No. 147,197
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown and described.

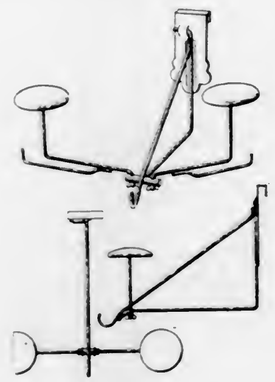
151,368
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application February 4, 1948, Serial No. 144,255
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

151,369
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,122
Term of patent 7 years
(Cl. D45—16)

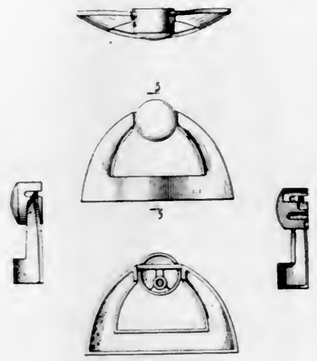
The ornamental design for a necklace or similar article, substantially as shown and described.

151,370
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,128
Term of patent 7 years
(Cl. D45—16)



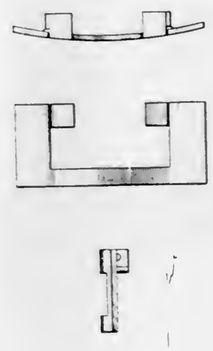
The ornamental design for a necklace or similar article, substantially as shown and described.

151,371
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application March 16, 1948, Serial No. 145,130
Term of patent 7 years
(Cl. D45—16)



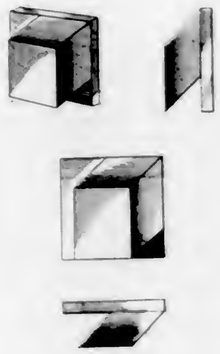
The ornamental design for a necklace or similar article, substantially as shown and described.

151,372
DESIGN FOR A CLOTHES HANGER
Leona S. Keefer, Dayton, Ohio
Application April 3, 1946, Serial No. 128,209
Term of patent 14 years
(Cl. D80—8)



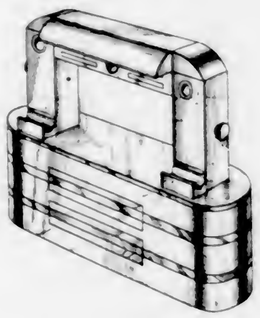
The ornamental design for a clothes hanger, as shown.

151,373
DESIGN FOR A DRAWER PULL
William A. Kendall, Winston-Salem, N. C., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application February 28, 1948, Serial No. 144,802
Term of patent 14 years
(Cl. D10—8)



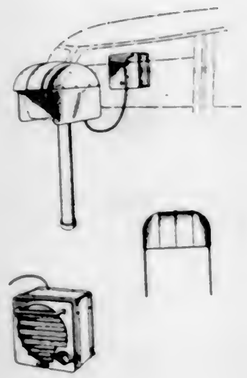
The ornamental design for a drawer pull, substantially as shown.

151,374
DESIGN FOR A DRAWER PULL
William A. Kendall, Winston-Salem, N. C., assignor to The Bassick Company, Bridgeport, Conn., a corporation of Connecticut
Application February 28, 1948, Serial No. 144,803
Term of patent 14 years
(Cl. D10—8)



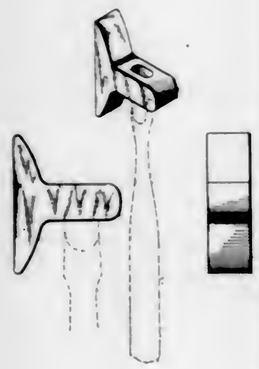
The ornamental design for a drawer pull, substantially as shown.

151,375
DESIGN FOR A PICTURE MOUNTING
Harry G. Koltnow, New York, N. Y., assignor to Kolto Art Products, Inc., New York, N. Y., a corporation of New York
Application January 18, 1947, Serial No. 136,231
Term of patent 14 years
(Cl. D29—20)



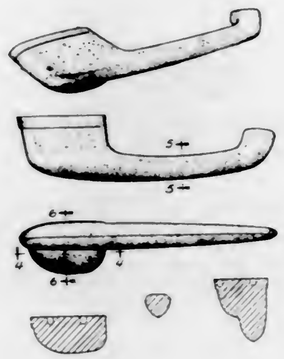
The ornamental design for a picture mounting, as shown.

151,376
DESIGN FOR A CIGARETTE DISPENSER
Charles Kutik, Paterson, N. J.
Application July 1, 1947, Serial No. 140,039
Term of patent 7 years
(Cl. D85—2)



The ornamental design for a cigarette dispenser, as shown and described.

151,377
DESIGN FOR A COMBINED LOUD SPEAKER AND SHELTER THEREFOR
Ernoll Wayne La Barre, New York, N. Y., assignor of one-half to Herbert C. Leech, doing business as Herbert C. Leech Illustrators, New York, N. Y.
Application March 20, 1947, Serial No. 137,773
Term of patent 7 years
(Cl. D26—14)

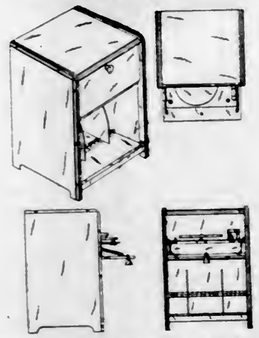


The ornamental design for a combined loud speaker and shelter therefor, as shown and described.

151,378
DESIGN FOR A METAL STRAIGHTENING HAMMER
Nathan Leskin, Philadelphia, Pa.
Application May 15, 1946, Serial No. 129,712
Term of patent 7 years
(Cl. D54—13)

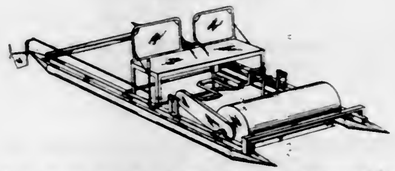
The ornamental design for a metal straightening hammer, as shown.

151,379
DESIGN FOR AN OUTSIDE DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE
Clare M. MacKichan, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application January 3, 1947, Serial No. 135,929
Term of patent 7 years
(Cl. D10—8)



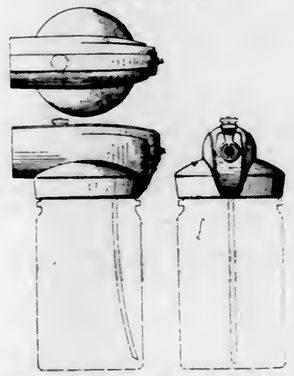
The ornamental design for an outside door handle or similar article for an automotive vehicle, substantially as shown.

151,380
DESIGN FOR A NECKTIE
David Margolis, New York, and Sol Weisblatt, Brooklyn, N. Y.
Application October 9, 1947, Serial No. 141,816
Term of patent 7 years
(Cl. D3—16)



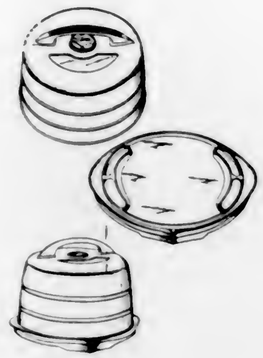
The ornamental design for a necktie, as shown and described.

151,381
DESIGN FOR A PHONOGRAPH
Max Mayerson, Richmond Heights, Mo.
Application June 18, 1947, Serial No. 139,780
Term of patent 3½ years
(Cl. D56—4)



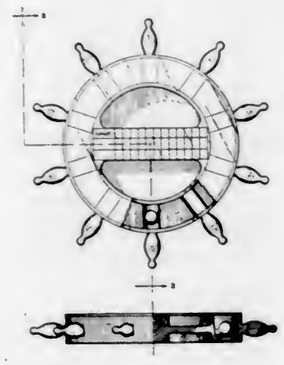
The ornamental design for a phonograph, as shown.

151,382
DESIGN FOR A WATERCRAFT
Elmer Melton, Oklahoma City, Okla.
Application June 28, 1947, Serial No. 139,983
Term of patent 3½ years
(Cl. D71—1)



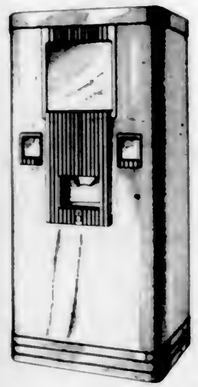
The ornamental design for a watercraft, as shown.

151,383
DESIGN FOR A SPRAYER
Carl E. Meyerhoefer, Brooklyn, N. Y., assignor to Lewyt Corporation, Brooklyn, N. Y., a corporation of New York
Application June 26, 1947, Serial No. 139,947
Term of patent 14 years
(Cl. D62—2)



The ornamental design for a sprayer, as shown and described.

151,384
DESIGN FOR A COMBINED OVEN AND GRILL
Charles L. Moffat, Weston, Ontario, Canada, assignor to Moffats Limited, Weston, Ontario, Canada, a corporation
Application January 11, 1947, Serial No. 136,105
Term of patent 3½ years
(Cl. D44—1)



The ornamental design for a combined oven and grill, as shown.

151,385
DESIGN FOR A COMBINED BOWLING GAME DEVICE AND ASH TRAY
John D. Nagel and Walter Lang, Chicago, Ill.
Application October 25, 1946, Serial No. 134,263
Term of patent 14 years
(Cl. D34—5)

The ornamental design for a combined bowling game device and ash tray, as shown.

151,386
DESIGN FOR A VENDING MACHINE CABINET OR SIMILAR ARTICLE
Hans G. Nissen, New York, N. Y., assignor of one-half to Alexander I. Martin, New York, N. Y.
Application March 13, 1946, Serial No. 127,439
Term of patent 14 years
(Cl. D52—3)

The ornamental design for a vending machine cabinet or similar article, substantially as shown and described.

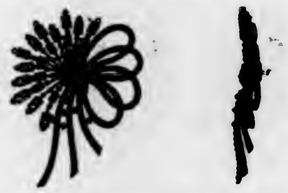
151,387
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 30, 1948, Serial No. 145,431
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,388
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 30, 1948, Serial No. 145,432
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

151,389
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 30, 1948, Serial No. 145,433
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,390
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 30, 1948, Serial No. 145,434
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,391
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application March 30, 1948, Serial No. 145,436
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,392
DESIGN FOR A CLIP OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application April 5, 1948, Serial No. 145,548
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a clip or similar article, substantially as shown.

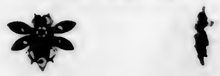
151,393
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application April 5, 1948, Serial No. 145,549
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,394
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application April 5, 1948, Serial No. 145,550
Term of patent 7 years
(Cl. D45—19)

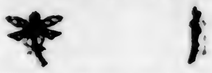
The ornamental design for a brooch or similar article, substantially as shown.

151,395
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 9, 1948, Serial No. 147,458
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

151,396
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 9, 1948, Serial No. 147,459
Term of patent 7 years
(Cl. D45—19)

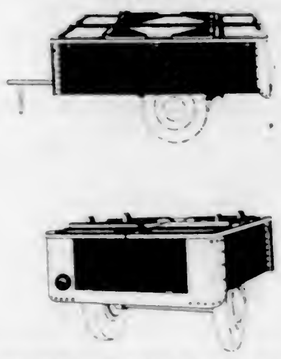


The ornamental design for a brooch or similar article, substantially as shown.

151,397
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 9, 1948, Serial No. 147,461
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,398
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1948, Serial No. 147,824
Term of patent 7 years
(Cl. D45—19)

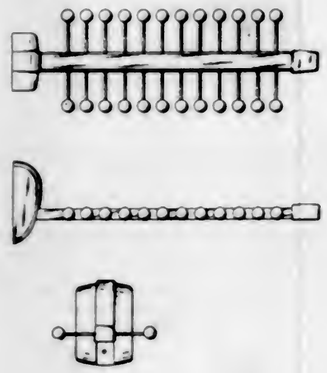


The ornamental design for a brooch or similar article, substantially as shown.

151,399
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application July 29, 1948, Serial No. 147,825
Term of patent 7 years
(Cl. D45—19)

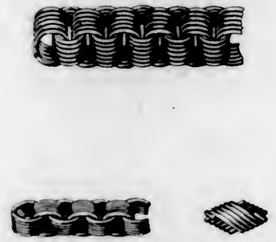
The ornamental design for a brooch or similar article, substantially as shown.

151,400
DESIGN FOR A CAMP TRAILER
John Morris Poche, New Orleans, La.
Application May 1, 1946, Serial No. 129,194
Term of patent 14 years
(Cl. D14—3)



The ornamental design for a camp trailer, as shown and described.

151,401
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Renato Pomatti, Beacon, N. Y.
Application May 22, 1947, Serial No. 139,200
Term of patent 7 years
(Cl. D45—19)

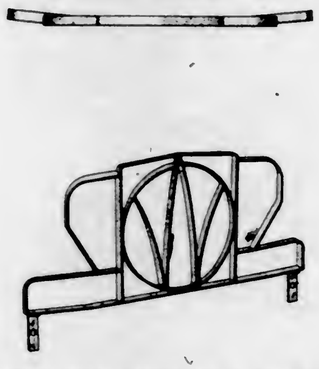


The ornamental design for a brooch or similar article, as shown and described.

151,402
DESIGN FOR A TIE-RACK
Thomas J. Ragland, Seattle, Wash.
Application May 17, 1946, Serial No. 129,772
Term of patent 7 years
(Cl. D33—8)

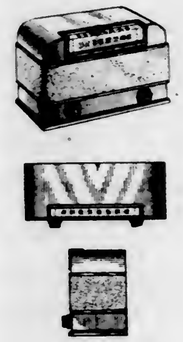
The ornamental design for a tie-rack, as shown and described.

151,403
DESIGN FOR A LINK CHAIN FOR A NECKLACE OR SIMILAR ARTICLE
Max Rahthus, New York, N. Y.
Application February 1, 1947, Serial No. 136,613
Term of patent 14 years
(Cl. D45—16)



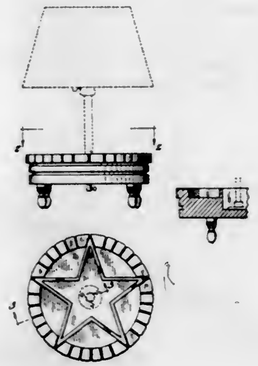
The ornamental design for a link chain for a necklace or similar article, substantially as shown.

151,404
DESIGN FOR A HANGER OR SIMILAR ARTICLE
Julia Read, New York, N. Y.
Application May 28, 1947, Serial No. 139,323
Term of patent 14 years
(Cl. D80—8)



The ornamental design for a hanger or similar article, substantially as shown and described.

151,405
DESIGN FOR A GRILL GUARD FOR AUTOMOBILE RADIATORS
Edward A. Rehrmann, New York, N. Y., assignor to State Welding Works, Inc., New York, N. Y.
Application August 2, 1947, Serial No. 140,678
Term of patent 3½ years
(Cl. D14—6)



The ornamental design for a grill guard for automobile radiators, substantially as shown.

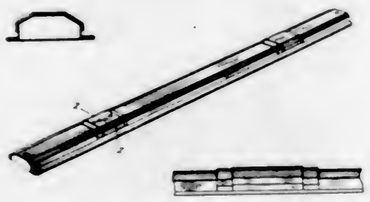
151,406
DESIGN FOR A RADIO RECEIVER CABINET
Jean O. Reinecke, Oak Park, Ill., assignor to Motorola, Inc., Chicago, Ill., a corporation of Illinois
Application September 18, 1947, Serial No. 141,462
Term of patent 3½ years
(Cl. D56—4)

The ornamental design for a radio receiver cabinet, substantially as shown and described.

151,407
DESIGN FOR A COMBINED LAMP AND FLOWER POT
Mariano Reres, Brooklyn, N. Y.
Application December 20, 1946, Serial No. 135,636
Term of patent 7 years
(Cl. D48—20)

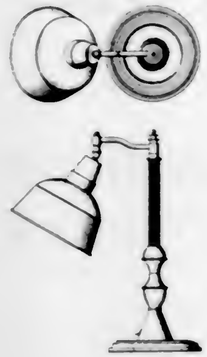
The ornamental design for a combined lamp and flower pot, as shown and described.

151,408
DESIGN FOR A SHOT GUN SIGHT
Kenneth D. Richards, Gardner, Mass.
Application December 5, 1946, Serial No. 135,268
Term of patent 7 years
(Cl. D30—1)



The ornamental design for a shot gun sight, as shown.

151,409
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Helyn M. Rogers, Minneapolis, Minn.
Application February 27, 1948, Serial No. 144,763
Term of patent 3½ years
(Cl. D45—19)

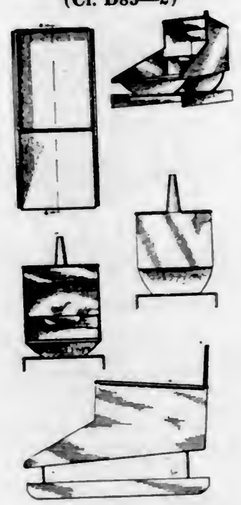


The ornamental design for a brooch or similar article, substantially as shown and described.

151,410
DESIGN FOR A LOWER RAIL FOR VENETIAN BLINDS
Harry S. Rosenbaum, Baltimore, Md.
Application October 24, 1946, Serial No. 134,203
Term of patent 14 years
(Cl. D21—6)

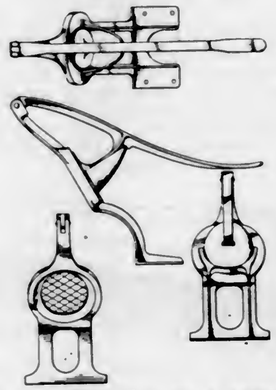
The ornamental design for a lower rail for Venetian blinds, as shown.

151,411
DESIGN FOR A MERCHANDISING COUNTER DISPLAY LAMP
Charles S. Rosenberg, Chicago, Ill.
Application May 29, 1947, Serial No. 139,354
Term of patent 14 years
(Cl. D48—20)



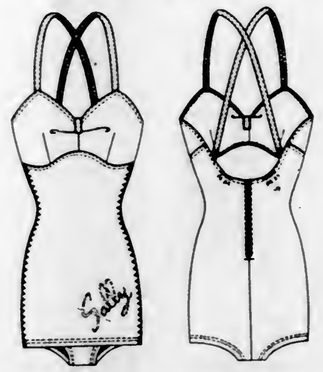
The ornamental design for a merchandising counter display lamp, as shown.

151,412
DESIGN FOR AN AERIAL TOY
Narcy B. Rucsynski, Detroit, Mich.
Application August 1, 1946, Serial No. 132,164
Term of patent 3½ years
(Cl. D34—15)



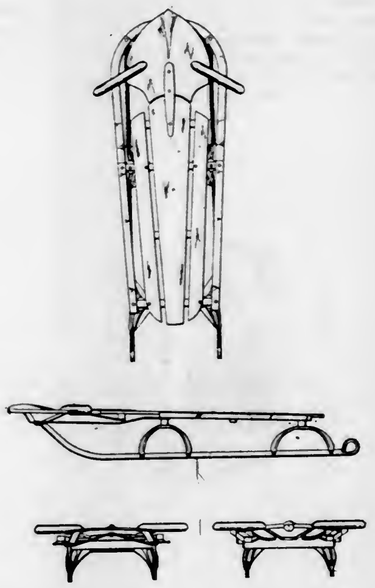
The ornamental design for an aerial toy, as shown and described.

151,413
DESIGN FOR A COMBINED ASH TRAY AND CIGARETTE HOLDER
Lee Sanchez and Thomas E. Lord, Hornitos, Calif.
Application June 9, 1947, Serial No. 139,532
Term of patent 7 years
(Cl. D85—2)



The ornamental design for a combined ash tray and cigarette holder, as shown.

151,414
DESIGN FOR A VEGETABLE SLICER
Frederick R. Smith, Toledo, Ohio
Application October 24, 1946, Serial No. 134,190
Term of patent 14 years
(Cl. D89—1)

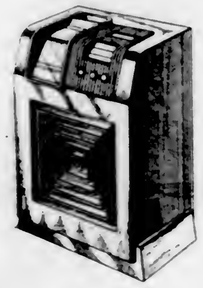


The ornamental design for a vegetable slicer, substantially as shown.

151,415
DESIGN FOR A BATHING SUIT
Mortimer Solomon, New York, N. Y.
Application October 16, 1947, Serial No. 141,953
Term of patent 3½ years
(Cl. D3—17)

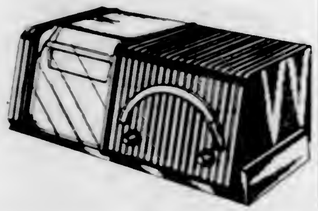
The ornamental design for a bathing suit, substantially as shown.

151,416
DESIGN FOR A SLED
Carl W. Sundberg, Birmingham, Mich., assignor to Pratt Manufacturing Company, Coldwater, Mich., a copartnership
Application March 7, 1947, Serial No. 137,443
Term of patent 14 years
(Cl. D34—15)



The ornamental design for a sled, as shown and described.

151,417
DESIGN FOR A COMBINED HIGH CHAIR AND BABY WALKER
Jack D. Sverdlik, West Hempstead, Long Island, N. Y.
Application May 17, 1947, Serial No. 139,119
Term of patent 7 years
(Cl. D15—8)

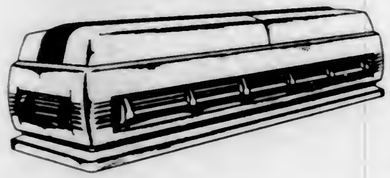


The ornamental design for a combined high chair and baby walker, as shown.

151,418
DESIGN FOR A FACSIMILE RECORDER
Walter Dorwin Teague, Annandale, N. J., assignor to Finch Telecommunications, Inc., Passaic, N. J., a corporation of Delaware
Application October 22, 1946, Serial No. 134,156
Term of patent 14 years
(Cl. D26—14)

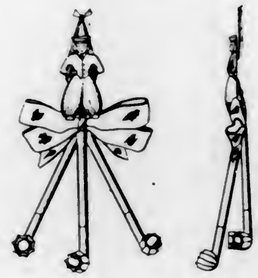
The ornamental design for a facsimile recorder, as shown and described.

151,419
DESIGN FOR A FACSIMILE RECORDER
Walter Dorwin Teague, Annandale, N. J., assignor to Finch Telecommunications, Inc., Passaic, N. J., a corporation of Delaware
Application October 22, 1946, Serial No. 134,157
Term of patent 14 years
(Cl. D26—14)



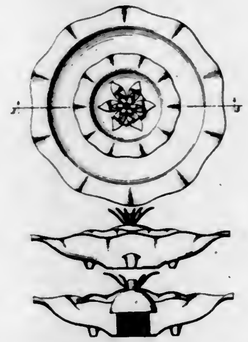
The ornamental design for a facsimile recorder, as shown and described.

151,420
DESIGN FOR A FACSIMILE RECORDER
Walter Dorwin Teague, Annandale, N. J., assignor to Finch Telecommunications, Inc., Passaic, N. J., a corporation of Delaware
Application October 22, 1946, Serial No. 134,158
Term of patent 14 years
(Cl. D26—14)



The ornamental design for a facsimile recorder, as shown and described.

151,421
DESIGN FOR A BURIAL CASKET
Arthur T. Thygeson, New York, and Peter Schladermundt, Bronxville, N. Y., assignors to National Casket Company, Inc., Boston, Mass., a corporation of New York
Application November 15, 1946, Serial No. 134,815
Term of patent 14 years
(Cl. D19—1)



The ornamental design for a burial casket, substantially as shown and described.

151,422
DESIGN FOR A DRESS ORNAMENT
Herman Wapnick, Brooklyn, N. Y.
Application July 27, 1946, Serial No. 132,017
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a dress ornament, as shown.

151,423
DESIGN FOR A PORTABLE ELECTRIC FOUNTAIN
Lewis P. Weil, Cynwyd, Pa.
Application September 7, 1946, Serial No. 133,161
Term of patent 14 years
(Cl. D44—1)

The ornamental design for a portable electric fountain, as shown.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Allied Radio Corporation, Chicago, Ill. Radio receivers of console, table and portable types, phono-radio combinations, and radio kits. Serial No. 513,646, Oct. 19. Class 21.

Altmann, Bernhard, New York, N. Y. Gabardine piece goods. Serial No. 554,544, Oct. 19. Class 42.

Amboy Milk Products Company, Amboy, Ill. Evaporated milk, fresh cream and fresh milk. Serial No. 523,232, Oct. 19. Class 46.

American Cyanamid Company, New York, N. Y. Sulfonamide preparation. Serial No. 558,265, Oct. 19. Class 6.

American Cyanamid Company, New York, N. Y. Sulfonamide preparation for veterinary use. Serial No. 558,266, Oct. 19. Class 6.

American Iron & Machine Works Company, Oklahoma City, Okla. Check-valves, float-valves, gate-valves, etc. Serial No. 517,951, Oct. 19. Class 13.

Ames Company, Inc., Elkhart, Ind. Sulfathiazole-sulfadiazine buffered with sodium citrate. Serial No. 547,415, Oct. 19. Class 6.

Anchor Paper Company, The, Cincinnati, Ohio. Wrapping paper. Serial No. 514,928, Oct. 19. Class 37.

Andrews, Norris, Los Angeles, Calif. Box-liner for packing grapes. Serial No. 541,067, Oct. 19. Class 31.

Anglophone Recordings, Inc., New York, N. Y. Non-electrical phonographs, and mechanically grooved phonograph records. Serial No. 516,247, Oct. 19. Class 36.

Arkwright Merchandising Corporation, New York, N. Y. Sheets and pillow cases. Serial No. 551,846, Oct. 19. Class 42.

Armstrong Cork Company, Lancaster, Pa. House organs published periodically. Serial No. 529,951, Oct. 19. Class 38.

Armstrong Paint & Varnish Works, Chicago, Ill. Paste paint. Serial No. 540,624, Oct. 19. Class 16.

Arnoff Shoe Company, Inc., New York, N. Y. Shoes made of leather. Serial No. 534,229, Oct. 19. Class 39.

Associated Merchandising Corporation, New York, N. Y. Assorted candies. Serial No. 536,661, Oct. 19. Class 46.

Associated Merchandising Corporation, New York, N. Y. Facial tissues. Serial No. 540,364, Oct. 19. Class 37.

Atlantic Cable Splicing Co.: *See*—
Lawlor, Joseph W.

Babson Bros. Co., Chicago, Ill. Detergent washing powder. Serial No. 526,677, Oct. 19. Class 4.

Barton, Carl J., doing business as Barton Products Co., Chicago, Ill. Various compositions containing chemical ingredients. Serial No. 510,824, Oct. 19. Class 6.

Barton Products Co.: *See*—
Barton, Carl J.

Baumritter, T. Co., Inc., New York, N. Y. Living room chairs. Serial No. 492,028, Oct. 19. Class 32.

Beam, Victor, doing business as Pope's Grill, Tulsa, Okla. Salad dressings. Serial No. 521,786, Oct. 19. Class 46.

Beautime Formals, Inc., New York, N. Y. Women's and misses' dresses and evening gowns. Serial No. 546,751, Oct. 19. Class 39.

Berner, Robert L., Company, Chicago, Ill. Wax covered fresh parsnips. Serial No. 518,72, Oct. 19. Class 46.

Bissell Varnish Company, The, Bridgeport, Conn. Varnishes. Serial No. 535,295, Oct. 19. Class 16.

Blackinton, W. & S., Co., Inc., Meriden, Conn. Hollow ware including trays, dishes, salvers, etc. Serial No. 540,244, Oct. 19. Class 28.

Blue Ribbon Paint Company, Wheeling, W. Va. Varnishes. Serial No. 540,369, Oct. 19. Class 16.

Bonat, Samuel & Bro., Inc., New York, N. Y. Hair shampoos; hair waving solutions; hair rinses, etc. Serial No. 538,596, Oct. 19. Class 6.

Bookmark, The: *See*—
Leistner, George W.

Boretz, Abraham, doing business as Boretz Manufacturing Company, New York, N. Y. Trunks, traveling bags, pocketbooks, etc. Serial No. 548,045, Oct. 19. Class 3.

Boretz Manufacturing Company: *See*—
Boretz, Abraham.

Bradford Machine Tool Co., The, Cincinnati, Ohio. Buffers, grinders, and polishers. Serial No. 517,824, Oct. 19. Class 23.

Brosseau & Company, Inc., New York, N. Y. Handbags and pocketbooks. Serial No. 547,823, Oct. 19. Class 3.

Brotman Associates, Inc., San Francisco, Calif. Canned chocolate milk. Serial No. 541,805, Oct. 19. Class 46.

Brown Palace Beauty Salon: *See*—
Glass, Blanche D.

Bull, W. H., Medicine Company, St. Louis, Mo. Insecticides. Serial No. 528,908, Oct. 19. Class 6.

Bulova Watch Company, Inc., New York, N. Y. Watches. Serial No. 508,710, Oct. 19. Class 27.

Burdsal, A., Company, The, Indianapolis, Ind. Floor enamel and porch paint. Serial No. 526,602, Oct. 19. Class 16.

Burlington Mills Corporation, Greensboro, N. C. Cotton yarns. Serial No. 546,361, Oct. 19. Class 43.

Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y. Medicinal preparation containing antacids. Serial No. 529,136, Oct. 19. Class 6.

Burroughs Wellcome & Co. (U. S. A.) Inc., New York, N. Y. Product containing the active principals of digitalis freed from inert material. Serial No. 529,138, Oct. 19. Class 6.

Burroughs Wellcome & Co., (U.S. A.) Inc., New York, N. Y. Antacid preparation. Serial No. 552,742, Oct. 19. Class 6.

Buxton, Incorporated, Springfield, Mass. Billfolds. Serial No. 543,091, Oct. 19. Class 3.

Carbide and Carbon Chemicals Corporation, New York, N. Y. Chemical preparation. Serial No. 510,935, Oct. 19. Class 6.

Castello, Anthony, doing business as Castello Packing Company, Brooklyn, N. Y. Edible salad and cooking oils. Serial No. 517,700, Oct. 19. Class 46.

Castello Packing Company: *See*—
Castello, Anthony.

Celanese Corporation of America, New York, N. Y. Piece goods made of cellulose acetate type yarns. Serial No. 550,666, Oct. 19. Class 42.

Century Thread Corp., New York, N. Y. Sewing thread of cotton, silk, nylon, etc. Serial Nos. 518,655–6, Oct. 19. Class 43.

Chap Stick Co.: *See*—
Morton Manufacturing Corporation.

Chicago Federation of Labor, Chicago, Ill. Periodically and intermittently appearing printed programs, magazines, and labor union directories. Serial No. 502,489, Oct. 19. Class 38.

Harness sweat pads. Oakes & Company. 441,132, Oct. 19; Serial No. 525,379, published Nov. 18, 1947.

Leather goods, Personal. C. Berkeley. 441,049, Oct. 19; Serial No. 510,476, published June 22, 1948.

Leather manufactures, Certain. Tex Tan of Yoakum. 503,153, Oct. 19; Serial No. 535,895, published June 8, 1948.

Luggage. American Hardware Company, Inc. 503,101, Oct. 19; Serial No. 532,674, published June 22, 1948.

Luggage. D. H. Mendelson. 503,232, Oct. 19; Serial No. 541,856, published June 15, 1948.

Luggage and carrying cases. Schell Leather Goods Co., Inc. 441,082, Oct. 19; Serial No. 516,223, published June 15, 1948.

Pocketbooks. E. J. Wilkins Company. 503,032, Oct. 19; Serial No. 528,666, published June 8, 1948.

Suitcases. Abei & Bach, Inc. 503,255, Oct. 19; Serial No. 543,676, published July 6, 1948.

Suitcases, hand luggage cases, and wardrobe suitcases. Hartmann Company. 503,203, Oct. 19; Serial No. 539,876, published June 15, 1948.

Suitcases, hand luggage cases equipped with garment carrying fixtures, and wardrobe cases. Hartmann Company. 503,256, Oct. 19; Serial No. 543,712, published July 6, 1948.

Suitcases, traveling bags, portfolios, etc. Likly Luggage Co., Inc. 503,267, Oct. 19; Serial No. 545,268, published July 27, 1948.

Trunks, dress suitcases, handbags, etc. H. L. Kotkins. 503,005, Oct. 19; Serial No. 521,813, published July 20, 1948.

Trunks, suitcases, wardrobe bags, etc. Desmond's. 380,671, Aug. 27, 1940. Republished Oct. 19.

Wallets, billfolds, purses, etc. Aristocrat Leather Products, Inc. 503,266, Oct. 19; Serial No. 545,214, published July 27, 1948.

Wallets or billfolds. Swank, Inc. 503,150, Oct. 19; Serial No. 535,757, published June 22, 1948.

Wallets or billfolds. Swank, Inc. 503,151, Oct. 19; Serial No. 535,766, published June 22, 1948.

CLASS 4

Belt-dressing. Charles A. Schieren Company. 72,420, re-renewed Jan. 26, 1949. O. G. Oct. 19.

Cleaner, General household. Morton S. Pine Company. 417,921, Nov. 20, 1945. Republished Oct. 19.

Cleaning aid of the neutral detergent type, Wet. Patek and Co. 432,633, Sept. 9, 1947. Republished Oct. 19.

Cleaning preparation. West Disinfecting Company. 503,286, Oct. 19; Serial No. 549,032, published July 20, 1948.

Cleanser in granular form for general washing purposes. Whisk Co. of New York, Inc. 441,100, Oct. 19; Serial No. 520,915, published Sept. 2, 1947.

Detergent and wetting agent, Compounded, synthetic. Stepan Chemical Company. 503,004, Oct. 19; Serial No. 521,699, published July 13, 1948.

Detergent and wetting agent, Synthetic. Stepan Chemical Company. 503,003, Oct. 19; Serial No. 521,698, published July 13, 1948.

Dressing and preservative for leather, rubber, canvas, etc. Chicago Belting Company. 135,412, Oct. 12, 1920. Republished Oct. 19.

Dressing for leather or canvas belts. Chicago Belting Company. 178,564, Jan. 15, 1924. Republished Oct. 19.

Polishing compound for white, hard, enameled surfaces. J. Thamm. 503,311, Oct. 19; Serial No. 515,729.

Polishing tissues, Silicone treated. Dow Corning Corporation. 441,107, Oct. 19; Serial No. 522,011, published July 20, 1948.

Preparation for cleaning and polishing silverware. Service Products, Incorporated. 245,670, renewed Aug. 21, 1948. O. G. Oct. 19.

Preparation for washing and cleaning the hair and for general household and laundry washing and cleaning purposes. Buscarlet Glove Company, Inc. 503,321, Oct. 19; Serial No. 532,801.

Sanding kits. Delta Manufacturing Company. 419,657, Feb. 26, 1946. Republished Oct. 19.

Scythe-stones, razor-hones, sandpaper, etc. Marshall-Wells Hardware Co. 71,386, re-renewed Nov. 24, 1948. O. G. Oct. 19.

Silicate of soda and silicate of potash. Philadelphia Quartz Company. 414,766, June 26, 1945. Republished Oct. 19.

Soap. Armour and Company. 503,206, Oct. 19; Serial No. 540,021, published July 20, 1948.

Soap. Armour and Company. 503,281, Oct. 19; Serial No. 548,466, published July 13, 1948.

Soap. Fels & Company. 503,332, Oct. 19; Serial No. 549,723.

Soap. Los Angeles Soap Company. 308,572, Dec. 12, 1933. Republished Oct. 19.

Soap. Mexican Amole Soap Co. 61,635, Apr. 2, 1907. Republished Oct. 19.

Soap flakes; cream metal polish, powdered cleanser. Chicago Sanitary Products Co. 503,071, Oct. 19; Serial No. 531,196, published July 13, 1948.

Soap, Laundry. Los Angeles Soap Company. 311,598, Mar. 27, 1934. Republished Oct. 19.

Soap, soap powders, household cleansers, etc. E. A. Meyer. 333,677, Mar. 31, 1936. Republished Oct. 19.

Synthetic preparation. Rosenthal-Bercow Co., Inc. 503,122, Oct. 19; Serial No. 533,784, published June 1, 1948.

CLASS 5

Adhesive comprised in whole or in part of silicate of soda. Philadelphia Quartz Company. 355,409–10, Mar. 15, 1938. Republished Oct. 19.

Cement, Adhesive. Tip-Top Products Company. 503,163, Oct. 19; Serial No. 536,464, published July 20, 1948.

Cement, Fabric. J. C. Truemper. 503,212, Oct. 19; Serial No. 540,484, published July 20, 1948.

Cements. Boyle-Midway Inc. 503,204, Oct. 19; Serial No. 539,934, published July 20, 1948.

Core binders, Cereal. Corn Products Refining Company. 389,293, July 29, 1941. Republished Oct. 19.

Glue. Perkins Glue Company. 503,208, Oct. 19; Serial No. 540,199, published July 20, 1948.

Silicate of soda. Philadelphia Quartz Company. 340,932, Nov. 24, 1936. Republished Oct. 19.

Silicate of soda. Philadelphia Quartz Company. 351,045, Oct. 19, 1937. Republished Oct. 19.

Tape, Friction. Plymouth Rubber Company, Inc. 503,216–17, Oct. 19; Serial Nos. 540,868–9, published July 20, 1948.

Tape, Gummed. McLaurin-Jones Co. 503,136, Oct. 19; Serial No. 534,907, published July 20, 1948.

CLASS 6

Acetyl tributyl citrate, acetyl triethyl citrate, acetyl tripropyl citrate, etc. Chas. Pfizer & Co., Inc. 503,018, Oct. 19; Serial No. 526,922, published July 20, 1948.

Ammonium sulphate. Jones & Laughlin Steel Corporation. 503,029, Oct. 19; Serial No. 528,488, published July 6, 1948.

Anesthetic, Local. Farbwerke, Vormals Meister, Lucius & Brüning. 32,210, re-renewed Dec. 6, 1948. O. G. Oct. 19.

Antibiotic in injectible dosage form. Wyeth Incorporated. 503,247, Oct. 19; Serial No. 543,248, published July 20, 1948.

Anti-freeze compound. Fleet Oil Company. 503,200, Oct. 19; Serial No. 539,509, published July 6, 1948.

Anti-freeze solution, radiator flush, radiator stop leak, etc. Goodyear Tire & Rubber Company. 503,031, Oct. 19; Serial No. 528,623, published July 6, 1948.

Astringent. Parke, Davis & Company. 248,114, renewed Oct. 16, 1948. O. G. Oct. 19.

Bile salts compound. Harrower Laboratory, Inc. 322,172, Feb. 26, 1935. Republished Oct. 19.

Bleaching and washing fluid, Chemical. Washing Fluid Chemical Co. 244,561, renewed July 24, 1948. O. G. Oct. 19.

Blue, Liquid laundry. Patek and Co. 502,989, Oct. 19; Serial No. 505,920, published July 20, 1948.

Bluing solution, Gun. W. G. Scroxton. 441,104, Oct. 19; Serial No. 521,615, published July 20, 1948.

Calcium lignosulfonate used as additive for cements and ceramics, Basic. Marathon Corporation. 503,190, Oct. 19; Serial No. 538,649, published June 29, 1948.

Camphor used for medicinal purposes. Sherka Chemical Company, Inc. 503,227, Oct. 19; Serial No. 541,590, published July 20, 1948.

Chemical composition in powdered form for killing snails and cutworms. Destruxol Corporation, Ltd. 503,084, Oct. 19; Serial No. 532,125, published July 20, 1948.
Chemical compounds. Arthur H. Thomas Company. 213,829, June 8, 1926. Republished Oct. 19.
Chemical compounds in liquid form. International Rustproof Corporation. 503,207, Oct. 19; Serial No. 540,073, published July 20, 1948.
Chemical flux composition. R. D. Wasserman. 410,922, Dec. 26, 1944. Republished Oct. 19.
Chemical flux composition. R. D. Wasserman. 415,433, Aug. 7, 1945. Republished Oct. 19.
Chemical for cleaning sandpaper, sanding belts, and discs, etc. Moline Paint Mfg. Co. 503,314, Oct. 19; Serial No. 521,270.
Chemical preparation having fireproofing and fireretarding properties. J. W. Stuart. 417,132, Oct. 16, 1945. Republished Oct. 19.
Chemical preparations for exterminating weeds. American Chemical Paint Company. 503,055, Oct. 19; Serial No. 529,849, published July 20, 1948.
Chemical substance. Parke, Davis & Company. 249,098, renewed Nov. 20, 1948. O. G. Oct. 19.
Chemical toxicants. Monsanto Chemical Company. 441,097, Oct. 19; Serial No. 519,484, published Oct. 14, 1947.
Coating compounds, Chemical plastic. Industrial Lining Engineers, Inc. 441,105, Oct. 19; Serial No. 521,890, published July 13, 1948.
Colloidal metal preparations. Heyden Chemical Corporation. 503,001, Oct. 19; Serial No. 517,576, published July 6, 1948.
Colloidal solution comprising an oxide of silicon in water. E. I. du Pont de Nemours and Company. 503,253, Oct. 19; Serial No. 543,577, published July 20, 1948.
Compacts, Filled. Coty, Inc. 503,185, Oct. 19; Serial No. 538,103, published June 22, 1948.
Composition of strong mineral acids. Pennsylvania Salt Manufacturing Company. 441,026, Oct. 19; Serial No. 507,018, published July 13, 1948.
Compound to be used as a cough syrup and an herb and vitamin compound for use as a tonic. J. E. Respondek. 503,145, Oct. 19; Serial No. 535,428, published July 20, 1948.
Compounds for processing pure silk. E. F. Houghton & Co 232,309, Sept. 6, 1927. Republished Oct. 19.
Conditioners and medicinal preparations for poultry and pigs. Poultry and pig. Rob Martin (Export) Limited. 503,026, Oct. 19; Serial No. 528,424, published July 20, 1948.
Cortex and thyroid extracts, Combination of orally active adrenal. Harrower Laboratory, Inc. 403,360, Sept. 21, 1943. Republished Oct. 19.
Cough and croup remedy. Glessner Company. 503,192, Oct. 19; Serial No. 538,751, published July 6, 1948.
Cream for treatment, or relief, of diaper rash. J. S. Johnson. 503,215, Oct. 19; Serial No. 540,820, published July 20, 1948.
Cure for piles. Pineule Medicine Co. 45,170, Aug. 8, 1905. New certificate. O. G. Oct. 19.
Deodorant compositions. C. V. Sparhawk. 441,042, Oct. 19; Serial No. 507,662, published July 13, 1948.
Derivatives of hexahydric alcohols and inner ethers thereof. 365,915, Mar. 21, 1939. Republished Oct. 19.
Dextrose, Pure crystallized. Corn Products Refining Company. 314,254, June 26, 1934. Republished Oct. 19.
Disinfectant and pine oil disinfectant. Great American Tea Company. 503,269, Oct. 19; Serial No. 545,845, published July 6, 1948.
Drying oil. Brown Oil & Chemical Corp 503,187, Oct. 19; Serial No. 538,492, published July 20, 1948.
Dye stuff for fabrics. R. Q. Martinez. 503,310, Oct. 19; Serial No. 515,319.
Eau de cologne. Countess Mara Incorporated. 503,087, Oct. 19; Serial No. 532,313, published July 20, 1948.
Embalming fluid. Embalmers' Supply Co. 503,320, Oct. 19; Serial No. 532,576.
Emulsion. Parke, Davis & Company. 251,074, renewed Dec. 25, 1948. O. G. Oct. 19.
Endocrine preparation. Harrower Laboratory, Inc. 294,161, May 17, 1932. Republished Oct. 19.
Ester-amides, Fatty acid. Armour and Company. 503,218, Oct. 19; Serial No. 540,964, published July 20, 1948.
Extract of the adrenal cortex tissue, Potent. Harrower Laboratory, Inc. 356,407, Apr. 26, 1938. Republished Oct. 19.
Face powder, lipstick, rouge, etc. D. J. Maxin. 441,075, Oct. 19; Serial No. 514,484, published Sept. 2, 1947.
Face powders, hair oil, hair tonic, etc. D. W. Brown. 503,236, Oct. 19; Serial No. 542,074, published July 20, 1948.
Fish liver oils containing vitamins A and D. Mead Johnson & Company. 503,231, Oct. 19; Serial No. 541,756, published July 20, 1948.
Foaming, wetting, and dispersing agent. MacAndrews & Forbes Company. 503,143, Oct. 19; Serial No. 535,419, published June 22, 1948.
Fumigating material, Gaseous. Guardite Corporation. 301,971, Mar. 21, 1933. Republished Oct. 19.
Fungicides, namely, dusting sulphur. Swift & Company. 441,037, Oct. 19; Serial No. 507,084, published July 20, 1948.
Germicide. E. F. Drew & Co., Inc. 503,050, Oct. 19; Serial No. 529,444, published July 6, 1948.
Gluconate product for the treatment of iron deficiency anemias, Ferrous. Nion Corporation. 503,254, Oct. 19; Serial No. 543,649, published July 20, 1948.
Hair-combing liquid. Edward Wesley & Company. 248,230, renewed Oct. 16, 1948. O. G. Oct. 19.
Hair tonic. E. J. Goodier. 502,983, Oct. 19; Serial No. 502,133, published June 29, 1948.
Hair tonic and shampoo. R. B. Semler, Inc. 503,252, Oct. 19; Serial No. 543,533, published July 20, 1948.
Hair tonic, hair shampoo, hair lacquer, etc. Harf, Inc. 503,259, Oct. 19; Serial No. 543,920, published July 20, 1948.

Remedies for the relief of kidney, bladder and liver troubles. E. C. De Witt & Company. 68 905, May 5, 1908. New certificate. O. G. Oct. 19.
Salt for meat curing. Myles Salt Company, Inc. 503,059, Oct. 19; Serial No. 530,550, published July 20, 1948.
Salve for relief of head and chest colds, headaches, etc. Altone Chemical Company, Inc. 503,158, Oct. 19; Serial No. 536,029, published June 29, 1948.
Salve or ointment. Vaporizing and rubbing. J. E. Respondek. 502,996, Oct. 19; Serial No. 514,496, published July 20, 1948.
Salve type preparation. J. I. Calicchio. 441,114, Oct. 19; Serial No. 523,239, published July 20, 1948.
Salves. E. C. De Witt & Co. 45,039, Aug. 1, 1905. New certificate. O. G. Oct. 19.
Shampoo. Procter & Gamble Company. 433,175, Sept. 30, 1947. Republished Oct. 19.
Shampoo tint, Oil. Mapril, Inc. 503,226, Oct. 19; Serial No. 541,434, published July 20, 1948.
Silicate of soda. Philadelphia Quartz Company. 338,319, Sept. 1, 1936. Republished Oct. 19.
Silicate of soda. Philadelphia Quartz Company. 340,026, Oct. 27, 1936. Republished Oct. 19.
Silicate of soda. Philadelphia Quartz Company. 346,131, May 18, 1937. Republished Oct. 19.
Silicate of soda. Philadelphia Quartz Company. 347,331, June 22, 1937. Republished Oct. 19.
Silicate of soda. Philadelphia Quartz Company. 350,514–15, Sept. 28, 1937. Republished Oct. 19.
Sodium cyanide. E. I. du Pont de Nemours and Company. 503,214, Oct. 19; Serial No. 540,797, published July 6, 1948.
Sodium ethyl mercurithiosalicylate or organic mercury compound solution. Eli Lilly and Company. 252,182, renewed Jan. 29, 1949. O. G. Oct. 19.

Sodium lignosulfonate compounds, Partially desulfonated. Marathon Corporation. 503,191, Oct. 19; Serial No. 538,650, published June 22, 1948.
Sodium lignosulfonate used for boiler water treatment. Marathon Corporation. 503,189, Oct. 19; Serial No. 538,648, published June 22, 1948.
Solution of an active principle of the pancreas having influence upon the circulation. Harrower Laboratory, Inc. 290,743, Jan. 12, 1932. Republished Oct. 19.
Solutions and other preparations for use in waving the hair, etc. A. Smith. 441,129, Oct. 19; Serial No. 524,826, published July 20, 1948.
Solutions, Gold plating. B. Robinson. 503,239, Oct. 19; Serial No. 542,172, published July 20, 1948.
Solutions of cellulose derivatives. Atlas Powder Company. 359,164, Aug. 9, 1938. Republished Oct. 19.
Sprout inhibitor for potatoes and other root crops. Thompson Horticultural Chemicals Corp. 503,317, Oct. 19; Serial No. 525,710.
Starch for laundry and manufacturing purposes. National Starch Company. 105,695, Aug. 10, 1915. Republished Oct. 19.
Starch for laundry purposes. National Starch Co. 101,966, Jan. 19, 1915. Republished Oct. 19.
Starch, Laundry. Corn Products Refining Company. 278,931, Jan. 6, 1931. Republished Oct. 19.
Starch, Laundry. Corn Products Refining Company. 280,717, Feb. 24, 1931. Republished Oct. 19.
Starch, principally in powdered form, Chemically treated. H. D. Meincke. 503,037, Oct. 19; Serial No. 529,077, published July 20, 1948.
Stomach powders. D. A. Molinari. 503,242, Oct. 19; Serial No. 542,960, published July 20, 1948.
Stop leak, Radiator, cooling system cleaner, rubber solvent, and hydraulic brake fluid. Dunlop Tire and Rubber Corporation. 441,071, Oct. 19; Serial No. 513,612, published July 20, 1948.
Substance for preventing rust, corrosion, or scale in boilers, radiators, and hot water systems. Philadelphia Quartz Company. 382,134, Oct. 15, 1940. Republished Oct. 19.
Substance including a water-soluble liver fraction and nucleinic acid. Harrower Laboratory, Inc. 356,408, Apr. 26, 1938. Republished Oct. 19.
Sulpha compounds. Baldwin Pharmacal Company. 503,070, Oct. 19; Serial No. 531,188, published July 13, 1948.
Tablets for the treatment of the liver. Fellows Medical Manufacturing Company, Inc. 503,268, Oct. 19; Serial No. 545,732, published July 6, 1948.
Therapeutic and immunizing agents. Cutter Laboratories. 441,045, Oct. 19; Serial No. 509,638, published Dec. 9, 1947.
Toilet cream. Unique Cosmetics, Inc. 503,165, Oct. 19; Serial No. 536,565, published July 20, 1948.
Toilet water. Lanman & Kemp-Barclay & Co., Incorporated. 503,202, Oct. 19; Serial No. 539,719, published July 20, 1948.
Tonic and conditioner for hogs, horses, cows, etc., General. D. H. Allen. 503,132, Oct. 19; Serial No. 534,587, published July 20, 1948.
Tonic containing malt, Nutritive. Galactina & Biomalz A. G. 441,050, Oct. 19; Serial No. 510,503, published July 13, 1948.
Troches or lozenges, Medicated throat. White Laboratories, Inc. 503,287, Oct. 19; Serial No. 550,571, published July 13, 1948.
Vehicle consisting of propylene glycol. McNeil Laboratories, Incorporated. 503,260, Oct. 19; Serial No. 544,097, published July 20, 1948.
Vitamin E. E. S. Miller Laboratories, Inc. 503,023, Oct. 19; Serial No. 527,537, published July 6, 1948.
Vitamin preparations in tablet, capsule, wafer, and liquid forms, and dry yeast. De Pree Company. 503,195, Oct. 19; Serial No. 539,034, published July 13, 1948.
Vitamin preparations, vaccines, therapeutic agents, etc. Ernst Bischoff Company, Incorporated. 503,111, Oct. 19; Serial No. 533,264, published July 13, 1948.
Vitamin preparations, vaccines, therapeutic agents, etc. Ernst Bischoff Company, Incorporated. 503,112, Oct. 19; Serial No. 533,265, published July 20, 1948.
Vitamin tablets. Jan-Wil, Inc. 503,271, Oct. 19; Serial No. 546,395, published July 6, 1948.
Vitamins. American Biochemical Company, Inc. 426,915, Jan. 21, 1947. Republished Oct. 19.
Vitamins, herb concentrates, etc. Old Fashioned Herb Company. 441,076, Oct. 19; Serial No. 514,620, published July 20, 1948.
Wax emulsions, Aqueous and nonaqueous. S. C. Johnson & Son, Inc. 503,072, Oct. 19; Serial No. 531,214, published July 20, 1948.

CLASS 7

Clothesline and cotton twine. Frank W. Winne & Son, Inc. 503,223, Oct. 19; Serial No. 541,243, published June 15, 1948.
Clothes-lines. American Manufacturing Company. 91,929, June 10, 1913. Republished Oct. 19.
Clothes-lines, Hemp. American Manufacturing Company. 85,402, Feb. 20, 1912. Republished Oct. 19.
Cord, Sash, coltheslines, and cotton twine. Frank W. Winne & Son, Inc. 503,222, Oct. 19; Serial No. 541,242, published June 15, 1948.
Cordage. American Manufacturing Company. 89,793–4, Jan. 14, 1913. Republished Oct. 19.
Lath-yarn. American Manufacturing Company. 89,973, Jan. 28, 1913. Republished Oct. 19.
Rope. Columbian Rope Company. 164,404, Feb. 20, 1923. Republished Oct. 19.
Rope. Columbian Rope Company. 170,136, July 10, 1923. Republished Oct. 19.
Rope and line. American Manufacturing Company. 73,990, June 8, 1909. Republished Oct. 19.
Rope, cord, and twine. American Manufacturing Company. 222,647, Jan. 4, 1927. Republished Oct. 19.
Rope, cord, lines, and twine. American Manufacturing Company. 57,434, Nov. 13, 1906. Republished Oct. 19.
Rope, cord, lines, and twine. American Manufacturing Company. 75,635, Oct. 26, 1909. Republished Oct. 19.
Rope, cord, lines, and twine. American Manufacturing Company. 105,179, July 13, 1915. Republished Oct. 19.
Rope, cord, lines, and twine. American Manufacturing Company. 109,054, Mar. 21, 1916. Republished Oct. 19.
Rope, Cotton, manila rope, hemp twine, etc. Frank W. Winne & Son, Inc. 503,221, Oct. 19; Serial No. 541,241, published June 15, 1948.
Rope of sisal and other vegetable hard fibre. Plymouth Cordage Company. 502,985, Oct. 19; Serial No. 502,999, published June 15, 1948.
Twine, rope, and cord. A. W. Archer Co. Inc. 503,213, Oct. 19; Serial No. 540,761, published June 15, 1948.
Twines and cords. Bibb Manufacturing Company. 502,980, Oct. 19; Serial No. 499,816, published June 15, 1948
Warp and other ropes and lines, Pot. Plymouth Cordage Company. 503,123, Oct. 19; Serial No. 534,050, published June 22, 1948.

CLASS 9

Fuse for igniting gunpowder and other explosives. Ensign-Bickford Company. 74,342, July 6, 1909. Republished Oct. 19.

CLASS 10

Fertilizers. N. S. Koos & Son Company. 503,078, Oct. 19; Serial No. 531,684, published July 13, 1948.

CLASS 11

Adding machine ribbons, accounting machine ribbons, calculating machine ribbons, etc. Stationers' Guild of America. 386,329, Apr. 1, 1941. Republished Oct. 19.
Carbon papers. Codo Manufacturing Corporation. 307,647, Oct. 31, 1933. Republished Oct. 19.
Ink, Lithographic rubbing, lithographic liquid tusche, etc. Wm. Korn, Inc. 345,523, Apr. 27, 1937. Republished Oct. 19.
Ink, Lithographic rubbing, lithographic liquid tusche, lithographic transfer ink, etc. Wm. Korn, Inc. 346,004, May 11, 1937. Republished Oct. 19.
Ink reducer, Lithographic. Indiana Chemical and Manufacturing Company. 140,404, Mar. 15, 1921. Republished Oct. 19.
Preparations for anti-offset ink, ink softener, and ink dryer. Indiana Chemical and Manufacturing Company. 503,043, Oct. 19; Serial No. 529,263, published July 20, 1948.
Stamp pads and rubber stamp ink. Fulton Specialty Co. 503,113, Oct. 19; Serial No. 533,293, published July 20, 1948.
Typewriter ribbons. Codo Manufacturing Corporation. 307,917, Nov. 14, 1933. Republished Oct. 19.
Typewriter ribbons and carbon papers. Codo Manufacturing Corporation. 307,749, Oct. 31, 1933. Republished Oct. 19.
Typewriter ribbons and carbon papers. Codo Manufacturing Corporation. 309,151, Jan. 2, 1934. Republished Oct. 19.
Writing fluids. W. A. Sheaffer Pen Company. 142,760, May 17, 1921. Republished Oct. 19.

CLASS 12

Brick siding, Artificial. Dant & Russell, Inc. 503,201, Oct. 19; Serial No. 539,670, published June 29, 1948.
Brick used in the construction of buildings, and tile. James Towne Colony Pottery. 441,069, Oct. 19; Serial No. 531,426, published June 29, 1948.
Cement for jointing water mains. Hayman, Michael & Co., Inc. 286,542, Sept. 1, 1931. Republished Oct. 19.
Cement, Mason's. Dewey Portland Cement Company. 292,161, Mar. 1, 1932. Republished Oct. 19.
Cement, Portland. Dewey Portland Cement Company. 290,413, Jan. 5, 1932. Republished Oct. 19.
Clinker, Refractory magnesian, ramming and patching materials. Basic Refractories, Inc. 441,015, Oct. 19; Serial No. 483,603, published June 29, 1948.
Duck tents, awnings, paulins, etc. Marshall-Wells Hardware Co. 71,509, re-renewed Dec. 1, 1948. O. G. Oct. 19.
Elements, Spacing and reinforcing. Timber Engineering Company. 418,890, Jan. 15, 1946. Republished Oct. 19.
Fastenings made of wood employed in timber connections. Timber Engineering Company. 409,317, Oct. 3, 1944. Republished Oct. 19.

Joints, Lumber and fabricated metal. Timber Engineering Company. 307,738, Oct. 31, 1933. Republished Oct. 19.
Mastic compound. Tremco Manufacturing Company. 403,130, Sept. 7, 1943. Republished Oct. 19.
Plaster, Brushing, a powder to be mixed with water. H. V. Root. 503,014, Oct. 19; Serial No. 526,558, published June 29, 1948.
Putty, Brine. Mundet Cork Corporation. 441,103, Oct. 19; Serial No. 521,592, published June 29, 1948.
Sheet material laminated from water-resisting paper and textile fabric. Angier Corporation. 503,073, Oct. 19; Serial No. 531,287, published June 29, 1948.
Shields, Termite. Timber Engineering Company. 386,736, Apr. 22, 1941. Republished Oct. 19.
Tiles of sheet metal, Sound-deadening. C. F. Burgess Laboratories, Inc. 247,114, renewed Sept. 18, 1948. O. G. Oct. 19.
Windows and window sashes. Vento Steel Sash Company. 224,213, Feb. 22, 1927. Republished Oct. 19.

CLASS 13

Chains and hoist hooks. Billings & Spencer Company. 402,398, July 20, 1943. Republished Oct. 19.
Connectors, Load distributing metal. Timber Engineering Company. 395,997, June 23, 1942. Republished Oct. 19.
Horseshoe-nails, carpet-tacks, barbed wire, etc. Marshall-Wells Hardware Co. 71,389, re-renewed Nov. 24, 1948. O. G. Oct. 19.
Key rings. Speidel Corporation. 383,325, Dec. 3, 1940. Republished Oct. 19.
Screws, Clamp, bolts, nuts. Parts Manufacturing Company. 242,718, renewed May 29, 1948. O. G. Oct. 19.
Wickets and grilles, Metal door. Ackerman Door Interviewer Corp. 250,501, renewed Dec. 11, 1948. O. G. Oct. 19.

CLASS 14

Alloys. Vanadium Corporation of America. 246,056, renewed Aug. 28, 1948. O. G. Oct. 19.
Babbitt metal, sheet-steel, tin-plate, etc. Marshall-Wells Hardware Co. 71,548, re-renewed Dec. 1, 1948. O. G. Oct. 19.
Castings, Miscellaneous. Ohio Malleable Iron Company. 70,665, re-renewed Sept. 22, 1948. O. G. Oct. 19.
Derails, Metal. Madden Company. 115,644, Feb. 27, 1917. Republished Oct. 19.
Metals and metal alloys, Nonferrous. American Smelting & Refining Company. 244,534–35, renewed July 24, 1948. O. G. Oct. 19.
Plates for vaults and safes, Metal. Guardian Metals Company. 222,104, renewed Dec. 21, 1946. O. G. Oct. 19.
Plates for vaults and safes, Metal. Guardian Metals Company. 222,105–6, Dec. 21, 1926. Corrected. O. G. Oct. 19.
Rail-anchors, Metal, anticreepers, tie-plate, etc. P. & M. Co. 89,292, Dec. 3, 1912. Republished Oct. 19.
Rail anchors or anticreepers. P. & M. Company. 177,413, Dec. 18, 1923. Republished Oct. 19.
Welding, brazing, and soldering rods, wires, and bars, etc., Metallic. R. D. Wasserman. 409,730, Oct. 17, 1944. Republished Oct. 19.
Welding electrodes, welding, brazing, and soldering overlay alloys, etc. R. D. Wasserman. 416,708, Sept. 25, 1945. Republished Oct. 19.
Welding electrodes, welding, brazing, and soldering overlay alloys, etc. R. D. Wasserman. 416,970, Oct. 9, 1945. Republished Oct. 19.
Welding electrodes, welding, brazing, and soldering rods and wires, etc. R. D. Wasserman. 408,653, Aug. 22, 1944. Republished Oct. 19.
Welding rods and metallic alloys, Metallic. Eutectic Welding Alloys, Inc. 386,989, Apr. 29, 1941. Republished Oct. 19.

CLASS 15

Fuel, Motor. Christopher Brothers. 441,022, Oct. 19; Serial No. 494,028, published July 13, 1948.
Greases, Lubricating. Union Oil Company of California. 502,990, Oct. 19; Serial No. 506,906, published June 29, 1948.
Lubricants of an oily character, Cutting. G. W. Richards. 231,710, renewed Aug. 23, 1947. O. G. Oct. 19.
Oil, Machinery lubricating. Sun Oil Company. 441,043, Oct. 19; Serial No. 508,623, published June 22, 1948.
Oil, Motor fuel, and an oil for lubricating purposes. McBride Refining Company, Inc. 441,110, Oct. 19; Serial No. 522,753, published July 6, 1948.
Oil, Motor lubricating. A. G. Meier. 441,025, Oct. 19; Serial No. 497,488, published July 6, 1948.
Oil, Motor lubricating. A. G. Meier. 441,074, Oct. 19; Serial No. 514,124, published July 13, 1948.
Oils and greases, etc., Refined, semi-refined and unrefined. Sinclair Refining Company. 503,230, Oct. 19; Serial No. 541,751, published July 20, 1948.
Oils and greases, Lubricating. Brooks Oil Company. 441,023, Oct. 19; Serial No. 494,256, published July 13, 1948.
Oils and greases, Lubricating. Fiske Brothers Refining Co. 503,043, Oct. 19; Serial No. 529,255, published July 6, 1948.
Oils and greases, Lubricating. Fiske Brothers Refining Co. 503,044, Oct. 19; Serial No. 529,256, published July 13, 1948.
Oils and hydraulic oil, Lubricating. Pure Oil Company. 503,020, Oct. 19; Serial No. 527,286, published July 20, 1948.
Oils, Lubricating. Miracle Lubricating Corporation. 503,298, Oct. 19; Serial No. 502,709.
Petroleum wax. Industrial Raw Materials Corp. 503,092–4, Oct. 19; Serial Nos. 532,455–7, published June 29, 1948.

CLASS 16

Aluminum powder. Brevolite Lacquer Company. 321,263, Jan. 22, 1935. Republished Oct. 19.
Coating compositions. Maas & Waldstein Co. 426,270, Dec. 24, 1946. Republished Oct. 19.
Enamels, Plating-rack, and stop-off coatings. Maas & Waldstein Co. 422,769, Aug. 13, 1946. Republished Oct. 19.
Lacquers and stains. Atlas Powder Company. 419,185, Feb. 5, 1946. Republished Oct. 19.
Lacquers for coating wood, glass, etc. Brevolite Lacquer Company. 321,264, Jan. 22, 1935. Republished Oct. 19.
Lacquers, lacquer enamels, varnishes, etc. Brevolite Lacquer Company. 341,867–8, Dec. 29, 1936. Republished Oct. 19.
Lacquers, paint thinners, and/or lacquer thinners. Zapon Company. 299,327, Nov. 29, 1932. Republished Oct. 19.
Paint, Barn, factory paint, house paint, etc. G. B. Carran. 283,713, June 2, 1931. Republished Oct. 19.
Paint enamels and undercoats for paint enamels, Prepared or ready-mixed liquid. J. F. Kurfees Paint Company. 503,149, Oct. 19; Serial No. 535,555, published July 6, 1948.
Paint in dry form. Western Auto Supply Company. 369,790, Aug. 1, 1939. Republished Oct. 19.
Paints and enamels, Ready mixed, paint colors, varnishes, etc. Atlas Powder Company. 358,179, June 28, 1938. Republished Oct. 19.
Paints, Exterior. Perma Products Company. 441,109, Oct. 19; Serial No. 522,740, published Apr. 13, 1948.
Paints in dry, paste and ready mixed forms, and painters' materials. O. E. Zinn. 441,136, Oct. 19; Serial No. 520,138.
Paints in paste and ready mixed form, varnishes, paint enamels, etc. Maas & Waldstein Co. 431,083, July 8, 1947. Republished Oct. 19.
Polish, Furniture, liquid wax, wax floor oil, etc. Midway Chemical Company. 248,535, renewed Oct. 23, 1948. O. G. Oct. 19.
Wood filler. Atlas Powder Company. 422,794, Aug. 13, 1946. Republished Oct. 19.

CLASS 17

Cigars. Gradiaz, Annis, & Co., Inc., 503,237, Oct. 19; Serial No. 542,122, published July 27, 1948.
Cigars. Metropolitan Cigar Corporation. 329,926, Nov. 19, 1935. Republished Oct. 19.
Cigars. Paxton and Gallagher Co. 304,694, July 18, 1933. Republished Oct. 19.
Cigars. Salvador Rodriguez ,Inc. 441,098, Oct. 19; Serial No. 519,542, published July 27, 1948.
Tobacco and tobacco products. Larus & Brother Company, Inc. 441,083, Oct. 19; Serial No. 516,552, published July 27, 1948.
Tobacco, Smoking. Charles & Company, Inc. 402,480, July 27, 1943. Republished Oct. 19.
Tobacco, Smoking, cigarettes, and cigars. John Sinclair Limited. 251,404, renewed Jan. 8, 1949. O. G. Oct. 19.

CLASS 19

Automobiles. Studebaker Corporation. 503,069, Oct. 19; Serial No. 531,158, published July 6, 1948.
Bolsters, Railway-truck, truck side frames, and spring planks. Buckeye Steel Castings Company. 249,355, renewed Nov. 13, 1948. O. G. Oct. 19.
Casters, Truck. Bond Foundry and Machine Company. 235,034, Nov. 8, 1927. Republished Oct. 19.

CLASS 20

Oilcloth, Table and wall. Interchemical Corporation. 441,067, Oct. 19; Serial No. 512,972, published July 20, 1948.
Wall covering, Coated fabric type. Interchemical Corporation. 503,021, Oct. 19; Serial No. 527,463, published June 1, 1948.

CLASS 21

Atomizer, Electrically heated. Tanglefoot Company. 424,466, Oct. 8, 1946. Republished Oct. 19.
Battery chargers. Lorain Products Corporation. 503,182, Oct. 19; Serial No. 537,906, published July 6, 1948.
Battery chargers. Lorain Products Corporation. 503,183–4, Oct. 19; Serial Nos. 537,907–8, published June 29, 1948.
Blowers, Portable electric. Breuer Electric Mfg. Company. 503,297, Oct. 19; Serial No. 502,422.
Broilers, Electric. F. L. Talge. 375,699, Feb. 27, 1940. Republished Oct. 19.
Cases, Flashlight, extension lights, plugs, etc. Stewart R. Browne Mfg. Co., Inc. 503,155, Oct. 19; Serial No. 535,931, published June 29, 1948.

Ceramics, High dielectric constant. American Lava Corporation. 426,925, Jan. 21, 1947. Republished Oct. 19.
Condensers and microphone stands, Electrical. Special Products Company. 441,024, Oct. 19; Serial No. 494,465, published July 23, 1946.
Condensers, Electrolytic, mica condensers, tubular condensers, etc. Aerovox Corporation. 503,249, Oct. 19; Serial No. 543,368, published July 20, 1948.
Control apparatus, Electronic. Raytheon Manufacturing Company. 503,164, Oct. 19; Serial No. 536,549, published June 29, 1948.
Duplicating apparatus, Facsimile. Radio Corporation of America. 441,070, Oct. 19; Serial No. 513,461, published June 29, 1948.
Electrical apparatus. Son-Chief Electrics, Incorporated. 441,126, Oct. 19; Serial No. 524,574, published July 13, 1948.
Electrical equipment. Tradio, Inc. 441,108, Oct. 19; Serial No. 522,339, published July 13, 1948.
Energy transducers, Mechano-electric, etc. Sonotone Corporation. 503,241, Oct. 19; Serial No. 542,672, published July 20, 1948.
Engraving and cutting implement, Portable electric. Burgess Battery Company. 502,982, Oct. 19; Serial No. 501,044, published July 20, 1948.
Fans and electric desk lamps, Electric. Stationers' Guild of America. 419,590, Feb. 26, 1946. Republished Oct. 19.
Fired material, Non-corrosive, heat-resisting. American Lava Corporation. 305,928, Aug. 29, 1933. Republished Oct. 19.
Flash lights, electric vapor and/or explosive proof extension lights, etc. Stewart R. Browne Mfg. Co., Inc. 503,154, Oct. 19; Serial No. 535,929, published July 13, 1948.
Food and drink mixers, Electric. John Oster Manufacturing Co. 503,179, Oct. 19; Serial No. 537,497, published June 29, 1948.
Heating pads for general use, Electrical. Son-Chief Electrics, Incorporated. 441,127, Oct. 19; Serial No. 524,575, published July 6, 1948.
Instrument inserted in arc lamps. H. L. Phillips. 503,308, Oct. 19; Serial No. 513,201.
Insulated wire, Electrical. Plastic Wire & Cable Corporation. 503,176, Oct. 19; Serial No. 537,354, published June 29, 1948.
Insulating material, Electrical. Continental Fibre Company. 117,249, June 26, 1917. Republished Oct. 19.
Insulating material, Electrical. Diamond State Fibre Company. 141,532, Apr. 26, 1921. Republished Oct. 19.
Insulating varnish, Electrical. Sherwin-Williams Company. 441,128, Oct. 19; Serial No. 524,734, published July 20, 1948.
Lamp bulbs, Electric. General Electric Company. 503,035, Oct. 19; Serial No. 528,857, published July 13, 1948.
Lights, Electric. J. S. Yarrow. 503,294, Oct. 19; Serial No. 498,742.
Machines, Electrically powered. G. S. Blakeslee & Co. 503,040, Oct. 19; Serial No. 529,133, published June 29, 1948.
Motors, Electric. Griffith Tool & Manufacturing Co. 503,188, Oct. 19; Serial No. 538,532, published July 6, 1948.
Motors, Electric, and various types of portable electrically-driven tools. Louisville Electric Manufacturing Company. 503,106, Oct. 19; Serial No. 532,944, published July 20, 1948.
Ozone generating machines, Electrical. General Ozone Corporation. 503,301, Oct. 19; Serial No. 506,030.
Public address equipment and component parts. R. Silverman. 441,119, Oct. 19; Serial No. 523,928, published June 29, 1948.
Radio transmitters, Carrier type, and carrier type radio receivers. G. E. Smith. 503,013, Oct. 19; Serial No. 526,525, published July 6, 1948.
Repair sleeves, Broken electric wire. L. F. Withers. 312,917, May 15, 1934. Republished Oct. 19.
Rheostats. Monitor Controller Company. 503,331, Oct. 19; Serial No. 546,721.
Sound equipment, Electric. St. Louis Music Supply Co. 503,307, Oct. 19; Serial No. 511,768.
Storage batteries. Keenan Auto Parts Company. 503,175, Oct. 19; Serial No. 537,322, published June 29, 1948.
Stoves and ranges, Electric. Charter Oak Stove and Range Company. 232,778, renewed Sept. 13, 1947. O. G. Oct. 19.
Stoves and ranges, Electric. Crown Stove Works. 503,167, Oct. 19; Serial No. 536,674, published June 29, 1948.
Stoves, Electric, and electric ranges. Noble & Harris. 263,481, Nov. 5, 1929. Republished Oct. 19.
Television receivers. Sightmaster Corp. 503,169, Oct. 19; Serial No. 536,843, published July 13, 1948.
Thermostatic switch with attendant wiring. H. E. White. 441,047, Oct. 19; Serial No. 510,219, published July 13, 1948.
Trolley frogs. Ohio Brass Company. 503,129, Oct. 19; Serial No. 534,330, published July 20, 1948.
Ultra-violet ray lamps and fixtures. O & S Products, Inc. 441,058, Oct. 19; Serial No. 511,181, published June 29, 1948.
Vacuum cleaners, Electrical, handles therefor and parts thereof. Vacuum Cleaner Corporation of America. 318,396, Oct. 23, 1934. Republished Oct. 19.
Welding machines, Electric. National Electric Welding Machines Co. 503,178, Oct. 19; Serial No. 537,475, published July 6, 1948.
Welding transformers, portable electric spot welding guns, and resistance welding apparatus. Martin Electric Corporation. 503,197, Oct. 19; Serial No. 539,190, published July 13, 1948.
Wire particularly adapted for the manufacture of thermionic grid elements. Fansteel Metallurgical Corporation. 441,060, Oct. 19; Serial No. 511,868, published July 6, 1948.

CLASS 22

Express-wagons, Boys', fishing-rods, fishing-reels, etc. Marshall-Wells Hardware Co. 71,390, re-renewed Nov. 24, 1948. O. G. Oct. 19.

CLASS 50

Beads, Reflective glass. B. & R. Manufacturing Company. 441,038, Oct. 19; Serial No. 507,103, published Dec. 30, 1947.
Caps and lids, Jar. Kerr Glass Manufacturing Corporation. 503,109, Oct. 19; Serial No. 533,171, published July 13, 1948.
Closures. Airdor Company. 503,048, Oct. 19; Serial No. 529,429, published July 20, 1948.
Closures, Bottle. Crown Cork & Seal Company, Inc. 503,243, Oct. 19; Serial No. 542,999, published July 20, 1948.
Clothes hanger, Detachable automobile. Har-Tal Car Clothes Hanger. 503,067, Oct. 19; Serial No. 531,031, published July 6, 1948.
Covers, Bowl, electric toaster covers, electric mixer covers, etc. Seymour Wallas & Company. 503,100, Oct. 19; Serial No. 532,647, published July 13, 1948.
Duck tents, awnings, paulins, etc. Marshall-Wells Hardware Co. 71,509, re-renewed Dec. 1, 1948. O. G. Oct. 19.
Electrotypes. Royal Electrotype Company. 503,076, Oct. 19; Serial No. 531,723, published July 13, 1948.
Flags of all types. Freece-Larsen, Inc. 425,401, Nov. 19, 1946. Republished Oct. 19.
Hangers, Garment. J. Pearl. 441,027, Oct. 19; Serial No. 499,569, published Aug. 5, 1947.
Hen's nests. C. G. Muehlfeld. 503,299, Oct. 19; Serial No. 504,060.
Papers, Coated and embossed, impregnated. Acme Backing Corporation. 503,124, Oct. 19; Serial No. 534,074, published July 6, 1948.
Scaffolds. Automatic Devices, Inc. 503,102, Oct. 19; Serial No. 532,676, published July 13, 1948.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 19TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Brooks, Eugene H., Dallas, Tex., assignor to Continental Gin Company. Cotton cleaning apparatus. Re. 23,044, Oct. 19.
Continental Gin Company, assignee: *See*—
Brooks, Eugene H.
Peremi, Edmund, Bayside, Long Island, and L. Toth, Flushing, assignors, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y. Window construction. Re. 23,045, Oct. 19.
Reconstruction Finance Corporation, assignee: *See*—
Peremi, Edmund and Toth.
Toth, Louis: *See*—
Peremi, Edmund and Toth.

LIST OF DESIGN PATENTEES

American Measuring Instruments Corporation, assignee: *See*—
Stern, Nathan S.
Bach, Alfons: *See*—
Cooper, Benjamin, Hohmann, and Bach.
Bahr, Harold A., Greendale, Wis. Counter decorative unit or the like. 151,424, Oct. 19.
Barosfsky, Jack, Los Angeles, Calif. Desk. 151,425, Oct. 19.
Bishop, Emerson C., Los Angeles, Calif. Advertising figurine. 151,426, Oct. 19.
Borg-Warner Corporation, assignee: *See*—
Keller, Leonard.
Bresn, Allan, Chicago, Ill. Hair comb. 151,427, Oct. 19.
Clark, Robert H., assignee: *See*—
Cruze, Charles F., and Killoran.
Clauss, Herman E., Affton, Mo. Vise-jar holder and support therefor. 151,428, Oct. 19.
Clauss, Herman E., Affton, Mo. Adjustable vise-jaw holder and support therefor. 151,429, Oct. 19.
Cohen, Sidney, assignor to Morris W. Haft & Bros., Inc., New York, N. Y. Suit. 151,430, Oct. 19.
Cooper, Benjamin, New York, N. Y., A. F. Hohmann, Teaneck, N. J., and A. Bach, Stamford, Conn.; said Hohmann and said Bach assignors to said Cooper. Lipped glass or similar article. 151,431, Oct. 19.
Coro, Inc., assignee: *See*—
Katz, Adolph.
Crowder, Wiley K., Detroit, Mich. Toy aircraft or similar article. 151,432, Oct. 19.
Cruze, Charles F., and R. H. Killoran, assignors to R. H. Clark, Los Angeles, Calif. Box. 151,433, Oct. 19.
Eames, Kenneth R., Worcester, Mass. Toy figure. 151,434, Oct. 19.
Eddy, William R., et al.: *See*—
St. Clair, Theodore A., and Eddy.
Epstein, Ralph, New York, N. Y., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J. Display stand or similar article. 151,435, Oct. 19.
Ewing, Ralph, New York, N. Y. Handbag or similar article. 151,436, Oct. 19.
Ewing, Ralph, New York, N. Y. Handbag or similar article. 151,437, Oct. 19.
Ewing, Ralph, New York, N. Y. Handbag or similar article. 151438, Oct. 19.
Ewing, Ralph, New York, N. Y. Handbag or similar article. 151,439, Oct. 19.
Finkelstein, Nathan, New York, N. Y. Jacket. 151,440, Oct. 19.
Finkelstein, Nathan, New York, N. Y. Jacket. 151,441, Oct. 19.
Fitzgerald, James R., and Z. S. Levine, Duluth, Minn. Illuminable sign. 151,442, Oct. 19.
Forstner Chain Corporation, assignee: *See*—
Mealy, Charles A.
Fraim, E. T., Lock Company, assignee: *See*—
Fraim, Edward T., II.
Fraim, Edward T., II, assignor to E. T. Fraim Lock Company, Lancaster, Pa. Door knocker. 151,443, Oct. 19.
Gill, Marvin L., assignee: *See*—
Hallgarth, William.
Goldberg, Harry, assignor to Morris W. Haft & Bros., Inc., New York, N. Y. Jacket. 151,444, Oct. 19.
Green, Joseph, New York, N. Y. Musical toy or similar article. 151,445, Oct. 19.
Greenberger, Harry J., Morristown, N. J. Slip. 151,446, Oct. 19.
Haft, Morris W., & Bros., Inc., assignee: *See*—
Cohen, Sidney.
Goldberg, Harry.
Halbriter, Percy H., Los Angeles, Calif. Slide viewer. 151,447, Oct. 19.
Hallgarth, William, Hatboro, assignor of one-half to M. L. Gill, Lansdale, Pa. Frying pan. 151,448, Oct. 19.
Hohmann, Albert F., et al.: *See*—
Cooper, Benjamin, Hohmann, and Bach.
Instrumentaktiebolaget J. A. Palm, assignee: *See*—
Kihlberg, Åke J. E.
Jenkins, William E., Sierra Madre, Calif. Combined coaster and ash tray. 151,449, Oct. 19.
Johndraw, Wilbur, Buffalo, N. Y. Paint spraying device or similar article. 151,450, Oct. 19.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,451, Oct. 19.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,452, Oct. 19.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 151,453, Oct. 19.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 151,454, Oct. 19.
Keller, Leonard, Tuckahoe, N. Y., assignor to Borg-Warner Corporation, Chicago, Ill. Combination kitchen and laundry unit. 151,455, Oct. 19.
Kihlberg, Åke J. E., assignor to Instrumentaktiebolaget J. A. Palm, Stockholm, Sweden. Pencil sharpener. 151,456, Oct. 19.
Killoran, Rollin H.: *See*—
Cruze, Charles F., and Killoran.
Kreisler, Jacques, Manufacturing Corporation, assignee: *See*—
Epstein, Ralph.
Krueger, Albert R., et al.: *See*—
Krueger, Carl F. and A. R.
Krueger, Carl F., Webster Groves, and A. R. Krueger, Northwoods, Mo. Refreshment stand. 151,457, Oct. 19.
La Barre, Ernoll W., assignor of one-half to H. C. Leech, doing business as Herbert C. Leech Illustrators, New York, N. Y. Pressure cooker. 151,458, Oct. 19.
Lang, Irving M., New York, N. Y. Cuff link or similar article. 151,459, Oct. 19.
Leech, Herbert C., assignee: *See*—
La Barre, Ernoll W.
Leech, Herbert C., Illustrators, assignee: *See*—
La Barre, Ernoll W.
Levine, Zelman S.: *See*—
Fitzgerald, James R., and Levine.
Lindemann, Joseph S., assignee: *See*—
Mayfield, Jean B.
Mayfield, Jean B., assignor to J. S. Lindemann, New York, N. Y. Bottle. 151,460, Oct. 19.
Meadow, Leon E., New York, N. Y. Handbag. 151,461, Oct. 19.
Mealy, Charles A., East Orange, N. J., assignor to Forstner Chain Corporation. Display stand for watch bracelets and bands. 151,462, Oct. 19.
Meyer, Arthur L., New York, N. Y. Spoon or similar article of tableware. 151,463, Oct. 19.
Motorola, Inc., assignee: *See*—
Reinecke, Jean O.
Olsen, Niels H. F., Dearborn, Mich. Air filter. 151,464, Oct. 19.
Phillippe, Alfred, Scarsdale, assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y. Bracelet or similar article. 151,465, Oct. 19.
Phillippe, Alfred, Scarsdale, assignor to Trifari, Krussman

& Fishel, Inc., New York, N. Y. Necklace or similar article. 151,466, Oct. 19.
Phillips Petroleum Company, assignee: *See*—
St. Clair, Theodore A., and Eddy.
Plastal Corporation, assignee: *See*—
Swikart, George.
Potts, Thomas A., Ware, and H. V. Waskiewicz, Warren, Mass. Collapsible utility boat. 151,467, Oct. 19.
Potts, Thomas A., Ware, and H. V. Waskiewicz, Warren, Mass. Collapsible kayak boat. 151,468, Oct. 19.
Reinecke, Jean O., Oak Park, Ill., assignor to Motorola, Inc. Automobile heater casing or the like. 151,469, Oct. 19.
Ross, Allan E., Vancouver, British Columbia, Canada. Electric iron. 151,470, Oct. 19.
St. Clair, Theodore A., and W. R. Eddy, Bartlesville, Okla., assignors to Phillips Petroleum Company. Gas regulator. 151,471, Oct. 19.
Schorr, Louis, Brooklyn, N. Y. Jewelry component. 151,472, Oct. 19.
Stahler, Robert C., Portsmouth, Ohio. Animal feeder. 151,473, Oct. 19.
Stern, Nathan S., assignor to American Measuring Instruments Corporation, New York, N. Y. Microfilm-reader casing. 151,474, Oct. 19.
Strassner, John F., New York, N. Y. Jacket. 151,475, Oct. 19.
Suman, Alwin L., Sierra Madre, Calif. Ceramic vase or similar article. 151,476, Oct. 19.
Swikart, George, Yonkers, assignor to Plastal Corporation, New York, N. Y. Spectacle case. 151,477, Oct. 19.
Trifari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Union Cutlery Company, Inc., assignee: *See*—
Vevirit, James V.
Vevirit, James V., Kenmore, assignor to Union Cutlery Company, Inc., Olean, N. Y. Knife holder. 151,478, Oct. 19.
Waskiewicz, Helen V.: *See*—
Potts, Thomas A., and Waskiewicz.
Way, William P., Floral Park, N. Y. Light box for viewing color transparencies. 151,479, Oct. 19.
Weiss, Alexander C., Chicago, Ill. Salad server. 151,480, Oct. 19.
Williamowicz, John, Worcester, Mass. Eelskin rig for bass. 151,481 Oct. 19.
Wilson, Minnie B., Chagrin Falls, Ohio. Wallpaper. 151,482, Oct. 19.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 19TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Adair, Russell S., Youngstown, Ohio. Control device for hydraulic steady-rest chucks. 2,451,705, Oct. 19.
Adams, Merrill L.: *See*—
Hearne, George W., and Adams.
Adel Precision Products Corp., assignee: *See*—
Kirkby, Raymond J.
Paxton, Donald D.
Strid, Carl J.
Advance Transformer Co., assignee: *See*—
Feinberg, Albert E.
Aero Supply Mfg. Co. Inc., assignee: *See*—
Beatty, Robert J. A.
Agriculture, The United States of America as represented by the Secretary of, assignee: *See*—
Le Mense, Elmer H., and Van Lanen.
Aimes, Francis M., Yonkers, N. Y. Drive control for air powered apparatus. 2,451,706, Oct. 19.
Ainsworth, Albert A., Savannah, Ga., C. A. Ainsworth, executrix of said A. A. Ainsworth, deceased, assignor to C. A. Ainsworth, Savannah, Ga. Picture corner mount. 2,451,646, Oct. 19.
Ainsworth, Clara A., executrix, assignee: *See*—
Ainsworth, Albert A.
Aktiengesellschaft Brown, Boveri & Cie., assignee: *See*—
Eichenberger, Ernst.
Aktiengesellschaft Fuer Technische Studien, assignee: *See*—
Villiger, Eugen and B.
Alba, Ralph T.: *See*—
Wallerstein, James S., and Alba.
Albree, George N., Winchester, Mass. Rearwardly striking firing mechanism. 2,451,527, Oct. 19.
Alexanderson, Ernst F. W., and F. G. Patterson, Schenectady, N. Y., assignors to General Electric Company. Radio landing apparatus. 2,451,793, Oct. 19.
Allen, John R., assignor to Manganese Products, Inc., Seattle, Wash. Treating intermediate manganese siliceous ores. 2,451,647, Oct. 19.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Wilson, William F.
American Brake Shoe Company, assignee: *See*—
Mantle, Burr W.
American Cabinet Hardware Corporation, Rockford, Ill., assignee: *See*—
Borchers, Earl M.
American Machine and Foundry Company, assignee: *See*—
Johnson, Carl W., and Neumair.
Kihn, George A.
American Meat Institute Foundation, assignee, et al.: *See*—
Kraybill, Henry R., and Beadle.
American Optical Company, assignee: *See*—
Ellis, Charles A.
American Rock Wool Corp., assignee: *See*—
Smith, Herbert C.
American Steel Foundries, assignee: *See*—
Baselt, Walter H.
Kinne, Edmund P., and Kayler.
American Viscose Corporation, assignee: *See*—
Boyce, Garfield L.
Anderson, Albert E., Holbrook, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Recorder. 2,451,464, Oct. 19.
Anderson, Carl E., assignee, et al.: *See*—
Nelson, Noble A.
Anderson, Gustave A., assignor to The International Handkerchief Mfg. Co., New York, N. Y. Blank advancing means. 2,451,648, Oct. 19.
Andreoli, Mario, Providence, R. I. Ornamental flower construction. 2,451,649, Oct. 19.
Armstrong, Fullerton G. G., Molescroft, Beverley, England. Valve arrangement. 2,451,707, Oct. 19.
Armstrong, James A., Downey, Calif. Method for separating worm-damaged nuts from sound nuts by immersion in a gravity liquid. 2,451,528, Oct. 19.
Arpin, Edmund P., Jr., Neenah, Wis. Rotary refiner. 2,451,708, Oct. 19.
Arrow-Hart Hegeman Electric Company, The, assignee: *See*—
Bentley, Robert H.
Associated Patentees, Inc., assignee: *See*—
Koch, Frederick.
Powers, Walter P.
Atkin, Kenneth C., Toledo, Ohio. Pistol grip motor casing. 2,451,650, Oct. 19.
Atlantic Refining Company, The, assignee: *See*—
Ferris, Seymour W.
Gzemski, Felix C.
Myers, William A., and Hall.
Van Hartesveldt, Carroll H.
Woodcock, Charles H.
Attapulgus Clay Company, assignee: *See*—
La Lande, William A., Jr.
Attorney General of the United States of America, Vested in the: *See*—
Salomon, François M. M. B.
Auburn, Basil J., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system for reel motors. 2,451,901, Oct. 19.
Automatic Pump & Softener Corporation, assignee: *See*—
Johnson, Bruce W., and Bullerjahn.
Automatic Steel Products, Inc., assignee: *See*—
Wickwire, Arthur M., and Zimmermann.
Avimo Limited, assignee: *See*—
Stevens, Herbert C. M.
Bacon, Kenneth D.: *See*—
Young, Arthur E., and Bacon.
Bakelite Corporation, assignee: *See*—
Wheeler, William R.
Baldwin, Joseph P., assignor to King Ranch, Inc., Kingsville, Tex. Saddle horn. 2,451,651, Oct. 19.
Baldwin Locomotive Works, The, assignee: *See*—
Macgeorge, William D.
Balsam, Henry M.: *See*—
Balsam, Maurice M. and H. M.
Balsam, M. M., Inc., assignee: *See*—
Balsam, Maurice M. and H. M.
Balsam, Maurice M. and H. M., assignors to M. M. Balsam, Inc., New York, N. Y. Machine for folding sheets of thermoplastic and like material. 2,451,794, Oct. 19.
Barker, Virgil D., Westfield, N. J. Rotary pump. 2,451,603, Oct. 19.
Barker, William A., and T. B. Clarke, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J. Work shifting mechanism for heel-attaching machines. 2,451,529, Oct. 19.
Barnes, Joseph H., assignor to Delaware Rayon Company, New Castle, Del. Thread guide holder. 2,451,795, Oct. 19.
Barnes, William E., Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa. Apparatus for measuring density of a thixotropic fluid. 2,451,604, Oct. 19.
Barnes, William E., Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa. Apparatus for measuring density of a thixotropic fluid. 2,451,605, Oct. 19.
Barney, Harold L., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transversal filter. 2,451,465, Oct. 19.
Baselt, Walter H., assignor to American Steel Foundries, Chicago, Ill. Cooled brake rotor. 2,451,709, Oct. 19.
Bassani, Laurent and Gaston Gagnepain, Paris, France. Color cinematography on lenticular films. 2,451,902, Oct. 19.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Refrigerator having a heat dissipating device for the electric motor thereof. 2,451,903, Oct. 19.
Baylis, Albert H.: *See*—
Lindstrom, Ture and Baylis.
Bazelon, Jacob L., Chicago, Ill. Shampoo board. 2,451,652, Oct. 19.
Bazelon, Jacob L., Chicago, Ill. Shampoo board. 2,451,653, Oct. 19.
Beadle, Buell W.: *See*—
Kraybill, Henry R., and Beadle.
Beard, Edward A., Marseilles, Ill. Electric fence insulator. 2,451,530, Oct. 19.
Beatty, Robert J. A., Dayton, Ohio, assignor to Aero Supply Mfg. Co., Inc., Corry, Pa. Locating tool. 2,451,904, Oct. 19.
Bechberger, Paul F., Tenafly, assignor to Bendix Aviation Corporation, Teterboro, N. J. Orientation system. 2,451,710, Oct. 19.
Beder, Samuel L., assignor of one-half to Irwin F. Mills Associates, New York, N. Y. Sand pail. 2,451,711, Oct. 19.
Beede, Herbert G.: *See*—
Lornitzo, Frank C., and Beede.
Bell, Forrest F., assignor to Curtis Companies Incorporated, Clinton, Iowa. Window structure. 2,451,654, Oct. 19.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Barney, Harold L.
Buchanan, Russell B.
Edson, James O., and Terry.
Gould, King E., and Mertz.
Holdaway, Vivian L.
Joel, Amos E., Jr.
Moore, Hilbert R.
Oliver, Bernard M.

Bendix Aviation Corporation, assignee: *See*—
Bechberger, Paul F.

Benninger, Edward: *See*—
Villiger, Eugen and Benninger.

Bentley, Robert H., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn. Electric wire terminal. 2,451,466, Oct. 19.

Bentley, Robert H., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn. Reverse action switch control. 2,451,905, Oct. 19.

Berkoff, Seymour, Bridgeport, Conn., assignor to General Electric Company. Phase shifting circuit. 2,451,796, Oct. 19.

Berman, Henry L., Jamaica, N. Y. Foot medication applicator. 2,451,906, Oct. 19.

Betteridge, Walter and E. R. Gadd, assignors to The Bristol Aeroplane Company Limited, Bristol, England. Bearing alloy. 2,451,907, Oct. 19.

Beusch, Willi, assignor to Landis & Gyr, A-G., Zug, Switzerland. Remote indicating plant operating on the impulse compensation method. 2,451,606, Oct. 19.

Bickel, Bruce T., assignor to The Standard Register Company, Dayton, Ohio. Strip feeding device. 2,451,467, Oct. 19.

Bienfait, Henri, and P. C. van der Willigen, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Coated welding rod. 2,451,655, Oct. 19.

Binash, Albert H., Oak Park, W. A. Tull, Midlothian, and R. T. Gautney, Chicago, Ill. Chiropractic machine. 2,451,607, Oct. 19.

Birch, Catherine R., executrix: *See*—
Birch, John W.

Birch, John W., Washington, D. C.; C. R. Birch, executrix of said J. W. Birch, deceased. Power-driven conveyer attachment for dump trucks. 2,451,656, Oct. 19.

Blackbourn, Joseph N., Prairie du Chien, Wis. Building block. 2,451,657, Oct. 19.

Blanchard, André, assignor to Schlumberger Well Surveying Corporation, Houston, Tex. Apparatus for producing pressure pulses in boreholes. 2,451,797, Oct. 19.

Blau, Marietta, assignor to Canadian Radium and Uranium Corporation, New York, N. Y. Method and apparatus for detecting changes in dimensions. 2,451,908, Oct. 19.

Bobe, Stanley A., Atlanta, Ga., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Series generator-fed motor system. 2,451,909, Oct. 19.

Bock, Ashley P., Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical discharge tube circuits. 2,451,910, Oct. 19.

Boots Pure Drug Company, Limited, assignee: *See*—
Short, Wallace F. and Oxley.

Borchers, Earl M., assignor to American Cabinet Hardware Corporation, Rockford, Illinois, Rockford, Ill. Catch. 2,451,798, Oct. 19.

Borell, George L., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Cabin pressure control means. 2,451,608, Oct. 19.

Boyce, Garfield L., Chester, Pa., assignor to American Viscose Corporation, Wilmington, Del. Winding of yarn. 2,451,468, Oct. 19.

Boynton, Earl S.: *See*—
O'Brien, Joseph F., and Boynton.

Braden, Vally N., assignor to Wingfoot Corporation, Akron, Ohio. Liquid-hydrocarbon-resistant container. 2,451,911, Oct. 19.

Bradley, Burt J., Boise, Idaho. Wire tightener. 2,451,531, Oct. 19.

Bradley, Wilburn F., Hollywood, Ill. Loading device for plastic molding machines. 2,451,912, Oct. 19.

Brandon, Howard, assignee, et al.: *See*—
Nelson, Noble A.

Breen, Ormiston J.: *See*—
Buchanan, Stephen N., and Breen.

Bremner, John G. M., and D. G. Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Acrolein and ethylene by pyrolysis of dihydropyran. 2,451,712, Oct. 19.

Breslee Mfg. Company, assignee: *See*—
Gardner, Arthur A., and MacCormack.

Brice, Walter J., White Plains, N. Y. Plastic ornamental article. 2,451,913, Oct. 19.

Brickman, A. W., trustees, et al.: *See*—
Kraybill, Henry R., and Beadle.

Bristol Aeroplane Company Limited, The, assignee: *See*—
Betterridge, Walter and Gadd.

Brophy, Gerald R., Westfield, and A. J. Miller, Elizabeth, N. J., assignors to The International Nickel Company, Inc., New York, N. Y. Steels and structural embodiments thereof for use at low temperatures. 2,451,469, Oct. 19.

Brown, Davis, Los Angeles, and J. D. Rossier, Compton, Calif.; said Rossier assignor to said Brown. Sewer pipe off-bearing and finishing machine. 2,451,713, Oct. 19.

Brown, Felix E., Bethlehem, Pa. Battery holding device. 2,451,532, Oct. 19.

Brown Instrument Company, The, assignee: *See*—
Wild, Rudolf F.

Brown, W. R., Corporation, assignee: *See*—
Brown, William R.

Brown, William R., assignor to W. R. Brown Corporation, Chicago, Ill. Valve structure. 2,451,799, Oct. 19.

Brush Development Company, The, assignee: *See*—
Massa, Frank.

Buchanan Electrical Products Corporation, assignee: *See*—
Buchanan, Stephen N., and Breen.

Buchanan, Russell B., Lynbrook, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Arresting hook device for grounded aircraft pilot trainers. 2,451,609, Oct. 19.

Buchanan, Stephen N., Westmoreland Hills, Md., and O. J. Breen, East Greenbush, N. Y., assignors to Buchanan Electrical Products Corporation. Terminal clip for electrical conductors. 2,451,800, Oct. 19.

Bucher, Francis X.: *See*—
Mumma, Robert E., and Bucher.

Buchmann, Abe, Cincinnati, Ohio. Toy. 2,451,801, Oct. 19.

Buckeye Laboratories Corporation, The, assignee: *See*—
Egger, Charles J., and Webster.

Buckley, John, Georgetown, Colo. Vehicle anchor device. 2,451,470, Oct. 19.

Budd Company, The, assignee: *See*—
Sweeney, Edward J.

Budzyna, Walter J., East Douglas, assignor to Draper Corporation, Hopedale, Mass. Dagger stop for looms. 2,451,914, Oct. 19.

Buffham, Robert C., Racine, Wis. Absorbent drip pad for toilet tanks. 2,451,714, Oct. 19.

Bugatti, Ettore, Paris, France. Mounting of grinding wheels, especially on grinding machines. 2,451,658, Oct. 19.

Bullerjahn, Adolph D.: *See*—
Johnson, Bruce W., and Bullerjahn.

Buresh, Francis M., Blandford, Mass., assignor of one-half to George F. Buresh, Cedar Rapids, Iowa. Machine and method for forming fiber webs. 2,451,915, Oct. 19.

Buresh, George F., assignee: *See*—
Buresh, Francis M.

Burgess, Everett H.: *See*—
Lehane, Timothy J., and Burgess.

Burk, Robert E., and E. C. Hughes, Cleveland Heights, assignors to The Standard Oil Company, Cleveland, Ohio. Preparation of a co-precipitated gel catalyst. 2,451,471, Oct. 19.

Burrus, Paul B., and Merton C. Leinberger, Dayton, Ohio, assignor, by mesne assignments, to Worthington Pump and Machinery Corporation. Cam. 2,451,802, Oct. 19.

Caldwell, William E., assignor to Carman & Co., Inc., New York, N. Y. Injector apparatus. 2,451,715, Oct. 19.

Callinan, Thomas D., Pittsfield, Mass., assignor to General Electric Company. Coating asbestos. 2,451,805, Oct. 19.

Calvert, Francis E., assignor to The Drackett Company, Cincinnati, Ohio. Recovery of proteins from soybeans in presence of blanketing agents and enzyme inhibitors. 2,451,659, Oct. 19.

Campbell, Donald L., Roselle Park, H. Z. Martin, Elizabeth, and C. W. Tyson, Summit, N. J., assignors to Standard Oil Development Company. Contacting solids and gases. 2,451,803, Oct. 19.

Campbell, Donald L., Short Hills, H. Z. Martin, Elizabeth, and E. V. Murphree and C. W. Tyson, Summit, N. J., assignors to Standard Oil Development Company. Method of and apparatus for contacting solids and gases. 2,451,804, Oct. 19.

Campbell, Kenneth N., South Bend, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of 4-alkyl-quinolines. 2,451,610, Oct. 19.

Campbell, Kenneth N., South Bend, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of 4-alkyl-quinolines. 2,451,611, Oct. 19.

Canadian Radium and Uranium Corporation, assignee: *See*—
Blau, Marietta.
Rosenblum, Solomon.

Candy, Albert M., La Grange, assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill. Mechanism for stud welding guns and the like. 2,451,716, Oct. 19.

Cannon, Paul Haven, Rome, Ga., assignor, by mesne assignments, to Celanese Corporation of America. Producing improved yarn. 2,451,533, Oct. 19.

Carman & Co., Inc., assignee: *See*—
Caldwell, William E.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Komorowski, Stanley A.

Carson, Percy A., East Cleveland, Ohio, assignor to General Electric Company. Cushioned display container. 2,451,806, Oct. 19.

Case, J. I., Company, assignee: *See*—
Hedquist, Milton T., and Haley.

Catizone, Daniel, New York, N. Y. Infant's garment 2,451,807, Oct. 19.

Celanese Corporation of America, assignee: *See*—
Cannon, Paul H.

Celotex Corporation, The, assignee: *See*—
Krajci, Samuel, and Savage.

Chain Belt Company, assignee: *See*—
Hilkemeier, Louis G., and Viall.

Chapin, Reynold S., Flushing, assignor to Press Wireless, Inc., New York, N. Y. Radio telegraph receiving system. 2,451,916, Oct. 19.

Check, Frank M., Sr., Stratford, Conn. Bending ball arbor. 2,451,717, Oct. 19.

Chicago Bridge & Iron Company, assignee: *See*—
Horton, George T.

Chilowsky, Constantin, New York, N. Y. Method of and apparatus for controlling the flight of dirigible aerial torpedoes. 2,451,917, Oct. 19.

Chott, George A., assignor of one-half to H. J. Chott, Riverside, Ill. Dental polishing cup. 2,451,918, Oct. 19.

Chott, Hugo J., assignee: *See*—
Chott, George A.

Christensen, Sofus, Valley Stream, assignor to Graham Company, Inc., New York, N. Y. Machine for weighing and packing mixed nuts or the like. 2,451,534, Oct. 19.

Churchill, Wilmer H., Saugus, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Floating cowl fastener construction. 2,451,808, Oct. 19.

Cinch Manufacturing Corporation, assignee: *See*—
Del Camp, Scipione M.

Clark, Andrew B. and K. C., Watsonville, Calif. Vehicle coupler. 2,451,660, Oct. 19.

Clark Equipment Company, assignee: *See*—
Gunning, Alfred W.

Clark, Harry F., Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Multiple control. 2,451,535, Oct. 19.

Clark, James L., Cambridge, Mass., assignor to the United States of America as represented by the Secretary of War. Variable inductance device. 2,451,809, Oct. 19.

Clark, Kenneth C.: *See*—
Clark, Andrew B. and K. C.

Clarke, Thomas B.: *See*—
Barker, William A., and Clarke.

Clarkson, Robert J., Winnsboro, S. C., assignor to United States Rubber Company, New York, N. Y. Making stretchable yarn. 2,451,919, Oct. 19.

Clausen, DeWitt: *See*—
Yeomans, Lucien L., and Clausen.

Clausen, Sigurd, New York, N. Y., assignor to International Cigar Machinery Company. Cigar wrapper cutting and transfer mechanism. 2,451,920, Oct. 19.

Cochrane, Richard M., West Springfield, assignor to Gilbert & Barker Manufacturing Company, Springfield, Mass. Dual firing rate oil burner apparatus. 2,451,661, Oct. 19.

Coffman, Donald D., and L. F. Salisbury, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of unsaturated fluorohydrocarbons. 2,451,612, Oct. 19.

Coggeshall, Norman D., O'Hara Township, Allegheny County, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Cementing wells. 2,451,472, Oct. 19.

Cohen, Arthur M., New Rochelle, N. Y., assignor to Ward Leonard Electric Company. Electromagnetic controller. 2,451,810, Oct. 19.

Coleman, Edwin D., Maywood, Ill. Bridge structure for pH measurement device. 2,451,663, Oct. 19.

Conquest, Victor, trustees, et al.: *See*—
Kraybill, Henry R., and Beadle.

Cook, John, Ridgewood, N. J. Unwinding device. 2,451,662, Oct. 19.

Cook, Willard G., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Rotary amplifier. 2,451,921, Oct. 19.

Cooper, Eli G., Great Barrington, Mass., assignor to the United States of America, as represented by the Secretary of War. Cheek pad for firearms. 2,451,473, Oct. 19.

Corbett, Herbert A.: *See*—
De Witt, William J., and Corbett.

Corning Glass Works, assignee: *See*—
Daudt, William H.

Corrao, Beatrice M., Brooklyn, N. Y. Baby bottle holder. 2,451,718, Oct. 19.

Cox, Andrew J., Falls Mills, assignor of one-half to Renick J. Cox, Bluefield, Va. Coal drill and chuck. 2,451,922, Oct. 19.

Cox, Renick J., assignee: *See*—
Cox, Andrew J.

Cox, Richard A., Gainesville, and L. D. Hartsfield, Lake City, Fla. Bottle holder. 2,451,923, Oct. 19.

Craig, Edward C., United States Navy. Dual tube pneumatic life prtserver belt. 2,451,474, Oct. 19.

Craig, Edward C., and L. A. Straits, United States Navy. Dual tube pneumatic life preserver belt. 2,451,475, Oct. 19.

Crosby, George A.: *See*—
Leslie, John H., II, and Crosby.

Crowley, John A., Jr., Scarsdale, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Apparatus for contacting solids with gaseous reactants. 2,451,924, Oct. 19.

Crown Cork Specialty Corporation, assignee: *See*—
Rau, Harry A.

Cupery, Martin E., Brandywine Hundred, and H. S. Rothrock, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Diallyl diglycolate-styrene copolymer. 2,451,536, Oct. 19.

Curtis Companies Incorporated, assignee: *See*—
Bell, Forrest F.

Curtis Pump Company, assignee: *See*—
Curtis, Russell R.

Curtis, Russell R., assignor to Curtis Pump Company, Dayton, Ohio. Pump valve construction. 2,451,925, Oct. 19.

Curtiss-Wright Corporation, assignee: *See*—
Knudsen, Erling M.

Cuttino, William H.: *See*—
Geiselman, Ralph A., and Cuttino.

Daily, John L., Johnstown, Pa. Corner fastener for plaster laths. 2,451,811, Oct. 19.

Dallin, Milton R., Salt Lake City, Utah. Electric air heater. 2,451,926, Oct. 19.

Danforth, Richard S., Berkeley, Calif. Anchor. 2,451,719, Oct. 19.

Darby, Paul F., Long Hill, Conn., and L. A. Nevala, Richland, Wash., assignors to Remington Arms Company, Inc., Bridgeport, Conn. Electrical conductivity testing machine. 2,451,613, Oct. 19.

Darnall, James C., Hyattsville, Md. Exterior bomb container for aircraft. 2,451,476, Oct. 19.

Darsie, Burns, Bayonne, N. J., assignor to Electric Boat Company, Groton, Conn. Gun aiming and firing means. 2,451,614, Oct. 19.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Door fastener. 2,451,537, Oct. 19.

Daudt, William H., assignor to Corning Glass Works, Corning, N. Y. Organo-disiloxane and methods of preparing it. 2,451,664, Oct. 19.

Davis, Marian Van Trine, assignee, et al.: *See*—
Van Trine, Ralph.

Davis, Thomas J., San Francisco, Calif. Centering device. 2,451,720, Oct. 19.

Dawson, Charles R.: *See*—
Keil, Harr, Dawson, and Wasserman.

Dec, Joseph: *See*—
Strain, William H., and Dec.

Deere & Company, assignee: *See*—
Oehler, William P.

Dehmel, Richard C., Summit, N. J. Automatic magnetic apparatus for simulating radio range signals. 2,451,927, Oct. 19.

De Lancey, Warren H., assignor to Gilbert & Barker Manufacturing Company, Springfield, Mass. Variable capacity pump. 2,451,666, Oct. 19.

Delaware Rayon Company, assignee: *See*—
Barnes, Joseph H.

Del Camp, Scipione M., Maywood, assignor to Cinch Manufacturing Corporation, Chicago, Ill. Tube socket for radio and like tubes. 2,451,538, Oct. 19.

De Luxe Products Corporation, assignee: *See*—
Flint, Charles R.

Dempster, George R., Knoxville, Tenn. Transporting and dumping equipment. 2,451,721, Oct. 19.

Denning, Stephen, assignor to E. L. Ruddy Company, Limited, Toronto, Ontario, Canada. Neon lighting equipment. 2,451,539, Oct. 19.

Desch, Joseph R., E. V. Gulden, and R. E. Mumma, assignors to The National Cash Register Company, Dayton, Ohio. Electron tube variable impulse transmitter. 2,451,812, Oct. 19.

De Witt, William J., and H. A. Corbett, assignors to Shoe Form Co. Inc., Auburn, N. Y. Fishhook making machine. 2,451,477, Oct. 19.

Di Bartolomeo, Joseph A., Baltimore, Md. Children's vehicle. 2,451,665, Oct. 19.

Dickerson, Paul M., East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electron discharge device having an electron beam passage and aligning means therewith for the cathode. 2,451,813, Oct. 19.

Dickey, Joseph B., and E. B. Towne, assignors to Eastman Kodak Company, Rochester, N. Y. Aminoanthraquinone dye compounds containing a trifluoromethyl group. 2,451,478, Oct. 19.

Diehl, Walter S., United States Navy. Airflow stabilizer. 2,451,479, Oct. 19.

Dinyer, Frank J., Mandan, N. Dak. Inhaler. 2,451,540, Oct. 19.

Dissel, Theodore A., Hartford, and I. L. Newell, Wethersfield, assignors to United Aircraft Corporation, East Hartford, Conn. Deicing composition for aircraft parts and surfaces. 2,451,814, Oct. 19.

Dixon, Thomas F.: *See*—
Weltman, William C., and Dixon.

Dodge, Ronald O., Poughkeepsie, assignor to International Business Machines Corporation, New York, N. Y. Power-operated skip tabulating mechanism for typewriting machines. 2,451,722, Oct. 19.

Doerr, Keith: *See*—
Doerr, Raymond and K.

Doerr, Raymond and K., assignors to H. B. Sherman Manufacturing Co., Battle Creek, Mich. Ball-bearing valve stem. 2,451,928, Oct. 19.

Doman, Glidden S., Stamford, assignor to United Aircraft Corporation, East Hartford, Conn. Dynamic balancer for rotor blades. 2,451,541, Oct. 19.

Dombrow, Bernard A.: *See*—
Miskel, John F., and Dombrow.

Domoj, John J.: *See*—
Elder, Robert M., and Domoj.

Donnell, Lloyd H., Chicago, Ill., and E. L. Shaw, Cuyahoga Falls, Ohio, assignors to Wingfoot Corporation, Wilmington, Del. Airship. 2,451,815, Oct. 19.

Dorgin, Abraham L., New York, N. Y. Inner sole. 2,451,929, Oct. 19.

Dow Chemical Company, The, assignee: *See*—
Young, Arthur E., and Bacon.

Drackett Company, The, assignee: *See*—
Calvert, Francis E.

Draper Corporation, assignee: *See*—
Budayna, Walter J.

Driver-Harris Company, assignee: *See*—
German, Howard M.

Dube, Aimee J., Troy, N. Y. Toy. 2,451,542, Oct. 19.

Ducey, Francis E., Midland, Mich. Infant's chair. 2,451,667, Oct. 19.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Tidik, Stephen, and Steadman.

Dunajeff, Leonid A., Havre de Grace, Md. Synchronized motor control. 2,451, 930, Oct. 19.

Dunn, George B., Schenectady, N. Y., assignor to General Electric Company. Web break detector. 2,451,816, Oct. 19.

Dunn, Herman J., New Haven, Conn. Brush support. 2,452,025, Oct. 19.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Campbell, Kenneth N.
Coffman, Donald D., and Salisbury.
Cupery, Martin E., and Rothrock.
Gray, Hugh W.
Gresham, William F.
Loder, Donald J.
Mehler, Albert J., Jr.
Nichols, James B.
Pitzl, Gilbert.
Schreiber, Richard S.
Vincent, John R.
Walker, Kenneth E.
Weber, Arthur G., and Hamblet.

Eagle, Harold S., Strathfield, near Sydney, New South Wales, Australia. Gearing connecting oppositely rotating shafts. 2,451,723, Oct. 19.

Eastman Kodak Company, assignee: *See*—
Dickey, Joseph B., and Towne.
Strain, William H., and Dec.

Edell, Richard A., Montgomery, Minn. Automatic headlight dimmer. 2,451,543, Oct. 19.

Edelmann, Harry, Cleveland, Ohio. Consecutive ruling machine. 2,451,931, Oct. 19.

Edgar, David: *See*—
Knowlton, Cutler, D., and Edgar.

Edson, James O., Great Kills, and D. M. Terry, Brooklyn, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Subharmonic generator. 2,451,480, Oct. 19.

Egger, Charles J., and R. H. Webster, Cleveland, Ohio, assignors to The Buckeye Laboratories Corporation. Process and apparatus for reconditioning contaminated oil. 2,451,668, Oct. 19.

Eichenberger, Ernst, Wettingen, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Gas blast circuit breaker. 2,451,669, Oct. 19.

Eitel-McCullough, Inc., assignee: *See*—
Howes, Gordon T.

Elder, Robert M., and John J. Domoj, Philadelphia, Pa. Bracing device for bombs on aircraft. 2,451,481, Oct. 19.

Electric Boat Company, assignee: *See*—
Darsie, Burns.

Electrical Industries, Inc., assignee: *See*—
Wyman, John H.

Electrolux Corporation, assignee: *See*—
Wahlberg, Eric C., and Lampe.

Electronic Laboratories, Incorporated, assignee: *See*—
Wise, Herman J.

Ellis, Charles A., assignor to American Optical Company, Southbridge, Mass. Adjustable perimeter target. 2,451,932, Oct. 19.

Emery, Roscoe C., assignee, executor, co-trustee, et al.: *See*—
Lyon, Alfred L.

England, Elmer A., Kalamazoo, Mich. Rope or wire tightener. 2,451,933, Oct. 19.

English Electric Company Limited, The assignee: *See*—
Smart, David L.

Evans, Clarence A., Atlanta, Ga. Molding hollow objects. 2,451,934, Oct. 19.

Evans, John, Hightstown, N. J., assignor to Radio Corporation of America. Super high frequency wattmeter. 2,451,724, Oct. 19.

Extruded Plastics, Inc., assignee: *See*—
Slaughter, Charles E.

Fairchild Engineering Company, assignee: *See*—
Le Greid, Erwin L.

Farrell, Robert W., New York, N. Y. Film viewing device. 2,451,544, Oct. 19.

Favre, Edward A., Waltham, Mass. Safety window seat. 2,451,670, Oct. 19.

Feinberg, Albert E., assignor to Advance Transformer Co., Chicago, Ill. Gaseous discharge lamp circuit. 2,452,026, Oct. 19.

Ferris, Seymour W., Mount Holly, N. J., assignor to The Atlantic Refining Company, Philadelphia, Pa. Dewaxing of hydrocarbon oils. 2,451,545, Oct. 19.

Fetterly, Lloyd C., Long Beach, assignor to Shell Development Company, San Francisco, Calif. Regenerating spent aqueous alkaline solution. 2,451,817, Oct. 19.

Feucht, Albert, Garfield Heights Ohio, assignor, by mesne assignments, to Le Roi Company, Milwaukee, Wis. Throttle valve for stoppers. 2,451,671, Oct. 19.

Fidelity Union Trust Company, executor: *See*—
Madden, Harry D.

Filbey, Emery T., trustees, et al.: *See*—
Kraybill, Henry R., and Beadle.

Flanagan, Robert M., Kansas City, Mo., assignor to Remington Arms Company, Inc., Bridgeport, Conn. Machine for gauging and assorting cartridges according to height of primers. 2,451,615, Oct. 19.

Flint, Charles R., La Porte, Ind., assignor to The De Luxe Products Corporation. Sparking device. 2,451,482, Oct. 19.

Flora, Laurence H.: *See*—
Tinnerman, George A., and Flora.

Flory, Paul J., Kent, assignor to Wingfoot Corporation, Akron, Ohio. Nitriles. 2,452,012, Oct. 19.

Flowers, Leola W.: *See*—
Flowers, Ralph G., and L. W.

Flowers, Ralph G., and L. W., Pittsfield, Mass., assignors to General Electric Company. Vinylphenoxthines and preparing the same. 2,451,818, Oct. 19.

Forton, Harold R., Greenback, Tenn. Method and apparatus for forming a powder from metals. 2,451,546, Oct. 19.

Foster, Newton C., McKeesport, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Cast polymerizatdion. 2,451,935, Oct. 19.

Franklin, Albert W., New York, assignor of one-half to J. Foster, Brightwaters, N. Y. Making a structural unit. 2,451,725, Oct. 19.

Freevol, Harold, assignee, et al.: *See*—
Nelson, Noble A.

Friend, Albert W., Collingswood, N. J., assignor to Radio Corporation of America. Power supply. 2,452,013, Oct. 19.

Frisch, Erling, Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Propulsion drive. 2,451,936, Oct. 19.

Frosch, Alex, Houston, Tex., assignor to Standard Oil Development Company. Induction maguetometer. 2,451,819, Oct. 19.

Frost, H., and Company, Limited, assignee: *See*—
Perrino, Albert E. B.

Fry, Donald R., East Greenbush, N. Y. Dry cell depolarizing and reconditioning device. 2,451,726, Oct. 19.

Fulton, Claude C., Florissant, Mo. Attachable traction lug rim. 2,451,937, Oct. 19.

G. and H. Hosiery Company, Inc., assignee: *See*—
Grove, Cornelius S., Sr., Pittman, and McKinney.

Gadd, Ernest R.: *See*—
Betteridge, Walter, and Gadd.

Gagnepain, Gaston: *See*—
Bassani, Laurent, and Gagnepain.

Garbuny, Max, and R. E. Hull, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Vapor electric device. 2,451,938, Oct. 19.

Gardner, Arthur A., and J. G. MacCormack, assignors to Breslee Mfg. Company, New York, N. Y. Heat-sealing apparatus. 2,451,728, Oct. 19.

Gardner, Ulrick K., Montgomery, Ala. Flange facing tool. 2,451,729, Oct. 19.

Garland Charles R., Hollywood, Calif. Piston pin holder attachable to conventional vise jaws. 2,451,727, Oct. 19.

Garrett, Elmer E., Freeport, N. Y., assignor to Polaroid Corporation, Cambridge, Mass. Apparatus for exposing and processing photographic film. 2,451,820, Oct. 19.

Gasoteria Corporation, assignee: *See*—
Rush, Leo E.

Gautney, Roy T.: *See*—
Binash, Albert H., Tull, and Gautney.

Geigy, J. R., A.-G., assignee: *See*—
Schetty, Guido.

Geiselman, Ralph A., and William H. Cuttino, Wilkinsburg, assignors to Westinghouse Electric Corporation, Pittsburgh, Pa. Automatic switching system. 2,451,939, Oct. 19.

Gendusa, Michel J., New Orleans, La. Doughnut glazing machine. 2,451,940, Oct. 19.

General Aniline & Film Corporation, assignee: *See*—
Hanford, William E.

General Electric Company, assignee: *See*—
Alexanderson, Ernst F. W., and Patterson.
Berkoff, Seymour.

Globe-Union Inc., assignee: *See*—
Wolff, Robert L., and Weber.

Glover, John E., Jr., Queens Village, and J. C. Hanson, Hicksville, N. Y., assignor to Republic Aviation Corporation. Flexible connection and seal. 2,451,941, Oct. 19.

Goin, Floyd I., Independence, Mo., assignor to Remington Arms Company, Inc., Bridgeport, Conn. Automatic stop and lock for machines for gauging cartridges. 2,451,616, Oct. 19.

Goldsmith, Hugo, assignor to Sport Products, Inc., Cincinnati, Ohio. Making protective helmets. 2,451,483, Oct. 19.

Gorin, Everett, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Chlorination of paraffinic hydrocarbons. 2,451,821, Oct. 19.

Gould, King E., Fanwood, N. J., and P. Mertz, Bellerose, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cathode-ray signal utilizing means. 2,451,484, Oct. 19.

Graham Company, assignee: *See*—
Christensen, Sofus.

Gray, Hugh W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Alcohol insoluble nitrogen substituted polyamides. 2,451,672, Oct. 19.

Gray, Kenneth R.: *See*—
Schlosser, Paul H., and Gray.

Grebowiec, Michael J., Kansas City, Mo., assignor to Remington Arms Company, Inc., Bridgeport, Conn. Packaging machine. 2,451,617, Oct. 19.

Greenbowe, James W., executor: *See*—
Madden, Harry D.

Greenlee, Harry R., Indianapolis, assignor to The Studebaker Corporation, South Bend, Ind. Detent means. 2,451,730, Oct. 19.

Gresham, William F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of N-alkyl diethanolamines. 2,451,942, Oct. 19.

Groen, Willem, and R. F. Onsrud, assignors to Onsrud Machine Works, Inc., Chicago, Ill. Swarf milling machine. 2,451,548, Oct. 19.

Gross, Henry R., Chicago, Ill. Combined thermal and magnetic flasher switch. 2,451,618, Oct. 19.

Grote Manufacturing Company, The, assignee: *See*—
Ryder, Charles D.

Grove, Cornelius S., Sr., J. V. McKinney, and S. Pittman, assignors to G. and H. Hosiery Company, Inc., Hickory, N. C. Wrap stripe attachment for knitting machines. 2,451,673, Oct. 19.

Guanella, Gustav, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y. Distance and speed indicating system. 2,451,822, Oct. 19.

Guanella, Gustav, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y. Direction finding system. 2,451,823, Oct. 19.

Guanella, Gustav, Zurich, and P. Güttinger, Wettingen, Switzerland, assignors to Radio Patents Corporation, New York, N. Y. Producing time modulated signal impulses. 2,451,824, Oct. 19.

Guarrera, John J., Astoria, Long Island, N. Y., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Oscillator tube with tunable coaxial resonator. 2,451,825, Oct. 19.

Gulden, Ernest V.: *See*—
Desch, Joseph R., Gulden, and Mumma.

Gulf Research & Development Company, assignee: *See*—
Coggeshall, Norman D.
Teplitz, Abraham J.

Gunning, Alfred W., Battle Creek, assignor to Clark Equipment Company, Buchanan, Mich. Industrial truck. 2,451,943, Oct. 19.

Güttinger, Paul: *See*—
Guanella, Gustav, and Güttinger.

Gzemski, Felix C., assignor to The Atlantic Refining Company, Philadelphia, Pa. Production of metal sulfonates. 2,451,549, Oct. 19.

Hade, Emile, Montreal, Quebec, Canada. Clothes drier. 2,451,674, Oct. 19.

Haley, James: *See*—
Hedquist, Milton T., and Haley.

Hall, Joseph S., Sale, assignor to Metropolitan-Vickers Electrical Company Limited, London, England. Axial flow compressor and like machines. 2,451,944, Oct. 19.

Hall, William A.: *See*—
Myers, William A., and Hall.

Haller, John F., Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation. Making chlorine dioxide. 2,451,826, Oct. 19.

Haller, Oscar H., Los Angeles, Calif. Holder. 2,451,550, Oct. 19.

Hamblet, Clement H.: *See*—
Weber, Arthur G., and Hamblet.

Hamilton, Francis E.: *See*—
Lake, Clair D., and Hamilton.

Hanford, William E., Easton, Pa., assignor to General Aniline & Film Corporation, New York, N. Y. Preparation of potassium alcoholates. 2,451,945, Oct. 19.

Hanson, John C.: *See*—
Glover, John E., Jr., and Hanson.

Harding, William R.: *See*—
Kenyon, Alonzo F., and Harding.

Harman, Denham: *See*—
White, Ellis R., and Harman.

Harmon, Kenneth A., Longmeadow, assignor to Wico Electric Company, West Springfield, Mass. Distributor. 2,451,675, Oct. 19.

Harris-Seybold Company, assignee: *See*—
Spiller, William R.

Harris, Walter R., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor control system. 2,451,946, Oct. 19.

Hart-Carter Company, assignee: *See*—
Longenecker, Ernst A.

Hartford National Bank and Trust Company, assignee, trustee: *See*—
Blenfait, Henry, and van der Willigen.

Hartsfield, Lewis D.: *See*—
Cox, Richard A., and Hartsfield.

Harvey, Louis A., Detroit, Mich. Hand-carried motion-picture projecting and viewing device. 2,451,947, Oct. 19.

Harvey, Valentine P.: *See*—
Molins, Desmond W., Harvey, Mason, and Powell.

Haseltine, Stacy B., La Grange, assignor to W. H. Miner, Inc., Chicago, Ill. Railway draft gear. 2,451,551, Oct. 19.

Haworth, Leland J., Belmont, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War. Push-pull amplifier. 2,451,827, Oct. 19.

Hawthorne, Charles W., York, Pa., assignor to Morgan Construction Company, Worcester, Mass. Shearing apparatus. 2,451,948, Oct. 19.

Hayward, Lee, Clayton, Mo. Bent-wire clothes hanger. 2,451,552, Oct. 19.

Hazeltine Research, Inc., assignee: *See*—
Wheeler, Harold A.

Hearne, George W., El Cerrito, and M. L. Adams, Modesto, assignors to Shell Development Company, San Francisco, Calif. Production of unsaturated carbonylic compounds. 2,451,485, Oct. 19.

Heating Corporation, assignee: *See*—
Lehane, Timothy J., and Burgess.

Hedquist, Milton T., and J. Haley, Rock Island, Ill., assignors to J. I. Case Company, Racine, Wis. Protective shield for orchard tractors. 2,451,553, Oct. 19.

Hedstrom, Olof H., Hartford City, Ind. Picture hanging means. 2,451,554, Oct. 19.

Heinemann, Heinz, Upper Darby, assignor to Porocel Corporation, Philadelphia, Pa. Production of acetals. 2,451,949, Oct. 19.

Heintz, Ralph M., assignor, by mesne assignments, to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Engine starting system. 2,452,027, Oct. 19.

Hengstebeck, Robert J., Chicago, and R. S. McDaniel, Alton, assignors to Standard Oil Company, Chicago, Ill. Catalytic conversion process. 2,451,619, Oct. 19.

Hennessy, Daniel E., Petersham, assignor to Springfield Wire and Tinsel Company, West Springfield, Mass. Strand coiling and winding apparatus. 2,451,731, Oct. 19.

Herriott, David R., Glendale, Calif. Safety device for fluid brakes. 2,451,828, Oct. 19.

Hershberger, William D., Princeton, N. J., assignor to Radio Corporation of America. Microwave-absorptive gas light valve. 2,451,732, Oct. 19.

Hightower, Ransom L., Sinton, Tex. Sack holding frame. 2,451,829, Oct. 19.

Hilkemeier, Louis G., West Allis, and G. K. Viall, assignors to Chain Belt Company, Milwaukee, Wis. Charging, sealing and discharging mixers. 2,451,555, Oct. 19.

Hinman, Donald D., Cleveland Heights, Ohio, assignor to General Electric Company. Starting arrangement for electric discharge devices. 2,451,830, Oct. 19.

Hipple, John A., Jr., Verona, assignor to Westinghouse Electric Corporation, Pittsburgh, Pa. Electrical network. 2,451,950, Oct. 19.

Hochwarder, John, Cleveland, Ohio. Work positioner. 2,451,733, Oct. 19.

Hoffmann-La Roche Inc., assignee: *See*—
Huber, Walter.
Isler, Otto.
Lindlar, Herbert.

Holdaway, Vivian L., Midland Park, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Electrode structure for gaseous discharge devices. 2,451,556, Oct. 19.

Holmes, Hiram C., Stockton, Calif. Lumber roll assembly. 2,451,620, Oct. 19.

Hopkins, Edwin, New York, N. Y. Transmission and reproduction of optical and acoustical effects. 2,451,734, Oct. 19.

Horton, George T., Chicago, Ill., assignor to Chicago Bridge & Iron Company. Vacuum tank for storing liquids at high or low temperatures. 2,451,486, Oct. 19.

Horwood, Howard J., New York, N. Y. Dry shaver. 2,451,831, Oct. 19.

Houdaille-Hershey Corporation, assignee: *See*—
Johnson, Bernard C.

House, Norman K., assignor to Lasalco, Inc., St. Louis, Mo. Electroplating machine. 2,451,676, Oct. 19.

Houston, Willard G., Wadsworth, Ohio. Power control unit. 2,451,621, Oct. 19.

Howat, Philip Y. K., Washington, D. C. Apparatus for molding concrete walls. 2,451,951, Oct. 19.

Howden, James, & Company Limited, assignee: *See*—
Lee, Leonard.

Howes, Gordon T., Belmont, assignor to Eitel-McCullough, Inc., San Bruno, Calif. Electron tube for high frequency. 2,451,557, Oct. 19.

Huber, Walter, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of unsaturated compounds. 2,451,741, Oct. 19.

Huelster, Otto J., assignor to Scovill Manufacturing Company, Waterbury, Conn. Button staple. 2,451,487, Oct. 19.

Hughes, Everett C.: *See*—
Burk, Robert E., and Hughes.

Hull, Robert E.: *See*—
Garbuny, Max, and Hull.

Hulsebus, Bernhard L., Pasadena, Calif., assignor to E. B. Hulsebus, Peoria, Ill. Weed extractor. 2,451,952, Oct. 19.

Hulsebus, Everett B., assignee: *See*—
Hulsebus, Bernhard L.

Huntington, Frederick T., Oroville, Calif. Die for swedging bullets. 2,451,488, Oct. 19.

Hutton, Ernest W.: *See*—
Storm, Herbert F., and Hutton.

Hydraulic Brake Company, assignee: *See*—
La Brie, Ludger E.

Hyler, John H., Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif. Vehicle coupling and power steering device. 2,451,677, Oct. 19.

Imperial Chemical Industries Limited, assignee: *See*—
Bremner, John G. M., and Jones.
Jarrett, Kenneth B.

Imperial Trust for the Encouragement of Scientific and Industrial Research, The, assignee: *See*—
Walls, Leslie P.

Ingram, Curtis S., Fairfax, Calif., assignor to the United States of America as represented by the United States Atomic Energy Commission. Meter protection circuit. 2,451,953, Oct. 19.

International Business Machines Corporation, assignee: *See*—
Dodge, Ronald D.
Lake, Clair D., and Hamilton.
Morton, John L.
Watson, Thomas J., and Sprecker.

International Cigar Machinery Company, assignee: *See*—
Clausen, Sigurd.

International Handkerchief Mfg. Co., The, assignee: *See*—
Anderson, Gustave A.

International Nickel Company, Inc., The, assignee: *See*—
Brophy, Gerald R., and Miller.

Inz. M. Lewandowski i B-cia, Kasinowscy Spolka z ograniczona odpowiedzialnoscia, assignee: *See*—
Lewandowski, Marian.

Isler, Otto, Basel, Switzerland, assignor, to Hoffmann-La Roche Inc., Nutley, N. J. Polyenes and the manufacture thereof. 2,451,735, Oct. 19.

Isler, Otto, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Polyenes and the manufacture thereof. 2,451,736, Oct. 19.

Isler, Otto, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of pentaenes. 2,451,737, Oct. 19.

Isler, Otto, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of pentaenes. 2,451,738, Oct. 19.

Isler, Otto, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of pentaenes. 2,451,739, Oct. 19.

Jack & Heintz Precision Industries, Inc., assignee: *See*—
Heintz, Ralph M.

Jarrett, Kenneth B., Welwyn Garden City, England, assignor to Imperial Chemical Industries Limited. Powdered polythene. 2,451,743, Oct. 19.

Jerguson Gage & Valve Company, assignee: *See*—
Winton, Lewis B.

Jewer, Allen: *See*—
LaLonde, George J., and Jewer.

Joel, Amos E., Jr., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Progressive selecting circuit. 2,451,489, Oct. 19.

Johns, Francis J., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Inductor generator equipment, especially for induction heating. 2,451,954, Oct. 19.

Johnson, Arthur F., Cambridge, Mass., assignor to Reynolds Metals Company, Inc., Richmond, Va. Production of aluminum. 2,451,490, Oct. 19.

Johnson, Arthur F., Cambridge, Mass., assignor to Reynolds Metals Company, Richmond, Va. Enriching the alumina content of recirculated cryolite fusions in aluminum production. 2,451,491, Oct. 19.

Johnson, Arthur F., Cambridge, Mass., assignor to Reynolds Metals Company, Richmond, Va. Method and apparatus for enriching the alumina content of cryolite fusions in aluminum production. 2,451,492, Oct. 19.

Johnson, Arthur F., Cambridge, Mass., assignor to Reynolds Metals Company, Richmond, Va. Enriching the alumina content of cryolite fusions in aluminum production. 2,451,493, Oct. 19.

Johnson, Arthur F., Longview, Wash., assignor to Reynolds Metals Company, Richmond, Va. Enriching alumina content of cryolite fusions. 2,451,494, Oct. 19.

Johnson, Bernard C., Mundelein, Ill., assignor to Houdaille-Hershey Corporation, Detroit, Mich. Refrigerator liner evaporator. 2,451,744, Oct. 19.

Johnson, Bruce W., Rockford, Ill., and A. D. Bullerjahn, Milwaukee, Wis., assignors to Automatic Pump & Softener Corporation, Rockford, Ill. Multiple port valve structure. 2,451,678, Oct. 19.

Johnson, Carl W., Brooklyn, and J. A. Neumair, Hollis, N. Y., assignors to American Machine and Foundry Company. Button sewing machine and sewing buttons. 2,451,495, Oct. 19.

Johnson, Victor S., assignee: *See*—
White, Sidney Y.

Johnson, Wilfrid E., Marblehead, Mass., assignor to General Electric Company. Supercharger control system. 2,451,835, Oct. 19.

Jolly, Carl H., U. S. Navy. Rocket launching device. 2,451,745, Oct. 19.

Jones, David Gwyn: *See*—
Bremner, John G. M., and Jones.

Jordan, Curtis S., Maywood, Calif. Rotary counterbalanced egg-carrier mechanism for classifying eggs according to weight. 2,451,836, Oct. 19.

Kayler, Frank H.: *See*—
Kinne, Edmund P., and Kayler.

Keil, Harry, and C. R. Dawson, New York, and D. Wasserman, Brooklyn, N. Y. Composition for poison ivy diagnosis. 2,451,955, Oct. 19.

Keim, Donald B., Bridgeport, Conn., assignor to General Electric Company. Cathode-ray tube support and positioning means. 2,451,832, Oct. 19.

Keller, Anne H.: *See*—
Keller, K. M., E. H., and A. H.

Keller, Elizabeth H.: *See*—
Keller, K. M., E. H., and A. H.

Keller, Kathryn M., E. H., and A. H., Chicago, Ill. Fever thermometer. 2,451,746, Oct. 19.

Kemper, Ira B., Portland, Oreg. Folding vehicle for children. 2,451,956, Oct. 19.

Kenyon, Alonzo F., Churchill, and W. R. Harding, Export, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system for electric motors. 2,451,957, Oct. 19.

Kihn, George A., Richmond, Staten Island, N. Y., assignor to American Machine and Foundry Company. Duplex package and making the same. 2,452,014, Oct. 19.

Kilgore, Lee A., Forest Hills, and S. L. Lindbeck, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system for synchronous machines. 2,451,958, Oct. 19.

Kindt, Ernest T., Lakewood, Ohio. Doweled structure. 2,451,747, Oct. 19.

King Ranch, Inc., assignee: *See*—
Baldwin, Joseph P.

Kingsbury & Davis Machine Company, assignee: *See*—
Straw, Clayton.

Kingston Products Corporation, assignee: *See*—
Woolley, Lee A.

Kinne, Edmund P., and F. H. Kayler, Alliance, Ohio, assignors to American Steel Foundries, Chicago, Ill. Adjusting means for yoke arrangements. 2,452,015, Oct. 19.

Kirkby, Raymond J., Sherman Oaks, Calif., assignor to Adel Precision Products Corp. Valve mechanism for handling liquefied gases and the like. 2,451,559, Oct. 19.

Klemperer, Hans, Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. Welding system. 2,451,496, Oct. 19.

Knowles, Robert B., Maywood, Calif. Fluid operated pump for oil wells and the like. 2,451,560, Oct. 19.

Knowlton, Cutler D., Rockport, and D. Edgar, Lynn, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J. Continuous brushing machine for leather. 2,451,561, Oct. 19.

Knudsen, Erling M., Arlington, N. J., assignor to Curtiss-Wright Corporation. Electric slip-ring and brush connection. 2,451,959, Oct. 19.

Koch, Frederick, Sparta, assignor to Associated Patentees, Inc., Ampere, N. J. Roll feed. 2,451,833, Oct. 19.

Komorowski, Stanley A., Chicago, Ill., assignor to Carnegie-Illinois Steel Corporation. Furnace lining structure. 2,451,679, Oct. 19.

Krajci, Samuel, and L. E. Savage, New Orleans, La., assignors to The Celotex Corporation, Chicago, Ill. Method of and apparatus for painting bevels. 2,451,960, Oct. 19.

Kratchman, Frederick J., College Point, N. Y. Thread miller. 2,451,497, Oct. 19.

Kraybill, Henry R., and B. W. Beadle, assignors, by mesne assignments, to A. W. Brickman, V. Conquest, F. J. Madden, W. B. Oleson, and E. T. Filbey, Chicago, Ill., as trustees for the benefit of American Meat Institute Foundation. Oxidation inhibitor for fats and oils. 2,451,748, Oct. 19.

Kreisler, Jacques, Manufacturing Corporation, assignee: *See*—
Kreisler, Leslie.
Kreisler, Leslie, and Siska.
Siska, John G.

Kreisler, Leslie, Teaneck, assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J. Bracelet or the like and making the same. 2,451,749, Oct. 19.

Kreisler, Leslie, Teaneck, and J. G. Siska, Cresskill, assignors to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J. Bracelet and making same. 2,451,750, Oct. 19.

Kronmiller, Carl G., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Switch device. 2,451,751, Oct. 19.

Kubler, Ernest F., Schenectady, N. Y., assignor to General Electric Company. Phase shifting circuit. 2,451,834, Oct. 19.

Kyle, William D., Jr., Milwaukee, and A. V. Ryan, South Milwaukee, Wis., assignors to Line Material Company. Transposing connections. 2,451,622, Oct. 19.

La Brie, Ludger E., assignor to Hydraulic Brake Company, Detroit, Mich. Automatic adjuster for friction elements. 2,451,562, Oct. 19.

Lacquer & Chemical Corporation, assignee: *See*—
Thau, Marcus.

Lagin, Herbert, New York, N. Y. Electric light socket. 2,451,680, Oct. 19.

La Guardia, Nick G., Denver, Colo. Carburetor. 2,451,563, Oct. 19.

Lake, Clair D., Binghamton, and F. E. Hamilton, Endicott, assignors to International Business Machines Corporation, New York, N. Y. Record punching machine. 2,451,752, Oct. 19.

La Lande, William A., Jr., Upper Darby, assignor to Attapulgus Clay Company, Philadelphia, Pa. Treatment of hydrocarbons with activated magnesium silicates. 2,451,564, Oct. 19.

La Londe, George J., and A. Jewer, Detroit, Mich. Sportsman's mitten. 2,451,837, Oct. 19.

Lambach, Fritz, Tenafly, N. J. Flat warp knitting machine. 2,451,498, Oct. 19.

Lambach, Fritz, Tenafly, N. J. Warp knitting machine. 2,451,499, Oct. 19.

Lampe, Robert C.: *See*—
Wahlberg, Eric C., and Lampe.

Landau, Lucian, assignor to Latex Industries Limited, Chingford, London, England. Production of hollow articles by dipping. 2,451,961, Oct. 19.

Landau, Miles E., Brooklyn, N. Y. Abrasive wheel with flexible resilient rim. 2,451,753, Oct. 19.

Landis & Gyr, A-G., assignee: *See*—
Beusch, Willi.

Landow, Mitchell, Bronx, N. Y. Chuck adapter. 2,451,565, Oct. 19.

Larmuth, Allin and L. J., Worsley, England. Loading and unloading device for wire stranding, rope, and cable making machines. 2,451,754, Oct. 19.

Larmuth, Leonard J.: *See*—
Larmuth, Allin and L. J.

Lasalco, Inc., assignee: *See*—
House, Norman K.

Latex Industries Limited, assignee: *See*—
Landau, Lucian.

Lavietes, David P., Boone, N. C. Smoker's pipe. 2,451,838, Oct. 19.

Lee, Leonard, assignor to James Howden & Company Limited, Glasgow, Scotland. Dust collector. 2,451,755, Oct. 19.

Le Greid, Erwin L., Westlake, assignor to Fairchild Engineering Company, Cleveland, Ohio. Making commutators. 2,451,500, Oct. 19.

Lehane, Timothy J., and E. H. Burgess, Chicago, Ill., assignors, by mesne assignments, to Heating Corporation. Automatic panel circuit for air reheat control. 2,451,566, 2,451,566, Oct. 19.

Leinberger, Merton C.: *See*—
Burrus, Paul B., and Leinberger.

Le Mense, Elmer H., and James M. Van Lanen, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture. Preparing starch hydrolyzing enzyme with aspergillus. 2,451,567, Oct. 19.

Lemon, Cecil G., assignor to Tenaplas Limited, London, England. Electrical conductor. 2,451,839, Oct. 19.

Le Roi Company, assignee: *See*—
Feucht, Albert.

Leslie, John H., II: *See*—
Marshall, William A., Jr., and Leslie.

Leslie, John H., II, Winnetka, and G. A. Crosby, Park Ridge, assignors to Stewart-Warner Corporation, Chicago, Ill. Engine operated hot-air heater with engine demounting means. 2,451,623, Oct. 19.

Le Tourneau, R. G., Inc., assignee: *See*—
Hyler, John H.

Lewandowski, Marian, assignor to Inz. M. Lewandowski i B-cia Kasinowscy Spolka z ograniczona odpowiedzialnoscia, Warsaw, Poland. Impulse transmitting apparatus. 2,451,840, Oct. 19.

Lewenstein, Mozes J., New York, N. Y. Auro-thio-glycolic-acid-anilide and making the same. 2,451,841, Oct. 19.

Liben, William, New York, N. Y. Specular reflectometer. 2,451,501, Oct. 19.

Liebmann, Dora M., and G. Liebmann, Cambridge, England. Calculating instrument. 2,451,842, Oct. 19.

Liebmann, Gerhard: *See*—
Liebmann, Dora M. and G.

Lindbeck, Simon L.: *See*—
Kilgore, Lee A., and Lindbeck.

Lindlar, Herbert, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of an aldehyde. 2,451,740, Oct. 19.

Lindlar, Herbert, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J. Manufacture of aldehydes. 2,451,742, Oct. 19.

Lindstrom, Ture, Edgewood, Pa., and A. H. Baylis, Ypsilanti, Mich., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,451,962, Oct. 19.

Line Material Company, assignee: *See*—
Kyle, William D., Jr., and Van Ryan.

Linn, Carl B., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbons. 2,451,568, Oct. 19.

Linn, Carl B., and L. Schmerling, Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Manufacture of fluoroalkanes. 2,451,843, Oct. 19.

Lisman, Henry, Belmar, and E. K. Stodola, Neptune, N. J., assignors to the United States of America as represented by the Secretary of War. Ultra high frequency oscillator. 2,451,502, Oct. 19.

Lloyd, Paul M., Glendale, Calif. Spindle reversing device for drill presses. 2,451,756, Oct. 19.

Loder, Donald J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Isocyanates of hydrolyzed ethylene vinyl ester interpolymers. 2,451,963, Oct. 19.

Logan, Joseph A., Hadley, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Oil burner delayed-action valve. 2,451,681, Oct. 19.

Logan, Joseph A., Hadley, assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass. Multiple nozzle gun type oil burner and control therefor. 2,451,964, Oct. 19.

Loikema, Jan: *See*—
Moller, Fredrik A. and Loikema.

Longenecker, Ernst A., Milwaukee, Wis., assignor to Hart-Carter Company, Peoria, Ill. Motor bicycle. 2,451,965, Oct. 19.

Loomis, Crawford C., Ilion, N. Y., and K. J. Lowe, deceased, late of Ilion, N. Y.; by Jane A. Lowe, administratrix, Ilion, N. Y., assignors to Remington Arms Company, Inc., Bridgeport, Conn. Inertia rate of fire retarder. 2,451,624, Oct. 19.

Lornitzo, Frank C., Pawtucket, R. I., assignor, by mesne assignments, to Pantex Manufacturing Corporation. Pressing machine and linkage mechanism for transmitting and transforming force for use therein. 2,451,844, Oct. 19.

Lornitzo, Frank C., and H. B. Beede, Pawtucket, R. I., assignors, by mesne assignments, to Pantex Manufacturing Corporation. Pressing machine and multiple lever linkage mechanism for transmitting and transforming force for use therein. 2,451,845, Oct. 19.

Lothman, Victor O., assignee: *See*—
Tellander, Frederic Jr.

Lounsbury, Harvey J., Glen Ellyn, assignor to W. H. Miner, Inc., Chicago, Ill. Railway car-end buffer. 2,451,569, Oct. 19.

Love, Marie H., and P. T. Love, Riverdale, N. Y. Nursing bottle holder. 2,451,846, Oct. 19.

Love, Paul T.: *See*—

Lund, Ole B., Havre, Mont. Refrigeration system using gas for defrosting. 2,451,682, Oct. 19.

Lyness, Horatio S., Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Making slip-lasted shoes. 2,451,570, Oct. 19.

Lyon, Alfred L., Eastport, Maine; Z. A. Lyon, R. C. Emery and C. C. Norton, executors of said A. L. Lyon, assignors to Z. A. Lyon, R. C. Emery and C. C. Norton, Eastport, Maine, co-trustees. Smokehouse for fish and other foodstuff. 2,452,016, Oct. 19.

Lyon, Zelma A., assignee, executor, co-trustee, et al.: *See*—
Lyon, Alfred L.

MacCormack, John G.: *See*—
Gardner, Arthur A., and MacCormack.

Macgeorge, William D., Drexel Hill, Pa., assignor to The Baldwin Locomotive Works. Motion recording apparatus. 2,451,757, Oct. 19.

Madden, Frank J., trustees et al.: *See*—
Kraybill, Henry R., and Beadle.

Madden, Harry D., deceased, late of South Orange, N. J.; by Fidelity Union Trust Company, executor, Newark, and J. W. Greenbowe, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Base structure for electron discharge tubes. 2,451,847, Oct. 19.

Malm, Henry, New York, N. Y. Rubber glove. 2,451,758, Oct. 19.

Mancia, Henri: *See*—
Megel, Guillaume E. and Mancia.

Manganese Products, Inc., assignee: *See*—
Allen, John R.

Mantle, Burr W., Pittsford, N. Y., assignor to American Brake Shoe Company, Wilmington, Del. Coupling. 2,451,683, Oct. 19.

Marshall, Alfred, Bay Shore, N. Y. Dive stabilizer for kites. 2,451,571, Oct. 19.

Marshall, William A., Jr., assignor to Stewart-Warner Corporation, Chicago, Ill. Air flow regulating valve. 2,451,626, Oct. 19.

Marshall, William A., Jr., Chicago, and J. H. Leslie, II, Winnetka, assignors to Stewart-Warner Corporation, Chicago, Ill. Air pressure responsive control for internal-combustion heaters. 2,451,625, Oct. 19.

Martin, Charles H., Los Angeles, Calif. Doorstop. 2,451,848, Oct. 19.

Martin, Homer Z.: *See*—
Campbell, Donald L., Martin, Murphree, and Tyson.
Campbell, Donald L., Martin, and Tyson.

Mascuch, Joseph J., assignee: *See*—
Nardone, Romeo M.

Mason, James A.: *See*—
Mollins, Desmond W., Harvey, Mason, and Powell.

Massa, Frank, Cleveland Heights, assignor to The Brush Development Company, Cleveland, Ohio. Transducer. 2,451,966, Oct. 19.

Massa, Frank, Cleveland Heights, assignor to The Brush Development Company, Cleveland, Ohio. Vibrational energy transmitter or receiver. 2,451,967, Oct. 19.

Massimiano, Santo A., Merchantville, N. J. Dental accessory. 2,451,849, Oct. 19.

Mastrillo, Joseph, Trenton, N. J. Shaper for trousers. 2,451,503, Oct. 19.

Mathieson Chemical Corporation, assignee: *See*—
Haller, John F.
Woodward, Eric R.

Maurer, Gottfried, Zurich, assignor to A. Müller A.-G. Brugg, Brugg, Switzerland. Swaging apparatus. 2,451,759, Oct. 19.

Mayo, Marion S., Los Angeles, Calif. Method of and apparatus for spinning cotton and other textile fibers. 2,451,504, Oct. 19.

McArthur, Elmer D., Schenectady, N. Y., assignor to General Electric Company. Photosensitive discharge device. 2,451,850, Oct. 19.

McCollum, Henry J. D., deceased; T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion aircraft-type heater. 2,451,627, Oct. 19.

McCollum, Henry J. D., deceased; T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion heater with air-heating tubes. 2,451,628, Oct. 19.

McCollum, Henry J. D., deceased; T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Sectional hot-air heater. 2,451,629, Oct. 19.

McCollum, Henry J. D., deceased; T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Aircraft heater with combustion air control. 2,451,760, Oct. 19.

McCollum, Henry J. D., deceased; T. McCollum, executrix, assignor to Stewart-Warner Corporation, Chicago, Ill. Internal-combustion heater for heating air. 2,451,851, Oct. 19.

McCollum, Thelma, executrix: *See*—
McCollum, Henry J. D.

McDaniel, Robert S.: *See*—
Hengstebeck, Robert J., and McDaniel.

McGee, Edward F., Wayland, Mass. Making sweet chocolate. 2,451,630, Oct. 19.

McGraw Electric Company, assignee: *See*—
Olving, Bror G.

McKinney, Julius V.: *See*—
Grove, Cornelius S., Sr., McKinney, and Pittman.

McKinnon, Columbus Chain Corporation, assignee: *See*—
Miller, William A., and Gerspacher.

McLamore, William M., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Beta-allylamino propionitriles. 2,451,852, Oct. 19.

Mead, Thomas H., and M. V. Stack, London, and E. L. Smith, North Harrow, assignors to Therapeutic Research Corporation of Great Britain Limited, London, England. Manufacture of penicillin. 2,451,853, Oct. 19.

Megel, Guillaume E., and H. Mancia, assignors of one-half to Usines Tornos Fabrique de Machines Mountier S. A., Mountier, Switzerland. Toolholder for automatic lathes. 2,451,684, Oct. 19.

Mehler, Albert J., Jr., Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Dry spinning apparatus. 2,451,854, Oct. 19.

Mercier, Pierre E., and R. Villers-Allerand, New York, N. Y., said Mercier assigner to said Villers-Allerand. Boat. 2,451,855, Oct. 19.

Mertz, Pierre: *See*—
Gould, King E., and Mertz.

Metropolitan-Vickers Electrical Company Limited, assignee: *See*—
Hall, Joseph S.

Middleton, Julius B., Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Mixing alkylation reactants. 2,452,017, Oct. 19.

Middleton, Julius B., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Alkylation process. 2,452,018, Oct. 19.

Miller, Arthur J.: *See*—
Brophy, Gerald R., and Miller.

Miller, Edward E., Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Mechanical device for determining the future position of aircraft. 2,451,856, Oct. 19.

Miller, William A., Buffalo, and R. E. Gerspacher, Kenmore, assignors to Columbus McKinnon Chain Corporation, Tonawanda, N. Y. Antiskid cross chain. 2,451,761, Oct. 19.

Millikan, Charles V., Tulsa, Okla., assignor to Geophysical Research Corporation, New York, N. Y. Packing ring. 2,451,762, Oct. 19.

Mills, Irwin F., Associates, assignee: *See*—
Beder, Samuel L.

Miner, W. H., Inc., assignee: *See*—
Haseltine, Stacy B.
Lounsbury, Harvey J.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Borell, George L.
Kronmiller, Carl G.

Miskel, John J., Brooklyn, and B. A. Dombrow, New York, N. Y., assignors to Nopco Chemical Company. Separation of capryl alcohol from methyl hexyl ketone by alkali treatment and distillation. 2,451,857, Oct. 19.

Misko, Michael J., Inglewood, Calif. Folding table with sectional top. 2,451,763, Oct. 19.

Moellenbeck, Arthur J., Milwaukee, and H. G. Stauffer, Wauwatosa, Wis., assignors to The National Cash Register Company, Dayton, Ohio. Combined accounting machine and typewriter. 2,451,631, Oct. 19.

Mollanen, Edward S., Oakland, Calif. Boxing glove. 2,451,685, Oct. 19.

Molins, Desmond W., V. P. Harvey, J. A. Mason, and G. F. W. Powell, assignors to Molins Machine Company, Limited, Deptford, London, S. E. 8, England. Fuse setting apparatus. 2,451,764, Oct. 19.

Molins Machine Company Limited, assignee: *See*—
Molins, Desmond W., Harvey, Mason, and Powell.

Möller, Fredrik A., Haren, near Groningen, and J. Lolkema, Hoogezand, assignors to Naamlooze Vennootschap: W. A. Scholten's Chemische Fabrieken, Groningen, Netherlands. Starch compositions capable of forming water-soluble derivatives. 2,451,686, Oct. 19.

Monsanto Chemical Company, assignee: *See*—
Wilson, William S.
Zienty, Ferdinand B., and Steahly.

Moore, Hilbert R., Pluckemin, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radiant energy measuring apparatus. 2,451,572, Oct. 19.

Morgan Construction Company, assignee: *See*—
Hawthorne, Charles W.

Mork, Raymond P., Schenectady, N. Y., assignor to General Electric Company. Controlled frequency oscillator. 2,451,858, Oct. 19.

Morris, Leycester W., Berkley, Mich. Collapsible chair. 2,451,687, Oct. 19.

Morton, John L., Endicott, assignor to International Business Machines Corporation, New York, N. Y. Filler reinforcing means and guard for mechanical pencils. 2,451,765, Oct. 19.

Moylan, Francis J., Scranton, Pa. Dental appliance. 2,451,766, Oct. 19.

Mueller, Erich O., Irwin, and D. L. Gibson, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Insulating mounting for brushholders and the like. 2,451,969, Oct. 19.

Muller, A., A.-G. Brugg, assignee: *See*—
Maurer, Gottfried.

Mumma, Robert E.: *See*—
Desch, Joseph R., Gulden, and Mumma.

Mumma, Robert E., and F. X. Bucher, assignors to The National Cash Register Company, Dayton, Ohio. Electron tube variable impulse communication system. 2,451,859, Oct. 19.

Munno, Vincent, Hoboken, N. J. Razor honing device. 2,451,860, Oct. 19.

Murdoch, Alexander, Jr., Philadelphia, Pa., assignor to Radio Corporation of America. Magnetostrictive electroacoustic transducer. 2,451,968, Oct. 19.

Murphree, Eger V.: *See*—
Campbell, Donald L., Martin, Murphree, and Tyson.

Myers, Cecil H., and H. A., Chicago, Ill. Hydraulic clutch and variable-speed drive. 2,451,688, Oct. 19.

Myers, Hubert A.: *See*—
Myers, Cecil H. and H. A.

Myers, William A., and W. A. Hall, Springfield, assignors to The Atlantic Refining Company, Philadelphia, Pa. Fluid catalyst regenerator system. 2,451,573, Oct. 19.

Myskowski, Edwin T., and H. F. Taylor, Washington, D. C. Screen for casting risers. 2,451,505, Oct. 19.

Naamlooze Vennootschap: W. A. Scholten's Chemische Fabrieken, assignee: *See*—
Möller, Fredrik A., and Lolkema.

Nardone, Romeo M., Teaneck, assignor to J. J. Mascuch, Milburn, N. J. Combined starter and generator. 2,451,767, Oct. 19.

Nash, Cleve C., Jr., Tulsa, Okla., assignor to Standard Oil Development Company. Controlling phase relationships in an electronic circuit. 2,451,861, Oct. 19.

National Blank Book Company, assignee: *See*—
Schade, Frank S.

National Cash Register Company, The, assignee: *See*—
Desch, Joseph R., Gulden, and Mumma.
Moellenbeck, Arthur J., and Stauffer.
Mumma, Robert E., and Bucher.

National Cylinder Gas Company, assignee: *See*—
Candy, Albert M.

National Distillers Products Corporation, assignee: *See*—
Pattee, Ellis C.

Navy, the United States of America as represented by the Secretary of the, assignee: *See*—
Salisbury, Winfield W.

Nelson, Everett E., Litchfield, Minn. Valve assembly for hydraulic steering systems. 2,451,689, Oct. 19.

Nelson, Noble A., Chicago, Ill., assignor of one-fifth to H. Freevol, one-fifth to S. Smedberg, one-fifth to H. Brandon, and one-fifth to C. E. Anderson. Fishing reel support or frame. 2,451,862, Oct. 19.

Neumair, Joseph A.: *See*—
Johnson, Carl W., and Neumair.

Nevala, Lloyd A.: *See*—
Darby, Paul F., and Nevala.

Newell, Isaac L.: *See*—
Dissel, Theodore A., and Newell.

Nichols, James B., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Regenerated cellulose film manufacture. 2,451,768, Oct. 19.

Nopco Chemical Company, assignee: *See*—
Miskel, John J., and Dombrow.

Norton, Charles C., assignee, executor, co-trustee, et al.: *See*—
Lyon, Alfred L.

Norton, Lowell E., Princeton Junction, N. J., assignor to Radio Corporation of America. Electronic system for measuring microwave transmission through a waveguide. 2,451,769, Oct. 19.

Oakley, Henry D., Schenectady, N. Y., assignor to General Electric Company. Apparatus for balancing rotors. 2,451,863, Oct. 19.

O'Brien, Daniel P., Stamford, Conn. Explosives. 2,451,864, Oct. 19.

O'Brien, Joseph F., Lebanon, and E. S. Boynton, East Orange, N. J., assignors to John B. Pierce Foundation, New York, N. Y. Back connection feed unit. 2,451,506, Oct. 19.

O'Brien, Joseph F., Lebanon, and E. S. Boynton, East Orange, N. J., assignors to John B. Pierce Foundation, New York, N. Y. Electrical outlet receptacle device. 2,451,507, Oct. 19.

O'Brien, William J., assignor to The Seamless Rubber Company, New Haven, Conn. Adhesive material. 2,451,865, Oct. 19.

Odor, Ralph K., Edmond, assignor to The Vornado Trust, Oklahoma City, Okla. Mounting for fan assemblies. 2,451,970, Oct. 19.

Oehler, William P., assignor to Deere & Company, Moline, Ill. Two-part sprocket. 2,451,690, Oct. 19.

Ohio Brass Company, The, assignee: *See*—
Smith, Edward P.

Ohio Crankshaft Company, The, assignee: *See*—
Strickland, Harold A., Jr.

Oleson, Wrisley B., trustee, et al.: *See*—
Kraybill, Henry R., and Beadle.

Oliver, Bernard M., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Control voltage means in pulse receiver. 2,451,632, Oct. 19.

Olsen, Leif C., Newcastle-on-Tyne, England. Synchronising device. 2,451,691, Oct. 19.

Olving, Bror G., assignor to McGraw Electric Company, Elgin, Ill. Automatic electric toaster. 2,451,508, Oct. 19.

Oman, Carl, Cedar Grove, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Impulse transmitter for metering systems. 2,451,971, Oct. 19.

Onsrud Machine Works, Inc., assignee: *See*—
Groen, Willem, and Onsrud.

Onsrud, Rudolph F.: *See*—
Groen, Willem, and Onsrud.

Ormond, Clyde, Rigby, Idaho. Collapsible boat. 2,451,866, Oct. 19.

Owsley, Ollie M., Alexandria, Va. Testing device for sound projector. 2,451,509, Oct. 19.

Oxley, Peter: *See*—
Short, Wallace F., and Oxley.

Pallenberg, Christian: *See*—
Telfor, Clarence F., and Pallenberg.

Pantex Manufacturing Corporation, assignee: *See*—
Lornitzo, Frank C.

Paramount Textile Machinery Co., assignee: *See*—
Richter, Henry.

Paraschuk, John, New York, N. Y. Chip guard. 2,451,574, Oct. 19.

Parke, Norman M., Jacksonville, Fla. Game of the ball and mallet type. 2,451,770, Oct. 19.

Pattee, Ellis C., Cincinnati, Ohio, assignor to National Distillers Products Corporation. Mashing cereals. 2,451,510, Oct. 19.

Patterson, Franklin G.: *See*—
Alexanderson, Ernst F. W., and Patterson.

Paxton, Donald D., Burbank, Calif., assignor to Adel Precision Products Corp. Hydraulic selector valve. 2,451,575, Oct. 19.

Pearce, George C., assignor to General Motors Corporation, Dayton, Ohio. Electrical control system. 2,451,576, Oct. 19.

Perfection Steel Body Company, The, assignee: *See*—
Seckel, Wallace H.

Perkins, James F., Oakland, Calif. Prerotation means for airplane landing wheels. 2,451,771, Oct. 19.

Perrigo, Albert E. B., assignor to H. Frost and Company Limited, Walsall, England. Slot closer for dynamo-electric machines. 2,451,633, Oct. 19.

Philco Corporation, assignee: *See*—
Bauman, John J.

Pierce, Jerry A.: *See*—
Richardson, Rober W., and Pierce.

Pierce, John B., Foundation, assignee: *See*—
O'Brien, Joseph F., and Boynon.

Pittman, Silas: *See*—
Grove, Cornelius S., Sr., McKinney, and Pittman.

Pitzl, Gilbert, Buffalo, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Melamine-formaldehyde resin dispersion in a nonbasic water-soluble alcohol medium. 2,451,867, Oct. 19.

Plungian, Mikhail B., assignor to Temple University, Philadelphia, Pa. Solubilization of rutin with methyl glucamine. 2,451,772, Oct. 19.

Polaroid Corporation, assignee: *See*—
Garrett, Elmer E.

Porocel Corporation, assignee: *See*—
Heinemann, Heinz.

Poster, Jacob, assignee: *See*—
Franklin, Albert W.

Poux, Noel J., Meadville, Pa. Terminal connection and making the same. 2,451,773, Oct. 19.

Powell, Gordon F. W.: *See*—
Molins, Desmond W., Harvey, Mason, and Powell.

Powers, Walter P., Spring Lake, assignors to Associated Patentees, Inc., Ampere, N. J. Optical indicator having cooperating grids. 2,451,972, Oct. 19.

Press Wireless, Inc., assignee: *See*—
Chapin, Reynold S.

Pugh, Merlin L., Minneapolis, Minn. Clothes drier. 2,451,692, Oct. 19.

Purdy, John F., Cuyahoga Falls, assignor to Wingfoot Corporation, Akron, Ohio. Making pneumatic tires. 2,451,973, Oct. 19.

Quackenbush, Edward C., Roselle, Ill., and H. Selvidge, Silver Spring, Md. Joint for high-frequency transmission lines. 2,451,868, Oct. 19.

Radio Corporation of America, assignee: *See*—
Evans, John.
Friend, Albert W.
Hershberger, William D.
Murdoch, Alexander, Jr.
Norton, Lowell E.
Stone, Fred B.
Thalner, Robert F.
Torsch, Charles E.

Radio Patents Corporation, assignee: *See*—
Guanella, Gustav.
Guanella, Gustav, and Guttinger.

Ranger, Arthur W., Brighton, England. Ink fountain for printing presses. 2,451,634, Oct. 19.

Rapean, John C., and W. E. Ross, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Catalyzed oxidation processes. 2,451,869, Oct. 19.

Rau, Harry A., Baltimore, Md., assignor to Crown Cork Specialty Corporation, Decatur, Ill. Locking lever feeding means. 2,451,974, Oct. 19.

Rayburn, Vincent A., and D. C. Robson, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Conveyer. 2,451,975, Oct. 19.

Rayonier Incorporated, assignee: *See*—
Schlosser, Paul H., and Gray.

Raytheon Manufacturing Company, assignee: *See*—
Klemperer, Hans.
Smith, Charles G.

Reagan, Maurice E., Pittsburgh, and W. A. Derr, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,451,976, Oct. 19.

Reeves Hoffman Corporation, assignee: *See*—
Samuelson, Wallace H. E.

Remington Arms Company, Inc., assignee: *See*—
Darby, Paul F., and Nevala.
Flanagan, Robert M.
Goln, Floyd I.
Grebowiec, Michael J.
Loomis, Crawford C., and Lowe.

Renshaw, David E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,451,977, Oct. 19.

Republic Aviation Corporation, assignee: *See*—
Glover, John E., Jr., and Hanson.

Reynolds Metals Company, Inc., assignee: *See*—
Johnson, Arthur F.

Rice, Henry T. M., San Marino, Calif. Making wrench sockets and the like. 2,451,511, Oct. 19.

Rice, Henry T. M., San Marino, Calif. Press forging articles. 2,451,512, Oct. 19.

Richards, Kenneth D., Gardner, Mass. Signal device for fishing tackle. 2,451,693, Oct. 19.

Richardson, Roger W., and J. A. Pierce, Baton Rouge, La., assignors to Standard Oil Development Company. Chlorine manufacture. 2,451,870, Oct. 19.

Richter, Henry, assignor to Paramount Textile Machinery Co., Kankakee, Ill. Setting apparatus for textile fabrics. 2,451,978, Oct. 19.

Richter, Samuel J., New York, N. Y. Combined connecting plug and fuse. 2,451,774, Oct. 19.

Roberts, Wesley J., Hot Springs, Ark. Endless conveyer egg-candling device. 2,451,577, Oct. 19.

Robson, Duer C.: *See*—
Rayburn, Vincent A., and Robson.

Rochow, Eugene G., Schenectady, N. Y., assignor to General Electric Company. Dimethyl germanium dichloride. 2,451,871, Oct. 19.

Rodgers, Howard C., Birmingham, Ala., assignor to Tennessee Coal, Iron, and Railroad Company. Collector drum. 2,451,872, Oct. 19.

Roebuck, John R., Madison, Wis. Process and apparatus for heating by centrifugal compression. 2,451,873, Oct. 19.

Roher, Harrison, La Crescenta, Calif. Holder for individual stencils and the like. 2,451,775, Oct. 19.

Rosefield, John B., Piedmont, Calif. Ant feeder. 2,451,578, Oct. 19.

Rosenblum, Solomon, Princeton, N. J., assignor to Canadian Radium & Uranium Corporation, New York, N. Y. Indicating device. 2,451,979, Oct. 19.

Ross, William E.: *See*—
Rapean, John C., and Ross.

Rossier, John D.: *See*—
Brown, Davis, and Rossier.

Rothrock, Henry S.: *See*—
Cupery, Martin E., and Rothrock.

Routson, Willis G., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Corrosion inhibiting composition. 2,451,874, Oct. 19.

Rowe, Raymond N., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Clamp for electric fuses, etc. 2,452,019, Oct. 19.

Ruddy, E. L., Company, Limited, assignee: *See*—
Denning, Stephen.

Rush, Leo E., West Lafayette, Ind., assignor to Gasoteria Corporation, Buffalo, N. Y. Predetermined stop dispensing mechanism of coin and manual controlled type. 2,451,776, Oct. 19.

Ryder, Charles D., Covington, assignor to The Grote Manufacturing Company, Bellevue, Ky. Traffic signaling device. 2,451,875, Oct. 19.

Salas, Miguel, Chihuahua, Mexico. Combination jack and concrete form. 2,451,777, Oct. 19.

Salisbury, Leroy F.: *See*—
Coffman, Donald D., and Salisbury.

Salisbury, Winfield W., Arlington, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy. Radio-frequency joint. 2,451,876, Oct. 19.

Salomon, Francois M. M. B., Paris, France; vested in the Attorney General of the United States of America. Oscillation reducing device. 2,451,513, Oct. 19.

Sambur, William, Jamaica, N. Y. Thermotemporal responsive device. 2,451,778, Oct. 19.

Samons, Starlin B., Sr., River Rouge, Mich. Artificial limb. 2,451,980, Oct. 19.

Samuelson, Wallace H. E., Weehawken, N. J., assignor, by mesne assignments, to Reeves Hoffman Corporation, Carlisle, Pa. Manufacturing oscillator plates. 2,451,877, Oct. 19.

Savage, Leon E.: *See*—
Krajci, Samuel, and Savage.

Savercool, John D., Cranford, N. J. Sanding nozzle. 2,451,878, Oct. 19.

Schade, Frank Stanley, assignor to National Blank Book Company, Holyoke, Mass. Easel book construction for ring books or loose-leaf binders. 2,451,694, Oct. 19.

Scharmann, Walter G., Westfield, N. J., assignor to Standard Oil Development Company. Hydrocarbon synthesis. 2,451,879, Oct. 19.

Schermuly, Alfred J.: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Charles: *See*—
Schermuly, Conrad D., A. J., and C.

Schermuly, Conrad D., A. J., and C., Parkgate, Newdigate, England. Rocket and the like. 2,451,981, Oct. 19.

Schetty, Guido, assignor to J. R. Geigy A.-G., Basel, Switzerland. 4-halogenomethyl-1:8-naphthsultones and a process for their manufacture. 2,451,579, Oct. 19.

Schlosser, Paul H., and K. R. Gray, assignors to Rayonier Incorporated, Shelton, Wash. Chemically treated wood pulp and producing a cellulosic product. 2,451,558, Oct. 19.

Schlumberger Well Surveying Corporation, assignee: *See*—
Blanchard, André.

Schmerling, Louis: *See*—
Linn, Carl B., and Schmerling.

Schratt, Frank A., Cincinnati, Ohio. Apparatus for treating tubular bodies. 2,451,635, Oct. 19.

Schreiber, Richard S., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyamides of high birefringence and obtaining same. 2,451,695, Oct. 19.

Schwinger, Abram, Philadelphia, Pa. Combined fluorescent and filament lamp reflector unit. 2,451,580, Oct. 19.

Scott, Eben L., Mission, Kans. Electrical plug and socket. 2,451,982, Oct. 19.

Scovill Manufacturing Company, assignee: *See*—
Huelster, Otto J.

Seamless Rubber Company, The, assignee: *See*—
O'Brien, William J.

Seckel, Wallace H., assignor to The Perfection Steel Body Company, Galion, Ohio. Cargo carrying vehicle body. 2,451,880, Oct. 19.

Selvidge, Harner: *See*—
Quackenbush, Edward C., and Selvidge.

Seward, Edgar C., Arlington, Va., and Frank Walcutt, Queens Village, L. I., N. Y. Fluid actuated piston distributing valve with fluid actuated piston pilot valve for expansible chamber motors. 2,451,983, Oct. 19.

Shapiro, Samuel G., Philadelphia, Pa. Fur curling device. 2,451,984, Oct. 19.

Shaw, Elgin L.: *See*—
Donnell, Lloyd H., and Shaw.

Shaw and Slavsky, Inc., assignee: *See*—
Slavsky, Robert J. and J. R.

Shell Development Company, assignee: *See*—
Fetterly, Lloyd C.
Hearne, George W., and Adams.
McLamore, William M.
Rapean, John C., and Ross.
Routson, Willis G.
White, Ellis R., and Harman.

Sherman, H. B., Manufacturing Co., assignee: *See*—
Doerr, Raymond and K.

Shoe Form Co. Inc., assignee: *See*—
De Witt, William J., and Corbett.

Short, Wallace F., and P. Oxley, assignors to Boots Pure Drug Company, Limited, Nottingham, England. Manufacture of amidines. 2,451,779, Oct. 19.

Sides, Harold I., assignor of one-half to Raymond M. Sides, Chicago, Ill. Auxiliary shelf for carts. 2,451,985, Oct. 19.

Sides, Raymond M., assignee: *See*—
Sides, Harold I.

Sieg, James E., United States Coast Guard. Compensator for guns. 2,451,514, Oct. 19.

Siegel, Morris H., and F. Sonin, New York, N. Y. Apparatus for forming fur filled yarn. 2,451,881, Oct. 19.

Simon, Constance A., assignee: *See*—
Simon, Justin, and Temko.

Simon, Justin, Brooklyn, and R. S. Temko, New York, said Temko assignor to C. A. Simon, Woodmere, N. Y. Cigarette lighter. 2,451,515, Oct. 19.

Siska, John G.: *See*—
Kreisler, Leslie, and Siska.

Siska, John G., North Cresskill, assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J. Flexible mesh bracelet and manufacture. 2,451,780, Oct. 19.

Skinner, Leslie A.: *See*—
Uhl, Edward G., and Skinner.

Skobel, Max, Eatontown, N. J., assignor to the United States of America, as represented by the Secretary of War. Seal terminal. 2,451,516, Oct. 19.

Slaughter, Charles E., New Canaan, assignor to Extruded Plastics, Inc., Norwalk, Conn. Thermoplastic extrusion method. 2,451,986, Oct. 19.

Slavsky, John R.: *See*—
Slavsky, Robert J. and J. R.

Slavsky, Robert J. and J. R., assignors to Shaw and Slavsky, Inc., Detroit, Mich. Price tag molding having a slide held tag and a transparent cover strip. 2,451,581, Oct. 19.

Sloan, David H., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electronic tube for ultra high frequencies. 2,451,987, Oct. 19.

Smart, David Lorimer, Stafford, assignor to The English Electric Company Limited, London, England. Electric discharge device. 2,451,988, Oct. 19.

Smedberg, Sam, assignee, et al.: *See*—
Nelson, Noble A.

Smith, Charles G., Medford, assignor to Raytheon Manufacturing Company, Newton, Mass. High-frequency electron discharge device of the triode type. 2,451,517, Oct. 19.

Smith, Edward P., assignor to The Ohio Brass Company, Mansfield, Ohio. Motor reversing control system for valves. 2,451,989, Oct. 19.

Smith, Ernest L.: *See*—
Mead, Thomas H., Stack, and Smith.

Smith, Herbert C., Los Angeles, Calif., assignor to American Rock Wool Corp., Wabash, Ind. Apparatus for producing mineral wool. 2,451,582, Oct. 19.

Smith, Walter C. J., Regina, Saskatchewan, Canada. Liquid proportioning gauge or indicator. 2,451,882, Oct. 19.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Crowley, John A., Jr.
Gorin, Everett.
Middleton, Julius B.
Squires, Rodney M.
Stevens, Nelson P., and Squires.

Solomon, Theodore, New York, N. Y. Picture holder. 2,451,583, Oct. 19.

Sonin, Frances: *See*—
Siegel, Morris H., and Sonin.

Sopcak, Michael J., Midland, Mich. Screw holding screw driver. 2,451,696, Oct. 19.

Speicher, Merle, St. Louis, Mo. Undergarment. 2,451,697, Oct. 19.

Spiller, William R., Dayton, assignor to Harris-Seybold Company, Cleveland, Ohio. Cutting machine. 2,451,636, Oct. 19.

Sport Products, Inc., assignee: *See*—
Goldsmith, Hugo.

Sprecker, Alfred L.: *See*—
Watson, Thomas J., and Sprecker.

Springfield Wire and Tinsel Company, assignee: *See*—
Hennessy, Daniel E.

Squires, Rodney M.: *See*—
Stevens, Nelson P., and Squires.

Squires, Rodney M., Alice, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Geophysical prospecting. 2,451,883, Oct. 19.

Stack, Maurice V.: *See*—
Mead, Thomas H., Stack, and Smith.

Standard Oil Company, assignee: *See*—
Burk, Robert E., and Hughes.
Hengstebeck, Robert J., and McDaniel.
Watson, Roger W.

Standard Oil Development Company, assignee: *See*—
Campbell, Donald L., Martin, Murphree, and Tyson.
Campbell, Donald L., Martin, and Tyson.
Frosch, Alex.
Nash, Cleve C., Jr.
Richardson, Roger W., and Pierce.
Scharmann, Walter G.
Wilson, Glenn W., Jr.

Standard Register Company, The, assignee: *See*—
Bickel, Bruce T.

Stauffer, Howard G.: *See*—
Moellenbeck, Arthur J., and Stauffer.

Steadman, Albert: *See*—
Tidik, Stephen, and Steadman.

Steahly, George W.: *See*—
Zienty, Ferdinand B., and Steahly.

Steele, Doty M., Los Angeles, Calif. Power-driven surfboard. 2,451,781, Oct. 19.

Stelzer, Otto E., South Bend, Ind. Bar mounting fixture. 2,451,884, Oct. 19.

Stevens, Herbert C. M., assignor to Avimo Limited, Taunton, England. Camera film gate threading mechanism. 2,451,782, Oct. 19.

Stevens, Nelson P., Dallas, and R. M. Squires, Alice, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Geochemical prospecting. 2,451,885, Oct. 19.

Stewart-Warner Corporation, assignee: *See*—
Leslie, John H., II, and Crosby.
Marshall, William A., Jr.
Marshall, William A., Jr., and Leslie.
McCollum, Henry J. De N.
Williams, Lynn A., Jr.

Stimson, Allen G., Lynnfield, Mass., assignor to General Electric Company. Electrical measuring instrument. 2,451,886, Oct. 19.

Stodola, Edwin K.: *See*—
Lisman, Henry, and Stodola.

Stone, Fred B., Haddon Heights, N. J., assignor to Radio Corporation of America. Signal receiver tuning indicator. 2,451,584, Oct. 19.

Storm, Herbert F., and E. W. Hutton, Schenectady, N. Y., assignors to General Electric Company. Keying control system for oscillators. 2,451,887, Oct. 19.

Strain, William H., Rochester, N. Y., and J. Dec, Martinsville, N. J., assignors to Eastman Kodak Company, Rochester, N. Y. N (β-hydroxy ethyl)-tetraiodophthalimide. 2,451,637, Oct. 19.

Straits, Lloyd A.: *See*—
Craig, Edward C., and Straits.

Straw, Clayton, Henniker, assignor to Kingsbury & Davis Machine Company, Contoocook, N. H. Box stacker. 2,452,020, Oct. 19.

Streff, Joseph M., Topeka, Kans. Toy ferris wheel. 2,451,585, Oct. 19.

Strickland, Harold A., Jr., Grosse Pointe Park, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio. Multiple furnace control. 2,451,518, Oct. 19.

Strid, Carl J., La Canada, Calif., assignor to Adel Precision Products Corp. Valve. 2,451,586, Oct. 19.

Studebaker Corporation, The, assignee: *See*—
Greenlee, Harry R.

Studler, René R., Washington, D. C. Cartridge belt link. 2,451,519, Oct. 19.

Submarine Signal Company, assignee: *See*—
Anderson, Albert E.

Sun Oil Company, assignee: *See*—
Barnes, William E.

Sutherland, Carl H., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Double electric motor driving means. 2,451,990, Oct. 19.

Suydam, Edward C., Los Angeles, Calif. Photographic plate and film holder. 2,451,638, Oct. 19.

Swanstrom, Klas A., Buckingham Township, Bucks County, Pa. Fastener. 2,451,991, Oct. 19.

Sweeney, Edward J., assignor to The Budd Company, Philadelphia, Pa. Making skin-and-frame assemblies. 2,451,783, Oct. 19.

Swinehart, Dean E., Ravenna, Ohio. Extension tongue. 2,451,698, Oct. 19.

Taylor, Edward H., Winnetka, assignor to Taylor Forge & Pipe Works, Cicero, Ill. Pipe end and joint. 2,451,587, Oct. 19.

Taylor Forge & Pipe Works, assignee: *See*—
Taylor, Edward H.

Taylor, Howard F.: *See*—
Myskowski, Edwin T., and Taylor.

Teclu, Theodore, Detroit, Mich. Grinding fixture. 2,451,588, Oct. 19.

Te Grotenhuis, Theodore A., Olmsted Falls, assignor to The General Tire & Rubber Company, Akron, Ohio. Apparatus for curing pneumatic tires. 2,451,992, Oct 19.

Telfor, Clarence F., St. Clair Shores, and C. Pallenberg, Detroit, Mich. Holding device. 2,451,993, Oct. 19.

Tellander, Frederic, Jr., Sheldon, assignor to V. O. Lothman, Evanston, Ill. Calculator mechanism. 2,451,784, Oct. 19.

Tellier, Andre, New York, N. Y. Setting means for world clocks. 2,451,639, Oct. 19.

Temko, Richard S.: *See*—
Simon, Justin, and Temko.

Temple University, assignee: *See*—
Plungian, Mikhail B.

Tenaplas Limited, assignee: *See*—
Lemon, Cecil G.

Tennessee Coal, Iron and Railroad Company, assignee: *See*—
Rodgers, Howard C.

Teplitz, Abraham J., Oakmont, assignor to Gulf Research & Development Company, Pittsburgh, Pa. Completing wells. 2,451,520, Oct. 19.

Terry, Donald M.: *See*—
Edson, James O., and Terry.

Thalner, Robert R., Princeton, N. J., assignor to Radio Corporation of America. Control system. 2,451,640, Oct. 19.

Thau, Marcus, New York, assignor to Lacquer & Chemical Corporation, Brooklyn, N. Y. Making a lacquer enamel. 2,451,785, Oct. 19.

Therapeutic Research Corporation of Great Britain, Limited, assignee: *See*—
Mead, Thomas H., Stack, and Smith.

Thomas, George E., Bogalusa, La. Lawn mowing machine. 2,451,589, Oct. 19.

Thompson, Elmer B., assignor to Globe Hoist Company, Des Moines, Iowa. Piston oil seal and wiper assembly. 2,451,888, Oct. 19.

Thomson, Alex, administrator: *See*—
White, Sidney Y.

Tidik, Stephen, Passaic, and A. Steadman, Upper Montclair, assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Forming a luminescent screen. 2,451,590, Oct. 19.

Tinnerman, George A., and L. H. Flora, assignors to Tinnerman Products, Inc., Cleveland, Ohio. Fastening device. 2,451,591, Oct. 19.
Tinnerman Products, Inc., assignee: *See*—
Tinnerman, George A., and Flora.
Toone, Ralph N., Wollaton Park, Nottingham, England. Thread tensioning device. 2,451,889, Oct. 19.
Torkelson, Torkel E.: *See*—
Weingart, Richard I. N., and Torkelson.
Torsch, Charles E., Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America. Power conservation system. 2,451,641, Oct. 19.
Towmotor Corporation, assignee: *See*—
Weaver, Elverton W.
Towne, Edmund B.: *See*—
Dickey, Joseph B., and Towne.
Towns, John E., Milwaukee, Wis. Splinter remover. 2,451,994, Oct. 19.
Truesdale, Eddie P., Orangeburg, S. C. Lamp for hospital beds. 2,451,995, Oct. 19.
Trumbull Electric Manufacturing Company, The, assignee: *See*—
Rowe, Raymond N.
Tull, William A.: *See*—
Binash, Albert H., and Tull, and Gautney.
Twaroski, Stanley E., Los Angeles, Calif. Support. 2,451,699, Oct. 19.
Tyrer, Daniel, Stockton-on-Tees, England. Manufacture of phenols or salts thereof. 2,451,996, Oct. 19.
Tyson, Charles W.: *See*—
Campbell, Donald L., Martin, Murphree, and Tyson.
Campbell, Donald L., Martin, and Tyson.
Ufnowski, Waclaw, Warsaw, Poland. Collection of gases from artificial silk and the like. 2,451,890, Oct. 19.
Uglum, Alfred H., Waterville, Iowa. Magazine loader. 2,451,521, Oct. 19.
Uhl, Edward G., Elizabeth, N. J., and L. A. Skinner, Washington, D. C., assignors to the United States of America as represented by the Secretary of War. Rocket projector. 2,451,522, Oct. 19.
Undy, Gustav E., Detroit, assignor, by mesne assignments, to Weltronic Company, Oakland County, Mich. Electronic timing control system. 2,451,997, Oct. 19.
United Aircraft Corporation, assignee: *See*—
Dissel, Theodore A., and Newell.
Doman, Glidden S.
United-Carr Fastener Corporation, assignee: *See*—
Churchill, Wilmer H.
United Shoe Machinery Corporation, assignee: *See*—
Barker, William A., and Clarke.
Knowlton, Cutler D. and E.
Lyness, Horatio S.
United States Atomic Energy Commission, United States of America as represented by the, assignee: *See*—
Ingram, Curtis S.
United States Rubber Company, assignee: *See*—
Clarkson, Robert J.
Universal Oil Products Company, assignee: *See*—
Linn, Carl B.
Linn, Carl B., and Schmerling.
Usines Tornos Fabrique de Machines Moutier S. A., assignee: *See*—
Megel, Guillaume E., and Mancia.
Vagim, Edward J., Fresno, Calif. Control circuit for automatic weighing machines. 2,451,891, Oct. 19.
Van Brocklin, Charles S., Portsmouth, N. H. Tool. 2,451,892, Oct. 19.
Van der Willigen, Paul C.: *See*—
Bienfait, Henri, and van der Willigen.
Van Hartesveldt, Carroll H., Rosemont, assignor to The Atlantic Refining Company, Philadelphia, Pa. Determining the rust-preventing properties of lubricants. 2,451,592, Oct. 19.
Van Lanen, James M.: *See*—
Le Mense, Elmer H., and Van Lanen.
Van Ryan, Anthony: *See*—
Kyle, William D., Jr., and Van Ryan.
Van Trine, Leona T., assignee, et al.: *See*—
Van Trine, Ralph.
Van Trine, Ralph, assignor of thirty per cent to L. T. Van Trine and thirty per cent to M. V. Davis, Durham, N. C. Companion clutch and brake pedal for automobiles and the like. 2,451,700, Oct. 19.
Viall, George K.: *See*—
Hilkemeier, Louis G., and Viall.
Vibraseal Corporation, assignee: *See*—
Wiltse, Sumner.
Villers-Allerand, Raymond, assignee: *See*—
Mercier, Pierre E., and Villers-Allerand.
Villiger, Eugen, and E. Benninger, assignors to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland. Multitubular heat exchanger. 2,451,786, Oct. 19.
Vincent, John R., Newport, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymerization of chloroprene. 2,451,787, Oct. 19.
Vornado Trust, The, assignee: *See*—
Odor, Ralph K.
Wagner, William, Brooklyn, N. Y. Terminal replacement for sealed refrigeration units. 2,451,701, Oct. 19.
Wahl, Albert G., Los Angeles, Calif. Garment hanger. 2,451,788, Oct. 19.
Wahlberg, Eric C., and R. C. Lampe, Stamford, Conn., assignors to Electrolux Corporation, New York, N. Y. Ball-bearing worm gear. 2,451,998, Oct. 19.
Walb, Thomas A., Philadelphia, Pa. Corrosion inhibitor. 2,451,523, Oct. 19.
Walcutt, Frank: *See*—
Seward, Edgar C., and Walcutt.
Walker, Brooks, Piedmont, Calif. Range adapter for mortars. 2,451,524, Oct. 19.
Walker, Kenneth E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydraulic fluids. 2,451,999, Oct. 19.
Wallace, Charles F., Westfield, assignor to Wallace & Tiernan Products, Inc., Belleville, N. J. Vibratory armature electromagnetic motor. 2,451,789, Oct. 19.
Wallace & Tiernan Products, Inc., assignee: *See*—
Wallace, Charles F.
Wallerstein Company, Inc., assignee: *See*—
Wallerstein, James S., and Alba.
Wallerstein, James S., and R. T. Alba, assignors, by mesne assignments, to Wallerstein Company, Inc., New York, N. Y. Recovery of enzymes from aqueous solutions and product obtained thereby. 2,452,000, Oct. 19.
Wallman, Henry, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Stagger tuned amplifier. 2,451,893, Oct. 19.
Walls, Leslie P., Teddington, assignor to The Imperial Trust for the Encouragement of Scientific and Industrial Research, Westminster, England. Phenanthridinium compounds and making them. 2,452,001, Oct. 19.
Walper, Curry O., Kitchener, Ontario, Canada. Antisplash construction for footwear. 2,452,028, Oct. 19.
War, The United States of America as represented by the Secretary of, assignee: *See*—
Clark, James L.
Cooper, Eli G.
Guarrera, John J.
Haworth, Leland J.
Lisman, Henry, and Stodola.
Miller, Edward E.
Skobel, Max.
Uhl, Edward G., and Skinner.
Wallman, Henry.
Weiss, Paul A.
Ward, Altie C., Pacific Palisades, Calif. Portable electric cleaner and scraping tool. 2,452,002, Oct. 19.
Ward, Leonard, Electric Company, assignee: *See*—
Cohen, Arthur M.
Washington, George, Jr., Morristown, N. J. Suction gun. 2,451,593, Oct. 19.
Wasserman, David: *See*—
Keil, Harry, Dawson, and Wasserman.
Watrous, Ward W., Jr.: *See*—
Zambakian, Irving, and Watrous.
Watson, Glenn W., Detroit, Mich. Electronic steam generator. 2,451,594, Oct. 19.
Watson, Roger W., assignor to Standard Oil Company, Chicago, Ill. Viscous mineral oil compositions. 2,451,642, Oct. 19.
Watson, Thomas J., New Canaan, Conn., and A. L. Sprecker, Freeport, assignors to International Business Machines Corporation, New York, N. Y. Register-controlled time recorder. 2,451,790, Oct. 19.
Wayne, Truman B., Houston, Tex. Treatment of drilling fluids. 2,452,021, Oct. 19.
Weaver, Elverton W., Cleveland Heights, assignor to Towmotor Corporation, Cleveland, Ohio. Universal joint. 2,451,791, Oct. 19.
Webb, Christopher F., London, S. W. 1., England, assignor, by mesne assignments, to General Register Corporation, Long Island City, N. Y. Totalizator counter. 2,451,525, Oct. 19.
Weber, Arthur G., Wilmington, and C. H. Hamblet, Gordon Heights, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of zinc propionate. 2,452,003, Oct. 19.
Weber, William: *See*—
Wolff, Robert L., and Weber.
Webster, Robert H.: *See*—
Egger, Charles J., and Webster.
Weddington, Harry F., Salisbury, N. C. Warp stop motion drop wire. 2,452,004, Oct. 19.
Weed, Hollis K., Blakeley Island, Ala. Steel reinforced tire. 2,451,894, Oct. 19.
Weigand, Frank G., Mount Carmel, Ill. Pipe clamp. 2,451,702, Oct. 19.
Weingart, Richard I. N., Glen Head, and T. E. Torkelson, Baldwin, assignors to General Register Corporation, Long Island City, N. Y. Ticket machine. 2,452,022, Oct. 19.
Weiss, Paul A., Chicago, Ill., assignor to the United States of America as represented by the Secretary of War. Resilient tantalum tubes and making same. 2,451,703, Oct. 19.
Weiss, Saul, Washington, D. C. Firing mechanism. 2,451,526, Oct. 19.
Weltman, William C., Wilkinsburg, Pa., and T. F. Dixon, Pasadena, Calif., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Coating with synthetic resin containing an accelerator, and resin compositions. 2,452,005, Oct. 19.
Weltronic Company, assignee: *See*—
Undy, Gustav E.

Werner, Mack M., Brooklyn, N. Y. Ointment applicator. 2,452,006, Oct. 19.
Western Electric Company, Incorporated, assignee: *See*—
Rayburn, Vincent A., and Robson.
Westinghouse Electric Corporation, assignee: *See*—
Auburn, Basil J.
Bobe, Stanley A.
Bock, Ashley P.
Cook, Willard G.
Dickerson, Paul M.
Foster, Newton C.

Sutherland, Carl H.
Weltman, William C., and Dixon.
Weybrew, Thelbert L.
Woodward, Foster R.
Zambakian, Irving, and Watrous.
Weybrew, Thelbert L., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Thermostatic regulation for engine cooling. 2,452,007, Oct. 19.
Wheeler, Floyd, Huntington Beach, Calif. Carpenter's layout wheel. 2,451,595, Oct. 19.
Wheeler, Harold A., Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Unitary balanced-inductor system. 2,451,596, Oct. 19.
Wheeler, William R., Plainfield, N. J., assignor to Bakelite Corporation. Annealing of calendered thermoplastic material. 2,451,597, Oct. 19.
White, Ellis R., Berkeley, and D. Harman, Albany, assignors to Shell Development Company, San Francisco, Calif. Synthetic grease. 2,451,895, Oct. 19.
White, Sidney Y., Wilmette, assignor to V. S. Johnson, Chicago, Ill.; A. Thomson, administrator of said V. S. Johnson, deceased. Variable inductance tuner. 2,451,643, Oct. 19.
Wickwire, Arthur M., Mountain Lakes, N. J., and H. J. Zimmermann, Canton, Ohio., assignors, by mesne assignments, to Automatic Steel Products, Inc. Mercury clutch. 2,452,008, Oct. 19.
Wico Electric Company, assignee: *See*—
Harmon, Kenneth A.
Wild, Rudolf F., assignor to The Brown Instrument Company, Philadelphia, Pa. Safe failure measuring and controlling apparatus. 2,452,023, Oct. 19.
Williams, Lynn A., Jr., Northfield, assignor to Stewart-Warner Corporation, Chicago, Ill. Combustion air flow responsive carbureting apparatus. 2,451,459, Oct. 19.
Wilson, Glenn W., Jr., Goose Creek, Tex., assignor to Standard Oil Development Company. Distillation of butane containing high boiling contaminants. 2,451,896, Oct. 19.
Wilson, William F., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Double engine transmission. 2,451,598, Oct. 19.
Wilson, William S., Brookline, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Preparation of aluminum sulfate. 2,452,024, Oct. 19.
Wiltse, Sumner, assignor to Vibraseal Corporation, Detroit, Mich. Closure assembly. 2,451,599, Oct. 19.
Wingfoot Corporation, assignee: *See*—
Braden, Vally N.
Donnell, Lloyd H., and Shaw.
Flory, Paul J.
Purdy, John F.
Winton, Lewis B., Greenwich, Conn., assignor to Jerguson Gage & Valve Company, Somerville, Mass. Manometer. 2,451,460, Oct. 19.
Wise, Herman J., assignor to Electronic Laboratories, Incorporated, Indianapolis, Ind. Vibratory circuit converter. 2,451,461, Oct. 19.
Wolff, Robert L., and W. Weber, assignors to Globe-Union Inc., Milwaukee, Wis. Multiple switch interlock. 2,451,602, Oct. 19.
Wood, Geoffrey H., Toronto, Ontario, Canada. Container. 2,451,644, Oct. 19.
Wood, Howard L., Oskaloosa, Iowa. Liquid level gauge. 2,451,704, Oct. 19.
Woodcock, Charles H., assignor to The Atlantic Refining Company, Philadelphia, Pa. Tube gauge. 2,451,600, Oct. 19.
Woodward, Eric R., New York, N. Y., assignor to Mathieson Chemical Corporation. Treating shrimp. 2,451,897, Oct. 19.
Woodward, Foster R., Pleasant Ridge, Mich., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Welding apparatus. 2,452,009, Oct. 19.
Woodward, Foster R., Pleasant Ridge, Mich., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Welding apparatus. 2,452,010, Oct. 19.
Woolley, Lee A., assignor to Kingston Products Corporation, Kokomo, Ind. Skate construction. 2,451,601, Oct. 19.
Worthington Pump and Machinery Corporation, assignee: *See*—
Burrus, Paul B., and Leinberger
Wyman, John H., Morristown, assignor to Electrical Industries, Inc., Newark, N. J. Electronic control system. 2,451,898, Oct. 19.
Yeomans, Lucien I., and D. Clausen, assignors to Lucien I. Yeomans, Inc., Chicago, Ill. Table drive mechanism. 2,451,899, Oct. 19.
Yeomans, Lucien I., Inc., assignee: *See*—
Yeomans, Lucien I., and Clausen.
Yglesias-Paz, Adolfo Raul, Guatemala City, Guatemala. Drying apparatus for coffee beans or the like, comprising a movable agitator and gas circulating means. 2,451,462, Oct. 19.
Young, Arthur E., and K. D. Bacon, assignors to The Dow Chemical Company, Midland, Mich. Hot-melt coating composition. 2,451,792, Oct. 19.
Zambakian, Irving, Bloomfield, and W. W. Watrous, Jr., Chatham, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical discharge device and base. 2,451,900, Oct. 19.
Zienty, Ferdinand B., and G. W. Steahly, assignors to Monsanto Chemical Company, St. Louis, Mo. Fungicidal and bactericidal compositions containing 1-(4'-isopropylbenzyl)-piperazine. 2,451,645, Oct. 19.
Zimmermann, Hans J.: *See*—
Wickwire, Arthur M., and Zimmermann.
Zimmermann, Waldemar E., Los Angeles, Calif. Tool for cutting insulation and stripping it from wires. 2,451,463, Oct. 19.
Zippel, Hyman M., Philadelphia, Pa. Hand weaving device. 2,452,011, Oct. 19.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 19TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Cleaning apparatus, cotton. E. H. Brooks, assignor to Continental Gin Company. Re. 23,044, Oct. 19.
Window construction. E. Feremi and L. Toth, assignors, by mesne assignments, to Reconstruction Finance Corporation. Re. 23,045, Oct. 19.

LIST OF DESIGN INVENTIONS

Air filter. N. H. F. Olsen. 151,464, Oct. 19.
Boat, Collapsible utility. T. A. Potts and H. V. Waskiewicz. 151,467, Oct. 19.
Box. C. F. Cruze and R. H. Killoran. 151,433, Oct. 19.
Bottle. J. B. Mayfield. 151,460, Oct. 19.
Bracelet or similar article. A. Katz. 151,454, Oct. 19.
Bracelet or similar article. A. Phillippe. 151,465, Oct. 19.
Case, Spectacle. G. Swikart. 151,477, Oct. 19.
Casing, Microfilm-reader. N. S. Stern. 151,474, Oct. 19.
Coaster and ash tray, Combined. W. E. Jenkins. 151,449, Oct. 19.
Comb, Hair. A. Bresn. 151,427, Oct. 19.
Cooker, Pressure. E. W. La Barre. 151,458, Oct. 19.
Cuff link or similar article. I. M. Lang. 151,459, Oct. 19.
Decorative unit or the like, Counter. H. A. Bahr. 151,424, Oct. 19.
Desk. J. Barofsky. 151,425, Oct. 19.
Display stand for watch bracelets and bands. C. A. Mealy. 151,462, Oct. 19.
Display stand or similar article. R. Epstein. 151,435, Oct. 19.
Door knocker. E. T. Fraim, II. 151,443, Oct. 19.
Feeder, Animal. R. C. Stahler. 151,473, Oct. 19.
Figurine, Advertising. E. C. Bishop. 151,426, Oct. 19.
Frying pan. W. Hallgarth. 151,448, Oct. 19.
Glass or similar article, Lipped. B. Cooper, A. F. Hohmann, and A. Bach. 151,431, Oct. 19.
Handbag. L. E. Meadow. 151,461, Oct. 19.
Handbag or similar article. R. Ewing. 151,436–9, Oct. 19.
Heater casing or the like, Automobile. J. O. Reinecke. 151,469, Oct. 19.
Holder and support therefor, Adjustable vise-jaw. H. E. Clauss. 151,429, Oct. 19.
Holder and support therefor, Vise-jaw. H. E. Clauss. 151,428, Oct. 19.
Holder, Knife. J. V. Vevirit. 151,478, Oct. 19.
Iron, Electric. A. E. Ross. 151,470, Oct. 19.
Jacket. N. Finkelstein. 151,440–1, Oct. 19.
Jacket. H. Goldberg. 151,444, Oct. 19.
Jacket. J. F. Strassner. 151,475, Oct. 19.
Jewelry component. L. Schorr. 151,472, Oct. 19.
Kayak boat, Collapsible. T. A. Potts and H. V. Waskiewicz. 151,468, Oct. 19.
Kitchen and laundry unit, Combination. L. Keller. 151,455, Oct. 19.
Light box for viewing color transparencies. W. P. Way. 151,479, Oct. 19.
Necklace or similar article. A. Katz. 151,451–3, Oct. 19.
Necklace or similar article. A. Phillippe. 151,466, Oct. 19.
Regulator, Gas. T. A. St. Clair and W. R. Eddy. 151,471, Oct. 19.
Rig for bass, Belskin. J. Williamowicz. 151,481, Oct. 19.
Server, Salad. A. C. Weiss. 151,480, Oct. 19.
Sharpener, Pencil. A. J. E. Kihlberg. 151,456, Oct. 19.
Sign, Illuminable. J. R. Fitzgerald and Z. S. Levine. 151,442, Oct. 19.
Slip. H. J. Greenberger. 151,446, Oct. 19.
Spoon or similar article of tableware. A. I. Meyer. 151,463, Oct. 19.
Spraying device or similar article, Paint. W. Johndrew. 151,450, Oct. 19.
Stand, Refreshment. C. F. and A. R. Krueger. 151,457, Oct. 19.
Suit. S. Cohen. 151,430, Oct. 19.
Toy aircraft or similar article. W. K. Crowder. 151,432, Oct. 19.
Toy figure. K. R. Eames. 151,434, Oct. 19.
Toy or similar article, Musical. J. Green. 151,445, Oct. 19.
Vase or similar article, Ceramic. A. L. Suman. 151,476, Oct. 19.
Viewer, Slide. P. H. Halbriter. 151,447, Oct. 19.
Wallpaper. B. B. Wilson. 151,482, Oct. 19.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 19TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive wheel with flexible resilient rim. M. E. Landau. 2,451,753, Oct. 19.
Accounting machine and typewriter, Combined. A. J. Moellenbeck and H. G. Stauffer. 2,451,631, Oct. 19.
Acetals, Production of. H. Heinemann. 2,451,949, Oct. 19.
Acrolein and ethylene by pyrolysis of dihydropyran. J. G. M. Bremner and D. G. Jones. 2,451,712, Oct. 19.
Adapter for mortars, Range. B. Walker. 2,451,524, Oct. 19.
Adhesive material. W. J. O'Brien. 2,451,865, Oct. 19.
Adjuster for friction elements, Automatic. L. E. La Brie. 2,451,562, Oct. 19.
Adjusting means for yoke arrangements. E. P. Kinne and F. H. Kayler. 2,452,015, Oct. 19.
Aiming and firing means, Gun. B. Darsie. 2,451,614, Oct. 19.
Aircraft heater with combustion air control. H. J. D. McCollum. 2,451,760, Oct. 19.
Air flow regulating valve. W. A. Marshall, Jr. 2,451,626, Oct. 19.
Airship. L. H. Donnel and E. L. Shaw. 2,451,815, Oct. 19.
Alcohol insoluble nitrogen substituted polyamides. H. W. Gray. 2,451,672, Oct. 19.
Aldehyde, Manufacture of an. H. Lindlar. 2,451,740, Oct. 19.
Aldehydes, Manufacture of. H. Lindlar. 2,451,742, Oct. 19.
Alkaline solution, Regenerating spent aqueous. L. C. Fetterly. 2,451,817, Oct. 19.
Alkylation process. J. B. Middleton. 2,452,018, Oct. 19.
Alkylation reactants, Mixing. J. B. Middleton. 2,452,017, Oct. 19.
Alloy: *See*—
Bearing alloy.
Alloy. H. M. German. 2,451,547, Oct. 19.
Alumina content of cryolite fusions, Enriching the. A. F. Johnson. 2,451,494, Oct. 19.
Alumina content of cryolite fusions in aluminum production, Enriching the. A. F. Johnson. 2,451,493, Oct. 19.
Alumina content of recirculated cryolite fusions in aluminum production, Enriching the. A. F. Johnson. 2,451,491, Oct. 19.
Aluminum, Production of. A. F. Johnson. 2,451,490, Oct. 19.
Aluminum sulfate, Preparation of. W. S. Wilson. 2,452,024, Oct. 19.
Amidines, Manufacture of. W. F. Short and P. Oxley. 2,451,779, Oct. 19.
Amplifier, Push-pull. L. J. Haworth. 2,451,827, Oct. 19.
Amplifier, Rotary. W. G. Cook. 2,451,921, Oct. 19.
Amplifier, Stagger tuned. H. Wallman. 2,451,893, Oct. 19.
Anchor. R. S. Danforth. 2,451,719, Oct. 19.
Anchor device, Vehicle. J. Buckley. 2,451,470, Oct. 19.
Annealing of calendered thermoplastic material. W. R. Wheeler. 2,451,597, Oct. 19.
Ant feeder. J. B. Rosefield. 2,451,578, Oct. 19.
Antiskid cross chain. W. A. Miller and R. E. Gerspacher. 2,451,761, Oct. 19.
Apparatus for balancing rotors. H. D. Oakley. 2,451,863, Oct. 19.
Apparatus for contacting solids with gaseous reactants. J. A. Crowley, Jr. 2,451,924, Oct. 19.
Apparatus for curing pneumatic tires. T. A. Te Grotenhuis. 2,451,992, Oct. 19.
Apparatus for exposing and processing photographic film. E. E. Garrett. 2,451,820, Oct. 19.
Apparatus for forming fur filled yarn. M. H. Siegel and F. Sonin. 2,451,881, Oct. 19.
Apparatus for measuring density of a thixotropic fluid. W. E. Barnes. 2,451,604–5, Oct. 19.
Apparatus for molding concrete walls. P. Y. K. Howat. 2,451,951, Oct. 19.
Apparatus for producing mineral wool. H. C. Smith. 2,451,582, Oct. 19.
Apparatus for producing pressure pulses in boreholes. A. Blanchard. 2,451,797, Oct. 19.
Apparatus for simulating radio range signals, Automatic magnetic. R. C. Dehmel. 2,451,927, Oct. 19.
Apparatus for textile fabrics, Setting. H. Richter. 2,451,978, Oct. 19.
Apparatus for treating tubular bodies. F. A. Schratt. 2,451,635, Oct. 19.
Applicator, Foot medication. H. L. Berman. 2,451,906, Oct. 19.
Applicator, Ointment. M. M. Werner. 2,452,006, Oct. 19.
Arbor, Bending ball. F. M. Check, Sr. 2,451,717, Oct. 19.
Arrangement for electric discharge devices, Starting. D. D. Hinman. 2,451,830, Oct. 19.
Asbestos, Coating. T. D. Callinan. 2,451,805, Oct. 19.
Attachment for knitting machines, Wrap stripe. C. S. Grove, Sr., J. V. McKinney, and S. Pittman. 2,451,673, Oct. 19.
Auro-thio-glycolic-acid-anilide and making the same. M. J. Lewenstein. 2,451,841, Oct. 19.
Baby bottle holder. B. M. Corrao. 2,451,718, Oct. 19.
Balanced-inductor system, Unitary. H. A. Wheeler. 2,451,596, Oct. 19.
Balancer for rotor blades, Dynamic. G. S. Doman. 2,451,541, Oct. 19.
Ball-bearing worm gear. E. C. Wahlberg and R. C. Lampe. 2,451,998, Oct. 19.
Base structure for electron discharge tubes. H. D. Madden and J. W. Greenbowe. 2,451,847, Oct. 19.
Bearing alloy. W. Betteridge and E. R. Gadd. 2,451,907, Oct. 19.
Bent-wire clothes hanger. L. Hayward. 2,451,552, Oct. 19.
Beta-allylamino propionitriles. W. M. McLamore. 2,451,852, Oct. 19.
Bicycle, Motor. E. A. Longenecker. 2,451,965, Oct. 19.
Blank advancing means. G. A. Anderson. 2,451,648, Oct. 19.
Block: *See*—
Building block.
Board: *See*—
Shampoo board.
Boat. P. E. Mercier and R. Villers-Allerand. 2,451,855, Oct. 19.
Boat, Collapsible. C. Ormond. 2,451,866, Oct. 19.
Bomb container for aircraft, Exterior. J. C. Darnall. 2,451,476, Oct. 19.
Bottleholder. R. A. Cox and L. D. Hartsfield. 2,451,923, Oct. 19.
Box stacker. C. Straw. 2,452,020, Oct. 19.
Bracelet and making same. L. Kreisler and J. G. Siska. 2,451,750, Oct. 19.
Bracelet and manufacture, Flexible mesh. J. G. Siska. 2,451,780, Oct. 19.
Bracelet or the like and making the same. L. Kreisler. 2,451,749, Oct. 19.
Bracing device for bombs on aircraft. R. M. Elder and J. J. Domoj. 2,451,481, Oct. 19.
Brake rotor, Cooled. W. H. Baselt. 2,451,709, Oct. 19.
Bridge structure for pH measurement device. E. D. Coleman. 2,451,663, Oct. 19.
Brush support. H. J. Dunn. 2,452,025, Oct. 19.
Brushing machine for leather, Continuous. C. D. Knowlton and D. Edgar. 2,451,561, Oct. 19.
Buffer, Railway car-end. H. J. Lounsbury. 2,451,569, Oct. 19.
Building block. J. N. Blackbourn. 2,451,657, Oct. 19.
Burner and control therefor, Multiple nozzle gun type oil. J. A. Logan. 2,451,964, Oct. 19.
Butane containing high boiling contaminants, Distillation of. G. W. Wilson, Jr. 2,451,896, Oct. 19.
Button sewing machine and sewing buttons. C. W. Johnson and J. A. Neumair. 2,451,495, Oct. 19.
Cabin pressure control means. G. L. Borell. 2,451,608, Oct. 19.
Calculator mechanism. F. Tellander, Jr. 2,451,784, Oct. 19.
Cam. P. B. Burrus and M. C. Leinberger. 2,451,802, Oct. 19.
Camera film gate threading mechanism. H. C. M. Stevens. 2,451,782, Oct. 19.
Capryl alcohol from methyl hexyl ketone by alkali treatment and distillation, Separation of. J. J. Miskel and B. A. Dombrow. 2,451,857, Oct. 19.
Carbonylic compounds, Production of unsaturated. G. W. Hearne and M. L. Adams. 2,451,485, Oct. 19.
Carbureting apparatus, Combustion air flow responsive. L. A. Williams, Jr. 2,451,459, Oct. 19.
Carburetor. N. G. La Guardia. 2,451,563, Oct. 19.
Carpenter's layout wheel. F. Wheeler. 2,451,595, Oct. 19.
Casing, Pistol grip motor. K. C. Atkin. 2,451,650, Oct. 19.
Cast polymerization. N. C. Foster. 2,451,935, Oct. 19.
Catalytic conversion process. R. J. Hengstebeck and R. S. McDaniel. 2,451,619, Oct. 19.
Catch. E. M. Borchers. 2,451,798, Oct. 19.
Cathode-ray signal utilizing means. K. E. Gould and P. Mertz. 2,451,484, Oct. 19.
Centering device. T. J. Davis. 2,451,720, Oct. 19.
Cereals, Mashing. E. C. Pattee. 2,451,510, Oct. 19.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 19TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Cleaning apparatus, cotton. E. H. Brooks, assignor to Continental Gin Company. Re. 23,044, Oct. 19.
Window construction. E. Peremi and L. Toth, assignors, by mesne assignments, to Reconstruction Finance Corporation. Re. 23,045, Oct. 19.

LIST OF DESIGN INVENTIONS

Air filter. N. H. F. Olsen. 151,464, Oct. 19.
Boat, Collapsible utility. T. A. Potts and H. V. Waskiewicz. 151,467, Oct. 19.
Box. C. F. Cruze and R. H. Killoran. 151,433, Oct. 19.
Bottle. J. B. Mayfield. 151,460, Oct. 19.
Bracelet or similar article. A. Katz. 151,454, Oct. 19.
Bracelet or similar article. A. Phillippe. 151,465, Oct. 19.
Case, Spectacle. G. Swikart. 151,477, Oct. 19.
Casing, Microfilm-reader. N. S. Stern. 151,474, Oct. 19.
Coaster and ash tray, Combined. W. E. Jenkins. 151,449, Oct. 19.
Comb, Hair. A. Bresn. 151,427, Oct. 19.
Cooker, Pressure. E. W. La Barre. 151,458, Oct. 19.
Cuff link or similar article. I. M. Lang. 151,459, Oct. 19.
Decorative unit or the like, Counter. H. A. Bahr. 151,424, Oct. 19.
Desk. J. Barofsky. 151,425, Oct. 19.
Display stand for watch bracelets and bands. C. A. Mealy. 151,462, Oct. 19.
Display stand or similar article. R. Epstein. 151,435, Oct. 19.
Door knocker. E. T. Fraim, II. 151,443, Oct. 19.
Feeder, Animal. R. C. Stahler. 151,473, Oct. 19.
Figurine, Advertising. E. C. Bishop. 151,426, Oct. 19.
Frying pan. W. Hallgarth. 151,448, Oct. 19.
Glass or similar article, Lipped. B. Cooper. A. F. Hohmann, and A. Bach. 151,431, Oct. 19.
Handbag. L. E. Meadow. 151,461, Oct. 19.
Handbag or similar article. R. Ewing. 151,436–9, Oct. 19.
Heater casing or the like, Automobile. J. O. Reinecke. 151,469, Oct. 19.
Holder and support therefor, Adjustable vise-jaw. H. E. Clauss. 151,429, Oct. 19.
Holder and support therefor, Vise-jaw. H. E. Clauss. 151,428, Oct. 19.
Holder, Knife. J. V. Vevirit. 151,478, Oct. 19.
Iron, Electric. A. E. Ross. 151,470, Oct. 19.
Jacket. N. Finkelstein. 151,440–1, Oct. 19.
Jacket. H. Goldberg. 151,444, Oct. 19.
Jacket. J. F. Strassner. 151,475, Oct. 19.
Jewelry component. L. Schorr. 151,472, Oct. 19.
Kayak boat, Collapsible. T. A. Potts and H. V. Waskiewicz. 151,468, Oct. 19.
Kitchen and laundry unit, Combination. L. Keller. 151,455, Oct. 19.
Light box for viewing color transparencies. W. P. Way. 151,479, Oct. 19.
Necklace or similar article. A. Katz. 151,451–3, Oct. 19.
Necklace or similar article. A. Phillippe. 151,466, Oct. 19.
Regulator, Gas. T. A. St. Clair and W. R. Eddy. 151,471, Oct. 19.
Rig for bass, Eelskin. J. Williamowicz. 151,481, Oct. 19.
Server, Salad. A. C. Weiss. 151,480, Oct. 19.
Sharpener, Pencil. A. J. E. Kihlberg. 151,456, Oct. 19.
Sign, Illuminable. J. R. Fitzgerald and Z. S. Levine. 151,442, Oct. 19.
Slip. H. J. Greenberger. 151,446, Oct. 19.
Spoon or similar article of tableware. A. I. Meyer. 151,463, Oct. 19.
Spraying device or similar article, Paint. W. Johndrew. 151,450, Oct. 19.
Stand, Refreshment. C. F. and A. R. Krueger. 151,457, Oct. 19.
Suit. S. Cohen. 151,430, Oct. 19.
Toy aircraft or similar article. W. K. Crowder. 151,432, Oct. 19.
Toy figure. K. R. Eames. 151,434, Oct. 19.
Toy or similar article, Musical. J. Green. 151,445, Oct. 19.
Vase or similar article, Ceramic. A. L. Suman. 151,476, Oct. 19.
Viewer, Slide. P. H. Halbriter. 151,447, Oct. 19.
Wallpaper. B. B. Wilson. 151,482, Oct. 19.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 19TH DAY OF OCTOBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive wheel with flexible resilient rim. M. E. Landau. 2,451,753, Oct. 19.
Accounting machine and typewriter, Combined. A. J. Moellenbeck and H. G. Stauffer. 2,451,631, Oct. 19.
Acetals, Production of. H. Heinemann. 2,451,949, Oct. 19.
Acrolein and ethylene by pyrolysis of dihydropyran. J. G. M. Bremner and D. G. Jones. 2,451,712, Oct. 19.
Adapter for mortars, Range. B. Walker. 2,451,524, Oct. 19.
Adhesive material. W. J. O'Brien. 2,451,865, Oct. 19.
Adjuster for friction elements, Automatic. L. E. La Brie. 2,451,562, Oct. 19.
Adjusting means for yoke arrangements. E. P. Kinne and F. H. Kayler. 2,452,015, Oct. 19.
Aiming and firing means, Gun. B. Darsie. 2,451,614, Oct. 19.
Aircraft heater with combustion air control. H. J. D. McCollum. 2,451,760, Oct. 19.
Air flow regulating valve. W. A. Marshall, Jr. 2,451,626, Oct. 19.
Airship. L. H. Donnel and E. L. Shaw. 2,451,815, Oct. 19.
Alcohol insoluble nitrogen substituted polyamides. H. W. Gray. 2,451,672, Oct. 19.
Aldehyde, Manufacture of an. H. Lindlar. 2,451,740, Oct. 19.
Aldehydes, Manufacture of. H. Lindlar. 2,451,742, Oct. 19.
Alkaline solution, Regenerating spent aqueous. L. C. Fetterly. 2,451,817, Oct. 19.
Alkylation process. J. B. Middleton. 2,452,018, Oct. 19.
Alkylation reactants, Mixing. J. B. Middleton. 2,452,017, Oct. 19.
Alloy: *See*—
Bearing alloy.
Alloy. H. M. German. 2,451,547, Oct. 19.
Alumina content of cryolite fusions, Enriching the. A. F. Johnson. 2,451,494, Oct. 19.
Alumina content of cryolite fusions in aluminum production, Enriching the. A. F. Johnson. 2,451,493, Oct. 19.
Alumina content of recirculated cryolite fusions in aluminum production, Enriching the. A. F. Johnson. 2,451,491, Oct. 19.
Aluminum, Production of. A. F. Johnson. 2,451,490, Oct. 19.
Aluminum sulfate, Preparation of. W. S. Wilson. 2,452,024, Oct. 19.
Amidines, Manufacture of. W. F. Short and P. Oxley. 2,451,779, Oct. 19.
Amplifier, Push-pull. L. J. Haworth. 2,451,827, Oct. 19.
Amplifier, Rotary. W. G. Cook. 2,451,921, Oct. 19.
Amplifier, Stagger tuned. H. Wallman. 2,451,893, Oct. 19.
Anchor. R. S. Danforth. 2,451,719, Oct. 19.
Anchor device, Vehicle. J. Buckley. 2,451,470, Oct. 19.
Annealing of calendered thermoplastic material. W. R. Wheeler. 2,451,597, Oct. 19.
Ant feeder. J. B. Rosefield. 2,451,578, Oct. 19.
Antiskid cross chain. W. A. Miller and R. E. Gerspacher. 2,451,761, Oct. 19.
Apparatus for balancing rotors. H. D. Oakley. 2,451,863, Oct. 19.
Apparatus for contacting solids with gaseous reactants. J. A. Crowley, Jr. 2,451,924, Oct. 19.
Apparatus for curing pneumatic tires. T. A. Te Grotenhuis. 2,451,992, Oct. 19.
Apparatus for exposing and processing photographic film. E. E. Garrett. 2,451,820, Oct. 19.
Apparatus for forming fur filled yarn. M. H. Siegel and F. Sonin. 2,451,881, Oct. 19.
Apparatus for measuring density of a thixotropic fluid. W. E. Barnes. 2,451,604–5, Oct. 19.
Apparatus for molding concrete walls. P. Y. K. Howat. 2,451,951, Oct. 19.
Apparatus for producing mineral wool. H. C. Smith. 2,451,582, Oct. 19.
Apparatus for producing pressure pulses in boreholes. A. Blanchard. 2,451,797, Oct. 19.
Apparatus for simulating radio range signals, Automatic magnetic. R. C. Dehmel. 2,451,927, Oct. 19.
Apparatus for textile fabrics, Setting. H. Richter. 2,451,978, Oct. 19.
Apparatus for treating tubular bodies. F. A. Schratt. 2,451,635, Oct. 19.
Applicator, Foot medication. H. L. Berman. 2,451,906, Oct. 19.
Applicator, Ointment. M. M. Werner. 2,452,006, Oct. 19.
Arbor, Bending ball. F. M. Check, Sr. 2,451,717, Oct. 19.
Arrangement for electric discharge devices, Starting. D. D. Hinman. 2,451,830, Oct. 19.
Asbestos, Coating. T. D. Callinan. 2,451,805, Oct. 19.
Attachment for knitting machines, Wrap stripe. C. S. Grove, Sr., J. V. McKinney, and S. Pittman. 2,451,673, Oct. 19.
Auro-thio-glycolic-acid-anilide and making the same. M. J. Lewenstein. 2,451,841, Oct. 19.
Baby bottle holder. B. M. Corrao. 2,451,718, Oct. 19.
Balanced-inductor system, Unitary. H. A. Wheeler. 2,451,596, Oct. 19.
Balancer for rotor blades, Dynamic. G. S. Doman. 2,451,541, Oct. 19.
Ball-bearing worm gear. E. C. Wahlberg and R. C. Lampe. 2,451,998, Oct. 19.
Base structure for electron discharge tubes. H. D. Madden and J. W. Greenbowe. 2,451,847, Oct. 19.
Bearing alloy. W. Betteridge and E. R. Gadd. 2,451,907, Oct. 19.
Bent-wire clothes hanger. L. Hayward. 2,451,552, Oct. 19.
Beta-allylamino propionitriles. W. M. McLamore. 2,451,852, Oct. 19.
Bicycle, Motor. E. A. Longenecker. 2,451,965, Oct. 19.
Blank advancing means. G. A. Anderson. 2,451,648, Oct. 19.
Block: *See*—
Building block.
Board: *See*—
Shampoo board.
Boat. P. E. Mercier and R. Villers-Allerand. 2,451,855, Oct. 19.
Boat, Collapsible. C. Ormond. 2,451,866, Oct. 19.
Bomb container for aircraft, Exterior. J. C. Darnall. 2,451,476, Oct. 19.
Bottleholder. R. A. Cox and L. D. Hartsfield. 2,451,923, Oct. 19.
Box stacker. C. Straw. 2,452,020, Oct. 19.
Bracelet and making same. L. Kreisler and J. G. Siska. 2,451,750, Oct. 19.
Bracelet and manufacture, Flexible mesh. J. G. Siska. 2,451,780, Oct. 19.
Bracelet or the like and making the same. L. Kreisler. 2,451,749, Oct. 19.
Bracing device for bombs on aircraft. R. M. Elder and J. J. Domoj. 2,451,481, Oct. 19.
Brake rotor, Cooled. W. H. Baselt. 2,451,709, Oct. 19.
Bridge structure for pH measurement device. E. D. Coleman. 2,451,663, Oct. 19.
Brush support. H. J. Dunn. 2,452,025, Oct. 19.
Brushing machine for leather, Continuous. C. D. Knowlton and D. Edgar. 2,451,561, Oct. 19.
Buffer, Railway car-end. H. J. Lounsbury. 2,451,569, Oct. 19.
Building block. J. N. Blackbourn. 2,451,657, Oct. 19.
Burner and control therefor, Multiple nozzle gun type oil. J. A. Logan. 2,451,964, Oct. 19.
Butane containing high boiling contaminants, Distillation of. G. W. Wilson, Jr. 2,451,896, Oct. 19.
Button sewing machine and sewing buttons. C. W. Johnson and J. A. Neumair. 2,451,495, Oct. 19.
Cabin pressure control means. G. L. Borell. 2,451,608, Oct. 19.
Calculator mechanism. F. Tellander, Jr. 2,451,784, Oct. 19.
Cam. P. B. Burrus and M. C. Leinberger. 2,451,802, Oct. 19.
Camera film gate threading mechanism. H. C. M. Stevens. 2,451,782, Oct. 19.
Capryl alcohol from methyl hexyl ketone by alkali treatment and distillation, Separation of. J. J. Miskel and B. A. Dombrow. 2,451,857, Oct. 19.
Carbonylic compounds, Production of unsaturated. G. W. Hearne and M. L. Adams. 2,451,485, Oct. 19.
Carbureting apparatus, Combustion air flow responsive. L. A. Williams, Jr. 2,451,459, Oct. 19.
Carburetor. N. G. La Guardia. 2,451,563, Oct. 19.
Carpenter's layout wheel. F. Wheeler. 2,451,595, Oct. 19.
Casing, Pistol grip motor. K. C. Atkin. 2,451,650, Oct. 19.
Cast polymerization. N. C. Foster. 2,451,935, Oct. 19.
Catalytic conversion process. R. J. Hengstebeck and R. S. McDaniel. 2,451,619, Oct. 19.
Catch. E. M. Borchers. 2,451,798, Oct. 19.
Cathode-ray signal utilizing means. K. E. Gould and P. Mertz. 2,451,484, Oct. 19.
Centering device. T. J. Davis. 2,451,720, Oct. 19.
Cereals, Mashing. E. C. Pattee. 2,451,510, Oct. 19.

Chain: *See*—
Antiskid cross chain.
Chair: *See*—
Collapsible chair. Infant's chair.
Charging, sealing and discharging mixers. L. G. Hilkemeier and G. K. Viall. 2,451,555, Oct. 19.
Children's vehicle. J. A. Di Bartolomeo. 2,451,665, Oct. 19.
Chiropractic machine. A. H. Binash, W. A. Tull, and R. T. Gautney. 2,451,607, Oct. 19.
Chlorine dioxide, Making. J. F. Haller. 2,451,826, Oct. 19.
Chlorine manufacture. R. W. Richardson and J. A. Pierce. 2,451,870, Oct. 19.
Chloroprene, Polymerization of. J. R. Vincent. 2,451,787, Oct. 19.
Chocolate, Making sweet. E. F. McGee. 2,451,630, Oct. 19.
Chuck adapter. M. Landow. 2,451,565, Oct. 19.
Cigar wrapper cutting and transfer mechanism. S. Clausen. 2,451,920, Oct. 19.
Circuit: *See*—
Gaseous discharge lamp circuit. Phase shifting circuit.
Meter protection circuit. Progressive selecting circuit.
Circuit breaker. T. Lindstrom and A. H. Baylis. 2,451,962, Oct. 19.
Circuit breaker, Gas blast. E. Eichenberger. 2,451,669, Oct. 19.
Circuit converter, Vibratory. H. J. Wise. 2,451,461, Oct. 19.
Circuits, Electrical discharge tube. A. P. Bock. 2,451,910, Oct. 19.
Clamp: *See*—
Pipe clamp.
Clamp for electric fuses, etc. R. N. Rowe. 2,452,019, Oct. 19.
Clip for electrical conductors, Terminal. S. N. Buchanan and O. J. Breen. 2,451,800, Oct. 19.
Closure assembly. S. Wiltse. 2,451,599, Oct. 19.
Clothes drier. E. Hade. 2,451,674, Oct. 19.
Clothes drier. M. L. Pugh. 2,451,692, Oct. 19.
Clutch: *See*—
Mercury clutch.
Clutch and brake pedal for automobiles and the like, Companion. R. V. Trine. 2,451,700, Oct. 19.
Clutch and variable-speed drive, Hydraulic. C. H. and H. A. Myers. 2,451,888, Oct. 19.
Coated welding rod. H. Beinfait and P. C. V. der Willigen. 2,451,655, Oct. 19.
Coating composition, Hot-melt. A. E. Young and K. D. Bacon. 2,451,792, Oct. 19.
Coiling and winding apparatus, Strand. D. E. Hennessy. 2,451,731, Oct. 19.
Collapsible chair. L. W. Morris. 2,451,687, Oct. 19.
Color cinematography on lenticular films. L. Bassani and G. Gagnepain. 2,451,902, Oct. 19.
Combined thermal and magnetic flasher switch. H. R. Gross. 2,451,618, Oct. 19.
Communication system, Electron tube variable impulse. R. E. Mumma and F. X. Bucher. 2,451,859, Oct. 19.
Commutators, Making. E. L. Le Greid. 2,451,500, Oct. 19.
Compensator for guns. J. E. Sieg. 2,451,514, Oct. 19.
Composition for poison ivy diagnosis. H. Keil and C. R. Dawson, and D. Wasserman. 2,451,955, Oct. 19.
Compounds, the manufacture of unsaturated. W. Huber. 2,451,741, Oct. 19.
Compressor and like machines, Axial flow. J. S. Hall. 2,451,944, Oct. 19.
Conductor, Electrical. C. G. Lemon. 2,451,839, Oct. 19.
Connection and seal, Flexible. J. E. Glover, Jr., and J. C. Hanson. 2,451,941, Oct. 19.
Connections, Transposing. W. D. Kyle, Jr., and A. V. Ryan. 2,451,622, Oct. 19.
Construction for footwear, Antisplash. C. O. Walper. 2,452,028, Oct. 19.
Container: *See*—
Liquid-hydrocarbon-resistant container.
Container. G. H. Wood. 2,451,644, Oct. 19.
Control circuit for automatic weighing machines. E. J. Vagim. 2,451,891, Oct. 19.
Control device for hydraulic steady-rest chucks. R. S. Adair. 2,451,705, Oct. 19.
Control for internal-combustion heaters, Air pressure responsive. W. A. Marshall, Jr., and J. H. Leslie, II. 2,451,625, Oct. 19.
Control, Multiple. H. F. Clark. 2,451,535, Oct. 19.
Control system. M. E. Reagan and W. A. Derr. 2,451,976, Oct. 19.
Control system. D. E. Renshaw. 2,451,977, Oct. 19.
Control system. R. B. Thalner. 2,451,640, Oct. 19.
Control system, Electrical. G. C. Pearce. 2,451,576, Oct. 19.
Control system, Electronic. J. H. Wyman. 2,451,898, Oct. 19.
Control system, Electronic timing. G. E. Undy. 2,451,997, Oct. 19.
Control system for electric motors. A. F. Kenyon and W. R. Harding. 2,451,957, Oct. 19.
Control system for oscillators, Keying. H. F. Storm and E. W. Hutton. 2,451,887, Oct. 19.
Control system for reel motors. B. J. Auburn. 2,451,901, Oct. 19.
Control system for synchronous machines. L. A. Kilgore and S. L. Lindbeck. 2,451,958, Oct. 19.
Control system for valves, Motor reversing. E. P. Smith. 2,451,989, Oct. 19.
Control system, Supercharger. W. E. Johnson. 2,451,835, Oct. 19.
Control unit, Power. W. G. Houston. 2,451,621, Oct. 19.
Control voltage means in pulse receiver. B. M. Oliver. 2,451,632, Oct. 19.
Conveyer. V. A. Rayburn and D. C. Robson. 2,451,975, Oct. 19.
Conveyer attachment for dump trucks, Power-driven. J. W. Birch. 2,451,656, Oct. 19.
Corrosion inhibitor. T. A. Walb. 2,451,523, Oct. 19.
Counter, Totalizator. C. F. Webb. 2,451,525, Oct. 19.
Coupling. B. W. Mantle. 2,451,683, Oct. 19.
Cup, Dental polishing. G. A. Chott. 2,451,918, Oct. 19.
Curling device, Fur. S. G. Shapiro. 2,451,984, Oct. 19.
Cushioned display container. P. A. Carson. 2,451,806, Oct. 19.
Cutting machine. W. R. Spiller. 2,451,636, Oct. 19.
Deicing composition for aircraft parts and surfaces. T. A. Dissel and I. L. Newell. 2,454,814, Oct. 19.
Dental accessory. S. A. Massimiano. 2,451,849, Oct. 19.
Dental appliance. F. J. Moylan. 2,451,766, Oct. 19.
Detecting changes in dimensions, Method and apparatus for. M. Blau. 2,451,908, Oct. 19.
Detector, Web break. G. B. Dunn. 2,451,816, Oct. 19.
Detent means. H. R. Greenlee. 2,451,730, Oct. 19.
Dewaxing of hydrocarbon oils. S. W. Ferris. 2,451,545, Oct. 19.
Diallyl diglycolate-styrene copolymer. M. E. Cupery and H. S. Rothrock. 2,451,536, Oct. 19.
Die for swedging bullets. F. T. Huntington. 2,451,488, Oct. 19.
Dimethyl germanium dichloride. E. G. Rochow. 2,451,871, Oct. 19.
Dimmer, Automatic headlight. R. A. Edell. 2,451,548, Oct. 19.
Direction finding system. G. Guanella. 2,451,823, Oct. 19.
Discharge device and base, Electrical. I. Zambakian and W. W. Watrous, Jr. 2,451,900, Oct. 19.
Discharge device, Electric. D. L. Smart. 2,451,988, Oct. 19.
Discharge device of the triode type, High-frequency electron. C. G. Smith. 2,451,517, Oct. 19.
Discharge device, Photosensitive. E. D. McArthur. 2,451,850, Oct. 19.
Distributor. K. A. Harmon. 2,451,675, Oct. 19.
Door fastener. G. E. Dath. 2,451,537, Oct. 19.
Doorstop. C. H. Martin. 2,451,848, Oct. 19.
Doweled structure. E. T. Kindt. 2,451,747, Oct. 19.
Drier: *See*—
Clothes drier.
Drill and chuck, Coal. A. J. Cox. 2,451,922, Oct. 19.
Drive control for air powered apparatus. F. M. Almes. 2,451,706, Oct. 19.
Drum, Collector. H. C. Rodgers. 2,451,872, Oct. 19.
Dry cell depolarizing and reconditioning device. D. R. Fry. 2,451,726, Oct. 19.
Drying apparatus for coffee beans or the like comprising a movable agitator and gas circulating means. A. R. Yglesias-Paz. 2,451,462, Oct. 19.
Dust collector. L. Lee. 2,451,755, Oct. 19.
Dye compounds containing a trifluoromethyl group, Aminoanthraquinone. J. B. Dickey and E. B. Towne. 2,451,478, Oct. 19.
Easel book construction for ring books or loose-leaf binders. F. S. Schade. 2,451,694, Oct. 19.
Egg-candling device, Endless conveyer. W. J. Roberts. 2,451,577, Oct. 19.
Egg-carrier mechanism for classifying eggs according to weight, Rotary counterbalanced. C. S. Jordan. 2,451,836, Oct. 19.
Electric air heater. M. R. Dallin. 2,451,926, Oct. 19.
Electrode structure for gaseous discharge devices. V. L. Holdaway. 2,451,556, Oct. 19.
Electromagnetic controller. A. M. Cohen. 2,451,810, Oct. 19.
Electron discharge device having an electron beam passage and aligning means therewith for the cathode. P. M. Dickerson. 2,451,813, Oct. 19.
Electronic steam generator. G. W. Watson. 2,451,594, Oct. 19.
Electronic system for measuring microwave transmission through a waveguide. L. E. Norton. 2,451,769, Oct. 19.
Electroplating machine. N. K. House. 2,451,676, Oct. 19.
Engine operated hot-air heater with engine demounting means. J. H. Leslie, II, and G. A. Crosby. 2,451,623, Oct. 19.
Engine transmission, Double. W. F. Wilson. 2,451,598, Oct. 19.
Enzymes from aqueous solutions and product obtained thereby, Recovery of. J. S. Wallerstein and R. T. Alba. 2,452,000, Oct. 19.
Explosives. D. P. O'Brien. 2,451,864, Oct. 19.
Extractor: *See*—
Weed extractor.
Extrusion method, Thermoplastic. C. E. Slaughter. 2,451,986, Oct. 19.
Fastener: *See*—
Door fastener.
Fastener. K. A. Swanstrom. 2,451,991, Oct. 19.

Fastener construction, Floating cowl. W. H. Churchill. 2,451,808, Oct. 19.
Fastener for plaster laths, Corner. J. L. Daily. 2,451,811, Oct. 19.
Fastening device. G. A. Tinnerman and L. H. Flora. 2,451,591, Oct. 19.
Feed unit, Back connection. J. F. O'Brien and E. S. Boynton. 2,451,506, Oct. 19.
Feeder: *See*—
Ant feeder.
Feeding device, Strip. B. T. Bickel. 2,451,467, Oct. 19.
Fence insulator, Electric. E. A. Beard. 2,451,530, Oct. 19.
Filler reinforcing means and guard for mechanical pencils. J. L. Morton. 2,451,765, Oct. 19.
Film manufacture, Regenerated cellulose. J. B. Nichols. 2,451,768, Oct. 19.
Filter: *See*—
Transversal filter.
Firing mechanism. S. Weiss. 2,451,526, Oct. 19.
Firing mechanism, Rearwardly striking. G. N. Albree. 2,451,527, Oct. 19.
Fishhook making machine. W. J. De Witt and H. A. Corbett. 2,451,477, Oct. 19.
Fixture, Bar mounting. O. E. Stelzer. 2,451,884, Oct. 19.
Flange facing tool. U. K. Gardner. 2,451,729, Oct. 19.
Flight of dirigible aerial torpedos, Method of and apparatus for controlling. C. Chilowsky. 2,451,917, Oct. 19.
Flower construction, Ornamental. M. Andreoli. 2,451,649, Oct. 19.
Fluids, Hydraulic. K. E. Walker. 2,451,999, Oct. 19.
Fluids, Treatment of drilling. T. B. Wayne. 2,452,021, Oct. 19.
Fluorescent and filament lamp reflector unit, Combined. A. Schwinger. 2,451,580, Oct. 19.
Fluoroalkanes, Manufacture of. C. B. Linn and L. Schmerling. 2,451,843, Oct. 19.
Fluorohydrocarbons, Preparation of unsaturated. D. D. Coffman and L. F. Salisbury. 2,451,612, Oct. 19.
Forging articles, Press. H. T. M. Rice. 2,451,512, Oct. 19.
Forming a powder from metals, Method and apparatus for. H. R. Forton. 2,451,546, Oct. 19.
4-alkyl-quinolines, Preparation of. K. N. Campbell. 2,451,610–11, Oct. 19.
4-halogenomethyl-1 : 8-naphthsultones and a process for their manufacture. G. Schetty. 2,451,579, Oct. 19.
Frame: *See*—
Sack holding frame.
Fungicidal and bactericidal compostions containing 1-(4'-isopropylbenzyl)-piperazine. F. B. Zienty and G. W. Steahly. 2,451,645, Oct. 19.
Furnace lining structure. S. A. Komorowski. 2,451,679, Oct. 19.
Fuse setting apparatus. D. W. Molins, V. P. Harvey, J. A. Mason, and G. F. W. Powell. 2,451,764, Oct. 19.
Game of the ball and mallet type. N. M. Parke. 2,451,770, Oct. 19.
Garment hanger. A. G. Wahl. 2,451,788, Oct. 19.
Garment, Infant's. D. Catizone. 2,451,807, Oct. 19.
Gaseous discharge lamp circuit. A. E. Feinberg. 2,452,026, Oct. 19.

Joint: *See*—
Radio-frequency joint. Universal joint.
Joint for high-frequency transmission lines. E. C. Quackenbush and H. Selvidge. 2,451,868, Oct. 19.
Knitting machine, Flat warp. F. Lambach. 2,451,495, Oct. 19.
Knitting machine, Warp. F. Lambach. 2,451,499, Oct. 19.
Lacquer enamel, Making. M. Thau. 2,451,785, Oct. 19.
Lamp for hospital beds. E. P. Truesdale. 2,451,995, Oct. 19.
Landing apparatus, Radio. E. F. W. Alexanderson and F. G. Patterson. 2,451,793, Oct. 19.
Launching device, Rocket. C. H. Jolly. 2,451,745, Oct. 19.
Lever feeding means, Locking. H. A. Rau. 2,451,974, Oct. 19.
Life preserver belt, Dual tube pneumatic. E. C. Craig. 2,451,474, Oct. 19.
Life preserver belt, Dual tube pneumatic. E. C. Craig and L. A. Straits. 2,451,475, Oct. 19.
Lighter, Cigarette. J. Simon and R. S. Temko. 2,451,515, Oct. 19.
Lighting equipment, Neon. S. Denning. 2,451,539, Oct. 19.
Limb, Artificial. S. B. Samons, Sr. 2,451,980, Oct. 19.
Liner evaporator, Refrigerator. B. C. Johnson. 2,451,744, Oct. 19.
Link, Cartridge belt. R. R. Studler. 2,451,519, Oct. 19.
Liquid-hydrocarbon-resistant container. V. N. Braden. 2,451,911, Oct. 19.
Liquid level gauge. H. L. Wood. 2,451,704, Oct. 19.
Loader, Magazine. A. H. Uglum. 2,451,521, Oct. 19.

Loading and unloading device for wire stranding, rope and cable making machines. A. and L. J. Larmuth. 2,451,734, Oct. 19.
Loading device for plastic molding machines. W. F. Bradley. 2,451,912, Oct. 19.
Locating tool. R. J. A. Beatty. 2,451,904, Oct. 19.
Lug rim, Attachable traction. C. C. Fulton. 2,451,937, Oct. 19.
Luminescent screen, Forming a. S. Tidik and A. Steadman. 2,451,590, Oct. 19.
Machine and method for forming fiber webs. F. M. Buresh. 2,451,915, Oct. 19.
Machine for folding sheets of thermoplastic and like material. M. M. and H. M. Balsam. 2,451,794, Oct. 19.
Machine for gauging and assorting cartridges according to height of primers. R. M. Flanagan. 2,451,615, Oct. 19.
Machine for weighing and packing mixed nuts or the like. S. Christensen. 2,451,534, Oct. 19.
Magnetometer, Induction. A. Frosch. 2,451,819, Oct. 19.
Manometer. L. B. Winton. 2,451,460, Oct. 19.
Measuring and controlling apparatus, Safe failure. R. F. Wild. 2,452,023, Oct. 19.
Measuring apparatus, Radiant energy. H. R. Moore. 2,451,572, Oct. 19.
Measuring instrument, Electrical. A. G. Stimson. 2,451,886, Oct. 19.
Mechanical device for determining the future position of aircraft. E. E. Miller. 2,451,856, Oct. 19.
Mechanism for stud welding guns and the like. A. M. Candy. 2,451,716, Oct. 19.
Melamine-formaldehyde resin dispersion in a nonbasic water-soluble alcohol medium. G. Pitzl. 2,451,867, Oct. 19.
Mercury clutch. A. M. Wickwire and H. J. Zimmermann. 2,452,008, Oct. 19.
Meter protection circuit. C. S. Ingram. 2,451,953, Oct. 19.
Method and apparatus for enriching the alumina content of cryolite fusions in aluminum production. A. F. Johnson. 2,451,492, Oct. 19.
Method for separating worm-damaged nuts from sound nuts by immersion in a gravity liquid. J. A. Armstrong. 2,451,528, Oct. 19.
Microwave-absorptive gas light valve. W. D. Hershberger. 2,451,732, Oct. 19.
Milling machine, Swarf. W. Groen and R. F. Onsrud. 2,451,548, Oct. 19.
Mineral oil compositions, Viscous. R. W. Watson. 2,451,642, Oct. 19.
Mitten, Sportsman's. G. J. La Londe and A. Jewer. 2,451,837, Oct. 19.
Motor: *See*—
Vibratory armature electromagnetic motor.
Motor control, Synchronized. L. A. Dunajeff. 2,451,930, Oct. 19.
Motor control system. W. R. Harris. 2,451,946, Oct. 19.
Motor driving means, Double electric. C. H. Sutherland. 2,451,990, Oct. 19.
Motor system, Series generator-fed. S. A. Bobe. 2,451,909, Oct. 19.
Mount: *See*—
Picture corner mount.
Mounting for brushholders and the like, Insulating. E. O. Mueller and D. L. Gibson. 2,451,969, Oct. 19.
Mounting for fan assemblies. R. K. Odor. 2,451,970, Oct. 19.
Mowing machine, Lawn. G. E. Thomas. 2,451,589, Oct. 19.
Multiple furnace control. H. A. Strickland, Jr. 2,451,518, Oct. 19.
N-alkyl diethanolamines, Preparation. W. F. Gresham. 2,451,942, Oct. 19.
N (β-hydroxy ethyl)-tetraiodophthalimide. W. H. Strain and J. Dec. 2,451,637, Oct. 19.
Network, Electrical. J. A. Hipple, Jr. 2,451,950, Oct. 19.
Nitriles. P. J. Flory. 2,452,012, Oct. 19.
Nozzle, Sanding. J. D. Savercool. 2,451,878, Oct. 19.
Nursing bottle holder. M. H. and P. T. Love. 2,451,846, Oct. 19
Oil burner apparatus, Dual firing rate. R. M. Cochrane. 2,451,661, Oct. 19.
Oil burner-delayed-action valve. J. A. Logan. 2,451,681, Oct. 19.
Ores, Treating intermediate manganese siliceous. J. R. Allen. 2,451,647, Oct. 19.
Organo-disiloxane and preparing it. W. H. Daudt. 2,451,664, Oct. 19.
Orientation system. P. F. Bechberger. 2,451,710, Oct. 19.
Ornamental article, Plastic. W. J. Brice. 2,451,913, Oct. 19.
Oscillator, Controlled frequency. R. P. Mork. 2,451,858, Oct. 19.
Oscillator plates, Manufacturing. W. H. E. Samuelson. 2,451,877, Oct. 19.
Oscillator tube with tunable coaxial resonator. ... J. Guarrera. 2,451,825, Oct. 19.
Oscillator, Ultra high frequency. H. Lisman and E. K. Stodola. 2,451,502, Oct. 19.
Oxidation inhibitor for fats and oils. H. R. Kraybill and B. W. Beadle. 2,451,748, Oct. 19.
Oxidation processes, Catalyzed. J. C. Rapean and W. E. Ross. 2,451,869, Oct. 19.
Package and making the same, Duplex. G. A. Kilin. 2,452,014, Oct. 19.
Packaging machine. M. J. Grebowiec. 2,451,617, Oct. 19.
Packing ring. C. V. Millikan. 2,451,762, Oct. 19.
Pad for firearms, Cheek. E. G. Cooper. 2,451,473, Oct. 19.
Pad for toilet tanks, Absorbent drip. R. C. Buffham. 2,451,714, Oct. 19.
Pail, Sand. S. L. Beder. 2,451,711, Oct. 19.
Painting bevels, Method of and apparatus for. S. Krajci and L. E. Savage. 2,451,960, Oct. 19.
Panel circuit for air reheat control, Automatic. T. J. Lehane and E. H. Burgess. 2,451,566, Oct. 19.
Penicillin, Manufacture of. T. H. Mead, M. V. Stack, and E. L. Smith. 2,451,853, Oct. 19.
Pentaenes, Manufacture of. O. Isler. 2,451,737–9, Oct. 19.
Phase relationships in an electronic circuit, Controlling. C. C. Nash, Jr. 2,451,861, Oct. 19.
Phase shifting circuit. S. Berkoff. 2,451,796, Oct. 19.
Phase shifting circuit. E. F. Kubler. 2,451,834, Oct. 19.
Phenanthridinium compounds and making them. L. P. Walls. 2,452,001, Oct. 19.
Phenols or salts thereof, Manufacture of. D. Tyrer. 2,451,996, Oct. 19.
Photographic plate and film holder. E. C. Suydam. 2,451,638, Oct. 19.
Picture corner mount. A. A. Ainsworth. 2,451,646, Oct. 19.
Picture holder. T. Solomon. 2,451,583, Oct. 19.
Pipe: *See*—
Smoker's pipe.
Pipe clamp. F. G. Weigand. 2,451,702, Oct. 19.
Pipe end and joint. E. H. Taylor. 2,451,587, Oct. 19.
Piston pin holder attachable to conventional vise jaws. C. R. Garland. 2,451,727, Oct. 19.
Plug and fuse, Combined connecting. S. J. Richter. 2,451,774, Oct. 19.
Plug and socket, Electrical. E. L. Scott. 2,451,982, Oct. 19.
Polyamides of high birefringence and obtaining same. R. S. Schreiber. 2,451,695, Oct. 19.
Polyenes and the manufacture thereof. O. Isler. 2,451,735–6, Oct. 19.
Polythene, Powdered. K. B. Jarrett. 2,451,743, Oct. 19.
Portable electric cleaner and scraping tool. A. C. Ward. 2,452,002, Oct. 19.
Potassium alcoholates, Preparation of. W. E. Hanford. 2,451,945, Oct. 19.
Power conservation system. C. E. Torsch. 2,451,641, Oct. 19.
Power-operated skip tabulating mechanism for typewriting machines. R. D. Dodge. 2,451,722, Oct. 19.
Power supply. A. W. Friend. 2,452,013, Oct 19.
Prerotation means for airplane landing wheels. J. F. Perkins. 2,451,771, Oct. 19.
Pressing machine and linkage mechanism for transmitting and transforming force for use therein. F. C. Lornitzo. 2,451,844, Oct. 19.
Pressing machine and multiple lever linkage mechanism for transmitting and transforming force for use therein. F. C. Lornitzo and H. G. Beede. 2,451,845, Oct. 19.
Price tag molding having a slide held tag and a transparent cover strip. R. J. and J. R. Slavsky. 2,451,581, Oct. 19.
Progressive selecting circuit. A. E. Joel, Jr. 2,451,489, Oct. 19.
Projecting and viewing device, Hand-carried motion-picture. L. A. Harvey. 2,451,947, Oct. 19.
Propulsion drive. E. Frisch. 2,451,936, Oct. 19.
Proteins from soybeans in presence of blanketing agents and enzyme inhibitors, Recovery of. F. E. Calvert. 2,451,659, Oct. 19.
Pump: *See*—
Rotary pump. Variable capacity pump.
Pump for oil wells and the like, Fluid operated. R. B. Knowles. 2,451,560, Oct. 19.
Pump valve construction. R. R. Curtis. 2,451,925, Oct. 19.
Punching machine, Record. C. D. Lake and F. E. Hamilton. 2,451,752, Oct. 19.
Radio-frequency joint. W. W. Salisbury. 2,451,876, Oct. 19.
Radio telegraph receiving system. R. S. Chapin. 2,451,916, Oct. 19.
Receptacle device, Electrical outlet. J. F. O'Brien and E. S. Boynton. 2,451,507, Oct. 19.
Reconditioning contaminated oil, Process and apparatus for. C. J. Egger and R. H. Webster. 2,451,668, Oct. 19.
Recorder. A. E. Anderson. 2,451,464, Oct. 19.
Recorder, Register-controlled time. T. J. Watson and A. L. Sprecker. 2,451,790, Oct. 19.
Recording apparatus, Motion. W. D. Macgeorge. 2,451,757, Oct. 19.
Reducing device, Oscillation. F. M. M. B. Salomon. 2,451,513, Oct. 19.
Reflectometer, Specular. W. Liben. 2,451,501, Oct. 19.
Refrigeration system using gas for defrosting. O. B. Lund. 2,451,682, Oct. 19.

Refrigerator having a heat dissipating device for the electric motor thereof. J. J. Bauman. 2,451,903, Oct. 19.
Regenerator system, Fluid catalyst. W. A. Myers and W. A. Hall. 2,451,573, Oct. 19.
Regulations for engine cooling, Thermostatic. T. L. Weybrew. 2,452,007, Oct. 19.
Remote indicating plant operating on the impulse compensation method. W. Beusch. 2,451,606, Oct. 19.
Resin containing an accelerator, and resin compositions, Coating with synthetic. W. C. Weitman and T. F. Dixon. 2,452,005, Oct. 19.
Ring: *See*—
Packing ring.
Rocket and the like. C. D., A. J., and C. Schermuly. 2,451,981, Oct. 19.
Rocket projector. E. G. Uhl and L. A. Skinner. 2,451,522, Oct. 19.
Rod: *See*—
Coated welding rod.
Roll assembly, Lumber. H. C. Holmes. 2,451,620, Oct. 19.
Roll feed. F. Koch. 2,451,833, Oct. 19.
Rope or wire tightener. E. A. England. 2,451,933, Oct. 19.
Rotary pump. V. D. Barker. 2,451,603, Oct 19.
Rotary refiner. E. P. Arpin, Jr. 2,451,708, Oct. 19.
Ruling machine, Consecutive. H. Edelmann. 2,451,931, Oct. 19.
Rust preventing properties of lubricants, Determining the. C. H. Van Hartesveldt. 2,451,592, Oct. 19.
Rutin with methyl glucamine, Solubilization of. M. B. Plungian. 2,451,772, Oct. 19.
Sack holding frame. R. L. Hightower. 2,451,829, Oct. 19.
Safety device for fluid brakes. D. R. Herriott. 2,451,828, Oct. 19.
Safety window seat. E. A. Favre. 2,451,670, Oct. 19.
Screen for casting risers. E. T. Myskowski and H. F. Taylor. 2,451,505, Oct. 19.
Screw driver, Screw holding. M. J. Sopcak. 2,451,696, Oct. 19.
Seal and wiper assembly, Piston oil. E. B. Thompson. 2,451,888, Oct. 19.
Seal terminal. M. Skobel. 2,451,516, Oct. 19.
Seat: *See*—
Safety window seat.
Sectional hot-air heater. H. J. D. McCollum. 2,451,629, Oct. 19.
Setting means for world clocks. A. Tellier. 2,451,639, Oct. 19.
Sewer pipe off-bearing and finishing machine. D. Brown and J. D. Rossier. 2,451,713, Oct. 19.
Shampoo board. J. L. Bazelon. 2,451,652–3, Oct. 19.
Shaper for trousers. J. Mastrillo. 2,451,503, Oct. 19.
Shaver, Dry. H. J. Horwood. 2,451,831, Oct. 19.
Shearing apparatus. C. W. Hawthorne. 2,451,948, Oct. 19.
Shelf for carts, Auxiliary. H. I. Sides. 2,451,985, Oct. 19.
Shield for orchard tractors, Protective. M. T. Hedquist and J. Haley. 2,451,553, Oct. 19.
Shifting mechanism for heel-attaching machines, Work. W. A. Barker and T. B. Clarke. 2,451,529, Oct. 19.
Shrimp, Treating. E. R. Woodward. 2,451,897, Oct. 19.
Signal device for fishing tackle. K. D. Richards. 2,451,693, Oct. 19.
Signal impulses, Producing time modulated. G. Guanella and P. Guttinger. 2,451,824, Oct. 19.
Signal receiver tuning indicator. F. B. Stone. 2,451,584, Oct. 19.
Signaling device, Traffic. C. D. Ryder. 2,451,875, Oct. 19.
Skate construction. L. A. Woolley. 2,451,601, Oct. 19.
Skin-and-frame assemblies, Making. E. J. Sweeney. 2,451,783, Oct. 19.
Slip-lasted shoes, Making. H. S. Lyness. 2,451,570, Oct. 19.
Slip-ring and brush connection, Electric. E. M. Knudsen. 2,451,959, Oct. 19.
Slot closer for dynamoelectric machines. A. E. B. Perrigo. 2,451,633, Oct. 19.
Smokehouse for fish and other foodstuff. A. L. Lyon. 2,452,016, Oct. 19.
Smoker's pipe. D. P. Lavietes. 2,451,838, Oct. 19.
Socket, Electric light. H. Lagin. 2,451,680, Oct. 19.
Socket for radio and like tubes, Tube. S. M. Del Camp. 2,451,538, Oct. 19.
Solids and gases, Contacting. D. L. Campbell, H. Z. Martin, and C. W. Tyson. 2,451,803, Oct. 19.
Solids and gases, Method of and apparatus for contacting. D. L. Campbell, H. Z. Martin, E. V. Murphree, and C. W. Tyson. 2,451,804, Oct. 19.
Sparking device. C. R. Flint. 2,451,482, Oct. 19.
Spindle reversing device for drill presses. P. M. Lloyd. 2,451,756, Oct. 19.
Spinning apparatus, Dry. A. J. Mehler, Jr. 2,451,854, Oct. 19.
Spinning cotton and other textile fibers, Method of and apparatus for. M. S. Mayo. 2,451,504, Oct. 19.
Splinter remover. J. E. Towns. 2,451,994, Oct. 19.
Sprocket, Two-part. W. P. Oehler. 2,451,690, Oct. 19.
Stabilizer, Airflow. W. S. Diehl. 2,451,479, Oct. 19.
Stabilizer for kites, Dive. A. Marshall. 2,451,571, Oct. 19.
Staple, Button. O. J. Huelster. 2,451,487, Oct. 19.
Starch compositions capable of forming water-soluble derivatives. F. A. Möller and J. Loikema. 2,451,686, Oct. 19.
Starch hydrolyzing enzyme with aspergillus, Preparing. E. H. Le Mense and J. M. V. Lanen. 2,451,567, Oct. 19.
Starter and generator, Combined. R. M. Nardone. 2,451,767, Oct. 19.
Starting system, Engine. R. M. Heintz. 2,452,027, Oct. 19.
Steels and structural embodiments thereof for use at low temperatures. G. R. Brophy and A. J. Miller. 2,451,469, Oct. 19.
Stop and lock for machines for gauging cartridges, Automatic. F. I. Goin. 2,451,616, Oct. 19.
Stop dispensing mechanism of coin and manual controlled type, Predetermined. L. E. Rush. 2,451,776, Oct. 19.
Stop for looms, Dagger. W. J. Budzyna. 2,451,914, Oct. 19.
Structural unit, Making a. A. W. Franklin. 2,451,725, Oct. 19.
Subharmonic generator. J. O. Edson and D. M. Terry. 2,451,480, Oct. 19.
Sulfonates, Production of metal. F. C. Gzemski. 2,451,549, Oct. 19.
Support: *See*—
Brush support.
Support. S. E. Twaroski. 2,451,699, Oct. 19.
Support and positioning means, Cathode-ray tube. D. B. Keim. 2,451,832, Oct. 19.
Support or frame, Fishing reel. N. A. Nelson. 2,451,862, Oct. 19.
Surfboard, Power driven. D. M. Steele. 2,451,781, Oct. 19.
Swaging apparatus. G. Maurer. 2,451,759, Oct. 19.
Switch: *See*—
Combined thermal and magnetic flasher switch.
Switch control, Reverse action. R. H. Bentley. 2,451,905, Oct. 19.
Switch device. C. G. Kronmiller. 2,451,751, Oct. 19.
Switching system, Automatic. R. A. Geiselman and W. H. Cuttino. 2,451,939, Oct. 19.
Synchronizing device. L. C. Olsen. 2,451,691, Oct. 19.
Table drive mechanism. L. I. Yeomans and D. Clausen. 2,451,899, Oct. 19.
Table with sectional top, Folding. M. J. Misko. 2,451,763, Oct. 19.
Tank for storing liquids at high or low temperatures, Vacuum. G. T. Horton. 2,451,486, Oct. 19.
Target, Adjustable perimeter. C. A. Ellis. 2,451,932, Oct. 19.
Tensioning device, Thread. R. N. Toone. 2,451,889, Oct. 19.
Terminal connection and making the same. N. J. Poux. 2,451,773, Oct. 19.
Terminal replacement for sealed refrigeration units. W. Wagner. 2,451,701, Oct. 19.
Testing device for sound projector. O. M. Owsley. 2,451,509, Oct. 19.
Testing machine, Electrical conductivity. P. F. Darby and L. A. Nevala. 2,451,613, Oct. 19.
Thermometer, Fever. K. M., E. H. and A. H. Keller. 2,451,746, Oct. 19.
Thermotemporal responsive device. W. Sambur. 2,451,778, Oct. 19.
Thread guide holder. J. H. Barnes. 2,451,795, Oct. 19.
Thread miller. F. J. Kratchman. 2,451,497, Oct. 19.
Ticket machine. R. I. N. Weingart and T. E. Torkelson. 2,452,022, Oct. 19.
Tire, Steel reinforced. H. K. Weed. 2,451,894, Oct. 19.
Tires, Making pneumatic. J. F. Purdy. 2,451,973, Oct. 19.
Toaster, Automatic electric. B. G. Olving. 2,451,508, Oct. 19.
Tongue, Extension. D. E. Swinehart. 2,451,698, Oct. 19.
Tool: *See*—

Weed extractor. B. L. Hulsebus. 2,451,952, Oct. 19.
Welding apparatus. F. R. Woodward. 2,452,009–10, Oct. 19.
Welding system. H. Klemperer. 2,451,496, Oct. 19.
Wells, Cementing. N. D. Coggeshall. 2,451,472, Oct. 19.
Wells, Completing. A. J. Teplitz. 2,451,520, Oct. 19.
Wheel: *See*—
Carpenter's layout wheel. Toy ferris wheel.
Winding of yarn. G. L. Boyce. 2,451,468, Oct. 19.
Window structure. F. F. Bell. 2,451,654, Oct. 19.
Wire terminal, Electric. R. H. Bentley. 2,451,466, Oct. 19.
Wire tightener. B. J. Bradley. 2,451,531, Oct. 19.
Wire, Warp stop motion drop. H. F. Weddington. 2,452,004, Oct. 19.
Wood pulp and producing a cellulosic product, Chemically treated. P. H. Schlosser and K. R. Gray. 2,451,558, Oct. 19.
Work positioner. J. Hochwarder. 2,451,733, Oct. 19.
Wrench sockets and the like, Making. H. T. M. Rice. 2,451,511, Oct. 19.
Yarn, Making stretchable. R. J. Clarkson. 2,451,919, Oct. 19.
Yarn, Producing improved. P. H. Cannon. 2,451,533, Oct. 19.
Zinc propionate, Preparation of. A. G. Weber and C. H. Hamblet. 2,452,003, Oct. 19.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 19, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Appeals for the District of Columbia

INTERNATIONAL STANDARD ELECTRIC CORPORATION
v.
LAWRENCE C. KINGSLAND, COMMISSIONER OF PATENTS

Nos. 9630—9631—9632. Decided July 30, 1948

[— F.2d —; 78 USPQ 241]

1. SUIT UNDER 4915 R. S.—PROCEDURE AND PRACTICE—PROCEEDINGS DE NOVO.

Where in a suit under R. S. 4915 the district court dismissed the complaint because the applications were insufficient to comply with the statutory requirements as to the disclosure of the invention, but on appeal, the appellate court remanded the cases with instructions to hold them pending a decision from the Patent Office on the question whether or not the descriptions would enable an expert in the art of automatic telephony to construct and use the device, and where upon the remand, the Commissioner of Patents referred the application to the telephone division and the Examiner held the disclosure insufficient without giving the appellant an opportunity to be heard and without specifying the defect in the description or drawings this action being approved by the Board of Appeals, and when the district court granted the motion of the Commissioner to dismiss and denied appellant's motion to reopen the cases to consider the decisions of the Examiner and the Board of Appeals as well as to hear the evidence of an independent expert, *Held* that, since the district court was in error in refusing to hear applicant's proferred testimony of an independent expert, and since proceedings under R. S. 4915 are de novo, the judgments are reversed and the cases remanded for further action in accordance with this opinion.

2. R. S. 4903 AND PATENT OFFICE RULES 65 AND 66 CONSTRUED.

Held that it is not the responsibility of the applicant to request either the Primary Examiner or the Board of Appeals to state reasons for their opinion; both the law and the rules of the Patent Office require specifically that that be done.

APPEALS from the District Court of the United States for the District of Columbia. Appeals Nos. 9630—9631—9632.

REVERSED.

Mr. Paul Kolisch (*Mr. Ralph B. Stewart* of counsel) for International.

Mr. W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

Before CLARK, WILBUR K. MILLER, *Associate Justices*, and MCGUIRE, *District Judge*, sitting by designation

PER CURIAM:

This is the second time these cases have been before this court. The first appeals were from judgments of the district court dismissing complaints under R. S. 4915, 35 U. S. C. 63, to obtain patents.

The claimed inventions are for combinations of electrical circuits and alleged conventional electromechanical elements to perform calculating operations and consist primarily, appellant contended, in the devising of circuits which make possible the use of relays, switches and other elements "of types used widely in telephone exchange systems."

[1] The applications involved were rejected by the Patent Office, for the reason that they did not contain disclosures which would enable persons skilled in the art to which they related or with which they were most nearly connected, to construct operative machines.

The original ground of rejection was that the Examiner could not understand and did not approve of the description and drawings and that as a consequence they did not satisfy the requisites of R. S. 4888[1]—and the Board of Appeals of the Patent Office affirmed. The Examiner in question was an expert in the calculating machine art (Division 23) but not in that of automatic telephony (Division 16), and so the basic question as to whether or not the descriptions would enable an expert in the latter art to construct and use the device was left unanswered.

Upon suit in the district court under R. S. 4915, the Commissioner of Patents rested his case on the Patent Office record and contended that R. S. 4888 could be satisfied only by addressing the disclosure to one skilled in the calculating art, and while the appellant offered testimony of an expert that the claimed inventions were most closely related to automatic telephony as contrasted with mechanisms appertaining to the field of calculators, the learned trial justice concluded that "the applications were insufficient to comply with the statutory requirements as to the disclosure of the invention." The

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

first appeals followed. In disposing of them we held:[1]

"The present question of law comes to this. When a technique previously used for one purpose (the construction of automatic-telephone equipment) is applied to a second purpose (the construction of calculating equipment) must the innovator describe the technique so that it can be used by men who know nothing about it but are skilled in applying different techniques to the second purpose? Such a description may not be possible and, we think, is not required."

and we remanded the cases to the district court with instructions to hold them pending a decision from the Patent Office in accordance with the mandate of this court.

Upon the remand the Commissioner of Patents referred the applications to the telephone division (16) and the Examiner held that the disclosure was not sufficient for one skilled in that art to construct or operate a machine. The appellant was given no opportunity to be heard and the Examiner specified no defect in the descriptions or drawings and did not specifically find any facts. On appeal to the Board of Appeals this action was approved. Request for reconsideration was denied.

The Commissioner of Patents then moved the district court to dismiss the complaint, stating:

"It is the position of the defendant that proceedings herein are now closed and that all that now remains to be done is to issue a formal order to that effect. The court of appeals did not indicate that the cases should be reopened for further prosecution in this court. It remanded them for one purpose only namely to be held until the Patent Office decided them. This has now been done and there seems to be no reason for holding them any longer."

The appellant moved the court to reopen the cases to consider the decisions of the Examiner of Division 16 and of the Board of Appeals, as well as to hear the evidence of an *independent* expert so as to "place the district court in a position to find the facts which the court of appeals was seeking . . ."

The appellant's motion was denied, that of the Commissioner of Patents granted, and the complaints dismissed.

The appellant relies on three allegations of error. First, that the Patent Office tribunals, after the remand of the cases, failed to comply both with the statute[2] and the rules of the Office[3] by failing to state sufficient reasons for the conclusions reached. Secondly, that the district court should have accepted appellant's evidence as established that a skilled worker in the automatic telephone art could build an operative machine on the basis of the disclosures of the applications involved; and, thirdly, the lower court made no additional findings of fact as it was required to do under amended Rule 52(a), Federal Rules of Civil Procedure.

[2] First, it is not the responsibility of the applicant to request either the Primary Examiner or the Board of Appeals to state reasons for their opinions. Both the law and the rules of the Patent Office require specifically that that be done. With reference to the appellant's second alleged error, as we said in the first appeals, the district court was not obliged to accept the testimony of the proffered witness and we so held, and we hold here that the court was not compelled under Rule 52(a) to make any findings of fact for that rule specifically provides, in part, that:

". . . Findings of fact and conclusions of law are unnecessary on decisions of motions under Rules 12 or 56 or any other motion except as provided in Rule 41(b)",

which latter rule is not here applicable.

Since, however, it appears it would be merely a matter of repetitive futility to again remand the cases to the Patent Office for compliance both with the law and its rules, since apparently it is unable to advance any reasons upon which its rejection was predicated, and since in any event we think the district court was in error in refusing to hear applicant's proffered testimony of an *independent* expert in the field, and in denying its motion, made for that purpose, and for the further reason that proceedings under R. S. 4915 are de novo, the judgments are reversed and the cases remanded for further action in accordance with this opinion.

REVERSED.

---

[1] 81 U. S. App. D. C. 215, 217.

[2] R. S. 4903, 35 USCA § 51.

"Whenever, on examination, any claim for a patent is rejected, the Commissioner shall notify the applicant thereof, giving him briefly *the reasons** for such rejection, together with such information and references as may be useful in judging of the propriety of renewing his application or of altering his specification; and if after receiving such notice, the applicant persists in his claim for a patent, with or without altering his specifications, the Commissioner shall order a reexamination of the case. . . ."

* Emphasis added throughout.

[3] Rules 65, 66, of the Rules of Practice in the United States Patent Office.

"65. Whenever, on examination, any claim of an application is rejected *for any reason whatever*, the applicant will be notified thereof. *The reasons for the rejection will be fully and precisely stated*, and such information and references will be given as may be useful in aiding the applicant to judge of the propriety of prosecuting his application, or of altering his specification, and if, after receiving this notice, he shall persist in his claim with or without altering his specification, the application will be reexamined. If upon reexamination the claim shall be again rejected, the reasons therefor will be fully and precisely stated.

66. Upon taking up an application for action on the merits the Examiner shall make a thorough investigation of the prior art with respect to the invention sought to be protected in the application. Upon the rejection of an application for want of novelty, the Examiner must cite the best references at his command. When the reference shows or describes inventions other than that claimed by the applicant, *the particular part relied on must be designated as nearly as practicable.* The pertinence of the reference, if not obvious, must be *clearly explained* and the anticipated claim specified . . ."

NOTICES

Classification Bulletins 103-128

Classification Bulletins containing the definitions of the following patent classes, complete as amended through Classification Order No. 31, are now available and may be obtained from the Commissioner of Patents at a cost of ten cents each:

Class	Title	Bulletin No.
44	Fuel and Igniting Devices	103
60	Power Plants	104
62	Refrigeration	105
80	Metal Rolling	106
88	Optics	107
90	Gear Cutting, Milling and Planing	108
104	Railways	109
105	Railway Rolling Stock	110
116	Signals and Indicators	111
150	Cloth, Leather, and Rubber Receptacles	112
178	Telegraphy	113
179	Telephony	114
180	Motor Vehicles	115
192	Clutches and Power-Stop Control	116
200	Electricity, Circuit Makers and Breakers	117
214	Material or Article Handling	118
215	Bottles and Jars	119
237	Heating Systems	120
246	Railway Switches and Signals	121
257	Heat Exchange	122
263	Heating	123
274	Sound Recording and Reproducing	124
279	Chucks or Sockets	125
285	Pipe Joints or Couplings	126
287	Rod Joints or Couplings	127
301	Land Vehicles, Wheels and Axles	128

Adjudicated Patents

(D. C. Ill.) Stewart and Lilja patent, No. 1,822,679, for a squirrel cage induction motor, claims 3 to 12 *Held* invalid. *Barber-Colman* v. *Sampsel Time Control*, 78 F. Supp. 770, 79 USPQ —.

(D. C. Mo.) Weaver patent, No. 2,304,043, for a dry shaver, claims 6, 7, 8, 10, 11, and 12 *Held* not infringed. *Harris* v. *Washington Shirt Co.*, 78 F. Supp. 667; 78 USPQ 281.

(D. C. Mo.) Harris patent, No. 2,332,379, for a dry shaver, claims 1, 2, 10, 11, 12, and 14 *Held* not infringed. *Id.*

Interference Notice

The Big Store Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Marlboro Shirt Company, Inc., Lombard and Paca Sts., Baltimore, Md., for registration of a trade-mark and registration No. 277,138, issued November 4, 1930, to The Big Store Company, southeast corner of Seventh and Race Sts., Cincinnati, Ohio, and the notice of such declaration sent by registered mail to the said The Big Store Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless The Big Store Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

Sept. 15, 1948.

Cancellation Notice

Willoughby Camera Stores, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of The Spencer Company, 711 West Lake St., Chicago, Ill., to effect the cancellation of trade-mark registration of Willoughby Camera Stores, Inc., No. 300,972, dated February 14, 1933. The assignment records of this Office show a transfer of title to this registration to Robert B. Wheelan, New York, N. Y., joined as a respondent to defend the registration concerned. The Office having been unable to secure service upon the registrant or said Wheelan, notice is hereby given that unless they, their assigns, legal representatives, or other person claiming an interest in the registration shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Sept. 13, 1948. *Assistant Commissioner of Patents.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,442,014. ELECTRICAL GAME BOARD. Patented May 25, 1948. Board is divided into two playing surfaces with a plurality of playing positions on each surface for movable playing men so that a circuit will be established through two playing men to sound a signal when the men are moved to certain positions. The playing positions are provided by embedding a plurality of spaced metallic members in each playing surface with their tops flush with top of board and their shanks below bottom of board. The metallic members in one surface are wired to the bottom of sockets. Plugs in the sockets are wired to the metallic members in the other playing surface. Playing men are wired to a source of electrical energy and a buzzer. The plugs may be pulled out and indiscriminately plugged in again to change the combination after each game. (Owner) David T. Myers, 201 Eaton Road, Charlotte, N. C. Groups 36—21; 39—41. Reg. No. 10,046.

Pat. 2,445,340. LONG-BASE STRAIN OR DISTANCE GAUGE. Patented July 20, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A gauge for measuring small changes in linear distance between two spaced zones. Two support members are permanently fastened in the zones and a removable post attached to each support. A tapeline is attached to a rotatable collar on one of the posts and to a wheel on the other post, which tensions the line. A spirit level and scale are mounted for vertical swinging adjustment parallel to the wheel for measuring changes in the vertical angular position of the wheel. (Owner) H. R. Thomas, 27 Cleveland St., Kensington, Md. Group 35—65. Reg. No. 10,047.

The following 7 patents are owned by Earl H. Hurley, 162½ Maple Ave., Corry, Pa.

Pat. 2,241,859. PORTABLE CLIMBER. Patented May 13, 1941. Groups 25—99; 33—81. Reg. No. 10,048.

Pat. 2,330,288. PORTABLE CLIMBER. Patented Sept. 28, 1943. Groups 25—99; 33—81. Reg. No. 10,049.

The portable climber in each of these two patents consists of a sectional standard having a pair of longitudinal tracks in opposite sides with a pair of stirrups slidably mounted on the tracks. When a person climbs and descends standard, he alternately moves the stirrups step by step with his feet. In Pat. 2,330,288 each stirrup carries an eccentric roller which frictionally engages the face of a track to prevent accidental slipping of stirrups. A plunger inside stirrup near its inner side is connected to each eccentric. The eccentrics do not interfere with free sliding movement of stirrups in an upward direction on tracks, but they must be released before stirrups can be slid down. Exerting foot pressure on a plunger simultaneously releases eccentric and forces stirrup down until plunger is released. The sections of the standard (which includes a suitable base) are easily connected and disconnected.

Pat. 2,247,024. PORTABLE SUPPORT. Patented June 24, 1941. Group 33—59—81. Reg. No. 10,050.

Pat. 2,350,113. PORTABLE SUPPORT. Patented May 30, 1944. Group 33—59—81. Reg. No. 10,051.

Adjustable supports of these two patents for plumbing pipes, light fixtures, etc., may be easily installed between a pair of spaced joists or walls without the use of nails, bolts, or the like. Each support consists of a pair of separable telescoped sections of channel bar material with a piercing prong on the outer end of each section. The bottom inner ends of the sections are formed with integral interlocking means for holding the sections together when installed in various extended positions with prongs embedded in oppositely disposed supporting surfaces. In Pat. 2,350,113 the inner bottom end of outer section has an upwardly inclined tongue for interlocking engagement with any one of a row of openings in bottom of inner section. Bulging projections in the sides of outer section are adapted to snap into longitudinal grooves in the sides of inner section.

Pat. 2,394,913. SWING. Patented Feb. 12, 1946. Group 25—14. Reg. No. 10,052.

Pat. 2,413,232. SWING. Patented Dec. 24, 1946. Group 25—14. Reg. No. 10,053.

These two patents show swings having operating means including levers controlled by occupant seated in swing so that swinging movement will result when occupant exerts pull on levers. Because of ease of operation, the swing provides an exercising device with recreational and amusement qualities. It may be easily operated by a patient to aid in restoring injured muscles and nerves. The swing may embody an upper rigid section pivoted to an overhead support and a pivoted lower section. Lower section will shift under occupant's weight when pull is exerted on levers to cause swing to move. Several modified types of swing are shown.

Pat. 2,443,248. MOTION PICTURE FILM STRIP UNWINDING APPARATUS. Patented June 15, 1948. Apparatus unwinds film from the center of a roll, guides it through a moving picture machine, and winds it on a collapsible hub from which it is readily removed in roll form. The roll is then placed on a drum mounted on top of a turntable of the apparatus and re-exhibited. Concentric spring-pressed centering fingers mounted on turntable around drum engage outermost loop of film and move inwardly as roll is unwound. If film unwinds too fast, an antomatic clutch temporarily stops turntable until slack is taken up. Turntable and collapsible hub are normally geared for rotation together. If the apparatus is used with machines where it is necessary to operate turntable independently of hub, a disk having long depending fingers is utilized. The disk may be mounted above drum so that rollers on free ends of fingers will hold loops of film (being unwound) separated to prevent kinking or bending. Group 39—12. Reg. No. 10,054.

Pat. 2,245,508. SANITARY LAMINATED PAD. Patented June 10, 1941. A sanitary pad for cleansing after defecation, disintegrable in water after use. Comprises a layer of absorbent cotton over a layer of cellulosic material and covered with a backing layer of tough water-resistant paper. Has a flange at one end turned to overlap a portion of the absorbent cotton layer for gripping pad. (Owner) George B. Travis, 2150 Pennsylvania Ave., N. W., Washington 7, D. C. Group 39—16. Reg. No. 10,055.

Pat. 2,339,170. AUTOMOBILE DOOR LOCK CONTROL DEVICE. Patented Jan. 11, 1944. Electric door-locking device may be used with conventional automobile door locks without materially changing them, and will not interfere with manual operation of such locks. The only change necessary is to provide an extension on the lower end of the manual push-pull rod commonly associated with each lock. As soon as the device locks the doors, no current is expended to keep them locked. When ignition switch is turned on with device installed, a warning light on dash will light and remain lighted until all doors are locked, or ignition turned off. Pressing a single push-button switch on dash will automatically and simultaneously lock all properly closed doors and break a normally closed circuit on each door after it is locked. If any door is improperly closed, when button is pressed a buzzer will sound. The warning light will light if any of the locked doors is subsequently unlocked while ignition is on. Modifications are shown. (Owner) Gustave Berliner, 800 East Oaks Ave., Compton, Calif. Groups 36—19; 38—31. Reg. No. 10,056.

Pat. 2,446,287. VERNIER FOR MECHANICALLY MEASURING ANGLES. Patented Aug. 3, 1948. This protractor can be applied directly to a planer, boring mill, etc., to automatically measure and indicate the exact angle through which the machine part is moved. A pivot is held stationary to an axle about which the part to be adjusted turns. A vernier disk is non-rotatably secured to the outer end of the pivot. A vernier arm is rotatably mounted on the pivot and attached to the part to be adjusted. The arm is interconnected by a train of gears with the stationary vernier disk. A second vernier disk is rotatably mounted on the disk arm and connected with the other parts by a gear train in such a way that it will automatically indicate the angle through which the machine element has been moved. (Owner) Elmer W. Kelley, 2205 East Routt Ave., Pueblo, Colo. Group 35—43. Reg. No. 10,057.

Pat. 2,437,982. HYDRAULIC DRUM JACK AND CARRIER. Patented Mar. 16, 1948. A combination jack and truck carrier are adapted to handle heavy drums. Truck includes upper and lower semi-circular bands, with a chain attached to the free ends of upper band to encircle drum. Stationary caster wheels are attached to sides of lower band, and a rotary caster at front. Arms secured to the front of the bands are attached by an upright. The upper arms and band are raised by a hydraulic jack mounted on lower arms, the jack stem engaging a plate secured to lower edges of upper arms. The arms are connected by coil springs on opposite sides of the jack, which is operated by a handle in conventional manner, with the upper band engaging a rib on drum. Carrier has lift hooks for loading and unloading by a hoisting cable. (Co-owner) Oleva I. Tietsema, P. O. Box 578, Oviedo, Fla. Group 35—63. Reg. No. 10,058.

Pat. 2,416,600. COMBINATION LIP AND HANDLE ASSEMBLY FOR CONTAINERS. Patented Feb. 25, 1947. Detachable lip and handle assembly for top of paint cans prevents paint from dripping down outer sides of can when brush is wiped on lip. The device consists of a split band having a relatively wide flaring flange around its top to form the lip. One end of band terminates in a hand grip and the other end terminates in a tab. A wing nut and bolt are used to draw band together so that its unflanged portion will embrace top of can, with bead of can seating on an annular shoulder of band. Device may be made from a single piece of strip metal. (Owner) Morton Waddell, 9 Lawrence Place, Bay Shore, Long Island, N. Y. Groups 33—59—73; 34—41. Reg. No. 10,059.

Pat. 2,438,314. SIGNAL STAFF HOLDING FINGER. Patented Mar. 23, 1948. Finger is easily attached to doors of mail boxes for swinging movement therewith to releasably hold a pivoted signal staff down when door is closed. When door is opened, finger slides outwardly on and past end of staff to permit staff to swing to upright signaling position under influence of a spring. When door is closed and staff lowered, it contacts finger, swinging outwardly on and past end of finger and then inwardly beneath finger. Finger (made from a single strip of metal) has an inwardly struck bendable tab near one end and a hook on the other end to secure it to opposite edges of door. Modifications shown. (Owner) Joseph P. Dalton, Cedar Ave. and White Horse Pike, Berlin, N. J. Group 33—59—73. Reg. No. 10,060.

Pat. 2,446,266. JET PROPELLED HELICOPTER ROTOR. Patented Aug. 3, 1948. A blowback stop mechanism for jet-propelled helicopter rotors which seals off the air and closes the lead port in the jet motor housing from the combustion chamber until the tip speed of the rotor reaches 350 M. P. H. Thereafter, the motor operates by ram compression and the speed and power are controlled by mefering the fuel. The mechanism extends about the rear end of a fuel spray nozzle and includes a channeled stationary ring having a rotating ring within. A number of overlapping segments pivotally supported in channel of stationary ring engage slots in the rotating ring. Rotating ring is operated by a rack and pinion to open and close the segments to open the air inlet port when the motor is to be run on ram compression and to close the segments to seal off the air while the motor is starting on compressed air. (Owner) Thomas L. Cummings, Box 635, Ketchikan, Alaska. Group 37—22. Reg. No. 10,061.

Pat. 2,443,355. PIPE CLEANER. Patented June 15, 1948. Cleaner connects a pipe, cigar, or cigarette holder to a faucet to flush them out. It consists of a small cylindrical body having an integral, radial, flaring stud on its periphery, and two removable dome-shaped rubber plugs of different size. Large plug fits in one end of body and small plug fits in outer end of stud. A continuous fluid passage extends through plugs, stud, and body. Cleaner may be held in one hand with pipe bowl pressed against large plug and small plug pressed against faucet, leaving other hand free. (Owner) James A. Manning, 156 Willow St., Lawrence, Mass. Groups 39—81; 40. Reg. No. 10,062.

Pat. 2,443,381. AUTOMOBILE TRAY. Patented June 15, 1948. A pull-out tray for instrument panel of automobiles, having a closure member flush with panel, is slidably mounted on a pair of spaced parallel bars. The bars extend through openings in two pairs of aligned lugs in bottom of tray near its inner end. The front ends of the bars are secured to a transverse bar screwed to instrument panel. The free inner ends of the parallel bars diverge slightly to provide binding action between them and the lugs to hold tray against vibration when it is in retracted position. (Owner) Walter G. Farrar, Jr., 507 Libbie Ave., Richmond, Va. Groups 33—72; 38—31. Reg. No. 10,063.

Pat. 2,438,094. ELEVATOR SWITCH. Patented Mar. 16, 1948. A tamper-proof safety switch for elevator doors and the like. A pair of spaced contacts is supported in a sealed casing. An electrically conductive actuator guide member has an elongated bore which extends into casing.

Guide directs the actuator between the contacts into operative or inoperative position when the elevator door is closed or opened. The control circuit is completely disabled when an attempt is made to introduce an incorrect actuator. (Owner) Swift & Company, Union Stock Yards, Chicago, Ill. Groups 35—62; 36—19. Reg. No. 10,064.

Pat. 2,439,334. SURFACE CLEANING MACHINE. Patented Apr. 6, 1948. A machine for defeathering poultry or cleaning any irregularly shaped article having loosely adhering material on its surface. Machine has two cylindrical whipping members, driven in opposite directions, rotatably mounted in a frame. Each whipping member includes a number of spaced ridged disks of deformable material such as heavy canvas duck coated with gummy latex, with flaps between the disks. When a fowl is pressed between the cylindrical members, the disks bend to frictionally engage the carcass, and pin feathers, etc., are pulled from the surface. (Owner) Swift & Company, Union Stock Yards, Chicago, Ill. Groups 20—15; 35—51. Reg. No. 10,065.

Pat. 2,408,544. TWIST DRILL SHARPENER. Patented Oct. 1, 1946. A honing fixture for sharpening drills of sizes from 1 to 80. The body is formed with a transverse recess and a longitudinal hole open at opposite ends of the body. A clamping member is mounted in the recess, rotatable on the body to an extent of 180°, and has a hole in registration with the hole in the body for receiving and supporting a drill in sharpening position. The drill is locked in the clamp by a tightening screw, and then locked in the body by a tightening screw, so that during the honing operation the drill lips are always disposed at a proper angle. (Owner) Joseph Banner, 158 West 80th St., Los Angeles 3, Calif. Group 35—41. Reg. No. 10,066.

Pat. 2,446,086. COMBINED COMB AND BRUSH. Patented July 27, 1948. Comb is housed within the brush and may be withdrawn by grasping knob on outer end of comb, the brush forming a handle for the comb. The brush back is made of two parts interlocked at one end but otherwise spaced apart, forming a longitudinal slideway for the comb. A short pin forms a stop to limit the outward movement of comb. (Owner) James Hermans. Address correspondence to Lucke & Lucke, 12 East 41st St., New York 17, N. Y. Groups 30—32; 34—54; 39—22—81; 40. Reg. No. 10,067.

Pat. 2,443,705. VENTILATING DEVICE FOR WATER CLOSETS. Patented June 22, 1948. The purpose of this invention is to provide means for withdrawing foul air from the conventional toilet bowl during use. The invention consists of a ventilating tube and valve-controlled siphon arrangement extending upwardly from the upper end of the bowl into the flush tank. At the upper end of the tube coils are formed which terminate in a drain pipe leading from the bowl. The construction of the coil, siphon, method of operation, and the like are set forth in the patent. (Owner) Harold Fitzgerald, 17584 Northrop Ave., Detroit 19, Mich. Groups 32—61; 33—61. Reg. No. 10,068.

Pat. 2,407,841. GARMENT HANGER. Patented Sept. 17, 1946. Hanger clamps several garments in suspended position. Four bars are pivoted together at rear end for lateral horizontal swinging movement about a hinge pintle. The front ends of inner bars are provided with lateral bosses forming stop shoulders against which outer bars fit for proper spacing. Fastener pins on front ends of inner bars coact with slots so that garments may be clamped between the two inner bars and between each inner bar and an outer bar. A pair of oppositely turned hanger hooks are pivoted in slots at top of the two inner bars and swing upward to support the hanger on the usual rod. When not in use, the hooks are housed in the slots. (Co-owner) Frank Le Roy, 3930 30th St., San Diego, Calif. Groups 25—99; 33—49; 40. Reg. No. 10,069.

Pat. 2,442,479. KEY RETAINER. Patented June 1, 1948. This key case has a number of spaced separators forming compartments. The separators are pivotally attached at one end, and the free ends are held together by a key string threaded through apertures in ends of the separators to hold a key in each compartment. By pulling a key out of its place the string will flex out, and the key may be placed in a lock without disarranging the other keys. To return the key to its compartment the free end of the string is pulled. (Owner) Garland L. Adair, 4217 Alamo, Fort Worth, Tex. Groups 31—72; 40. Reg. No. 10,070.

Pat. 2,444,207. SURGICAL PROBING AND EXTRACTING PLIERS, ELECTRICALLY CONTROLLED. Patented June 29, 1948. Surgical probing and extracting pliers have automatically operated electric means for signaling when a metallic object sought (such as a bullet) has been located. Consists of a handle wherein an electric lamp and battery are provided which are normally out of circuit. The circuit is completed only when the metallic object probed for is firmly grasped by the instrument. The lamp provides a signal and illuminates operation of the extraction. When a metallic object is gripped by the jaw elements of instrument, current flows from upper jaw element through the metallic object to the lower jaw element, through the instrument to the handle, and through a bushing mounting a light bulb, and back to the battery, lighting the bulb. (Owner) Samuel B. Smith, North Hackensack, N. J. Groups 36—21; 39—16. Reg. No. 10,071.

Pat. 2,446,542. ELECTRICAL CABLE CONNECTOR. Patented Aug. 10, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928: 370 O. G. 757.) An electrical cable connector capable of transmitting high electrical loads uniformly while under high tensile load. The connection comprises two main sections, one of brass and one of aluminum, one threaded within the other. The conductor and the connector are welded together and the shank of the connector compressed around the conductor and screwed into the brass section. The electrical path through the connector utilizes the high conductivity of the fused mass of annealed aluminum in contact with every wire of the conductor, while the compressed mechanical connection provides the tensile strength. (Owner) Donald MacInnes, 124 East 91st St., New York 28, N. Y. Group 36—11—31. Reg. No. 10,072.

Notice

General Aniline & Film Corporation is offering licenses at reasonable royalty under more than 3,000 of its patents. The patents will be listed, in the near future, in the Register of Patents Available for License or Sale. Pending such publication, a booklet containing listing of these patents may be secured from the Corporation or from the U. S. Patent Office.

Further information may be secured through the Patent Department, General Aniline & Film Corporation, 247 Park Avenue, New York 17, N. Y.

Notice

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license only. Licenses will be granted on reasonable terms.

Pending publication of patent numbers and abstracts in the GAZETTE, listings may be inspected at the U. S. Patent Office.

These patents are contained in 10 schedules. Schedules will be published shortly and the listings of patents will follow by schedule number.

Communications concerning specific abstracts should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Delaware.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 19, 1948

[VOL. 615. No. 3]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. The Chief

Applicant claims ownership of registration No. 347,830.
FOR TRUNKS—WARDROBE, STEAMER, DRESS, AND TAXI; HAND LUGGAGE—OVERNIGHTS, PULLMANS, WARDROBES, HAT AND SHOE CASES, DUFFLE BAGS, ZIPPER BAGS, LAUNDRY CASES, AND OVERSEAS CASES.
Claims use since Jan. 26, 1937, on trunks and hand luggage (except overseas cases); and since August 1947 on overseas cases.

Ser. No. 549,958. OSHKOSH TRUNKS AND LUGGAGE, Oshkosh, Wis. Filed Feb. 17, 1948. Under section 2f of the act of 1946.

MINNETONKA

Applicant claims ownership of registration No. 414,266.
FOR TRUNKS—WARDROBE, TAXI, STEAMER, AND DRESS; HAND LUGGAGE—OVERNIGHTS, PULLMANS, HAT AND SHOE CASES, TRAY CASES, WARDROBES, AND OVERSEAS CASES.
Claims use since October 1939 on trunks and hand luggage; and since August 1947 on overseas cases.

Ser. No. 549,959. OSHKOSH TRUNKS AND LUGGAGE, Oshkosh, Wis. Filed Feb. 17, 1948. Under section 2f of the act of 1946.

WINNEBAGO

Applicant claims ownership of registration No. 414,267.
FOR TRUNKS—WARDROBE, TAXI, STEAMER, AND DRESS; HAND LUGGAGE—OVERNIGHTS, PULLMANS, HAT AND SHOE CASES, TRAY CASES, WARDROBES, AND OVERSEAS CASES.
Claims use since October 1939 on trunks and hand luggage; and since August 1947 on overseas cases.

Ser. No. 549,960. OSHKOSH TRUNKS AND LUGGAGE, Oshkosh, Wis. Filed Feb. 17, 1948.

Black Hawk

FOR TRUNKS—WARDROBE, TAXI, STEAMER, AND DRESS; HAND LUGGAGE—OVERNIGHTS, PULLMANS, HAT AND SHOE CASES, TRAY CASES, WARDROBES, AND OVERSEAS CASES.
Claims use since December 1946 on trunks and hand luggage; and since August 1947 on overseas cases.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 511,799. DETERGENTS, INC., Columbus, Ohio. Filed Feb. 20, 1948.

all

FOR DETERGENTS FOR USE AS A LAUNDRY POWDER.
Claims use since Sept. 30, 1946.

Ser. No. 526,677. BABSON BROS. CO., Chicago, Ill. Filed July 5, 1947.

Surge

Applicant claims ownership of registrations Nos. 201,871, 387,233, 387,726, 388,024, 389,572, 390,651, 393,323, 409,666, and 411,716.
FOR DETERGENT WASHING POWDER WITH A WETTING AGENT ADDED, IN TABLET AND POWDER FORM, PARTICULARLY FOR CLEANING DAIRY UTENSILS.
Claims use since June 20, 1947.

Ser. No. 552,297. THE M. WERK COMPANY, St. Bernard, Ohio. Filed Mar. 18, 1948.

WERK'S HYTEXAL

The color lining appearing on the drawing is for shading purposes only. The word "Werk's" is disclaimed apart from the mark. Applicant claims ownership of registration No. 318,098.
FOR CLEANING COMPOUNDS FOR GENERAL LAUNDRY PURPOSES.
Claims use since Feb. 20, 1928.

Ser. No. 552,298. THE M. WERK COMPANY, St. Bernard, Ohio. Filed Mar. 18, 1948.

WERK'S LT 60

The color lining appearing on the drawing is for shading purposes only. The word "Werk's" is disclaimed apart from the mark. Applicant claims ownership of registration No. 320,415.
FOR CLEANING COMPOUNDS FOR GENERAL LAUNDRY, TEXTILE, AND SIMILAR INDUSTRIAL USES.
Claims use since July 19, 1934.

Ser. No. 559,182. RONUK, LIMITED, Portslade, England. Filed June 14, 1948.

PANDA

Applicant claims ownership of Great Britain registration No. 611,425, dated Apr. 12, 1940.
FOR STEELWOOL AND STEEL SHAVINGS FOR CLEANING PURPOSES.

Ser. No. 559,447. HILLYARD CHEMICAL COMPANY, St. Joseph, Mo. Filed May 5, 1948. Under section 2f of the act of 1946.

BRITEN-ZIT

Applicant claims ownership of registration No. 250,718.
FOR LIQUID CLEANER FOR FLOORS AND WOODWORK.
Claims use since Oct. 17, 1927.

CLASS 5

ADHESIVES

Ser. No. 514,940. CORN PRODUCTS REFINING COMPANY, New York, N. Y. Filed Sept. 15, 1947.

FOR CHEMICAL PRODUCTS DERIVED FROM CORN—NAMELY, MODIFIED WHOLE PROTEIN FROM CORN GLUTEN AND ZEIN—FOR ADHESIVE PURPOSES.
Claims use since May 30, 1944, on whole corn gluten; and since Sept. 6, 1946, on extract from corn gluten.

Ser. No. 534,529. THE GUMMED PRODUCTS COMPANY, Troy, Ohio. Filed Sept. 15, 1947.

GP

FOR FIBROUS SHEET AND WEB MATERIAL BACKED WITH ADHESIVE—NAMELY, GUMMED TAPE, CLOTH TAPE, SISAL TAPE, LINER BOARD TAPE, KRAFT TAPE, PAPER TAPE, BOX TAPE, LOCKER TAPE, CORD REINFORCED TAPE, WATERPROOFED GUMMED TAPE, VENEER TAPE, DUPLEX TAPE, FLAT GUMMED SHEETS AND TAPE, COATED AND LAMINATED SHEETS OF PAPER, CLOTH AND OTHER LAMINAE.
Claims use since July 7, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 510,824. CARL J. BARTON, doing business as Barton Products Co., Chicago, Ill. Filed Mar. 9, 1948. Under section 2f of the act of 1946.

Barton

FOR VARIOUS COMPOSITIONS CONTAINING CHEMICAL INGREDIENTS FOR SEALING ENGINE BLOCKS; SEALING LEAKS IN AUTOMOBILE RADIATORS; CLEANING AUTOMOBILE RADIATORS; RESTORING LOST POWER IN AUTOMOBILE ENGINES BY DISSOLVING GUM AND SLUDGE, FREEING STICKY VALVES AND PREVENTING CARBON FROM FORMING IN THE CYLINDERS; ELIMINATING AND PREVENTING RUST IN THE COOLING SYSTEM OF AN AUTOMOBILE; SEALING AUTOMOBILE IGNITION WIRES TO PREVENT ABSORPTION OF MOISTURE AND WATER; A CONDITIONER FOR GASOLINE AND FUEL OIL, I. E. ABSORBS MOISTURE, REDUCES CARBON FORMATION, PREVENTS CLOGGING OF BURNER; BRAKE FLUID.
Claims use since Oct. 5, 1935.

Ser. No. 513,286. THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Nov. 28, 1947.

SOFTRESS

FOR SOAPLESS SHAMPOO.
Claims use since Oct. 28, 1946.

Ser. No. 519,816. JULIUS GOLDNER, doing business as Regal Chemical Co., Brooklyn, N. Y. Filed Nov. 4, 1947.

Regal

FOR HYDRAULIC BRAKE FLUID.
Claims use since 1939.

Ser. No. 520,500. ESTON CHEMICALS, INC., Los Angeles, Calif. Filed July 5, 1947.

BROMOFUME

FOR SOIL AND GRAIN FUMIGANTS.
Claims use since Mar. 11, 1943.

Ser. No. 520,761. MORTON MANUFACTURING CORPORATION, doing business as Snow White Products Company, Lynchburg, Va. Filed Dec. 18, 1947.

Snow White

Applicant claims ownership of registrations Nos. 301,546, and 420,852.
FOR LEMON CREAM FOR USE AS A COSMETIC SKIN CREAM.
Claims use since Nov. 11, 1946.

Ser. No. 524,818. ANATOLE ROBBINS, INC., Los Angeles, Calif. Filed Mar. 8, 1948.

Pin-up

FOR LIQUID MAKE-UP PREPARATION, ALSO USED AS A POWDER BASE.
Claims use since Dec. 1, 1943.

Ser. No. 527,935. NATIONAL ALUMINATE CORPORATION, Chicago, Ill. Filed July 5, 1947.

NALCITE

FOR ION EXCHANGE COMPOSITIONS USED IN THE SOFTENING AND PURIFYING OF WATER AND IN THE PURIFYING OF LIQUID MEDIUMS, OTHER THAN WATER.
Claims use since Feb. 18, 1938.

Ser. No. 528,908. W. H. BULL MEDICINE COMPANY, St. Louis, Mo. Filed July 19, 1947.

BULCO

FOR INSECTICIDES—TO WIT, INSECT SPRAY, INSECTICIDAL CONCENTRATES, AND INSECT POWDER.
Claims use since Aug. 31, 1938.

Ser. No. 529,136. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed July 22, 1947.

'CARMACIN'

FOR MEDICINAL PREPARATION CONTAINING ANTACIDS, USED IN THE TREATMENT OF GASTRIC HYPERACIDITY.
Claims use since June 1933.

Ser. No. 529,138. BURROUGHS WELLCOME & CO. (U. S. A.) INC., New York, N. Y. Filed July 22, 1947.

'DIGINUTIN'

FOR PRODUCT CONTAINING THE ACTIVE PRINCIPALS OF DIGITALIS FREED FROM INERT MATERIAL, FOR ADMINISTRATION BY MOUTH IN THE TREATMENT OF VARIOUS CARDIAC CONDITIONS.
Claims use since June 1930.

Ser. No. 532,914. DAVIDSON MANUFACTURING CORPORATION, Chicago, Ill. Filed Aug. 30, 1947. Under section 2f of the act of 1946.

Davidson

FOR GUM ARABIC SOLUTION USED TO PROTECT LITHOGRAPHIC PLATES WHEN NOT IN USE, COUNTER-ETCH USED IN REMOVING OXIDES AND FOREIGN MATTER FROM THE GRAINED SURFACES OF LITHOGRAPHIC PLATES, SOLUTION USED FOR MAKING A LITHOGRAPHIC PLATE PHOTOSENSITIVE, SOLUTION USED TO CLEAN BLANKETS AND ROLLERS USED IN PRINTING MACHINES, PREPARATION USED TO PRESERVE LITHOGRAPHIC PLATES WHEN THEY ARE TO BE STORED FOR LONG PERIODS OF TIME, FOUNTAIN ETCHES EMPLOYED IN THE LITHOGRAPHIC PROCESS, AND POWDER USED IN THE PRINTING INDUSTRY TO PRESERVE BLANKETS AND TO ABSORB GREASES AND OILS WHICH MAY HAVE PENETRATED INTO THE BLANKETS.
Claims use since Nov. 20, 1940.

Ser. No. 533,409. SERVICE INDUSTRIES, Philadelphia, Pa. Filed Sept. 4, 1947.

SLUG

FOR CHEMICAL COMPOUND FOR USE AS A DRAIN CLEANER.
Claims use since July 21, 1947.

Ser. No. 534,190. JOHN E. RESPONDEK, doing business as Noxruma Products Co., Detroit, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

"INDIA"

The drawing is lined to indicate shading. Applicant claims ownership of registration No. 412,869.
FOR HERB TEA TO BE USED AS A LAXATIVE.
Claims use since Nov. 11, 1938.

Ser. No. 536,313. TENNESSEE COPPER COMPANY, Copperhill, Tenn. Filed Sept. 30, 1947. Under section 2f of the act of 1946.

"TRI-BASIC"

Applicant claims ownership of registration No. 414,085.
FOR COPPER FUNGICIDES.
Claims use since Aug. 20, 1937.

Ser. No. 537,026. ELMO, INC., Philadelphia, Pa. Filed Oct. 7, 1947.

FOUNDATION MIST

No claim is made to the word "Foundation" apart from the mark. Applicant claims ownership of registrations Nos. 198,810, 378,524, and 362,283.
FOR FACIAL CREAMS.
Claims use since Apr. 12, 1938.

Ser. No. 537,027. ELMO, INC., Philadelphia, Pa. Filed Oct. 7, 1947.

MARGO MASQUE

No claim is made to the word "Masque" apart from the mark. Applicant claims ownership of registration No. 143,326.
FOR FACE PACKS.
Claims use since December 1927.

Ser. No. 537,059. HELEN MCHENRY, Toledo, Ohio. Filed Oct. 7, 1947.

Mountain Maid

FOR TOILET CREAMS, HAIR OIL, AND DEODORANT.
Claims use since May 12, 1947.

Ser. No. 537,263. ANDREW WILSON, INC., Springfield, N. J. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

SLUG-O

FOR PREPARATION FOR KILLING SLUGS, SNAILS, AND OTHER PESTS.
Claims use since Dec. 31, 1940.

Ser. No. 537,266. ANDREW WILSON, INC., Springfield, N. J. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

CHINCH-O

Applicant claims ownership of registration No. 384,037.
FOR INSECTICIDES.
Claims use since June 1933.

Ser. No. 538,172. PLOUGH, INC., Memphis, Tenn. Filed Oct. 17, 1947. Under section 2f of the act of 1946.

MEXICAN
Wm L. Dewoody

The signature is that of Wm. L. Dewoody, deceased. Applicant claims ownership of registration No. 182,511.
FOR POWDER FOR PRICKLY HEAT, NETTLE RASH, AND CHAFED SKIN; FOR EXTERNAL USE ONLY.
Claims use since January 1894.

Ser. No. 538,596. SAMUEL BONAT & BRO., INC., New York, N. Y. Filed Oct. 22, 1947. Under section 2f of the act of 1946.

Bonat

Applicant claims ownership of registrations Nos. 298,298, 402,853, and 415,146.
FOR HAIR SHAMPOOS, HAIR WAVING SOLUTIONS, HAIR RINSES, HAIR TONICS, AND HAIR DRESSING.
Claims use since 1912.

Ser. No. 545,806. ROBERT E. WILSON, doing business under the name Duncan-Wilson, Princeton, N. J. Filed Dec. 30, 1947.

nitecap

FOR PREPARATION TO ALLEVIATE UNPLEASANT AFTER-EFFECTS FROM OVERINDULGENCE.
Claims use since Nov. 21, 1947.

Ser. No. 547,415. AMES COMPANY, INC., Elkhart, Ind. Filed Jan. 19, 1948.

DiSulfa-VESS

No claim is made to the word "Disulfa" apart from the mark. Applicant claims ownership of registrations Nos. 384,081 and 413,585.
FOR SULFATHIAZOLE-SULFADIAZINE BUFFERED WITH SODIUM CITRATE.
Claims use since Dec. 22, 1947.

Ser. No. 547,479. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Jan. 19, 1948.

SULFAPROMIN

FOR CHEMOTHERAPEUTIC AGENT FOR USE IN THE TREATMENT OF MYCO-BACTERIAL DISEASES.
Claims use since Dec. 9, 1947.

Ser. No. 547,647. R. J. MORAN CO., Boston, Mass. Filed Jan. 21, 1948.

PEROPHYL

FOR ANTISEPTIC CREAM OINTMENT FOR HEALING.
Claims use since September 1947.

Ser. No. 547,753. R. J. MORAN CO., Boston, Mass. Filed Jan. 22, 1948.

PAPRANIN

FOR MEDICINAL PREPARATION—NAMELY, A LIQUID DIGESTANT TO AID DIGESTION.
Claims use since June 1936.

Ser. No. 547,895. CHURCH & DWIGHT CO. INC., New York, N. Y. Filed Jan. 24, 1948.

ARM & HAMMER BRAND

No claim is made to the word "Brand" apart from the mark. Applicant claims ownership of registration No. 106,215.
FOR BICARBONATE OF SODA (BAKING SODA).
Claims use since 1874.

Ser. No. 548,763. LOUIS W. SCHATZ, doing business as General Plastics Manufacturing Company, Tacoma, Wash. Filed Feb. 4, 1948.

DURA-NETT

No claim is made to the syllable "nett" apart from the entire mark as shown.
FOR PRESERVATIVE TREATING CHEMICALS FOR FISHNETS.
Claims use since May 15, 1946.

Ser. No. 548,818. RICHARD HUDNUT, New York, N. Y. Filed Feb. 5, 1948.

SOPHISTI-CREME

The word "Creme" is disclaimed apart from the mark as shown.
FOR CAKE MAKEUP.
Claims use since Oct. 20, 1947.

Ser. No. 549,009. RUDOLPH L. SCHWARTZ, doing business as Watertecter Company, Buffalo, N. Y. Filed Feb. 6, 1948.

WATERTECTER

FOR COMPOSITION OF MATTER INCLUDING AN INGREDIENT WHICH CHANGES COLOR UPON CONTACT WITH WATER, AND WHICH IS USEFUL TO DETERMINE THE PRESENCE OF WATER COLLECTING IN A TANK OR OTHER CONTAINER FOR GASOLINE AND OTHER MINERAL OIL PRODUCTS.
Claims use since Nov. 17, 1938.

Ser. No. 550,067. PENOLA INC., Chicago, Ill. Filed Feb. 18, 1948.

ε

FOR INSECTICIDES.
Claims use since May 26, 1947.

Ser. No. 550,086. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 18, 1948.

Maid of Honor

FOR INSECTICIDES AND MOTH PREVENTIVES.
Claims use since Jan. 15, 1946.

Ser. No. 550,920. THE GROVE LABORATORIES, INC., Wilmington, Del., and St. Louis, Mo. Filed Mar. 1, 1948.

GCT

FOR TABLETS FOR THE RELIEF OF COLDS.
Claims use since Feb. 20, 1948.

Ser. No. 551,573. MORTON MANUFACTURING CORPORATION, doing business as Chap Stick Co., Lynchburg, Va. Filed Mar. 9, 1948.

Chap-ans

The word "Chap" is disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 86,819, 375,567, 273,217, 253,632, and 405,187.
FOR HAND AND SKIN BALM.
Claims use since Feb. 25, 1948.

Ser. No. 552,742. BURROUGHS WELLCOME & CO., U. S. A. INC., New York, N. Y. Filed Mar. 23, 1948.

'ALUPHEL'

FOR ANTACID PREPARATION.
Claims use since Mar. 5, 1948.

Ser. No. 553,438. WALLACE & TIERNAN PRODUCTS, INC., Belleville, N. J. Filed Mar. 30, 1948.

GLAMYLOL

FOR ANTISEPTICS CONTAINING AS AN ACTIVE INGREDIENT A QUATERNARY AMMONIUM COMPOUND.
Claims use since Feb. 27, 1948.

Ser. No. 553,735. PARFUMS WIEL PARIS CO., New York, N. Y. Filed Apr. 2, 1948.

Evettes

FOR PERFUMES, COLOGNES, AND TOILET WATERS.
Claims use since Mar. 18, 1948.

Ser. No. 558,064. PHYSICIANS' DRUG & SUPPLY CO., Philadelphia, Pa. Filed May 28, 1948.

ME FUR ONE

FOR DRUG TO BE USED IN THE TREATMENT OF CARDIAC CONDITIONS AND ASTHMA.
Claims use since May 6, 1948.

Ser. No. 558,065. PHYSICIANS' DRUG & SUPPLY CO., Philadelphia, Pa. Filed May 28, 1948.

THIMECIL

FOR DRUG TO BE USED IN THE TREATMENT OF THYROID DISEASES.
Claims use since May 6, 1948.

Ser. No. 558,265. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed June 2, 1948.

DARVISUL

FOR SULFONAMIDE PREPARATION.
Claims use since May 17, 1948.

Ser. No. 558,266. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed June 2, 1948.

MEGASUL

FOR SULFONAMIDE PREPARATION FOR VETERINARY USE.
Claims use since May 17, 1948.

CLASS 7

CORDAGE

Ser. No. 527,140. SAUERMAN BROS., INC., Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

SPECIAL EXCAVATOR

Applicant claims ownership of registration No. 191,911.
FOR WIRE CABLE FOR USE IN CONNECTION WITH EXCAVATING MACHINERY, SLACKLINE CABLEWAY, POWER DRAG SCRAPERS, AND THE LIKE.
Claims use since February 1921.

Ser. No. 532,933. THE HOOVEN & ALLISON COMPANY, Xenia, Ohio. Filed Aug. 30, 1947.

H&A Cordage

The word "Cordage" and the representation of the cord are disclaimed apart from the mark as shown. Applicant claims ownership of registrations Nos. 354,632 and 358,393.

FOR ROPE; BINDER TWINE; JUTE, HEMP, OAKUM AND SISAL TWINES; TARRED TWINES; CLOTHES LINES; AND TWINE AND ROPE TO BE USED FOR PACKINGS.

Claims use since 1922.

Ser. No. 534,037. THE LINEN THREAD CO., INC., New York, N. Y. Filed Sept. 10, 1947.

DUNBARTON

FOR TWINE.

Claims use since 1937.

Ser. No. 544,191. PLYMOUTH CORDAGE COMPANY, Plymouth and North Plymouth, Mass. Filed Dec. 12, 1947. Under section 2f of the act of 1946.

STRONG-TIE

Applicant claims ownership of registration No. 198,391.

FOR FIBROUS AND TEXTILE CABLES, ROPES, AND TWINES.

Claims use since July 21, 1922.

Ser. No. 550,814. MACWHYTE COMPANY, Kenosha, Wis. Filed Feb. 28, 1948.

HI-LASTIC

FOR WIRE ROPE.

Claims use since Mar. 1, 1935.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 540,175. COLUMBIA RIBBON & CARBON MANUFACTURING COMPANY, INC., Glen Cove, N. Y. Filed Nov. 5, 1947. Under section 2f of the act of 1946.

Silk Gauze

FOR TYPEWRITER RIBBONS AND CARBON PAPER.

Claims use since January 1906.

Ser. No. 547,874. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y. Filed Jan. 23, 1948.

Park Lane

Applicant claims ownership of registration No. 392,421.

FOR CARBON PAPER.

Claims use since Nov. 28, 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 539,996. TRUSCON STEEL COMPANY, Youngstown, Ohio. Filed Nov. 3, 1947.

TRUSGUARD

FOR HIGHWAY ROAD GUARDS AND PARTS THEREOF.

Claims use since Oct. 16, 1947.

Ser. No. 546,717. GEO. S. MEPHAM CORPORATION, East St. Louis, Ill., assignor to C. K. Williams & Co., East St. Louis, Ill., a corporation of Delaware. Filed Jan. 10, 1948.

STAR

FOR COLORS FOR MASONRY MATERIALS INCLUDING MORTAR, CEMENT, PLASTER, AND STUCCO.

Claims use since Apr. 2, 1922.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 526,676. CONRAD J. PATT, Chicago, Ill. Filed July 5, 1947.

HANGMASTER

FOR BRACKET TYPE SUPPORTS FOR CLOTHES HANGERS.

Claims use since Apr. 2, 1947.

Ser. No. 527,255. RICHARDS-WILCOX MANUFACTURING COMPANY, Aurora, Ill. Filed July 5, 1947.

DOR-WAY

FOR HARDWARE FOR GARAGE DOORS OF THE VERTICAL TURN-OVER TYPE—NAMELY, HORIZONTAL METAL TRACKS, METAL ROLLERS, PIVOTED GUIDE ARMS, AND UPPER AND LOWER WEATHER STRIPS.

Claims use since December 1939.

Ser. No. 527,937. RICHARDS-WILCOX MANUFACTURING COMPANY, Aurora, Ill. Filed July 5, 1947.

EARWAY

FOR METALLIC SLIDING DOOR TRACK.

Claims use since June 1928.

Ser. No. 528,573. EDWARD E. JOHNSON, INC., St. Paul, Minn. Filed July 14, 1947. Under section 2f of the act of 1946.

JOHNSON

FOR WELL SCREENS USED IN CONJUNCTION WITH DEEP WELLS FOR PUMPING LIQUIDS SUCH AS WATER AND OIL.

Claims use since December 1908.

Ser. No. 532,035. KOKOMO SANITARY POTTERY CORPORATION, Kokomo, Ind., and Chicago, Ill. Filed Aug. 21, 1947.

"Paul Revere" refers to the historical character in Revolutionary history, now deceased.

FOR VITREOUS CHINA WATER CLOSETS, TANKS, AND BOWLS.

Claims use since 1932.

Ser. No. 532,036. KOKOMO SANITARY POTTERY CORPORATION, Kokomo, Ind., and Chicago, Ill. Filed Aug. 21, 1947.

FOR VITREOUS CHINA WATER CLOSETS, TANKS, AND BOWLS.

Claims use since 1932.

Ser. No. 533,868. THE FAIRBANKS COMPANY, New York, N. Y. Filed Sept. 9, 1947.

SPHERO

Applicant claims ownership of registration No. 77,630.

FOR STEAM AND WATER VALVES.

Claims use since Oct. 1, 1909.

Ser. No. 533,870. THE FAIRBANKS COMPANY, New York, N. Y. Filed Sept. 9, 1947.

FAIRCOSEAL

Applicant claims ownership of registration No. 401,038.

FOR PLUMBING AND STEAM-FITTING VALVES.

Claims use since Sept. 3, 1942.

CLASS 15

OILS AND GREASES

Ser. No. 536,280. PENNSYLVANIA REFINING COMPANY, Butler, Pa. Filed Sept. 30, 1947.

CRUISER

FOR MOTOR LUBRICATING OILS.
Claims use since January 1933.

Ser. No. 558,864. THE CLEVELAND DENTAL MANUFACTURING COMPANY, Cleveland, Ohio. Filed June 10, 1948.

Solubri

Applicant claims ownership of registration No. 191,635.
FOR DENTAL HANDPIECE LUBRICATING OIL.
Claims use since Feb. 9, 1929.

Ser. No. 563,751. THE PURE OIL COMPANY, Chicago, Ill. Filed Aug. 19, 1948.

AIRLIGHT

FOR STOVE AND LAMP NAPHTHAS AND GASOLINE.
Claims use since 1917.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 496,454. MINWAX COMPANY, INC., New York, N. Y. Filed July 26, 1947. Under section 2f of the act of 1946.

DRI-GLOSS

FOR WAX FINISH FOR TILE, MARBLE, TERRAZZO, AND FLOOR SURFACES.
Claims use since February 1937.

Ser. No. 508,048. LACQUER & CHEMICAL CORPORATION, Brooklyn, N. Y. Filed Apr. 12, 1948. Under section 2f of the act of 1946.

ALAKA

Applicant claims ownership of registration No. 212,432.
FOR VARNISH AND PYROXYLIN LACQUERS, PAINT ENAMELS, PAINT AND VARNISH THINNING LIQUIDS, PAINT AND VARNISH SOLVENTS, READY-MIXED PAINTS, ASPHALT PAINTS, PAINT PRIMERS, PASTE PAINTS, AND RUBBER BASED PAINTS.
Claims use since Jan. 1, 1923.

Ser. No. 517,060. INDUSTRIAL METAL PROTECTIVES, INC., Wilmington, Del., and Dayton, Ohio. Filed Aug. 8, 1947.

FOR METAL DUST-CONTAINING COMPOSITIONS IN THE NATURE OF A PAINT FOR COATING METALS—NAMELY, RESIN-METAL DUST COATING COMPOSITIONS AND ALKALI SILICATE-METAL DUST COATING COMPOSITIONS AND INGREDIENTS THEREFOR.
Claims use since Jan. 18, 1947.

Ser. No. 517,281. THE O'BRIEN CORPORATION, South Bend, Ind., by change of name from O'Brien Varnish Corporation. Filed Oct. 4, 1947.

Applicant claims ownership of registration No. 153,812.
FOR PAINT ENAMELS; PAINT ENAMEL UNDERCOATS; READY MIXED INTERIOR PAINTS; READY MIXED EXTERIOR PAINTS; PAINT OILS; LIQUID PAINT AND VARNISH REMOVER; VARNISHES; LIQUID FINISHES FOR WOOD FLOORS IN THE NATURE OF PAINTS, ENAMELS, VARNISHES AND LACQUERS; LIQUID FILLERS AND SURFACERS FOR WOOD FLOORS—NAMELY, VARNISHES, FILLERS, OIL STAINS, SYNTHETIC CLEAR COATINGS AND PIGMENTED FLOOR ENAMELS; WOOD STAINS; OIL PAINTS; VARNISH STAINS; SIGN PAINTER PAINTS; ASPHALTUM PAINT; BRONZING LIQUID; PAINT DRYERS; LACQUERS; PAINT PRIMERS; AND GLAZING LIQUIDS.
Claims use since 1910.

45,473. KODOL. Registered Aug. 22, 1905. E. C. De Witt & Co. REMEDIES FOR CURING DYSPEPSIA. Class 6. New certificate under section 7(c) issued Oct. 19, 1948, to E. C. De Witt & Co., Inc., Chicago, Ill., a corporation of New York.

68,905. REPRESENTATION OF SUN AND MOUNTAINS. Registered May 5, 1908. E. C. De Witt & Company. REMEDIES FOR THE RELIEF OF KIDNEY, BLADDER AND LIVER TROUBLES. Class 6. New certificate under section 7(c) issued Oct. 19, 1948, to E. C. De Witt & Co., Inc., Chicago, Ill., a corporation of New York.

114,260. VERMOUTH AND FANCIFUL DESIGN. Registered Dec. 5, 1916. Martini & Rossi. DISTILLED ALCOHOLIC LIQUORS. Class 49. New certificate under section 7(c) issued Oct. 19, 1948, to Martini & Rossi Corporation, New York, N. Y., a corporation of Delaware.

185,413. MARTINI. Registered June 17, 1924. Martini & Rossi. WINES, SPARKLING WINES, AND WINE VERMUTH. Class 47. New certificate under section 7(c) issued Oct. 19, 1948, to Martini & Rossi Corporation, New York, N. Y., a corporation of Delaware.

227,926. "ROSSI" ETC. AND DESIGN. Registered May 17, 1927. Martini & Rossi. WINES—NAMELY, APPETIZERS MADE FROM A WINE BASE. Class 47. New certificate under section 7(c) issued Oct. 19, 1948, to Martini & Rossi Corporation, New York, N. Y., a corporation of Delaware.

299,161. PICTORIAL DESIGN. Registered Nov. 22, 1932. Martini & Rossi S. A. VERMOUTH, COCKTAILS, LIQUORS, AND BITTERS. Class 49. New certificate under section 7(c) issued Oct. 19, 1948, to Martini & Rossi Corporation, New York, N. Y., a corporation of Delaware.

311,119. MARTINI AND DESIGN. Registered Mar. 13, 1934. Martini & Rossi S. A. VERMOUTH, SPARKLING AND STILL WINES AND PREPARED WINES AS APPETIZERS. Class 47. New certificate under section 7(c) issued Oct. 19, 1948, to Martini & Rossi Corporation, New York, N. Y., a corporation of Delaware.

TRADE-MARK REGISTRATIONS REPUBLISHED

The following marks registered under the act of 1905, or the act of 1881, are published under the provisions of section 12(c) of the Trade-Mark Act of 1946. These registrations are not subject to opposition but are subject to cancellation under section 14 of the act of 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 185,279. Registered June 10, 1924. DIAMOND STATE FIBER COMPANY, Elsmere, Del., and Bridgeport, Pa. Republished by Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware.

VULCAWOOD

FOR COMBINED VULCANIZED FIBER AND PHENOLIC CONDENSATION PRODUCTS.
Claims use since Nov. 1, 1923.

Reg. No. 228,253. Registered May 24, 1927. MOLINE CONSUMERS COMPANY, Moline, Ill., a corporation of Illinois. Republished by registrant.

LUCKY STRIKE

FOR COAL.
Claims use since Apr. 23, 1926.

Reg. No. 256,917. Registered May 28, 1929. WARREN MACPHERSON, Cambridge, Mass. Republished by General Latex and Chemical Corporation, Cambridge, Mass., a corporation of Massachusetts.

REVULTEX

FOR VULCANIZED OR PARTLY VULCANIZED RUBBER LATEX IN UNCOAGULATED, NATURAL, DILUTE, CONCENTRATED OR COAGULATED FORM.
Claims use since Oct. 18, 1927.

Reg. No. 389,219. Registered July 29, 1941. CHEROKEE COAL COMPANY, Louisville, Ky., a corporation of Kentucky. Republished by registrant.

The word "Harlan" and the representation of the lump of coal are disclaimed apart from the mark as shown.
FOR COAL.
Claims use since 1933.

Reg. No. 391,594. Registered Nov. 18, 1941. CHEROKEE COAL COMPANY, Louisville, Ky., a corporation of Kentucky. Republished by registrant.

FOR COAL.
Claims use since 1925.

Reg. No. 391,659. Registered Nov. 18, 1941. PRINCESS ELKHORN COAL COMPANY, Paintsville, Ky., a corporation of Delaware. Republished by registrant.

The word "Elkhorn" is disclaimed apart from the mark as shown.
FOR COAL.
Claims use since May 23, 1941.

Reg. No. 396,832. Registered Aug. 4, 1942. GRAPEVINE COAL COMPANY, Madisonville, Ky., a corporation of Delaware. Republished by registrant.

The word "Coal" and the representation of a lump of coal are disclaimed.
FOR COAL.
Claims use since June 1, 1918.

Reg. No. 418,198. Registered Dec. 11, 1945. CORN PRODUCTS REFINING COMPANY, New York, N. Y., a corporation of New Jersey. Republished by registrant.

CERELOSE

FOR HIGHLY REFINED MONOSACCHARIDE DERIVED BY HYDROLYSIS OF POLYMERIC CARBOHYDRATE MATERIALS, USED IN FERMENTATION AND CHEMICAL MANUFACTURING PROCESSES AS A RAW MATERIAL IN THE PRODUCTION OF ALCOHOL, ORGANIC ACIDS AND POLYHYDROXY COMPOUNDS.
Claims use since about July 1923.

CLASS 2

RECEPTACLES

Reg. No. 216,393. Registered Aug. 10, 1926. CHAMPION PNEUMATIC MACHINERY COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The words "Air Compressor" are disclaimed apart from the mark as shown.
FOR AIR COMPRESSOR TANKS.
Claims use since Nov. 3, 1921.

Reg. No. 277,655. Registered Nov. 25, 1930. THE AMERICAN PULLEY COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

TRUK-PAK

FOR PACKAGE TRAYS FOR TRUCKS.
Claims use since Apr. 11, 1929.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 234,098. Registered Oct. 18, 1927. SAMUEL WARD MANUFACTURING CO., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

WARD'S

FOR WRITING CASES AND PORTFOLIOS.
Claims use since 1868.

Reg. No. 380,671. Registered Aug. 27, 1940. DESMOND'S, Los Angeles, Calif. Republished by Desmond's, Inc., Los Angeles, Calif., a corporation of California.

MAIN LINE

FOR TRUNKS, SUIT CASES, WARDROBE BAGS, OVERNIGHT BAGS, VALISES, AND HAND BAGS.
Claims use since Dec. 30, 1939.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 61,635. Registered Apr. 2, 1907. MEXICAN AMOLE SOAP CO., Peoria, Ill. Republished by Amole Incorporated, Tipp City, Ohio, a corporation of Ohio.

AMOLE

FOR SOAP.
Claims use since about January 1883.

Reg. No. 135,412. Registered Oct. 12, 1920. CHICAGO BELTING COMPANY, Chicago, Ill. Republished by Chicago Belting Company, Chicago, Ill., a corporation of Delaware.

The words "Trade" and "Mark" are disclaimed apart from the mark as shown.
FOR DRESSING AND PRESERVATIVE FOR LEATHER, RUBBER, CANVAS, AND FABRIC BELTING AND OTHER LEATHER PRODUCTS.
Claims use since June 28, 1919.

Reg. No. 178,564. Registered Jan. 15, 1924. CHICAGO BELTING COMPANY, Chicago, Ill. Republished by Chicago Belting Company, Chicago, Ill., a corporation of Delaware.

Beltex Gripstick

FOR DRESSING FOR LEATHER OR CANVAS BELTS.
Claims use since May 1, 1923.

Reg. No. 308,572. Registered Dec. 12, 1933. LOS ANGELES SOAP COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

LADY JANE

FOR SOAP.
Claims use since 1912.

Reg. No. 311,598. Registered Mar. 27, 1934. LOS ANGELES SOAP COMPANY, Los Angeles, Calif., a corporation of California. Republished by registrant.

OUR LEADER

FOR LAUNDRY SOAP.
Claims use since 1903.

Reg. No. 333,677. Registered Mar. 31, 1936. E. A. MEYER, doing business as Green Bay Soap Company, Green Bay, Wis. Republished by Green Bay Soap Company, Green Bay, Wis., a partnership.

WHITE QUEEN

FOR SOAP, SOAP POWDERS, HOUSEHOLD CLEANERS, WATER SOFTENERS.
Claims use since 1898.

Reg. No. 414,766. Registered June 26, 1945. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

The drawing is lined to indicate shading only.
FOR SILICATE OF SODA AND SILICATE OF POTASH, EITHER ALONE OR IN ADMIXTURE WITH OTHER CHEMICALS, USED FOR CLEANSING FIBRES, METALS, CERAMICS, WOOD AND THE LIKE.
Claims use since Apr. 10, 1930.

Reg. No. 417,921. Registered Nov. 20, 1945. THE MORTON S. PINE COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

PYNAMULSE

FOR GENERAL HOUSEHOLD CLEANER.
Claims use since Dec. 29, 1944.

Reg. No. 419,657. Registered Feb. 26, 1946. THE DELTA MANUFACTURING COMPANY, Milwaukee, Wis. Republished by Rockwell Manufacturing Company, Pittsburgh, Pa., a corporation of Pennsylvania.

Deltacraft

FOR SANDING KITS CONTAINING INDIVIDUAL CONTAINERS OF CEMENT AND ASSORTED GRADES OF ABRASIVE GRIT FOR PRODUCING SANDING BLOCKS.
Claims use since June 6, 1945.

Reg. No. 432,633. Registered Sept. 9, 1947. PATEK AND CO., San Francisco, Calif., a corporation of California. Republished by registrant.

CYLON

FOR WET CLEANING AID OF THE NEUTRAL DETERGENT TYPE.
Claims use since on or about Dec. 1, 1945.

CLASS 5

ADHESIVES

Reg. No. 340,932. Registered Nov. 24, 1936. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

SEAL

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION, FOR ADHESIVE PURPOSES.
Claims use since May 14, 1936.

Reg. No. 351,045. Registered Oct. 19, 1937. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

STIXSO

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION, SOLD AS AN ADHESIVE.
Claims use since Apr. 13, 1936.

Reg. No. 355,409. Registered Mar. 15, 1938. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

STIXSIL

FOR ADHESIVE COMPRISED IN WHOLE OR IN PART OF SILICATE OF SODA EITHER ANHYDROUS, HYDRATED OR IN SOLUTION.
Claims use since Sept. 10, 1937.

Reg. No. 355,410. Registered Mar. 15, 1938. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

STIXSOL

FOR ADHESIVE COMPRISED IN WHOLE OR IN PART OF SILICATE OF SODA EITHER ANHYDROUS, HYDRATED OR IN SOLUTION.
Claims use since Sept. 10, 1937.

Reg. No. 389,293. Registered July 29, 1941. CORN PRODUCTS REFINING COMPANY, New York, N. Y., a corporation of New Jersey. Republished by registrant.

KORDEK

FOR CEREAL CORE BINDERS FOR USE IN FOUNDRIES.
Claims use since Aug. 22, 1917.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 101,966. Registered Jan. 19, 1915. NATIONAL STARCH CO., New York, N. Y. Republished by Corn Products Refining Company, New York, N. Y., a corporation of New Jersey.

DURYEAS' SATIN GLOSS

FOR STARCH FOR LAUNDRY PURPOSES.
Claims use since 1860.

Reg. No. 105,695. Registered Aug. 10, 1915. NATIONAL STARCH COMPANY, New York, N. Y. Republished by Corn Products Refining Company, New York, N. Y., a corporation of New Jersey.

KINGSFORD'S

FOR STARCH FOR LAUNDRY AND MANUFACTURING PURPOSES.
Claims use since 1848.

Reg. No. 123,483. Registered Nov. 12, 1918. THE PHENOL CHEMICAL COMPANY, Chicago, Ill. Republished by The Diversey Corporation, Chicago, Ill., a corporation of Illinois.

ENOZ

FOR MOTH PREVENTIVE AND EXTERMINATOR.
Claims use since Apr. 16, 1918.

Reg. No. 190,573. Registered Oct. 14, 1924. ASH GROVE LIME AND PORTLAND CEMENT COMPANY, Kansas City, Mo., and Portland, Me., a corporation of Maine. Republished by registrant, present address Kansas City, Mo.

KEMILIME

FOR HIGH-CALCIUM, HYDRATED LIME FOR GENERAL INDUSTRIAL AND CHEMICAL USES.
Claims use since Mar. 1, 1924.

Reg. No. 213,829. Registered June 8, 1926. ARTHUR H. THOMAS COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

DEHYDRITE

FOR CHEMICAL COMPOUNDS FOR ABSORBING MOISTURE IN STEEL AND ORGANIC-COMBUSTION ANALYSIS.
Claims use since Jan. 6, 1926.

Reg. No. 218,284. Registered Sept. 21, 1926. THE HARROWER LABORATORY, INC., Wilmington, Del., and Glendale, Calif., a corporation of Delaware. Republished by registrant, present address, Glendale, Calif.

ENDOTHYRIN

FOR MEDICINAL SOLUTION FOR USE IN THE TREATMENT OF SIMPLE GOITER AND HYPOTHYROIDISM.
Claims use since Apr. 1, 1926.

Reg. No. 232,309. Registered Sept. 6, 1927. E. F. HOUGHTON & CO., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

"SILKLUBRIC"

FOR COMPOUNDS FOR PROCESSING PURE SILK TO ADD STRENGTH TO THE MATERIAL BY LUBRICATION AS WELL AS TO SOFTEN THE SERICIN OR GUM IN THE SILK.
Claims use since Apr. 16, 1927.

Reg. No. 234,453. Registered Oct. 25, 1927. MCCORMICK & CO., INCORPORATED, Baltimore, Md., a corporation of Maryland. Republished by registrant.

INSEKTOSPRAY

FOR INSECTICIDES.
Claims use since about June 6, 1927.

Reg. No. 240,337. Registered Mar. 27, 1928. MUNSCH-PROTZMANN CO., New York, N. Y. Republished by Henrietta Carnot, New York, N. Y.

CARBONOEL

FOR A PREPARATION FOR THE TREATMENT OF SKIN DISEASES.
Claims use since December 1908.

Reg. No. 272,196. Registered July 1, 1930. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

APESTRIN

FOR PREPARATION CONTAINING A PRINCIPLE WITH A SPECIFIC INFLUENCE ON SEXUAL MATURITY AND A RIPENING OF THE GRAAFIAN FOLLICLES.
Claims use since Feb. 28, 1930.

Reg. No. 273,945. Registered Aug. 19, 1930. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

ACCRETIN

FOR PREPARATION COMPRISING AN EXTRACT OF ENDOCRINE TISSUE (ANTERIOR PITUITARY AND THYMUS) CONTAINING A PRINCIPLE WITH A SPECIFIC GROWTH-STIMULATING INFLUENCE.
Claims use since Feb. 28, 1930.

Reg. No. 278,931. Registered Jan. 6, 1931. CORN PRODUCTS REFINING COMPANY, New York, N. Y., a corporation of New Jersey. Republished by registrant.

FOR LAUNDRY STARCH.
Claims use since Aug. 1, 1913.

Reg. No. 280,717. Registered Feb. 24, 1931. CORN PRODUCTS REFINING COMPANY, New York, N. Y., a corporation of New Jersey. Republished by registrant.

ARGO

FOR LAUNDRY STARCH.
Claims use since December 1907.

Reg. No. 282,522. Registered Apr. 21, 1931. T. C. WHITLOCK, Winston-Salem, N. C. Republished by registrant.

Sapha

FOR PREPARATION FOR REMOVING DANDRUFF, RELIEVING ITCHING AND IRRITATION OF THE SCALP, AND FOR PROMOTING THE GROWTH OF HAIR.
Claims use since Jan. 1, 1930.

Reg. No. 290,743. Registered Jan. 12, 1932. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

PANOCRIN

FOR SOLUTION OF AN ACTIVE PRINCIPLE OF THE PANCREAS HAVING INFLUENCE UPON THE CIRCULATION AND FOR USE IN THE TREATMENT OF CIRCULATORY DISORDERS ASSOCIATED WITH HYPERTENSION AND ANGINA.
Claims use since July 6, 1931.

Reg. No. 294,161. Registered May 17, 1932. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

Menocrin

FOR ENDOCRINE PREPARATION FOR USE AS A UTERO-OVARIAN REGULATOR THROUGH OVARIAN ENDOCRINE FUNCTION AND THAT OF ASSOCIATED SYNERGISTIC GLANDS.
Claims use since Jan. 5, 1932.

Reg. No. 301,971. Registered Mar. 21, 1933. THE GUARDITE CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

GUARDITE

FOR GASEOUS FUMIGATING MATERIAL PARTICULARLY ADAPTED FOR FUMIGATING AND CURING TOBACCO, FOOD STUFFS, AND OTHER ARTICLES AND MATERIALS IN CONFINED SPACES.
Claims use since July 1, 1930.

Reg. No. 313,345. Registered May 22, 1934. THE O. & W. THUM COMPANY, doing business as The Tanglefoot Company, Grand Rapids, Mich. Republished by The Tanglefoot Company, Grand Rapids, Mich., a corporation of Michigan.

DIFUSO

FOR INSECTICIDE.
Claims use since Mar. 30, 1932.

Reg. No. 314,254. Registered June 26, 1934. CORN PRODUCTS REFINING COMPANY, New York, N. Y., a corporation of New Jersey. Republished by registrant.

DEXTROSOL

FOR PURE CRYSTALLIZED DEXTROSE FOR MEDICINAL PURPOSES.
Claims use since Feb. 20, 1934.

Reg. No. 315,520. Registered July 31, 1934. SOCIÉTÉ ANONYME DES PARFUMS WEIL, Paris, France. Republished by Parfums Weil Paris Co., New York, N. Y., a limited partnership.

BAMBOU

FOR PERFUMES, FACE POWDERS, TALCUM POWDERS, ROUGES, TOILET WATERS, BRILLIANTINES, FACE LOTIONS, COLD CREAMS, SKIN CREAMS, AND BATH SALTS.
Claims use since Dec. 12, 1933.

Reg. No. 322,172. Registered Feb. 26, 1935. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

BILISALIN

FOR BILE SALTS COMPOUND, FOR USE IN TREATMENT OF MUCOUS COLITIS, INTESTINAL TOXEMIA, BILIARY INSUFFICIENCY AND CHRONIC ENDOCRINE SHORTCOMINGS.
Claims use since Oct. 14, 1934.

Reg. No. 338,319. Registered Sept. 1, 1936. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

TN

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Mar. 12, 1936.

Reg. No. 340,026. Registered Oct. 27, 1936. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

STAR

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED OR IN SOLUTION.
Claims use since May 14, 1936.

Reg. No. 346,131. Registered May 18, 1937. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

NOHEEV

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED OR IN SOLUTION (EITHER WITH OR WITHOUT MINOR QUANTITIES OF ADMIXED MINERAL INGREDIENTS) USED IN THE WELL DRILLING INDUSTRY TO IMPART TO DRILLING MUDS THE ABILITY TO MAKE CONTACT WITH THE SO-CALLED HEAVING SHALE WITHOUT DISINTEGRATING.
Claims use since Sept. 10, 1936.

Reg. No. 347,331. Registered June 22, 1937. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

RU

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Jan. 11, 1937.

Reg. No. 350,514. Registered Sept. 28, 1937. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

NS

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Apr. 20, 1937.

Reg. No. 350,515. Registered Sept. 28, 1937. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

OS

FOR SILICATE OF SODA, EITHER ANHYDROUS, HYDRATED, OR IN SOLUTION.
Claims use since Apr. 20, 1937.

Reg. No. 355,896. Registered Apr. 5, 1938. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

Adremin

FOR PLURIGLANDULAR PREPARATIONS IN THE FORM OF TABLETS, CAPSULES, EXTRACTS, SOLUTIONS, AND THE LIKE FOR THE TREATMENT OF HYPOADRENIA AND HYPOCRINISM WITH SYMPTOMS OF ASTHENIA, SUBOXIDATION, HYPOTENSION, ETC.
Claims use since Oct. 11, 1937.

Reg. No. 356,407. Registered Apr. 26, 1938. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

CORTINORAL

FOR POTENT EXTRACT OF THE ADRENAL CORTEX TISSUE FOR ORAL ADMINISTRATION IN HYPOADRENIA AND SIMILAR STATES.
Claims use since Aug. 26, 1937.

Reg. No. 356,408. Registered Apr. 26, 1938. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

HEMATOCRIN

FOR SUBSTANCE INCLUDING A WATER-SOLUBLE LIVER FRACTION AND NUCLEINIC ACID FOR USE IN THE TREATMENT OF ANEMIA AND PERNICIOUS ANEMIA.
Claims use since Aug. 26, 1937.

Reg. No. 358,157. Registered June 28, 1938. SPICER AND COMPANY, Glendale, Calif. Republished by The Harrower Laboratory, Inc., Glendale, Calif., a corporation of Delaware.

HETERIL

FOR PREPARATION FOR AN ANTIGEN (PARENTERAL ALTERATIVE).
Claims use since Jan. 31, 1938.

Reg. No. 359,164. Registered Aug. 9, 1938. ATLAS POWDER COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant.

METALITE ZATEX

FOR SOLUTIONS OF CELLULOSE DERIVATIVES—NAMELY, CELLULOSE ESTERS AND ETHERS, FOR PRINTING, FINISHING, DELUSTERING AND/OR COATING TEXTILES, FABRIC, WOOD, METAL, ETC.
Claims use since Aug. 27, 1937.

Reg. No. 362,796. Registered Nov. 29, 1938. LOUISIANA DRUG CO. INC., Opelousas, La., a corporation of Louisiana. Republished by registrant.

LADCO

FOR INSECT SPRAY, INSECT DUST, A PREPARATION USED IN THE TREATMENT OF COUGHS AND COLDS, MILK OF MAGNESIA, RUBBING ALCOHOL COMPOUND, ANTISEPTIC, WINE OF COD LIVER OIL EXTRACT, COD-TUSSAL, AND ANT POISON.
Claims use since Sept. 1, 1936.

Reg. No. 365,915. Registered Mar. 21, 1939. ATLAS POWDER COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant.

ARLEX

FOR DERIVATIVES OF HEXAHYDRIC ALCOHOLS AND INNER ETHERS THEREOF.
Claims use since Oct. 12, 1938.

Reg. No. 382,134. Registered Oct. 15, 1940. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

RUSTICON

FOR SUBSTANCE FOR PREVENTING RUST, CORROSION, OR SCALE IN BOILERS, RADIATORS, AND HOT WATER SYSTEMS.
Claims use since Oct. 11, 1924.

Reg. No. 389,448. Registered Aug. 5, 1941. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

BILICHOLAN

FOR PREPARATION FOR USE AS A STIMULANT IN GASTROENTEROLOGICAL PRACTICE.
Claims use since Feb. 3, 1941.

Reg. No. 391,953. Registered Dec. 2, 1941. PARFUMS WEIL PARIS, INC., New York, N. Y. Republished by Parfums Weil Paris Co., New York, N. Y., a limited partnership.

Cobra

FOR PERFUMES.
Claims use since May 18, 1941.

Reg. No. 398,704. Registered Nov. 17, 1942. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

KASIL

FOR POTASSIUM SILICATE, EITHER ANHYDROUS, HYDROUS, CRYSTALLINE, GLASSY OR IN SOLUTION, OR IN ADMIXTURE WITH OTHER ALKALINE SALTS, USEFUL IN THE MANUFACTURE OF GELS, CEMENTS, COATINGS, DETERGENTS, AND THE LIKE.
Claims use since Aug. 19, 1941.

Reg. No. 403,360. Registered Sept. 21, 1943. THE HARROWER LABORATORY, INC., Glendale, Calif., a corporation of Delaware. Republished by registrant.

Cortothyrin

FOR COMBINATION OF ORALLY ACTIVE ADRENAL CORTEX AND THYROID EXTRACTS, WITH VITAMIN C, INDICATED IN SUBCLINICAL ADDISONIAN SYNDROMES (HYPO ADRENIA), IN THE ADRENAL DEFICIENCY ASSOCIATED WITH HYPOMETABOLISM, AND IN THE DEPLETED STATES FOLLOWING ACUTE AND CHRONIC INFECTIONS.
Claims use since Dec. 15, 1940.

Reg. No. 410,922. Registered Dec. 26, 1944. RENE D. WASSERMAN, doing business as Eutectic Welding Alloys Company, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

EUTECTOR

FOR CHEMICAL FLUX COMPOSITION FOR USE IN WELDING, BRAZING, AND SOLDERING OPERATIONS, EITHER TO BE APPLIED TO METAL SURFACES OR TO WELDING RODS.
Claims use since June 14, 1944.

Reg. No. 415,433. Registered Aug. 7, 1945. RENE D. WASSERMAN, doing business as Eutectic Welding Alloys Company, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

FLOTECTIC

FOR CHEMICAL FLUX COMPOSITION FOR USE IN WELDING, BRAZING AND SOLDERING OPERATIONS, EITHER TO BE APPLIED TO METAL SURFACES OR TO WELDING RODS.
Claims use since Jan. 31, 1945.

Reg. No. 417,132. Registered Oct. 16, 1945. JAY W. STUART, doing business as De-Oxo-Lin Chemical Products, Los Angeles, Calif. Republished by O. T. Hodnefield, Los Angeles, Calif.

DE-OXO-LIN

FOR CHEMICAL PREPARATION HAVING FIRE-PROOFING AND FIRERETARDING PROPERTIES AND USED FOR COATING AND IMPREGNATING FABRICS, LUMBER AND OTHER INFLAMMABLE MATERIALS, AND FOR ADMIXTURE WITH LIQUID COATING COMPOSITIONS.
Claims use since Oct. 27, 1939.

Reg. No. 423,762. Registered Sept. 10, 1946. E. F. DREW & CO., INC., New York, N. Y., a corporation of Delaware. Republished by registrant.

RESISTOL A

FOR HYDROGENATION CATALYSTS FOR HYDROGENATION OF EDIBLE OILS.
Claims use since Oct. 16, 1945.

Reg. No. 426,915. Registered Jan. 21, 1947. AMERICAN BIOCHEMICAL COMPANY, INC., New York, N. Y. Republished by The Harrower Laboratory, Inc., Glendale, Calif., a corporation of Delaware.

BIO-KAPS

FOR VITAMINS.
Claims use since July 25, 1945.

Reg. No. 430,267. Registered June 10, 1947. THE TANGLEFOOT COMPANY, Grand Rapids, Mich., a corporation of Michigan. Republished by registrant.

DIFUSO

FOR INSECTICIDES.
Claims use since Feb. 20, 1946.

Reg. No. 433,175. Registered Sept. 30, 1947. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Prizma

FOR SHAMPOO.
Claims use since Dec. 8, 1945.

CLASS 7

CORDAGE

Reg. No. 57,434. Registered Nov. 13, 1906. THE AMERICAN MANUFACTURING COMPANY, New York, N. Y. Republished by American Manufacturing Company, Brooklyn, N. Y., a corporation of Massachusetts.

AMERICAN

FOR ROPE, CORD, LINES AND TWINE.
Claims use since about Feb. 1, 1889.

Reg. No. 73,990. Registered June 8, 1909. THE AMERICAN MANUFACTURING COMPANY, Charleston, W. Va., and New York, N. Y. Republished by American Manufacturing Company, Brooklyn, N. Y., a corporation of Massachusetts.

ACME

FOR ROPE AND LINE MANUFACTURED FROM VEGETABLE FIBER.
Claims use since Jan. 1, 1905.

Reg. No. 75,635. Registered Oct. 26, 1909. THE AMERICAN MANUFACTURING COMPANY, New York, N. Y. Republished by American Manufacturing Company, Brooklyn, N. Y., a corporation of Massachusetts.

ANCHOR

FOR ROPE, CORD, LINES AND TWINE MANUFACTURED FROM VEGETABLE FIBER.
Claims use since about Feb. 1, 1904.

Reg. No. 85,402. Registered Feb. 20, 1912. THE AMERICAN MANUFACTURING COMPANY, Charleston, W. Va., and New York, N. Y., assignor to American Manufacturing Company, a corporation of Massachusetts. Republished by American Manufacturing Company, Brooklyn, N. Y., a corporation of Massachusetts.

WHITE SWAN

FOR HEMP CLOTHES-LINES.
Claims use since about Oct. 1, 1908.

Reg. No. 89,793. Registered Jan. 14, 1913. AMERICAN MANUFACTURING COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address Brooklyn, N. Y.

TROJAN

FOR CORDAGE.
Claims use since June 26, 1908.

Reg. No. 89,794. Registered Jan. 14, 1913. AMERICAN MANUFACTURING COMPANY, Boston, Mass., a corporation of Massachusetts. Republished by registrant, present address Brooklyn, N. Y.

SPARTAN

FOR CORDAGE.
Claims use since July 15, 1912.

Reg. No. 89,973. Registered Jan. 28, 1913. AMERICAN MANUFACTURING COMPANY, Boston, Mass., a corporation of Massechusetts. Republished by registrant, present address Brooklyn, N. Y.

ROYAL

FOR LATH-YARN.
Claims use since Jan. 6. 1909.

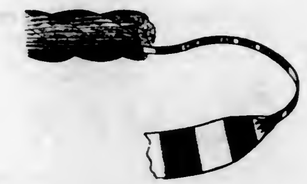
Reg. No. 91,929. Registered June 10, 1913. AMERICAN MANUFACTURING COMPANY, Boston, Mass., and New York, N. Y., a corporation of Massachusetts. Republished by registrant.

"COMET"

FOR CLOTHES-LINES MANUFACTURED FROM VEGETABLE FIBER.
Claims use since June 22, 1910.

Reg. No. 105,179. Registered July 13, 1915. AMERICAN MANUFACTURING COMPANY, Boston, Mass., and New York, N. Y., a corporation of Massachusetts. Republished by registrant, present address Brooklyn, N. Y.

PENNANT



FOR ROPE, CORD, LINES AND TWINE MANUFACTURED FROM VEGETABLE FIBER.
Claims use since about Feb. 15, 1906.

Reg. No. 109,054. Registered Mar. 21, 1916. AMERICAN MANUFACTURING COMPANY, Boston, Mass., and New York, N. Y., a corporation of Massachusetts. Republished by registrant, present address Brooklyn, N. Y.

ANCO

FOR ROPE, CORD, LINES, AND TWINE MANUFACTURED FROM VEGETABLE FIBER.
Claims use since about Mar. 25, 1915.

Reg. No. 164,404. Registered Feb. 20, 1923. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

The trade-mark consists of a thin pliant tape which is applied to the goods by being incorporated in the rope between the twisted elements of which the rope is formed. The representation of the rope is disclaimed apart from the mark as shown.
FOR ROPE.
Claims use since Feb. 20, 1914.

Reg. No. 170,136. Registered July 10, 1923. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

The trade-mark consists of a thin pliant tape which is applied to the goods by being incorporated within and surrounded by the fiber constituting one of the yarns used for making the rope or twine. The representation of the rope and the coloring on the tape are disclaimed apart from the mark as shown.

Reg. No. 222,647. Registered Jan. 4, 1927. AMERICAN MANUFACTURING COMPANY, Boston, Mass., and New York, N. Y., a corporation of Massachusetts. Republished by registrant, present address Brooklyn, N. Y.

E Z

FOR ROPE, CORD, AND TWINE MANUFACTURED FROM VEGETABLE FIBER.
Claims use since Apr. 28, 1924.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 74,342. Registered July 6, 1909. THE ENSIGN-BICKFORD COMPANY, Simsbury, Conn., a corporation of Connecticut. Republished by registrant.

CLIMAX

FOR FUSE FOR IGNITING GUNPOWDER AND OTHER EXPLOSIVES.
Claims use since 1888.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 140,404. Registered Mar. 15, 1921. INDIANA CHEMICAL AND MANUFACTURING COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

REDUCOL

FOR LITHOGRAPHIC INK REDUCER.
Claims use since Sept. 1, 1903.

Reg. No. 142,760. Registered May 17, 1921. W. A. SHEAFFER PEN COMPANY, Fort Madison, Iowa, a corporation of Delaware. Republished by registrant.

Skrip

FOR WRITING FLUIDS.
Claims use since Apr. 10, 1920.

Reg. No. 307,647. Registered Oct. 31, 1933. CODO MANUFACTURING CORPORATION, Coraopolis, Pa., a corporation of Delaware. Republished by registrant.

Codo
Super-kote

The word "Kote" is disclaimed apart from the mark as shown.
FOR CARBON PAPERS.
Claims use since April 1932.

Reg. No. 307,749. Registered Oct. 31, 1933. CODO MANUFACTURING CORPORATION, Coraopolis, Pa., a corporation of Delaware. Republished by registrant.

KEEN-RITE

FOR TYPEWRITER RIBBONS AND CARBON PAPERS.
Claims use since September 1920.

Reg. No. 307,917. Registered Nov. 14, 1933. CODO MANUFACTURING CORPORATION, Coraopolis, Pa., a corporation of Delaware. Republished by registrant.

Codo
Super-fiber

The word "Fiber" is disclaimed apart from the mark as shown.
FOR TYPEWRITER RIBBONS.
Claims use since October 1930.

Reg. No. 309,151. Registered Jan. 2, 1934. CODO MANUFACTURING CORPORATION, Coraopolis, Pa., a corporation of Delaware. Republished by registrant.

Codo

FOR TYPEWRITER RIBBONS AND CARBON PAPERS.
Claims use since Jan. 1, 1928.

Reg. No. 345,523. Registered Apr. 27, 1937. WM. KORN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

KORN'S

FOR LITHOGRAPHIC RUBBING INK, LITHOGRAPHIC LIQUID TUSCHE, LITHOGRAPHIC TRANSFER INK, AUTOGRAPHIC INK, MUSIC PLATE TRANSFER INK, AND LITHOGRAPHIC STICK TUSCHE.
Claims use since 1880.

Reg. No. 346,004. Registered May 11, 1937. WM. KORN, INC., New York, N. Y., a corporation of New York. Republished by registrant.

FOR LITHOGRAPHIC RUBBING INK, LITHOGRAPHIC LIQUID TUSCHE, LITHOGRAPHIC TRANSFER INK, AUTOGRAPHIC INK, MUSIC PLATE TRANSFER INK, AND LITHOGRAPHIC STICK TUSCHE.
Claims use since 1897.

Reg. No. 386,329. Registered Apr. 1, 1941. STATIONERS' GUILD OF AMERICA, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Guild

FOR ADDING MACHINE RIBBONS, ACCOUNTING MACHINE RIBBONS, CALCULATING MACHINE RIBBONS, CARBON PAPER, DUPLICATOR INK, INKING PADS, NUMBERING MACHINE INK, STAMP PAD INK, STAMP PADS, AND TYPEWRITER RIBBONS.
Claims use since Feb. 17, 1922.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 224,213. Registered Feb. 22, 1927. VENTO STEEL SASH COMPANY, Muskegon Heights, Mich. Republished by Jacob Wendling, Buffalo, N. Y.

VENTO

FOR WINDOWS AND WINDOW SASHES.
Claims use since on or about June 1, 1924.

Reg. No. 286,542. Registered Sept. 1, 1931. MICHAEL HAYMAN & CO., INC., Buffalo, N. Y., a corporation of New York. Republished by registrant.

HAYMANITE

FOR CEMENT FOR JOINTING WATER MAINS.
Claims use since about Apr. 2, 1931.

Reg. No. 290,413. Registered Jan. 5, 1932. DEWEY PORTLAND CEMENT COMPANY, Kansas City, Mo., a corporation of West Virginia. Republished by registrant.

FOR PORTLAND CEMENT.
Claims use since Feb. 16, 1931.

Reg. No. 292,161. Registered Mar. 1, 1932. DEWEY PORTLAND CEMENT COMPANY, Kansas City, Mo., a corporation of West Virginia. Republished by registrant.

FOR MASON'S CEMENT.
Claims use since June 26, 1931.

Reg. No. 307,738. Registered Oct. 31, 1933. TIMBER ENGINEERING COMPANY, Washington, D. C., a corporation of Delaware. Republished by registrant.

TECO

FOR LUMBER AND FABRICATED METAL JOINTS FOR TIMBER CONNECTIONS.
Claims use since Mar. 30, 1933.

Reg. No. 386,736. Registered Apr. 22, 1941. TIMBER ENGINEERING COMPANY, Washington, D. C., a corporation of Delaware. Republished by registrant.

TECO

FOR TERMITE SHIELDS.
Claims use since Oct. 21, 1940.

Reg. No. 403,130. Registered Sept. 7, 1943. THE TREMCO MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DURAGLAZE

FOR MASTIC COMPOUND FOR USE AS A PUTTY SUBSTITUTE IN THE GLAZING OF WINDOWS.
Claims use since Oct. 16, 1942.

Reg. No. 409,317. Registered Oct. 3, 1944. TIMBER ENGINEERING COMPANY, Washington, D. C., a corporation of Delaware. Republished by registrant.

TECO-LOCK

The word "Lock" is disclaimed apart from the mark as shown.

FOR FASTENINGS MADE OF WOOD EMPLOYED IN TIMBER CONNECTIONS—NAMELY, DOWELS, KEYS, MORTISES, TENONS, AND SPINDLE LOCKS.

Claims use since Sept. 1, 1943.

Reg. No. 418,890. Registered Jan. 16, 1946. TIMBER ENGINEERING COMPANY, Washington, D. C., a corporation of Delaware. Republished by registrant.

TECO-POST

The word "Post" is disclaimed apart from the mark as shown.

FOR SPACING AND REINFORCING ELEMENTS PRIMARILY OF WOOD FOR USE ON CONSTRUCTING DEMOUNTABLE SHELVING, FURNITURE, AND OTHER DEMOUNTABLE TIMBER CONSTRUCTIONS.

Claims use since Dec. 15, 1944.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 383,325. Registered Dec. 3, 1940. SPEIDEL CORPORATION, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

"Key-Master"

FOR KEY RINGS.

Claims use since Mar. 1, 1940.

Reg. No. 395,997. Registered June 23, 1942. TIMBER ENGINEERING COMPANY, Washington, D. C., a corporation of Delaware. Republished by registrant.

FOR LOAD DISTRIBUTING METAL CONNECTORS FOR USE IN JOINING TIMBER MEMBERS IN ALL TYPES OF LIGHT AND HEAVY FRAME TIMBER STRUCTURES.

Claims use since Oct. 20, 1941.

Reg. No. 402,398. Registered July 20, 1943. THE BILLINGS & SPENCER COMPANY, Hartford, Conn., a corporation of Connecticut. Republished by registrant.

FOR CHAINS AND HOIST HOOKS.

Claims use since on or about Aug. 31, 1870.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 89,292. Registered Dec. 3, 1912. THE P. & M. Co., Chicago, Ill. Republished by Poor & Company, Chicago, Ill., a corporation of Delaware.

P & M

FOR METAL RAIL-ANCHORS, ANTICREEPERS, TIE-PLATE, SPLICE-BAR, GUARD RAIL CLAMPS, AND RAIL-BONDS.

Claims use since 1906.

Reg. No. 115,644. Registered Feb. 27, 1917. THE MADDEN COMPANY, Chicago, Ill. Republished by Poor & Company, Chicago, Ill., a corporation of Delaware.

BLUE FLAG

FOR METAL DERAILS.

Claims use since October 1915.

Reg. No. 177,413. Registered Dec. 18, 1923. THE P. & M. COMPANY, Chicago, Ill. Republished by Poor & Company, Chicago, Ill., a corporation of Delaware.

FAIR

FOR RAIL ANCHORS OR ANTICREEPERS.

Claims use since Apr. 26, 1922.

Reg. No. 386,989. Registered Apr. 29, 1941. EUTECTIC WELDING ALLOYS, INC., New York, N. Y. Republished by Euctectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

CASTOLIN

FOR METALLIC WELDING RODS AND METALLIC ALLOYS FOR WELDING, BRAZING AND SOLDERING.

Claims use since July 29, 1939.

Reg. No. 408,653. Registered Aug. 22, 1944. RENE D. WASSERMAN, doing business as Eutectic Welding Alloys Company, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

EUTECTRODE

FOR WELDING ELECTRODES, WHICH ARE CONSUMED IN THE WELDING OPERATION, WELDING, BRAZING AND SOLDERING RODS AND WIRES, EITHER BARE OR COATED WITH FLUX SUBSTANCE FOR USE IN CONNECTION WITH OXY-ACETYLENE TORCHES, WITH ELECTRIC HEATING AND CARBON-ARC DEVICES.

Claims use since March 1944.

Reg. No. 409,730. Registered Oct. 17, 1944. RENE D. WASSERMAN, doing business as Eutectic Welding Alloys Company, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

EUTECROD

The word "Rod" is disclaimed apart from the mark as shown.

FOR METALLIC WELDING, BRAZING, AND SOLDERING RODS, WIRES, AND BARS, EITHER BARE OR COATED WITH FLUX SUBSTANCE FOR USE IN CONNECTION WITH OXYACETYLENE TORCHES, WITH ELECTRIC HEATING AND CARBON-ARC DEVICES.

Claims use since Apr. 21, 1944.

Reg. No. 416,708. Registered Sept. 25, 1945. RENE D. WASSERMAN, doing business as Eutectic Welding Alloys Company, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

EUTECHROM

FOR WELDING ELECTRODES, WHICH ARE CONSUMED IN THE WELDING OPERATION, WELDING, BRAZING, AND SOLDERING OVERLAY ALLOYS IN THE FORM OF RODS AND WIRES, EITHER BARE OR COATED WITH FLUX SUBSTANCE FOR USE IN CONNECTION WITH OXY-ACETYLENE TORCHES OR WITH ELECTRIC HEATING AND CARBON-ARC DEVICES.

Claims use since Jan. 31, 1945.

Reg. No. 416,970. Registered Oct. 9, 1945. RENE D. WASSERMAN, doing business as Eutectic Welding Alloys Company, New York, N. Y. Republished by Eutectic Welding Alloys Corporation, New York, N. Y., a corporation of New York.

EUTECTOFILM

FOR WELDING ELECTRODES, WHICH ARE CONSUMED IN THE WELDING OPERATION, WELDING, BRAZING, AND SOLDERING OVERLAY ALLOYS IN THE FORM OF RODS AND WIRES, EITHER BARE OR COATED WITH FLUX SUBSTANCE FOR USE IN CONNECTION WITH OXY-ACETYLENE TORCHES, WITH ELECTRIC HEATING AND CARBON-ARC DEVICES.

Claims use since Jan. 31, 1945.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 283,713. Registered June 2, 1931. GRACE B. CARRAN, doing business as Central Petroleum Company, Cleveland, Ohio. Republished by Central Petroleum Company, Cleveland, Ohio, a corporation of Ohio.

CEN-PE-CO

FOR BARN PAINT, FACTORY PAINT, HOUSE PAINT, METAL PAINT, AND ROOF PAINT.

Claims use since Jan. 2, 1931.

Reg. No. 299,327. Registered Nov. 29, 1932. THE ZAPON COMPANY, Wilmington, Del. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

MOVIETONE

FOR LACQUERS, PAINT THINNERS, AND/OR LACQUER THINNERS.

Claims use since Oct. 19, 1928.

Reg. No. 321,263. Registered Jan. 22, 1935. BREVOLITE LACQUER COMPANY, North Chicago, Ill. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

BREVAL

FOR ALUMINUM POWDER, DRY AND IN PASTE FORM.

Claims use since January 1930.

Reg. No. 321,264. Registered Jan. 22, 1935. BREVOLITE LACQUER COMPANY, North Chicago, Ill. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

KRISTOKRAK

FOR LACQUERS FOR COATING WOOD, GLASS, COMPO, PAPER, METAL, AND OTHER SURFACES, SAID LACQUERS CONTAINING IN SOLUTION A CRYSTALLIZING SUBSTANCE AND FURNISHING A FILM SHOWING A CRYSTAL FINISH.

Claims use since September 1927.

Reg. No. 341,867. Registered Dec. 29, 1936. BREVOLITE LACQUER COMPANY, North Chicago, Ill., assignor to Atlas Powder Company. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

BREVOLUX

FOR LACQUERS, LACQUER ENAMELS, VARNISHES, COATINGS CONTAINING SYNTHETIC RESINS, PAINT ENAMELS, DRIERS, AND THINNERS.

Claims use since April 1929.

Reg. No. 341,868. Registered Dec. 29, 1936. BREVOLITE LACQUER COMPANY, North Chicago, Ill., assignor to Atlas Powder Company. Republished by Atlas Powder Company, Wilmington, Del., a corporation of Delaware.

BREVEX

FOR LACQUERS, LACQUER ENAMELS, VARNISHES, AND COATINGS CONTAINING SYNTHETIC RESINS, PAINT ENAMELS, DRIERS AND THINNERS.
Claims use since September 1931.

Reg. No. 358,179. Registered June 28, 1938. ATLAS POWDER COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant.

ZAPONITE

FOR READY MIXED PAINTS AND ENAMELS, PAINT COLORS, VARNISHES, LACQUERS, THINNERS FOR PAINTS AND ENAMELS, PAINT-LIKE COMPOSITIONS FOR LACQUERING AND ENAMELING AND THINNERS THEREFOR.
Claims use since Aug. 25, 1924.

Reg. No. 369,790. Registered Aug. 1, 1939. THE WESTERN AUTO SUPPLY COMPANY, doing business as Western Auto Stores and as The Western Auto Supply Company, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

COLOR-TONE

FOR PAINT IN DRY FORM.
Claims use since Feb. 21, 1939.

Reg. No. 419,185. Registered Feb. 5, 1946. ATLAS POWDER COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant.

AQUANITE

FOR LACQUERS AND STAINS.
Claims use since Feb. 1, 1923.

Reg. No. 422,769. Registered Aug. 13, 1946. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.

CHEMTITE

FOR PLATING-RACK ENAMELS AND STOP-OFF COATINGS FOR ARTICLES TO BE PLATED TO PREVENT DEPOSITION OF METAL ON THE COATED PORTION.
Claims use since Aug. 14, 1945.

Reg. No. 422,794. Registered Aug. 13, 1946. ATLAS POWDER COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant.

ZAFIL

FOR WOOD FILLER.
Claims use since Sept. 19, 1945.

Reg. No. 426,270. Registered Dec. 24, 1946. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.

DUART

FOR COATING COMPOSITIONS, INCLUDING CLEAR WRINKLE VARNISHES AND PIGMENTED WRINKLE ENAMELS ADAPTED TO PRODUCE WRINKLE FINISHES.
Claims use since July 1, 1934.

Reg. No. 431,083. Registered July 8, 1947. MAAS & WALDSTEIN CO., Newark, N. J., a corporation of New Jersey. Republished by registrant.

COPRENE

FOR PAINTS IN PASTE AND READY MIXED FORM, VARNISHES, PAINT ENAMELS AND LACQUERS.
Claims use since Oct. 15, 1940.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 304,694. Registered July 18, 1933. PAXTON & GALLAGHER CO., Omaha, Nebr., a corporation of Nebraska. Republished by registrant.

El Paxo

FOR CIGARS.
Claims use since December 1909.

Reg. No. 329,926. Registered Nov. 19, 1935. METROPOLITAN CIGAR CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

EL SALERO

FOR CIGARS.
Claims use since Oct. 20, 1925.

Reg. No. 402,480. Registered July 27, 1943. CHARLES & COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

BON VOYAGE

FOR SMOKING TOBACCO.
Claims use since Mar. 16, 1917.

CLASS 19

VEHICLES

Reg. No. 235,034. Registered Nov. 8, 1927. BOND FOUNDRY AND MACHINE COMPANY, Manheim, Pa., a corporation of Pennsylvania. Republished by registrant.

Bond

FOR TRUCK CASTERS.
Claims use since January 1915.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 117,249. Registered June 26, 1917. THE CONTINENTAL FIBRE COMPANY, Newark, Del. Republished by Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware.

CONITE

FOR ELECTRICAL INSULATING MATERIAL.
Claims use since Aug. 1, 1916.

Reg. No. 141,532. Registered Apr. 26, 1921. DIAMOND STATE FIBRE COMPANY, Elsmere, Del., and Bridgeport, Conn. Republished by Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware.

CELORON

The drawing is lined for shading only.
FOR ELECTRICAL INSULATING MATERIAL.
Claims use since January 1919.

Reg. No. 263,481. Registered Nov. 5, 1929. NOBLE & HARRIS, Detroit, Mich., assignor to The Edison Illuminating Company. Republished by Electromaster, Inc., Mount Clemens, Mich., a corporation of Michigan.

ELECTROCHEF

FOR ELECTRIC STOVES AND ELECTRIC RANGES.
Claims use since Dec. 10, 1928.

Reg. No. 305,928. Registered Aug. 29, 1933. AMERICAN LAVA CORPORATION, Chattanooga, Tenn., a corporation of Tennessee. Republished by registrant.

ALSIMAG

FOR NON-CORROSIVE, HEAT-RESISTING, FIRED MATERIAL DERIVED BY COMBINATION OF MATERIALS OF MINERALOGIC ORIGIN, CUT, EXTRUDED, PRESSED OR MACHINED TO SHAPES AND DIMENSIONS FOR USE AS ELECTRIC INSULATION.
Claims use since Feb. 1, 1933.

Reg. No. 312,917. Registered May 15, 1934. LOTTIE FRANCES WITHERS, Oakland, Calif. Republished by registrant.

The words "Repairs Broken Coils" are disclaimed. The word "Sleeve" and the representation of a sleeve as well as the representation of the manner of use thereof appearing in the drawing are disclaimed apart from the mark shown.
FOR BROKEN ELECTRIC WIRE REPAIR SLEEVES.
Claims use since Nov. 23, 1933.

Reg. No. 318,396. Registered Oct. 23, 1934. THE VACUUM CLEANER CORPORATION OF AMERICA, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

The representation of the goods is disclaimed.
FOR ELECTRICAL VACUUM CLEANERS, HANDLES THEREFOR AND PARTS THEREOF.
Claims use since Jan. 15, 1932.

Reg. No. 375,699. Registered Feb. 27, 1940. FOSTER L. TALGE, Kansas City, Mo. Republished by Rival Manufacturing Company, Kansas City, Mo., a corporation of Missouri.

Broil-O-Mat

The word "Broil" is disclaimed apart from the mark as shown.
FOR ELECTRIC BROILERS.
Claims use since Jan. 16, 1939.

Reg. No. 419,590. Registered Feb. 26, 1946. STATIONERS' GUILD OF AMERICA, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Guild

FOR ELECTRIC FANS AND ELECTRIC DESK LAMPS.
Claims use since Apr. 1, 1944.

Reg. No. 424,466. Registered Oct. 8, 1946. THE TANGLEFOOT COMPANY, Grand Rapids, Mich., a corporation of Michigan. Republished by registrant.

DIFUSOLIER

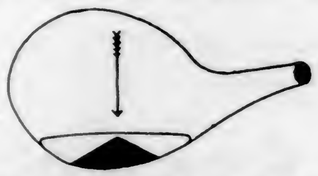
FOR ELECTRICALLY HEATED ATOMIZER FOR SPRAYING LIQUID.
Claims use since Aug. 3, 1945.

Reg. No. 426,925. Registered Jan. 21, 1947. AMERICAN LAVA CORPORATION, Chattanooga, Tenn., a corporation of Tennessee. Republished by registrant.

TIOLEKTRIK

FOR HIGH DIELECTRIC CONSTANT CERAMICS FOR USE AS INSULATORS IN CAPACITORS, CONDENSERS, RESISTORS AND THE LIKE INVOLVING THE USE OF TITANIUM.
Claims use since Aug. 30, 1945.

CLASS 22



GAMES, TOYS, AND SPORTING GOODS

Reg. No. 294,136. Registered May 17, 1932. KENNETH SMITH, Kansas City, Mo. Republished by registrant.

PERFO-GRIP

The word "Grip" is disclaimed apart from the mark as shown.
FOR GOLF CLUBS AND PARTS OF GOLF CLUBS.
Claims use since Dec. 19, 1931.

Reg. No. 308,967. Registered Dec. 26, 1933. KENNETH SMITH, Kansas City, Mo. Republished by registrant.

The lining of the drawing is intended to indicate shading only. The representation of a golf club is disclaimed.
FOR FINISHED WOOD AND IRON GOLF CLUBS.
Claims use since Oct. 15, 1931.

Reg. No. 319,431. Registered Nov. 27, 1934. SPEIDEL CORPORATION, Providence, R. I., a corporation of Rhode Island. Republished by registrant.

Pronto

FOR BRIDGE SCORE INDICATORS.
Claims use since Aug. 1, 1934.

Reg. No. 327,093. Registered Aug. 13, 1935. KENNETH SMITH, Kansas City, Mo. Republished by registrant.

The trade-mark consists of a silver-white dot in contrast to the color of the golf club head, and located in opposed relation on each side of the heel or neck of the said head, incorporated in the material forming the golf club head, either by setting a pin in the material, or by imprinting with paint. The representation of the golf club head forms no part of applicant's mark.
FOR GOLF CLUBS.
Claims use since November 1927.

Reg. No. 332,549. Registered Feb. 18, 1936. GENERAL SPORTS, INC., Chicago, Ill. Republished by Wilson Sporting Goods Co., Chicago, Ill., a corporation of Delaware.

TURF RIDER

FOR GOLF CLUBS AND GOLF BALLS.
Claims use since July 18, 1934.

Reg. No. 332,550. Registered Feb. 18, 1936. GENERAL SPORTS, INC., Chicago, Ill. Republished by Wilson Sporting Goods Co., Chicago, Ill., a corporation of Delaware.

Sweepstakes

FOR GOLF CLUBS AND GOLF BALLS.
Claims use since Aug. 30, 1934.

Reg. No. 348,732. Registered Aug. 3, 1937. KENNETH SMITH, Lenexa, Kans. Republished by registrant.

AROWIN

FOR GOLF CLUBS AND PARTS THEREOF.
Claims use since November 1936

Reg. No. 356,063. Registered Apr. 12, 1938. MEIER & FRANK COMPANY, INC., Portland, Oreg., a corporation of Oregon. Republished by registrant.

Timberline

FOR SKIS, SKI BINDINGS, AND SKI POLES.
Claims use since Sept. 27, 1937.

Reg. No. 380,121. Registered Aug. 6, 1940. KENNETH SMITH, Lenexa, Kans. Republished by registrant.

Signet

FOR GOLF CLUBS.

The words "Special Export" are disclaimed apart from the mark as shown.
FOR BEER.
Claims use since Feb. 12, 1935.

Reg. No. 380,014. Registered Aug. 6, 1940. RAINIER BREWING COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

The drawing is lined for red and silver.
FOR BEER.
Claims use since Feb. 23, 1939.

Reg. No. 381,216. Registered Sept. 17, 1940. RAINIER BREWING COMPANY, San Francisco, Calif., a corporation of California. Republished by registrant.

The words "San Francisco, Calif." and "Old Stock Ale" are disclaimed apart from the mark as shown.
FOR ALE.
Claims use since June 26, 1934.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 314,414. Registered June 26, 1934. J. C. MILLETT CO., doing business as Occidental Distilling Co., San Francisco, Calif. Republished by J. C. Millett Co., San Francisco, Calif., a corporation of California.

CLEARBROOK

FOR WHISKEY.
Claims use since Mar. 1, 1934.

Reg. No. 321,825. Registered Feb. 19, 1935. GREEN-BROS, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

BURWOOD

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since Oct. 20, 1934.

Reg. No. 334,794. Registered May 12, 1936. GREEN-BROS, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

GARDEN CLUB

The word "Club" is disclaimed apart from the mark as shown.
FOR BRANDY, COGNAC, GIN, RUM, AND WHISKEY.
Claims use since Apr. 9, 1935.

Reg. No. 337,293. Registered Aug. 4, 1936. GREEN-BROS, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

EdenPark

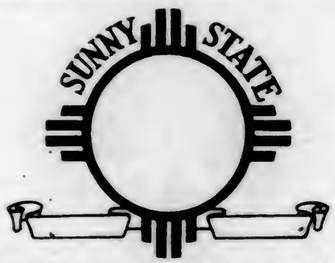
FOR WHISKEY, GIN, RUM, BRANDY, AND ALCOHOLIC CORDIALS.
Claims use since Mar. 1, 1934.

Reg. No. 352,206. Registered Nov. 23, 1937. GREEN-BROS, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

The word "Club" is disclaimed apart from the mark as shown.

FOR ALCOHOLIC BEVERAGES, SPECIFICALLY LIQUEURS, CORDIALS, DISTILLED BRANDIES, FRUIT FLAVORED BRANDIES, FRUIT FLAVORED GIN, COCKTAILS, BITTERS, DRY GIN, MIXED SPECIALTY DRINKS AND PUNCHES.

Claims use since Apr. 27, 1935.



Reg. No. 361,661. Registered Oct. 25, 1938. GREEN-BROS, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS AND COCKTAILS.

Claims use since 1891.

Reg. No. 363,983. Registered Jan. 17, 1939. ANCHOR LIQUOR COMPANY, Albuquerque, N. Mex. Republished by Anchor Liquor Company, also doing business as Sunny State Liquor Company, Albuquerque, N. Mex., a co-partnership.

FOR ALCOHOLIC CORDIALS AND LIQUEURS, ROCK AND RYE, GINS, AND WHISKIES.

Claims use since July 19, 1934.

Reg. No. 370,862. Registered Sept. 12, 1939. GREEN-BROS, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

No claim is made to the outline of a label.

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS AND COCKTAILS.

Claims use since Oct. 9, 1937.

Reg. No. 388,634. Registered July 1, 1941. GREEN-BROS, INC., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

du Parc

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS AND COCKTAILS.

Claims use since Jan. 4, 1941.

Reg. No. 388,659. Registered July 1, 1941. J. C. MILLETT CO., San Francisco, Calif., a corporation of California. Republished by registrant.

FOR WHISKEY.

Claims use since Apr. 13, 1938.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 425,401. Registered Nov. 19, 1946. FREECE-LARSEN, INC., Norristown, Pa., a corporation of Pennsylvania. Republished by registrant.

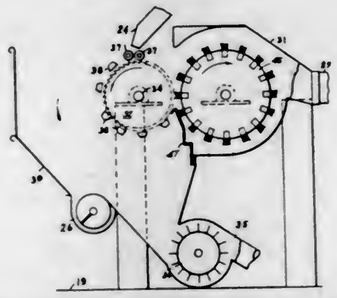
"Betsy Ross"

FOR FLAGS OF ALL TYPES—NAMELY, NATIONAL AND ALLIED NATION FLAGS, ADVERTISING FLAGS, SIGNAL FLAGS, OFFICIAL SERVICE FLAGS, AND FLAGS USED ONLY FOR DECORATIVE PURPOSES; CODE SIGNALS; PENNANTS AND BANNERS.

Claims use since Oct. 1, 1943.

REISSUES

OCTOBER 19, 1948



23,044

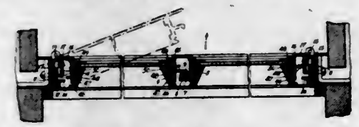
COTTON CLEANING APPARATUS

Eugene H. Brooks, Dallas, Tex., assignor to Continental Gin Company, a corporation of Delaware

Original No. 2,440,139, dated April 20, 1948, Serial No. 635,947, December 19, 1945, which is a division of Serial No. 598,095, June 7, 1945, now Patent No. 2,418,694, dated April 8, 1947. Application for reissue May 22, 1948, Serial No. 28,685

6 Claims. (Cl. 19—67)

6. In a lint cotton cleaner embodying a casing, a rotating saw cylinder mounted in the upper part of the casing in spaced relation to one wall of the casing, feed rollers mounted closely adjacent the saw cylinder and disposed to feed lint cotton in a thin uniform bat to the saw cylinder to be carried around thereby, a cleaning bar extending parallel to the long axis of the saw cylinder and disposed sufficiently close thereto to be struck by the lint carried around by the rotating saw cylinder thereby to remove trash from the lint, means cooperating with the saw cylinder to doff lint therefrom and disposed to doff said lint after the same has been carried around past the cleaning bar, and means adjacent the bottom of the casing for removing lint and trash thrown off by striking the cleaning bar.



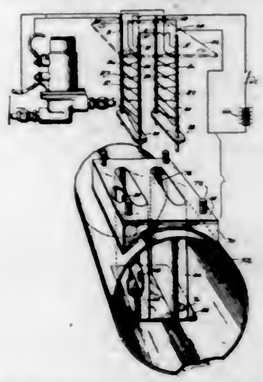
23,045

WINDOW CONSTRUCTION

Edmund Peremi, Bayside, Long Island, and Louis Toth, Flushing, N. Y., assignors, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y., a corporation of the United States of America

Original No. 2,077,807, dated April 20, 1937, Serial No. 693,199, October 11, 1933. Application for reissue April 22, 1948, Serial No. 22,668

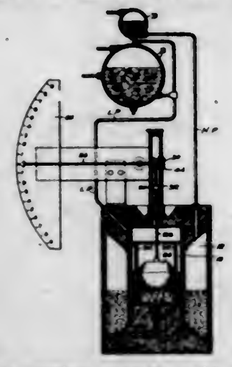
11 Claims. (Cl. 189—69)



3. In a casement window, in combination, a frame comprising a side bar having a body portion disposed transversely of the plane of the frame, flanges on said body portion defining with it a recess of tapering width for holding a yieldable weather strip, a weather strip of resilient compressible material mounted in the recess, and a sash hingedly mounted on said side bar and having a stile formed to engage the latter at a plurality of spaced points located at opposite sides of the weather strip, said stile including a flange which extends in the frame plane when the sash is in closed position and which moves into engagement mith the weather strip in a path normal to the weather strip as the sash is moved to closed position.

PATENTS

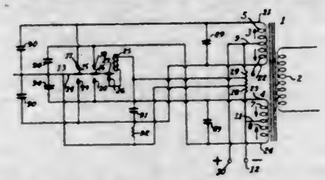
GRANTED OCTOBER 19, 1948



2,451,459
COMBUSTION AIR FLOW RESPONSIVE CARBURETING APPARATUS
Lynn A. Williams, Jr., Northfield, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application June 23, 1944, Serial No. 541,827
3 Claims. (Cl. 158—28)

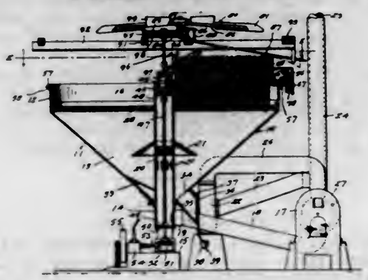
1. In the combination comprising a liquid fuel burning device, a combustion air supply conduit and a fuel line for said device, an electrically operated valve for modulating the rate of flow of fuel through said line in response to a varying electrical potential, electric circuit means for varying the potential at said fuel control valve, and the last said means including electrical resistors responsive to the cooling effect of the air flowing through said conduit, the improvement in said electric circuit which comprises a bridge circuit, a resistor element in said bridge circuit and means associated with said resistor element to cause air to flow in contact therewith when air flows through said conduit such that the mass rate of flow of air in contact with said resistor element is a function of the mass rate of flow of air through said conduit, a second resistor element in said bridge circuit and means associated with said second resistor element to pass air from said conduit in contact with said second resistor at a substantially constant rate regardless of the rate of flow through said conduit, and said second resistor being arranged in opposition to the first said resistor in said bridge circuit.

2,451,460
MANOMETER
Lewis B. Winton, Greenwich, Conn., assignor to Jerguson Gage & Valve Company, Somerville, Mass., a corporation of Massachusetts
Application October 4, 1946, Serial No. 701,151
5 Claims. (Cl. 73—403)



5. An indicating mechanism for use where subject to bodily angular displacement and of the type which includes a manometer of the hydrostatic type having a chamber containing a manometric liquid on which rests a float and means external to the chamber free from mechanical connection or engagement with the float and relative to which the float moves as the liquid level varies, said means being constructed and arranged to be influenced by the variations in relative position to manifest the vertical position of the float and thereby the height of the liquid column, which mechanism is characterized by the fact that said float comprises a body in the form of a sphere cut away at top and bottom, from which rises a superstructure having adjacent its

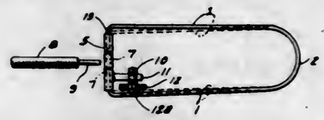
upper end a portion opposite said means for influencing the same, said superstructure comprising an adjustably movable counterbalancing mass, the intermediate spherical segment being of such altitude that its upper and lower bases remain respectively emersed and immersed throughout the range of inclination, the metacentric height of the float being substantially zero, which is manifested by the fact that the float develops no rotary reaction in a vertical plane on inclination alone of the system.



2,451,461
VIBRATORY CIRCUIT CONVERTER
Herman J. Wise, Indianapolis, Ind., assignor to Electronic Laboratories, Incorporated, Indianapolis, Ind., a corporation of Indiana
Application December 1, 1944, Serial No. 566,128
3 Claims. (Cl. 171—97)

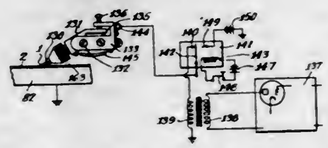
3. In a transformer system in combination, a transformer having a primary and a secondary winding, said primary winding having a center tap connected to one side of a source of direct current supply and its outer terminals respectively connected to oppositely disposed contacts, said secondary winding including a first and second coil, each coil having a center tap dividing each coil into first and second section, the center tap of one coil being adapted to be connected to one side of the load circuit and a center tap of the other coil being adapted to be connected to the other side of a load circuit, a pair of contacts, one of said contacts being connected to the outer terminal of the first secondary coil and the other contact being connected to the opposite outer terminal of the second secondary coil, a second pair of contacts, one of said second pair of contacts being connected to the other outer terminal of the first secondary coil and the other of said second pair of contacts being connected to the other outer terminal of the second secondary coil and a vibrating reed operating between the contacts connected to the outer terminal of the primary winding and alternately connecting the outer terminals of the primary

winding with one side of the line and between said first and second pairs of contacts and alternately connecting the contacts of each pair.



2,451,462
DRYING APPARATUS FOR COFFEE BEANS OR THE LIKE, COMPRISING A MOVABLE AGITATOR AND GAS CIRCULATING MEANS
Adolfo Raul Yglesias-Paz, Guatemala City, Guatemala
Application April 21, 1944, Serial No. 532,077
2 Claims. (Cl. 34—181)

1. A bean drier comprising an upper bean chamber, a lower air chamber, a perforate partition wall common to said chambers, means operatively connected with the air chamber for forcing hot air upwardly therethrough and through the mass of beans in the bean chamber, a driven fan disposed above the bean chamber for producing a flow of air over the entire surface of the mass of beans for drawing off moist air arising therefrom, and means interposed between the perforate wall and the fan means for agitating the beans while subject to the action of the hot air and the air circulation produced by said fan means embodying a drum equipped to bodily lift beans upwardly from the leading side of the drum and deposit the beans at the trailing side thereof, means operatively connected with the drum for rotating the latter about a horizontal axis, and means operatively connected with drum for swinging the latter about a vertical axis passing through the centers of said chambers simultaneously with the rotation of the drum, and a gang of agitating blades trailing the drum in its movement about the vertical axis for shifting the beans toward the center of the bean chamber.

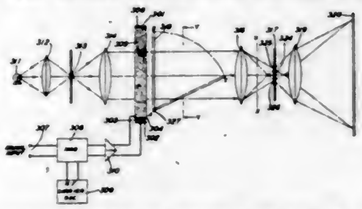


2,451,463
TOOL FOR CUTTING INSULATION AND STRIPPING IT FROM WIRES
Waldemar E. Zimmermann, Los Angeles, Calif.
Application April 12, 1947, Serial No. 741,095
5 Claims. (Cl. 81—9.5)

1. In a tool for cutting insulation and stripping it from wires, a pair of manually grippable arms resiliently united at one end so as to tend to spring apart, each of said arms having a free end portion which is directed toward and substantially alines with the free end portion of the other arm, said free end portions terminating in cutting edges, an open-ended sleeve of rigid sheet material one end portion of which loosely surrounds one of said free end portions and forms a stop shoulder to arrest the inward movement of the latter, and the opposite end portion of which

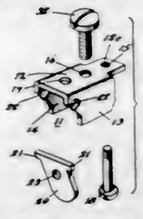
loosely surrounds the other of said free end portions, said sleeve having alined cutouts in its opposite sides to admit a sheathed wire between said cutting edges, and manually adjustable stop means carried by the last recited end portion of said sleeve and positioned to limit the movement of said cutting edges when forced toward each other by the compressive action of the hand of a person grasping the aforesaid pair of manually grippable arms.

2,451,464
RECORDER
Albert E. Anderson, Holbrook, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Original application September 8, 1943, Serial No. 501,727. Divided and this application September 15, 1945, Serial No. 616,579
2 Claims. (Cl. 346—34)



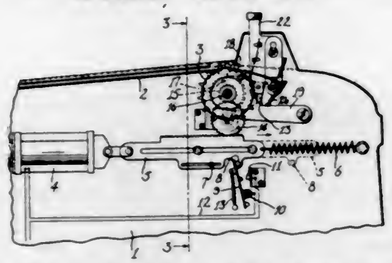
1. In a depth sounding recorder having a record paper, a stylus adapted when energized by an electric potential to mark the paper and means moving the stylus repeatedly across the paper, means for producing an electric potential in response to the receipt of a signal impulse, means normally connecting said impulse responsive means to said stylus, a potential source, and means under control of the operator for disconnecting said stylus from said impulse responsive means and connecting the stylus to said potential source, whereby a fix mark can be made across the paper.

2,451,465
TRANSVERSAL FILTER
Harold L. Barney, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 27, 1947, Serial No. 731,343
13 Claims. (Cl. 250—41.5)



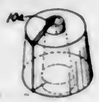
1. The method which comprises translating applied waves into elastic waves progressive across a predetermined space interval, directing electromagnetic energy through said space interval in a direction transverse to the direction of progression of said elastic waves, receiving and integrating components of said electromagnetic energy that pass through said progressive elastic waves,

and weighting various of said energy components that pass through respectively different parts of



said space interval in accordance with a predetermined weighting function.

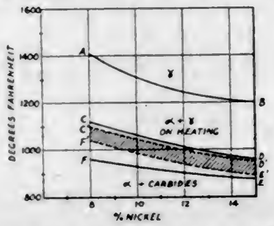
2,451,466
ELECTRIC WIRE TERMINAL
Robert H. Bentley, Hartford, Conn., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a corporation of Connecticut
Application February 28, 1946, Serial No. 650,946
16 Claims. (Cl. 173—259)



6. An electric wire terminal connection comprising an insulating body, a conductive member having bearing notches whose mouths are narrower than their interiors, a jaw member having rectangular trunnions whose smallest dimension will permit insertion into said notches, said trunnions being held in said notches upon rotation of said jaw from the entrance position and affording a fixed pivot for said jaw member, said body having a passage and said jaw having an aperture positioned so that the bared end of an electric wire may be insterted through both, and means causing edges of said jaw aperture simultaneously to grip opposite sides of said wire end.

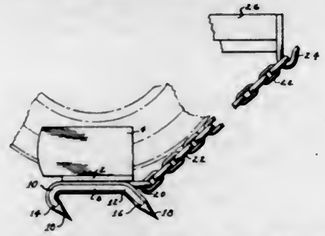
2,451,467
STRIP FEEDING DEVICE
Bruce T. Bickel, Dayton, Ohio, assignor to The Standard Register Company, Dayton, Ohio, a corporation of Ohio
Application October 16, 1942, Serial No. 462,275
15 Claims. (Cl. 271—2.4)

1. A strip feeding apparatus, wherein a continuous strip of material is progressively advanced through successive substantially equal lengths and arrested at the end of each feeding operation, including a reciprocatory rack bar, an electromagnetic device for moving the rack bar in one direction, a retracting spring against the yielding resistance of which the rack bar is moved under magnetic influence and by which it is moved in the opposite direction upon interruption of the magnetic influence, an energizing circuit for the electromagnetic device including a circuit make and break device operable by the reciprocatory rack bar to close the circuit upon retractive movement of the rack bar under influence of the spring and to open the circuit upon movement of the rack bar under influence of the electromagnetic device, a gear wheel meshing with the rack bar and receiving alternating motion therefrom incident to the to and fro reciprocation of the rack bar, a pawl and ratchet couple, the driving member of which receives a to and fro oscillatory motion from the gear and imparts intermittent motion in one direction to the other member of the pawl and ratchet couple and returns idly independently thereof, a strip feeding member connected to and moving in unison with the driven member of the pawl and ratchet couple to advance an engaged strip through successive step by step movements, a rotary member having a stop portion advanced through a step by step movement in unison with the advancement of the strip, a detent engageable with the stop portion thereof upon the completion of each cycle of strip feeding operation to arrest the actuating mechanism, and a manually operable tripping member for disengaging the detent from the stop preparatory to initiation of a succeeding cycle of operation.



2,451,468
WINDING OF YARN
Garfield L. Boyce, Chester, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application July 1, 1944, Serial No. 543,151
14 Claims. (Cl. 242—161)

1. A package comprising a core about which a yarn is wound in a mass, a tail end extending from under one end of the mass of the winding and being secured to the package by a sticker at a position inside the other end of the core without being wound about the end of the core projecting from the end of the mass from which the tail extends.

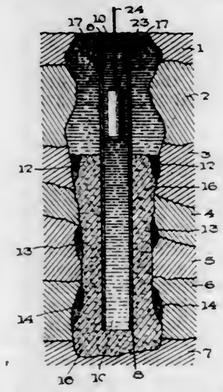


2,451,469
STEELS AND STRUCTURAL EMBODIMENTS THEREOF FOR USE AT LOW TEMPERATURES
Gerald Robert Brophy, Westfield, and Arthur John Miller, Elizabeth, N. J., assignors to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
Application August 2, 1946, Serial No. 687,876
12 Claims. (Cl. 148—31)

1. A method of producing ferritic steel having high impact resistance at temperatures down to at least about minus 320° F. which comprises subjecting a wrought steel containing about 8% to 15% nickel, about 0.03% to 0.15% carbon and the balance essentially iron to a heat treatment comprising a conditioning treatment of said steel at a temperature for the nickel content at least about 200° F. above the line AB in the drawing, cooling the thus-treated steel to approximately room temperature at a rate at least as rapid as air cooling, heating said steel to a temperature for the nickel content above the line AB in the drawing but at least about 100° F. below the temperature employed in said conditioning treat-

ment, cooling the thus-treated steel to approximately room temperature at a rate at least as rapid as air cooling, thereafter treating said steel at a temperature for the nickel content within the zone CDEF in the drawing, cooling the steel and heating the steel to a temperature for the nickel content not above the zone CDEF in the drawing.

2,451,470
VEHICLE ANCHOR DEVICE
John Buckley, Georgetown, Colo.
Application May 8, 1947, Serial No. 746,728
2 Claims. (Cl. 188—4)

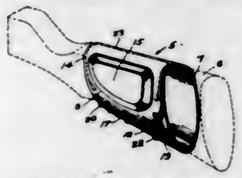


1. In an anchoring device for motor vehicles, a base plate adapted to be positioned for tires of a wheel to roll thereon, a yoke mounted on the under surface of the base plate intermediate of the ends thereof and forming a forwardly extending eye, a chain secured in the eye of the yoke and adapted to be secured to a forward part of the vehicle, and relatively heavy rods mounted on the under surface of the base and spaced inwardly from the ends thereof, said rods having forwardly and downwardly extending prongs on the forward ends thereof and offset inwardly toward the rear of the base with forwardly and downwardly extending prongs on the rear ends thereof wherein the prongs on the rear ends are offset inwardly from the prongs on the forward ends of the rods.

2,451,471
PREPARATION OF A CO-PRECIPITATED GEL CATALYST
Robert E. Burk and Everett C. Hughes, Cleveland Heights, Ohio, assignors to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application January 20, 1942, Serial No. 427,524
2 Claims. (Cl. 252—254)

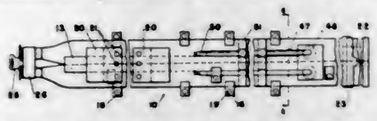
1. A process of making a co-precipitated aluminum-chromium-molybdenum gel type oxide catalyst, which comprises mixing (1) a solution of an alkali metal aluminate and (2) an acidic solution of chromium salt and ammonium paramolybdate, in desired ratio, with adjustment of the pH 6–11, the lower the concentration of molybdenum the higher the pH whereby all of said three oxide components are simultaneously precipitated by the mixing of the above two solutions, washing the precipitate, drying at about 140° F. to a hard granular state, grinding and sizing, drying and gradually raising the temperature to 900–1,000° F., cooling, and washing with boiling water until molybdenum blue shows in the wash water.

2,451,472
METHOD OF CEMENTING WELLS
Norman D. Coggeshall, O'Hara Township, Allegheny County, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application April 16, 1945, Serial No. 588,440
1 Claim. (Cl. 166—22)



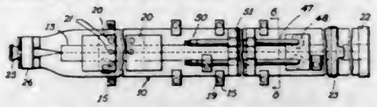
A method of cementing a well so that the degree of completion of the cementing operation may be determined which comprises replacing the normally used drilling mud in the region to be cemented with a radioactive drilling mud introduced through the drill stem, removing the drill stem, inserting the casing into the well, measuring the variation with depth of the radioactivity in the well, forcing cement into place around the casing so as to displace the radioactive drilling mud in the annular space around the casing and again measuring the variation with depth of the radioactivity in the well, whereby by comparison with the first said measurement the location of undisplaced radioactive drilling mud may be determined.

2,451,473
CHEEK PAD FOR FIREARMS
Eli G. Cooper, Great Barrington, Mass., assignor to the United States of America as represented by the Secretary of War
Application September 3, 1946, Serial No. 694,441
3 Claims. (Cl. 42—74)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



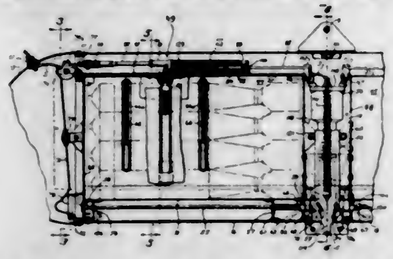
1. A cheek pad for use with a gun stock, comprising a flexible base member shaped to snugly embrace a gun stock, means for securing said base member to said gun stock against longitudinally or circumferentially translative movement rela-

tive thereto, a flexible pocket member attached to the outside of said base member to form a pocket therebetween having an opening accessible from the outside, an adjustable cushion formed of a plurality of resilient slabs carried inside the



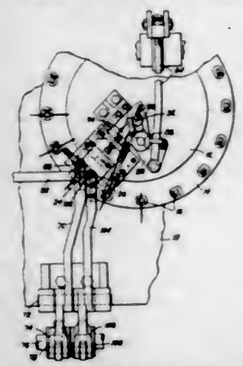
pocket and separately insertable and removable through said opening, and unitary fastening means for both closing said opening and holding said flexible base member in snug engagement with said stock.

2,451,474
DUAL TUBE PNEUMATIC LIFE PRESERVER BELT
Edward C. Craig, United States Navy
Application February 5, 1945, Serial No. 576,351
4 Claims. (Cl. 9—19)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A dual tube life preserver comprising a life belt consisting of a pair of individual tubes longitudinally joined together, means for simultaneously inflating both tubes with a pressure medium, each of said tubes being provided with a transverse fold providing overlapped portions enabling said belt to increase in girth, and means for releasably holding said fold in folded position while said belt is in deflated position, said releasable means comprising a breakable connection between said overlapped portions and being operated by the pressure medium entering into said tubes.

2,451,475
DUAL TUBE PNEUMATIC LIFE PRESERVER BELT
Edward C. Craig and Lloyd A. Straits, United States Navy
Application July 30, 1942, Serial No. 452,823
2 Claims. (Cl. 9—19)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

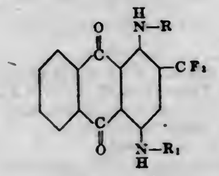


1. A dual tube life preserver comprising a life belt consisting of a pair of individual tubes longitudinally hinged together, means for simultaneously inflating both tubes with a pressure medium, each of said tubes being provided with longitudinally extending accordion pleats enabling said belt to expand, and means for releasably holding said accordion pleats in folded position while said belt is in deflated position said releasable means being operated by said pressure medium entering into said tubes.

2,451,476
EXTERIOR BOMB CONTAINER FOR AIRCRAFT
James C. Darnall, Hyattsville, Md.
Application November 8, 1943, Serial No. 509,375
10 Claims. (Cl. 89—1.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a device of the class described, a normally closed bomb container, a door hingedly mounted on the bottom of said container, means operatively connected to said door for positively and releasably locking said door in closed position on the container, for the purpose of holding and discharging a load of bombs therefrom by gravity, door closing and holding means operatively connected to said door arranged to close said door after the discharge of a load of bombs from the container, and means operatively connected to said door closing and holding means and engageable by the bombs in said container for rendering said door closing and holding means inoperative while the bombs remain in said container.

2,451,477
FISHHOOK MAKING MACHINE
William J. De Witt and Herbert A. Corbett, Auburn, N. Y., assignors to Shoe Form Co. Inc., Auburn, N. Y., a corporation of New York
Application September 19, 1945, Serial No. 617,232
8 Claims. (Cl. 140—104)



1. A fishhook making machine comprising a die having a flat upper surface and being provided with a recess in the surface, means for locating a fishhook blank in position with the blank extending along the surface and across the recess, a forming tool comprising a plunger and a stud projecting laterally from the plunger, means for moving the stud into the recess in the die thereby to force a portion of the blank into the recess to form a loop, a second forming tool comprising a slide having a recess extending substantially

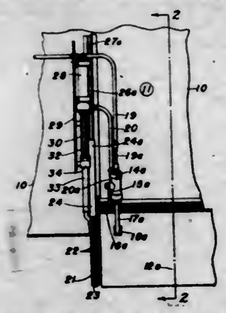
in a vertical plane and terminating in a horizontal face, means for moving the second forming tool transversely of the stud across the recess in the die thereby to bend the end of the loop partly about the stud, means for retracting the second forming tool, a third forming tool comprising a plunger having a semicircular recess in the lower portion thereof, means for moving the third forming tool toward the stud thereby to force the end portion of the blank toward the body portion thereof to complete an eye, means for retracting the third forming tool, means for partly raising the stud to release the pressure of the first forming tool upon the blank, and means for moving the blank in a direction to remove the eye from the stud.

2,451,478
AMINOANTHRAQUINONE DYE COMPOUNDS CONTAINING A TRIFLUOROMETHYL GROUP
Joseph B. Dickey and Edmund B. Towne, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 10, 1946, Serial No. 696,030
5 Claims. (Cl. 260—379)

1. The anthraquinone dye compounds having the formula:

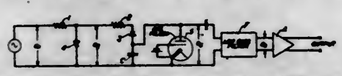
wherein R and R_1 each represents a member selected from the group consisting of a hydrogen atom, a primary alkyl group having 1 to 6 carbon atoms, an alkoxyalkyl group having 3 to 6 carbon atoms, a hydroxyalkyl group having 2 to 5 carbon atoms, a monohydroxyalkoxyalkyl group having 4 to 6 carbon atoms, an unsaturated aliphatic hydrocarbon radical having 2 to 4 carbon atoms and whose unsaturation consists of a single double bond, an isopropyl group, a

$$-CH_2CH_2COOCH_3$$



group, a $-CH_2CH_2COOC_2H_5$ group and a

$$-CH_2CH_2CCH_3$$
$$\|$$
$$O$$

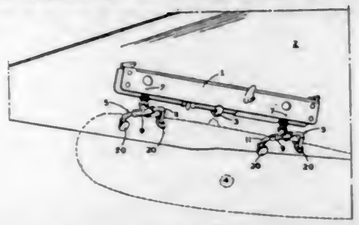


group and wherein said alkyl, alkoxyalkyl, hydroxyalkyl, monohydroxyalkoxyalkyl and unsaturated aliphatic hydrocarbon groups are noncyclic and are composed only of atoms selected from the group consisting of carbon, hydrogen and oxygen atoms.

2,451,479
AIRFLOW STABILIZER
Walter S. Diehl, United States Navy
Application April 28, 1945, Serial No. 590,853
12 Claims. (Cl. 244—130)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

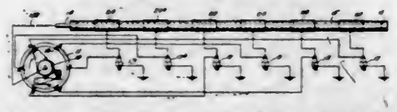
1. In aircraft having a compartment adapted to be opened to the atmosphere and a closure therefor, airflow stabilizing means adapted to be positioned in the airstream adjacent the forward end of said compartment for substantially eliminating air turbulence in and around said compartment when the closure is open, and means for extending and retracting said stabilizing means into and out of the airstream.

2,451,480
SUBHARMONIC GENERATOR
James O. Edson, Great Kills, and Donald M. Terry, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 31, 1947, Serial No. 725,476
4 Claims. (Cl. 172—281)



1. In a frequency reducer for generating a wave which is a desired subharmonic of a base frequency supply, the combination with a source of alternating current of predetermined frequency, a condenser, means for charging said condenser by uniform voltage increment from said supply source, a gas-filled discharge tube having an anode, a cathode and a control electrode, a load circuit including said source, anode and cathode, a control circuit for said tube including said condenser, cathode and control electrodes, means in said control circuit for maintaining said tube in a non-conducting condition until a predetermined number of charging increments have been applied to said condenser, whereupon said tube becomes conducting and a wave is produced in said output circuit having a frequency equal to that of the supply source frequency divided by the number of charging increments applied to the condenser, and other cooperating means in said control and output circuits, for causing rapidly decaying oscillations in said control circuit in response to conduction of said tube, to decease the charge on said condenser.

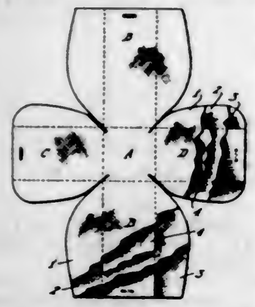
2,451,481
BRACING DEVICE FOR BOMBS ON AIRCRAFT
Robert M. Elder and John J. Domoj, Philadelphia, Pa.
Application September 4, 1945, Serial No. 614,330
4 Claims. (Cl. 89—1.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A device for use in conjunction with a suspension support to brace objects suspended therefrom against sway, comprising a structure including a mounting member arranged to be inserted in said support, a brace member carried by said mounting member and having depending spaced parallel leg portions arranged to engage the surface of said suspended object laterally at

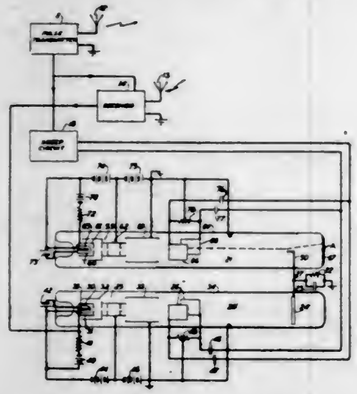
opposite sides of the center line thereof, said brace member being adjustable to vary the position thereof angularly with respect to the mounting member, means to secure the brace member in the angular position to which it is adjusted

with respect to said mounting member, and extensible means on said mounting member cooperable between the suspension support and said brace member to urge the latter downwardly into firm engaging contact with the surface of said suspended object.



2,451,482
SPARKING DEVICE
Charles R. Flint, La Porte, Ind., assignor to The De Luxe Products Corporation, a corporation of Indiana
Application March 22, 1945, Serial No. 584,097
3 Claims. (Cl. 123—148)

3. In a multicylinder, spark-fired, internal combustion engine having an intake manifold normally under substantial vacuum, and having a sparking device in each cylinder actuated by a spark coil, means for electrically energizing at least one sparking device by a separate electrical impulse insufficient to fire the same prior to firing thereof, said means including a distributor electrically connected to a spark coil which may be the aforesaid spark coil, a plurality of metal members electrically connected to the distributor and energized therewith, with the metal members being connected individually to the sparking devices, there being an air gap in the connection between said metal members and the spark coil with said air gap being normally bridged by the electrical impulses thereto, and means for varying the absolute pressure about said gap in correlation with the absolute pressure in the intake manifold of the engine.

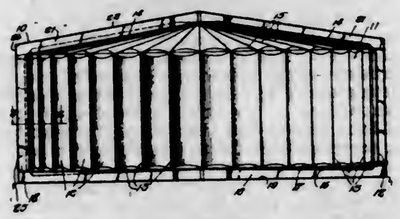


2,451,483
METHOD OF MAKING PROTECTIVE HELMETS
Hugo Goldsmith, Cincinnati, Ohio, assignor to Sport Products, Inc., Cincinnati, Ohio, a corporation of Ohio
Application June 14, 1946, Serial No. 676,815
3 Claims. (Cl. 154—110)

1. A method of molding protective helmets which consists in positioning three four-leafed clover leaf shaped plies of heat plastic sheet material in overlying registry on a form with strips of sheet material arranged in a cross shaped formation between the plies so that each leaf of each clover shaped ply will have a strip extending medially between said leaf and the contiguous leaf of an adjacent ply, the side edges of adjacent leaves overlapping forming four six ply bands extending diagonally of the helmet, the crown of the helmet having a rectangular area of seven plies of fabric and the front, back, and sides having five plies, securing the plies in po-

sition on the form, moving the positioned plies onto an expandable inner mold member, and expanding the member to subject the plies to sufficient heat and pressure by contact with a heated exterior mold member, contoured to determine the shape of the outer surface of the helmet, to form a light, rigid one piece helmet.

2,451,484
CATHODE-RAY SIGNAL UTILIZING MEANS
King E. Gould, Fanwood, N. J., and Pierre Mertz, Bellerose, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 5, 1943, Serial No. 505,028
21 Claims. (Cl. 315—9)

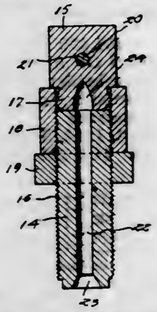


1. Means for differentiating between repeated pulse signals and spurious variations of a random distribution and character, comprising means for producing a beam of electrons modulated with said pulse signals and said spurious variations, an array of insulated electrical conductors, means for repeatedly sweeping said beam over said conductors in turn to charge them with electrons from said beam, said sweeping means comprising means for starting each sweep a short period before said beam is modulated in accordance with one of said pulses, said period being the same or nearly the same for each sweep, whereby the conductor or conductors which are impinged by said beam at the instants the modulations thereon correspond to said pulses receive a charge each sweep cycle while adjacent conductors receive charges corresponding to the spurious modulations only occasionally because of the random distribution of the spurious variations, and means under control of the charges on said conductors to enable a comparison of said charges to be made.

2,451,485
PRODUCTION OF UNSATURATED CARBONYLIC COMPOUNDS
George W. Hearne, El Cerrito, and Merrill L. Adams, Modesto, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 27, 1947, Serial No. 776,616
17 Claims. (Cl. 260—604)

1. A process for the production of an unsaturated carbonylic compound of the group consisting of the unsaturated aldehydes and the unsaturated ketones, which comprises passing a gaseous mixture comprising an olefin containing at least three carbon atoms and oxygen into contact with a solid catalyst essentially comprising cuprous oxide.

2,451,486
VACUUM TANK FOR STORING LIQUIDS AT HIGH OR LOW TEMPERATURES
George T. Horton, Chicago, Ill., assignor to Chicago Bridge & Iron Company, a corporation of Illinois
Application September 1, 1944, Serial No. 552,289
1 Claim. (Cl. 220—9)

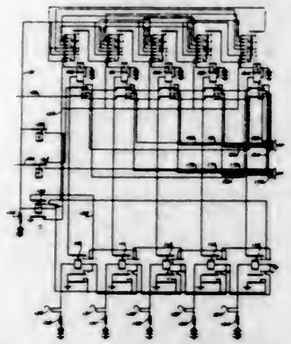


A storage vessel comprising an inner pressure shell of thin material capable of retaining a substantial part of its strength at extreme temperatures, said inner shell having side walls comprising vertical intersecting cylindrical sections concave inwardly and said inner shell having bottom and top walls comprising intersecting radially arranged conical sections concave inwardly, said cylindrical sections and said conical sections being subjected to tensional forces only, an outer shell of sheet metal for supporting the inner shell, said outer shell having side walls comprising a plurality of vertical panels arranged in the form of a polygon having the same number of sides as there are cylindrical sections in the inner vessel, insulating supports extending between the intersection of cylindrical sections and the adjacent intersection of vertical panels, said outer shell having a bottom and a top, insulating supports extending between the intersections of the conical sections in the top walls and the top of the outer vessel and insulating supports extending between the intersections of the conical sections in the bottom walls and the bottom of the outer vessel, the inner shell being free to expand or contract by change of its radius of curvature in each of said sections.

2,451,487
BUTTON STAPLE
Otto J. Hueister, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application April 28, 1944, Serial No. 533,150
8 Claims. (Cl. 24—94)

1. A staple of the class described comprising a U-shaped staple part and a head part, the staple part comprising an elongated cross-head of T-shaped cross-sectional form throughout the length thereof terminating in substantially parallel pronged ends arranged angularly to the cross-head, said head part having an elongated recess opening through the inner surface of said part and conforming with the cross-sectional contour of said cross-head to firmly support the cross-head of the staple part in connection with the head part, the prongs of the staple part projecting angularly from the inner surface of said head part, and part of said cross-head being exposed at the inner surface of said head part.

2,451,488
DIE FOR SWEDGING BULLETS
Frederick T. Huntington, Oroville, Calif.
Application March 9, 1944, Serial No. 525,766
2 Claims. (Cl. 78—61)

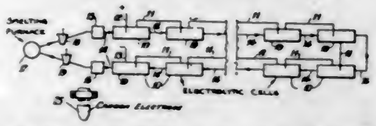


2. A die structure for the swedging of bullets comprising a body section, a head section, said sections having similar external screw threads, a nut engaging said screw threads and securing said sections together, the body having a bore, and the head section having a recess conforming to the shape of the point of a bullet, said recess at its base being of greater diameter than said bore, said body section being elongated, and a lock nut engaging the screw threads of the body section and adapted to abut against the nut.

2,451,489
PROGRESSIVE SELECTING CIRCUIT
Amos E. Joel, Jr., New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application May 15, 1945, Serial No. 593,946
5 Claims. (Cl. 177—353)

1. A selecting circuit comprising a chain of relays, an intermittently closed contact, means responsive to the closure of said contact with one of said relays operated to operate the next relay of

said chain, contacts operated by said next relay for closing a locking circuit for itself independent of said contact and for closing a locking circuit for said one relay under the control of said intermittently closed contact, means normally effective to operate a particular one of said relays in response to the first closure of said intermittently closed contact, auxiliary means for causing the



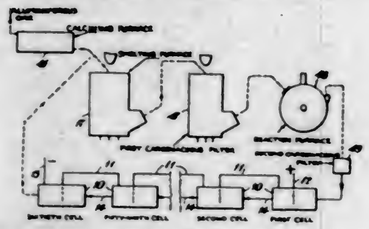
first closure of said intermittently closed contact to operate any desired one of said relays, comprising a secondary winding on each of said chain relays, a key individual to each of said relays and means under the control of each of said keys to energize the secondary winding of the associated chain relay, and means also under the control of each of said keys for unlocking any previously locked relay of said chain.

2,451,490

PRODUCTION OF ALUMINUM

Arthur F. Johnson, Cambridge, Mass., assignor to Reynolds Metals Company, Inc., Richmond, Va., a corporation of Delaware

Application August 4, 1944, Serial No. 548,043
2 Claims. (Cl. 204—67)



1. In the electrolytic production of aluminum from alumina dissolved in a fluoride fusion, the improvement which comprises circulating an alumina-containing fluoride fusion consisting essentially of the fluorides of sodium and aluminum through a series of cells in each of which it is subjected to electrolysis resulting in a diminution of the alumina content of the fusion and in liberation of fused metallic aluminum, transferring the fluoride fusion discharged from the last cell of the series to an alumina-replenishing zone and in said zone dissolving alumina in the alumina-depleted fluoride fusion by bringing said fusion in the presence of carbon into contact with a charge of material consisting essentially of aluminum compounds of the class consisting of alumina and hydrated aluminum oxides and also containing impurities including iron compounds while maintaining in said alumina-replenishing zone a temperature effective to reduce iron compounds present to metallic iron, separating reduced iron from the fluoride fusion, again circulating the fluoride fusion with its alumina content thus replenished through the series of cells in a cyclic manner, withdrawing from said cells the fused metallic aluminum liberated therein, and segregating the aluminum withdrawn from an initial minor portion of the cells of said series from the aluminum of relatively high purity withdrawn from the subsequent major portion of the cells of said series in the direction of electrolyte circulation.

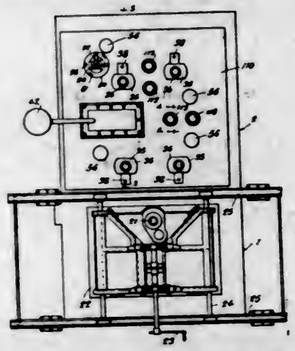
2,451,491

ENRICHING THE ALUMINA CONTENT OF RECIRCULATED CRYOLITE FUSIONS IN ALUMINUM PRODUCTION

Arthur F. Johnson, Cambridge, Mass., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware

Application January 30, 1945, Serial No. 575,313
4 Claims. (Cl. 204—67)

1. In the electrolytic production of aluminum from alumina dissolved in a fluoride fusion, the improvement which comprises circulating an alumina-containing fluoride fusion consisting essentially of the fluorides of sodium and aluminum through a series of cells in each of which it is subjected to electrolysis resulting in a diminution of the alumina content of the fusion, dissolving alumina in the alumina-depleted fluoride fusion discharged from the last cell of the series by bringing said alumina-depleted fusion in an alumina-replenishing zone and in the presence of carbon into contact with a charge of material consisting essentially of alumina but also including impurities of the group consisting of combined iron, silicon and titanium while maintaining a temperature effective to reduce a part of the iron compounds present to metallic iron, separating in said alumina-replenishing zone the fluoride fusion with its alumina content thus replenished from the bulk of the iron, then filtering the separated fluoride fusion through a porous mass of carbon, subsequently reacting the filtered fusion with aluminum in a reducing atmosphere, filtering the reacted fusion through a porous mass of carbon, and again circulating the twice filtered fusion through said series of cells in repetitions of this cycle.



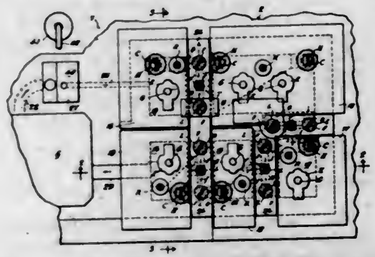
2,451,492

METHOD AND APPARATUS FOR ENRICHING THE ALUMINA CONTENT OF CRYOLITE FUSIONS IN ALUMINUM PRODUCTION

Arthur F. Johnson, Cambridge, Mass., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware

Application January 31, 1946, Serial No. 644,562
4 Claims. (Cl. 204—67)

1. In the electrolytic production of aluminum from alumina dissolved in a fluoride fusion, the improvement which comprises circulating an alumina-containing fluoride fusion through an electrolytic cell having several stages of electrolysis in series in which it is subjected to electrolysis resulting in a diminution of the alumina content of the fusion and in liberation of fused metallic aluminum, transferring the fluoride fusion depleted in alumina from the cell to an alumina-replenishing zone and in said zone dissolving alumina in the alumina-depleted fusion by bringing said fusion into contact with a charge of impure alumina-containing feed material having oxidic impurities, including the oxides of iron, silicon and titanium, and carbon and aluminum as reducing agents, heating the feed material and reducing



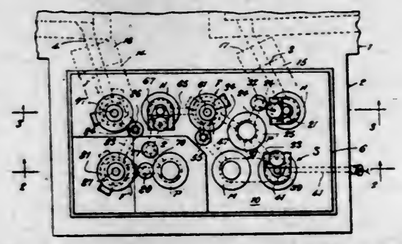
agents to reduce the oxides of iron, silicon and titanium, separating the reduced metals from the alumina-enriched fusion, flowing the alumina-enriched fusion from which the reduced metals were separated through at least one carbon filter heated to a temperature of about 1000° C. to 1200° C. to remove metallic impurities, and flowing the enriched and purified fusion back into and through the electrolytic cell.

2,451,493

PROCESS FOR ENRICHING THE ALUMINA CONTENT OF CRYOLITE FUSIONS IN ALUMINUM PRODUCTION

Arthur F. Johnson, Cambridge, Mass., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware

Application February 21, 1946, Serial No. 649,299
1 Claim. (Cl. 204—67)



In the electrolytic production of aluminum from a fusion of cryolite containing dissolved alumina, the improvement which comprises circulating the alumina-containing fusion through an electrolytic cell in which it is subjected to electrolysis resulting in a diminution of the alumina content of the fusion and in liberation of fused metallic aluminum, transferring the fluoride fusion depleted in alumina from the cell to an alumina-replenishing zone having a plurality of separate but connected stages by bringing said alumina-depleted fusion into contact with a charge of alumina-containing feed material having oxidic impurities, including the oxides of iron, silicon and titanium, and carbon as a reducing agent in one stage, selectively reducing a part of the iron oxide in said stage, passing the alumina-enriched fusion through a carbon filter maintained at a temperature between about 1000° C. and 1150° C. to reduce iron oxide not reduced in said first stage and into a second stage maintained at a temperature of from about 1000° C. to 1150° C., mixing metallic aluminum with the fusion in said second stage to reduce the silicon and titanium oxides, collecting the reduced silicon and titanium with a molten alloying agent from the class consisting of iron and ferroaluminum, withdrawing the alumina-enriched fusion from said second stage, reducing the temperature of the fusion withdrawn from said second stage, and passing the fusion at the reduced temperature into the electrolytic cell.

2,451,494

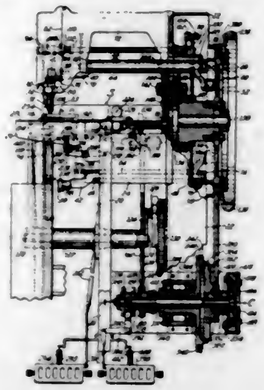
ENRICHING ALUMINA CONTENT OF CRYOLITE FUSIONS

Arthur F. Johnson, Longview, Wash., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware

Application January 28, 1947, Serial No. 724,856
4 Claims. (Cl. 204—67)

1. In the electrolytic reduction of alumina from cryolite-containing fusions of alumina, the improvement which comprises withdrawing alumina-depleted fusion from the electrolytic reduction operation, adding crude bauxite containing oxidic impurities including iron oxide to a portion of the withdrawn alumina-depleted fusion in amount sufficient to bring the alumina content of that portion of the withdrawn fusion up to as high as 13%, heating the enriched fusion in contact with a reducing agent from the class consisting of aluminum, aluminum alloys and carbon to reduce the iron oxide to iron while at a temperature above the melting point of the reduced iron, separating molten iron from the fusion, mixing the alumina-enriched fusion from which the molten iron was separated with another portion of the withdrawn alumina-depleted fusion, said another portion of the withdrawn alumina-depleted fusion being in amount sufficient to produce a resultant fusion having an alumina content of about 7%, passing the latter fusion through a carbon filter and back into the electrolytic reduction operation.

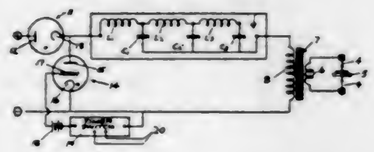
2,451,495



BUTTON SEWING MACHINE AND METHOD OF SEWING BUTTONS

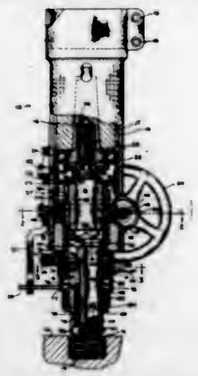
Carl W. Johnson, Brooklyn, and Joseph A. Neumair, Hollis, N. Y., assignors to American Machine and Foundry Company, a corporation of New Jersey

Application February 3, 1944, Serial No. 520,876
33 Claims. (Cl. 112—112)



1. In a sewing machine having a material work support table, a pair of opposed needle bars

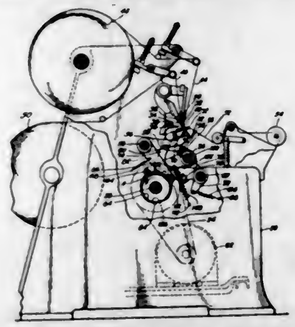
adapted to alternately project a double pointed needle having a thread with a loose end back and forth through work on said table to secure a button thereto, and a thread puller for pulling the loose end of said thread through said work and said button once each sewing cycle, a button support located above said work table and constructed and arranged to position said button in the path of said needle with the underside of said button spaced from said work, means for moving said support and said work in a predetermined



path in a plane substantially at right angles relative to the path of movement of said needle and needle bars, and means for operating said needle bars and thread puller in timed relation to said last-named means to project said needle and thread downwardly entirely through a selected hole in said button and said work and upwardly through said work and another selected hole in said button on each alternate movement of said bars to dispose said thread in single continuous thread arrangement and sew said button to said work.

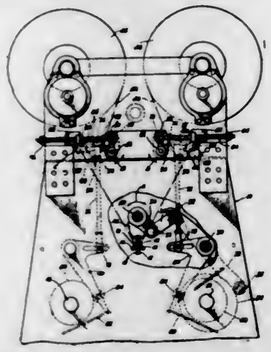
2,451,496
WELDING SYSTEM
Hans Klemperer, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application February 26, 1946, Serial No. 650,357
2 Claims. (Cl. 219—4)

1. A welding system comprising a pulse-forming line consisting of a plurality of interconnected capacitors with an inductance connected between each pair of capacitors, means for supplying current to said pulse line to store electrical energy in said capacitors, a welding load circuit, and means to discharge said pulse-forming line into said welding load circuit, whereby a welding current impulse of substantially rectangular waveshape and of predetermined duration is supplied to said welding load circuit.



2,451,497
THREAD MILLER
Frederick J. Kratchman, College Point, N. Y.
Application September 22, 1944, Serial No. 555,384
8 Claims. (Cl. 90—11.58)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A thread miller comprising an outer housing, a power shaft in said housing, a drive shaft splined to said power shaft, an inner housing journalled about said drive shaft, said inner housing including a concentric cylidrical upper portion having an interrupted external thread extending about part of said upper portion, a depending lower portion having an eccentric cylindrical internal shaftway therethrough, a driven shaft, an eccentric bushing in which said driven shaft is journalled, said eccentric bushing being rotatable within said eccentric portion of said inner housing, a coupling shuttle connecting said drive shaft to said driven shaft, a milling cutter mounted on said driven shaft, means connected to said eccentric bushing for rotating the same and thus varying the eccentricity of said milling cutter, means for locking said milling cutter in radially extended position, means for spirally moving said inner housing to cause said milling cutter to mill a thread in a previously drilled hole in a plate, and means for guiding said inner housing in the drilled hole in a plate comprising a depending lip extending partly around its edge.

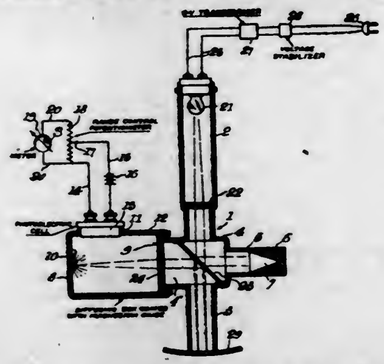


2,451,498
FLAT WARP KNITTING MACHINE
Fritz Lambach, Tenafly, N. J.
Application May 28, 1945, Serial No. 596,362
19 Claims. (Cl. 66—86)

2. A flat warp knitting machine comprising: a first series of knitting implements arranged for reciprocating movements, a first drive associated with said first series of knitting implements for imparting periodic reciprocating movements in a predetermined direction to said first series of knitting implements, a second series of knitting implements arranged for movements transversely of and substantially in the same direction as said first series of knitting implements, said second series of knitting implements being arranged for performing movements in coordinated relation with movements of said first series of knitting implements, a second drive associated with said second series of knitting implements for imparting at predetermined intervals periodic movements transversely of the direction of the strokes of said first series of knitting implements to said second series of knitting implements, said second series of knitting implements being further reciprocable substantially in the direction of the strokes of said first series of knitting implements, and an actuating drive associated with said second series of knitting implements for imparting at predetermined intervals an additional movement

to said second series of knitting implements in a direction opposite to the direction of movement performed by said first series of knitting implements during a stroke thereof whereby the length of such a stroke of said first series of knitting implements may be reduced in accordance with the length of the additional movement of said second series of knitting implements.

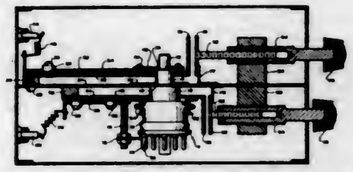
2,451,499
WARP KNITTING MACHINE
Fritz Lambach, Tenafly, N. J.
Application February 25, 1947, Serial No. 730,816
10 Claims. (Cl. 66—86)



1. A warp knitting machine comprising: a rotatable driving shaft, a rotatable warp beam, movable warp guides, warp guide driving means actuated by said driving shaft and associated with said warp guides for imparting periodic reciprocating movements to the latter so as to feed warp yarn drawn from said warp beam to the needles of the machine, means acting on said warp yarns for tensioning same, a movable tension regulating bar engaged with said warp yarns, and a tension regulating bar drive associated with said tension regulating bar for imparting periodic reciprocating movements to said tension regulating bar whereby tension modifying actions of the reciprocating warp guides on the tensioned warp yarns are substantially compensated.

2,451,500
METHOD OF MAKING COMMUTATORS
Erwin L. Le Greid, Westlake, Ohio, assignor to Fairchild Engineering Company, Cleveland, Ohio, a corporation of Ohio
Application April 26, 1945, Serial No. 590,423
2 Claims. (Cl. 29—155.54)

1. The method of making commutators which comprises providing a channel-shaped metal strip having an additional marginal flange along one edge whereby such edge of said strip is T-shaped in cross-section, cutting away said flange at regularly spaced intervals to leave regularly spaced projections to which windings may be attached, transversely notching the legs and, to a portion of its depth, the web of said channel intermediately of said projections, slotting said web for a portion of its width intermediately of and from the side on which said projections occur, bending said strip in the areas of said notches to bring adjacent each other the ends thereof and to form a regular polygon, filling the polygon thus formed with a moldable insulating material, and then turning off the outer portions of the polygon to a cylindrical form so that all of the metal is cut away in the notched areas, leaving a cylindrical commutator with a continuous outer surface consisting of alternate segments of metal and insulating material.



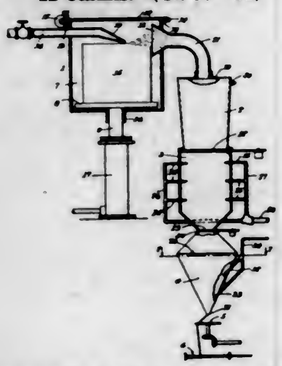
2,451,501
SPECULAR REFLECTOMETER
William Liben, New York, N. Y.
Application September 21, 1944, Serial No. 555,158
1 Claim. (Cl. 88—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

Apparatus for measuring the light reflectance from reflective surfaces, which comprises a housing, a mounting in the housing forming a closure for an end of the housing, a source of light mounted on the closure for illuminating the interior of the housing, the said housing having an opposite open end adapted to engage the reflective surface of a test object, a collimating lens mounted in the housing intermediate the ends for receiving light from the said source, a pair of oppositely directed arms opening into the housing intermediate the collimating lens and the test surface, the said arms forming a pair of op-

positely directed chambers, one of which chambers is a light trap chamber, the other of which chambers is a light-energizing chamber, the light trap chamber being closed by an end closure member provided with an interiorly disposed concave conical recess having a light absorptive surface thereon, a semi-transparent mirror mounted in the housing intermediate the openings of the said chambers into the housing, the said semi-transparent mirror being adapted to reflect a portion of collimated light incident thereon from the light source into the light trap chamber for absorption therein on the concave conical light-absorbing surface while passing the remaining amount of the incident collimated light to the test surface for reflection therefrom back to the mirror, light-responsive-means mounted in the light-energizing chamber, and a focusing lens mounted in the light-energizing chamber adjacent to the opening thereof into the housing, the said focusing lens having a focal length substantially equal to the distance from the lens to the end of the chamber for transmitting and focusing the light reflected from the test surface and thence from the mirror against the end of the light-energizing chamber, the said light-responsive means receiving light transmitted by the focusing lens and becoming energized by the said light whereby the reflectance of the test surface may be determined.

2,451,502
ULTRA HIGH FREQUENCY OSCILLATOR
Henry Lisman, Belmar, and Edwin K. Stodola, Neptune, N. J., assignors to the United States of America as represented by the Secretary of War
Application August 14, 1945, Serial No. 610,861
8 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

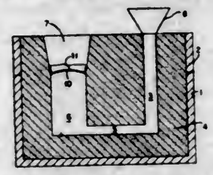
1. An electronic circuit assembly comprising an electron tube having axially-spaced cathode, grid, and anode terminals arranged in the order named, three spaced, parallel plates perpendicularly disposed with respect to the axis of said tube, the middle plate being substantially in the plane of the grid terminal and connected thereto, means to couple the upper and lower plates to said anode and cathode terminals, respectively, a portion of one of said plates being bent from the main body thereof, and a movable metallic plate supported by and coupled to an adjacent plate and cooperating with said bent portion to form a variable capacity therewith.



2,451,503
SHAPER FOR TROUSERS
Joseph Mastrillo, Trenton, N. J.
Application September 26, 1946, Serial No. 699,461
2 Claims. (Cl. 223—63)

1. A device of the character described, comprising an adjustable frame for shaping trousers including a pair of complementary U-shaped members, having shortened inturned end portions and elongated inturned end portions respectively, said U-shaped members having a flat rear edge and a tapered front edge and means for retaining the frame in adjusted positions, said means comprising U-shaped clamp members adapted to be inserted on the shortened ends of said U-shaped frame members, a pivoted latch carried by each

of said clamp members, said latch having a tapered tongue portion which is adapted to lie intermediate of the tapered front edges of said frame members to lock said frame members in adjusted relation to each other.



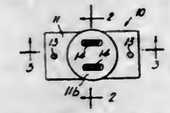
2,451,504
METHOD OF AND APPARATUS FOR SPINNING COTTON AND OTHER TEXTILE FIBERS
Marion S. Mayo, Los Angeles, Calif.
Application July 23, 1945, Serial No. 606,622
11 Claims. (Cl. 57—34)

1. Apparatus including a cyclone chamber into which cotton or other fibers may be introduced, said chamber being formed with a reduced open end, and air nozzles extending tangentially into and toward said reduced end of said chamber for directing jets of air under high pressure into said chamber for subjecting the cotton and other fibers to a swirling and conical spiral motion for paralleling and spinning said fibers into yarn.

2,451,505
SCREEN FOR CASTING RISERS
Edwin T. Myskowski and Howard F. Taylor, Washington, D. C.
Application May 21, 1945, Serial No. 594,881
4 Claims. (Cl. 22—134)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

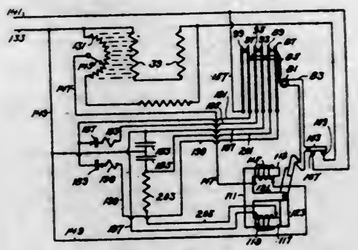
4. In a casting apparatus having a riser chamber and a casting chamber, a convex, metallic perforated screen interposed between said casting chamber and said riser chamber, the outer peripheral portion of said screen being bent up-

wardly and outwardly so as to wedge against the inner side of the riser chamber and aid in retaining the screen in position on the chamber.



2,451,506
BACK CONNECTION FEED UNIT
Joseph F. O'Brien, Lebanon, and Earl S. Boynton, East Orange, N. J., assignors to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application November 29, 1944, Serial No. 565,724
1 Claim. (Cl. 173—334.1)

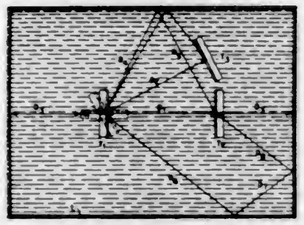
A feed unit of a seriatim electrical conduit system comprising a self-enclosed housing including a separable base member, said housing and said base member being formed of insulating material, said housing having a female formation at one end and a male formation at its opposite end, electrical conductors extending longitudinally into said housing and having their ends projecting from said male end formation, a longitudinal partition extending from the inner face of the front wall of said housing for isolating said electrical conductors, a set of recesses extending transversely of said housing, said recesses corresponding in number to the number of said electrical conductors, a number of bus conductors coextensive with said housing and corresponding to the number of said electrical conductors, said bus conductors being respectively connected to said electrical conductors at their respective ends inwardly of said housing, each of said bus conductors comprising a longitudinally extending flat strip portion, and further comprising at one end an arcuately configurated hollow arm arranged to receive the inward end of its associated electrical conductor, an opening formed in said base member through which power supply leads may pass, and apertures formed in said housing substantially in alignment with said arcuately hollow arms for the reception of the blades of an electrical connector plug.



2,451,507
ELECTRICAL OUTLET RECEPTACLE DEVICE
Joseph F. O'Brien, Lebanon, and Earl S. Boynton, East Orange, N. J., assignors to John B. Pierce Foundation, New York, N. Y., a corporation of New York
Application March 9, 1946, Serial No. 653,322
6 Claims. (Cl. 173—330)

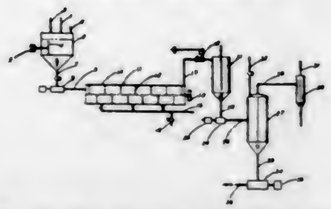
1. An electric outlet receptacle device comprising a housing having an elongated portion of substantially flat strip formation adapted to lie with a broad face flush against a supporting surface, and having an enlarged intermediate outlet portion; longitudinal chamber means defined within said elongated portion of the housing for receiving and retaining electrical contact elements, said chamber means being open-ended providing passage for electrical conductors; chamber means defined within said enlarged outlet portion of the housing, said enlarged outlet portion protruding from said broad face, and the last-named chamber means extending transversely across said longitudinal chamber means into the said protruding portion of the housing

providing pocket means for accommodating the contact means of electrical devices utilizing said outlet receptacle device; electrical contact elements lying within said longitudinal chamber means and having intermediate outlet members disposed at the junction of the said internal chamber means; and aperture means formed through said enlarged portion of the housing opposite said pocket means, affording entry of said contact means of electrical devices utilizing the outlet receptacle device.



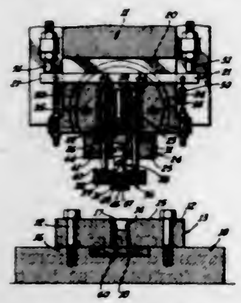
2,451,508
AUTOMATIC ELECTRIC TOASTER
Bror G. Olving, Elgin, Ill., assignor to McGraw Electric Company, Elgin, Ill., a corporation of Delaware
Application November 22, 1944, Serial No. 564,622
3 Claims. (Cl. 219—19)

1. In an automatic electric toaster the combination with electric toast heating elements, a control switch for said heating elements biased to open position, movable means to cause closing of said switch to start a toasting operation and a latch to hold the switch in closed position, of means for terminating a toasting operation, comprising an electromagnetic differential relay having two oppositely acting coils for controlling said latch, means for energizing one coil with a current of substantially constant value comprising an adjustable potentiometer connected to the terminals of the heating elements and means for energizing the other coil by an initially large and then decaying current comprising at least one pair of half-wave dry-disc type rectifiers, a timing condenser, a timing resistor connected in series circuit with said timing condenser, means to energize said rectifiers momentarily during the movement of said movable means to fully charge said condenser, the condenser then discharging through said timing resistor and said other coil with an initially large and then decaying current, termination of a toasting operation and release of said latch occurring when the current traversing said other coil has reached a predeter-



mined low value, said potentiometer having a positive temperature coefficient of resistance and being subject to heat from the toast heating elements to ensure that successively toasted slices of bread shall be uniformly toasted, irrespective of changes of temperature of the toaster.

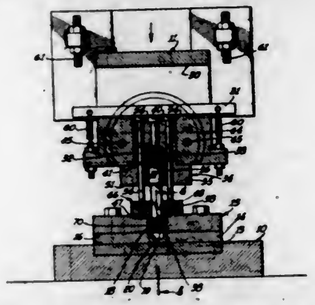
2,451,509
TESTING DEVICE FOR SOUND PROJECTORS
Ollie M. Owsley, Alexandria, Va.
Application July 5, 1944, Serial No. 543,596
11 Claims. (Cl. 73—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In the testing of an underwater sound transducer, by the use of a second underwater sound transducer, both being submerged in a water-filled testing tank, the method of testing which comprises positioning said transducers as far apart in said tank as will permit the earliest reflected sound wave transmitted by one of said transducers to arrive at said second transducer enough after the directly transmitted waves to permit said directly transmitted waves to make a sensible impression upon said second transducer before the arrival of said reflected sound waves, applying a driving energy to one of said transducers, measuring the energy applied to said transducer, receiving by the second transducer the energy directly transmitted by said first transducer, measuring the received energy, comparing the energy transmitted and the energy received, keying said driving energy to permit the transmission of a sensible signal and keying reception to receive said directly transmitted signals and to cut off before the reflected signals arrive at said second transducer.

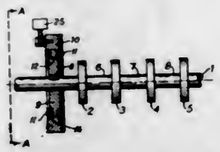
2,451,510
PROCESS FOR MASHING CEREALS
Ellis C. Pattee, Cincinnati, Ohio, assignor to National Distillers Products Corporation, a corporation of Virginia
Application March 29, 1943, Serial No. 480,917
1 Claim. (Cl. 195—21)

In the process of mashing cereals, the steps of first gelatinizing the same by conducting the same, in admixture with water to the extent of from 300 to 700% by weight of the cereals, progressively forward as a continuous stream through a first zone maintained at from 100 to 160° C., the rate of progression being so related to the volume of said zone that the cereal is held at said temperature for a period of from 3 to 20 minutes, thereafter passing the material in admixture with malt as a continuous stream through not exceeding two stages of pressure reduction, the final stage being maintained under an absolute pressure of substantially 150–200 mm. of mercury, whereby the temperature is instantaneously reduced to from 60 to 65° C., the rate of discharge being so related to the volume of said final stage that the material is saccharified in said final stage for a period of from 3 to 30 minutes, and continuously withdrawing the saccharified material from said final stage.



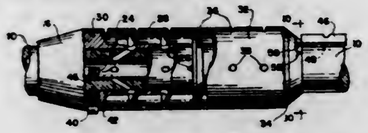
2,451,511
MEANS FOR MAKING WRENCH SOCKETS AND THE LIKE
Henry T. M. Rice, San Marino, Calif.
Application May 24, 1944, Serial No. 537,064
5 Claims. (Cl. 78—9)

5. Press forging apparatus for forming socketed articles from billets, comprising: a die block having a non-undercut substantially parallel-sided die cavity sunk therein, a die punch of smaller cross-sectional size than said die cavity reciprocable into and out of said die cavity, a reciprocable plunger head adapted to carry said punch toward and from said die block, a die closure mounted on said plunger head and arranged for movement relative to the plunger head in a direction parallel to the reciprocative movement of the plunger head, yielding means normally holding said member in an advanced position relative to said plunger head, said die closure member being engageable with and stopped by said die block at a predetermined position in the course of travel of said plunger head toward said die block, and said die closure member having an extension receivable with a close sliding fit within an end portion of said parallel-sided die cavity as said member closely approaches and then engages said die block, said die closure and its said extension having an aperture slidably receiving said punch, said plunger head being adapted finally to positively engage said die closure element and hold it rigidly against said die block as said die punch reaches the limit of its forward travel.



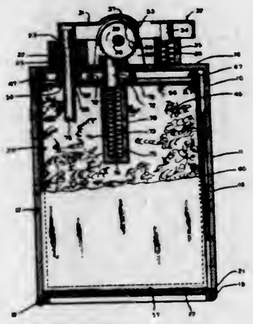
2,451,512
MEANS FOR PRESS FORGING ARTICLES
Henry T. M. Rice, San Marino, Calif.
Application May 26, 1944, Serial No. 537,390
9 Claims. (Cl. 78—9)

1. Press forging apparatus of the character described, comprising: a die block having a die cavity sunk therein, a die punch reciprocable into and out of said die cavity, an abutment closing the inner end of said die cavity and formed with a transverse rib extending transversely across the



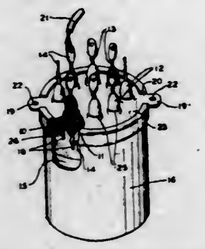
inner end portion of the cavity and spaced from two opposite sides thereof, and a central notch in said rib adapted to slidably receive the end portion of said punch.

2,451,513
OSCILLATION REDUCING DEVICE
Francois Marie Michel Bernard Salomon, Paris, France; vested in the Attorney General of the United States of America
Original application August 16, 1939, Serial No. 290,433. Divided and this application May 25, 1945, Serial No. 595,838. In France August 17, 1938
9 Claims. (Cl. 74—574)



1. In apparatus of the class described, a rotatable machine member having a guideway concentric with the axis of rotation thereof, a damping mass mounted on said member for angular movement relative thereto on said guideway, yieldable means for resisting relative movement of said mass and member, and at least one pendular damping mass carried by said first-named damping mass.

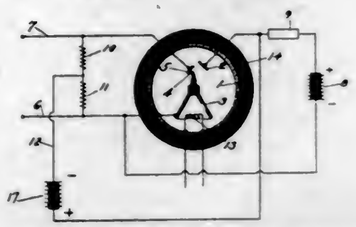
2,451,514
COMPENSATOR FOR GUNS
James E. Sieg, United States Coast Guard
Application November 21, 1945, Serial No. 630,104
3 Claims. (Cl. 89—14)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In combination with a gun barrel having a section provided with inclined means permitting gases to escape therethrough, a compensator including a sleeve encircling said section and having openings therethrough normally registering with the said inclined means, said sleeve being rotatable with respect to said section to vary the registration of said openings and inclined means, a perforated member spaced from and encircling the sleeve, and inclined members dividing the space between the sleeve and perforated member into compartments.

2,451,515
CIGARETTE LIGHTER
Justin Simon, Brooklyn, and Richard S. Temko, New York, N. Y.; said Temko assignor to Constance A. Simon, Woodmere, N. Y.
Application May 23, 1944, Serial No. 536,916
7 Claims. (Cl. 67—7.1)

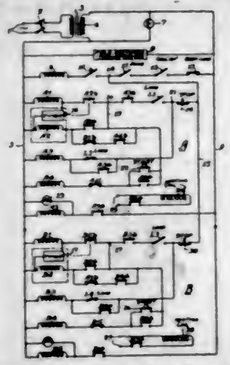
1. Cigarette lighter construction comprising: a casing; a cartridge, said cartridge being adapted to contain fuel and having a flint carrier associated therewith; a flint disposed within said carrier; a gate movably associated with the cartridge and the carrier and adapted in the open position thereof, to allow the flint to move upwardly of said carrier and in the closed position thereof to obstruct movement of the flint upwardly of the carrier and means associated with the casing and adapted to actuate said gate.



2,451,516
SEAL TERMINAL
Max Skobel, Eatontown, N. J., assignor to the United States of America as represented by the Secretary of War
Application July 14, 1945, Serial No. 605,171
3 Claims. (Cl. 174—151)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

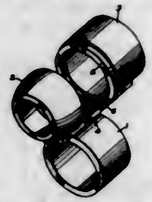
1. A terminal assembly comprising in combination, a pre-formed mounting plate of flexible

insulating material with projecting funnel-like sleeves integrally attached thereto having longitudinally disposed passages of restricted diameter therethrough, a plurality of reinforcing rigid plates disposed above and below said mounting plate with holes therein aligned with said sleeves to permit the latter to project therethrough and having raised ridges around the edges of the holes said ridges being shaped to apply compression to the bases of said sleeves, terminal rods having lugs on the ends thereof for insertion through said restricted passages by expanding said passages as the lugs pass therethrough, the diameter of said rods being larger than the diameter of said passages whereby after insertion the rods will be held securely and resiliently within said restricted passages and the lugs projected above and below said plates beyond said sleeves.



2,451,517
HIGH-FREQUENCY ELECTRON DISCHARGE DEVICE OF THE TRIODE TYPE
Charles G. Smith, Medford, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application September 22, 1943, Serial No. 503,354
4 Claims. (Cl. 250—27.5)

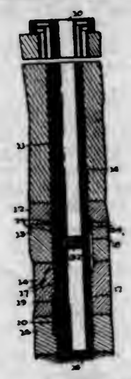
1. An electronic discharge device comprising an envelope evacuated to a degree sufficient to prevent gaseous conduction and containing an anode, a cathode having an emission element sufficiently sharp to provide an electron emissive surface having a voltage gradient at said surface of at least 10,000 volts per centimeter when the potential drop between said anode and said cathode is of the order of 100 volts, a control electrode adjacent said cathode for altering the voltage gradient at said surface to change the work function of said emissive surface and thereby effect instantaneous changes in the electronic emission of said surface, and means adjacent the space between said cathode and anode for imposing a magnetic field upon said space in a direction to deflect electrons emitted by said cathode away from said control electrode and toward said anode.



2,451,518
MULTIPLE FURNACE CONTROL
Harold A. Strickland, Jr., Grosse Pointe Park, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application April 18, 1945, Serial No. 589,054
7 Claims. (Cl. 219—20)

4. In power equipment, a first induction heating coil adapted to receive a load, a second induction heating coil adapted to receive a load, a common source of power for said coils, timer means for timing a heating cycle separately in each coil, load control means for preventing a heat cycle in a coil without a load in that coil, control means for preventing a heat cycle in either coil while a heat cycle is progressing in the other coil, and means for preventing a renewed

cycle in either one of said coils after an interrupted cycle in that coil, without first removing and replacing the load in that coil.

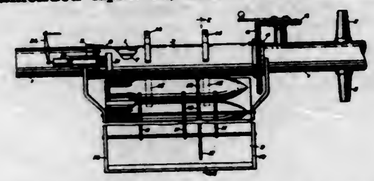


2,451,519
CARTRIDGE BELT LINK
René R. Studler, Washington, D. C.
Application March 10, 1943, Serial No. 478,661
14 Claims. (Cl. 89—35)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a link for a machine gun belt of the disintegrating type, first and second loops shaped to embrace a cartridge, a body portion rigid with said first and second loops and connecting the same in coaxial spaced relation, said body portion, first and second loops being of plastic material, and a third resilient metallic loop secured to said portion between said first and second loops and in contact with the inner end of said first loop and in coaxial relation with said first and second loops, said third loop being adapted to resiliently grip a cartridge inserted into said first and second loops.

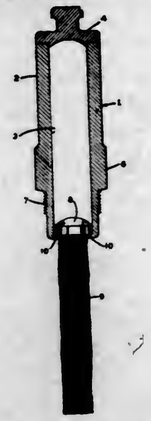
2,451,520
METHOD OF COMPLETING WELLS
Abraham J. Teplitz, Oakmont, Pa., assignor to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application May 29, 1945, Serial No. 596,511
2 Claims. (Cl. 166—22)

2. A method of completing a well which is cased and cemented throughout the producing section said casing and cement being perforated in the zone of desirable production comprising forcing a suspension of radioactive material into the producing perforations and cement channels, removing the suspension from inside the casing, running a radioactivity log of the producing section, allowing the well to produce for a short interval, running a second radioactivity log to determine the presence of channels which permit entrance of undesirable components, perforating and re-cementing opposite the indicated source of said undesirable fluids and erecting a



barrier inside the casing between said perforations and the original perforations whereby the zone of production and original perforations are protected from contact with the cement during such re-cementing operation.

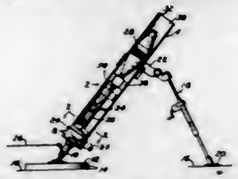
2,451,521
MAGAZINE LOADER
Alfred H. Ugium, Waterville, Iowa
Application January 9, 1945, Serial No. 572,044
1 Claim. (Cl. 86—47)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A filler for sub-machine gun magazines having an open end, including a support for holding a magazine with open end downward, means arranged on said support beneath the open end of said magazine for pressing a cartridge upwardly into the magazine comprising a plunger mounted for vertical reciprocating movement, a rotatable shaft disposed beneath the plunger, a crank on said shaft, a connecting rod rotatably connected at its lower end to said crank and pivotally connected at its upper end to said plunger, and means for rotating said shaft, and gravity actuated means carried by said support for delivering cartridges one by one onto said plunger comprising a hopper elevated relative to the said plunger provided with vertical guide grooves for slidably engaging the rims of cartridge cases to maintain the cartridges in alignment one above the other and a passageway communicating at an angle with said hopper adjacent the bottom of the vertical guide grooves for delivering cartridges one by one from the guide grooves to the top of said plunger.

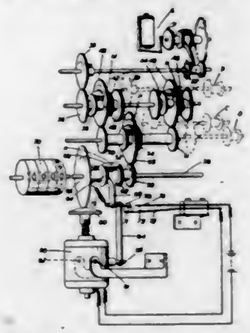
2,451,522
ROCKET PROJECTOR
Edward G. Uhl, Elizabeth, N. J., and Leslie A. Skinner, Washington, D. C., assignors to the United States of America as represented by the Secretary of War
Application December 2, 1942, Serial No. 467,660
13 Claims. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A rocket projector comprising a tube, a rotatable sleeve movable on said tube between the ends thereof, apertures in said tube and said sleeve capable of being aligned with each other to allow a rocket to be admitted to the tube, means to rotate said sleeve to a position in which the apertures are out of alignment whereby the aperture in said tube is closed, and loading means on the sleeve extending exteriorly before the sleeve aperture in a direction to engage outwardly of a rocket beside the tube and cam the rocket into the aperture of the tube as the sleeve uncovers and closes the tube aperture.



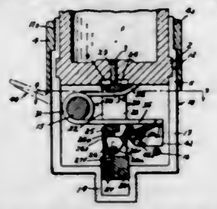
2,451,523
CORROSION INHIBITOR
Thomas A. Walb, Philadelphia, Pa.
Application June 30, 1945, Serial No. 602,640
2 Claims. (Cl. 299—20)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A device of the character described comprising a casing having an elongated open-ended chamber therein, a member disposed in said chamber and arranged for sliding movement lengthwise thereof, a flange at the open end of said casing extending into the path of said mem-



ber to prevent withdrawal thereof entirely from said chamber, a wick secured to said member and extending lengthwise within the body substantially the entire length thereof, said wick being impregnated with a corrosion inhibitor material and arranged for withdrawal from the chamber to the extent limited by engagement of said member with said flange, and a cover cap on the open end of the casing to close the chamber and seal the wick therein, said cover cap being removable when it is desired to withdraw the wick from the casing preparatory to using the device.

2,451,524
RANGE ADAPTER FOR MORTARS
Brooks Walker, Piedmont, Calif.
Application August 6, 1945, Serial No. 609,315
18 Claims. (Cl. 89—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



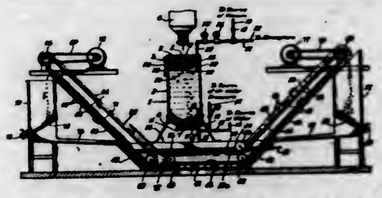
18. In a range reducer adapted for insertion into a mortar comprising a barrel having a bore, an elongated member of lesser diameter than the diameter of said bore and slidably disposed in said bore, vane means attached to said member adjacent the ends thereof and engaging the walls of said bore to locate said member axially of bore, and a forwardly projecting firing pin carried by said member at its forward end.

2,451,525
TOTALIZATOR COUNTER
Christopher Frederick Webb, London S. W. 1, England, assignor, by mesne assignments, to General Register Corporation, Long Island City, N. Y., a corporation of New York
Application April 13, 1943, Serial No. 482,888
In Great Britain March 1, 1943
9 Claims. (Cl. 235—92)

1. In combination, a plurality of impulse-receiving devices, a member associated with each device arranged to be displaced from an initial position upon reception of impulses by its associated device, a common registering means, power operated means for actuating said registering means to register the total number of impulses received by said devices and for simultaneously returning any displaced member to its initial position, and means operable when any member is displaced from its initial position to cause said power operated means to actuate said registering means, and when all of said members are returned to their initial positions to interrupt such actuation of said registering means.

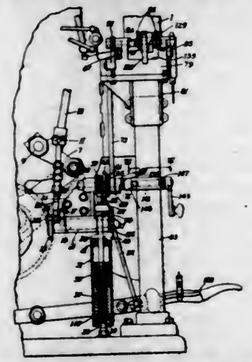
2,451,526
FIRING MECHANISM
Saul Weiss, Washington, D. C.
Application May 29, 1944, Serial No. 537,881
8 Claims. (Cl. 89—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A firing mechanism for a firearm comprising a firing pin unit having a lateral aperture, a spring means having a coiled portion and upper and lower spring elements extending laterally therefrom, means associated with said coil portion for mounting said spring adjacent said unit, said spring elements being received within said aperture, cocking means to retract the said unit against the action of one of said spring elements and means on the cocking means to further stress the spring by contact with the other of said spring element simultaneously with the cocking operation.



2,451,527
REARWARDLY STRIKING FIRING MECHANISM
George Norman Albree, Winchester, Mass.
Application August 22, 1944, Serial No. 550,578
17 Claims. (Cl. 42—69)

1. A firearm of the rim fire type, comprising a barrel having a firing chamber, an anvil member in the rear of the barrel to engage the end of a rim fire cartridge occupying the firing chamber, and means for detonating said cartridge in said firing chamber, said means including a firing element situated in front of the anvil member to engage with the front face of the rim of said cartridge thereby to pinch said rim against the anvil.

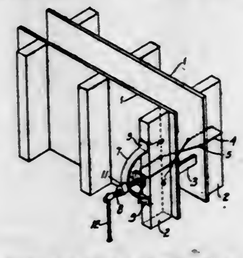


2,451,528
METHOD FOR SEPARATING WORM-DAMAGED NUTS FROM SOUND NUTS BY IMMERSION IN A GRAVITY LIQUID
James A. Armstrong, Downey, Calif.
Application June 28, 1943, Serial No. 492,524
6 Claims. (Cl. 209—3)

1. The method of separating whole perforate-shelled worm-damaged nuts from whole imperforate-shelled nuts which comprises immersing the nuts in a liquid, then subjecting the liquid and the immersed nuts to a substantial increase in pressure to cause some of the liquid to enter and partially fill the perforate-shelled nuts, and

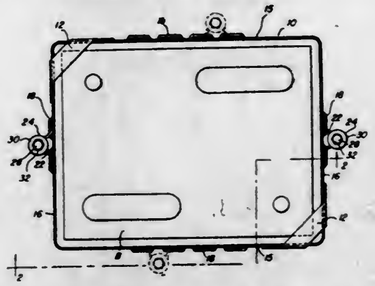
thereafter subjecting the nuts to gravity separation in a liquid medium to separate the liquid-containing perforate-shelled nuts from the imperforate-shelled nuts.

2,451,529
WORK SHIFTING MECHANISM FOR HEEL-ATTACHING MACHINES
William Arthur Barker and Thomas Baggott Clarke, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application April 12, 1946, Serial No. 661,816
In Great Britain April 28, 1945
13 Claims. (Cl. 12—19.2)



1. In a heel-attaching machine, a shoe-support, a carrier movable between two positions, two operating mechanisms mounted upon the carrier and respectively cooperating with the shoe-support in the two positions of said carrier, means for moving the carrier to its two positions, means resisting movement of the carrier, and means arranged to vary the resistance.

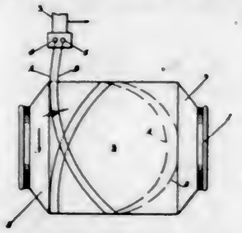
2,451,530
ELECTRIC FENCE INSULATOR
Edward A. Beard, Marseilles, Ill.
Application February 5, 1946, Serial No. 645,588
1 Claim. (Cl. 174—163)



An insulator for electric fences, comprising a cylindrical insulator member having a central axial opening and a radial slot extending from the outer periphery of said insulator member into said axial opening, the slot being arranged at an angle to the axis of the opening, the sides of the slot extending into said opening to form ribs which are parallel to said slot, the insulator member also being provided with a pair of spaced circumferentially extending parallel grooves formed in its outer periphery, the grooves having their opposite ends arranged upon opposite sides of and near the slot, a mounting spike secured to the insulator member and disposed opposite to the slot and projecting laterally beyond the opposite sides of the insulator member, and spaced opposed pairs of parallel arcuate fingers secured to the spike and arranged in the grooves and engaging the ends of the grooves, the arcuate fingers serving to secure the spike to the insulator member and to positively hold the insulator member against turning.

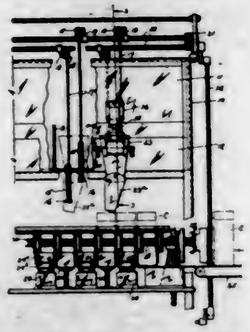
2,451,531
WIRE TIGHTENER
Burt J. Bradley, Boise, Idaho
Application April 29, 1946, Serial No. 665,873
5 Claims. (Cl. 140—119)

1. A tightener for a tie wire having ends straddling a stake and projecting beyond an edge thereof, the tightener comprising a yoke braced against the stake, a head member having means for securing the wire ends thereon and a threaded element co-operable with the yoke in advancing the element, the latter being anchored to the head with limited freedom of revolving motion.



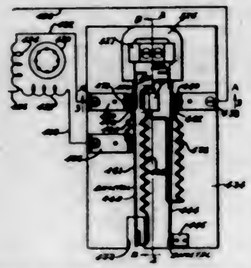
2,451,532
BATTERY HOLDING DEVICE
Felix E. Brown, Bethlehem, Pa.
Application April 12, 1945, Serial No. 587,993
2 Claims. (Cl. 180—68.5)

1. A battery retaining device, comprising a rectangular-shaped frame having comparatively narrow side and end panels with diagonally disposed strips connecting the upper edges of the panels of corners of the frame for engaging the upper end of a battery to hold the battery down-



wardly, the panels of said frame having pairs of flat loops struck from intermediate portions thereof and extended outwardly with the inner surfaces of the loops spaced from the outer surfaces of the panels, and U-shaped clips with outwardly extended flanges at the ends and having slots in the lower edges positioned on the loops struck from the frame with the flanges thereof in the loops, and with the slots in the lower edges of the clips positioned over the ends of the loops.

2,451,533
METHOD OF PRODUCING IMPROVED YARN
Paul Haven Cannon, Rome, Ga., assignor, by mesne assignments, to Celanese Corporation of America, a corporation of Delaware
Application October 17, 1945, Serial No. 622,797
2 Claims. (Cl. 57—156)

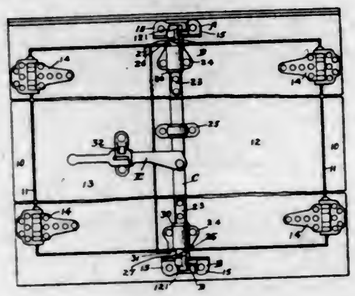


1. Method of producing an improved yarn, which comprises simultaneously spinning two separate yarns, forming a package of said separate yarns by cross-winding the same on to said package while maintaining said yarns in a spaced relation at all points of the package and in such a manner that one yarn forms a shoulder at one end of the package while a different yarn forms a shoulder at the other end of the package and then removing said yarns from the package and simultaneously twisting the same so as to form a blended yarn in which the portions of the yarn at the shoulders are staggered with respect to each other in the blended yarn.

2,451,534
MACHINE FOR WEIGHING AND PACKING MIXED NUTS OR THE LIKE
Sofus Christensen, Valley Stream, N. Y., assignor to Graham Company, Inc., New York, N. Y., a corporation of New York
Application October 31, 1945, Serial No. 625,813
6 Claims. (Cl. 249—15)

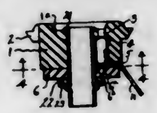
2. An apparatus for packing mixed solid articles of various weights into a package of a correct prescribed weight, comprising a receptacle divided into a number of compartments for holding articles of different weights, dependent hoppers leading from and opposite each compartment, a corresponding number of weighing scales of progessively increasing capacity arranged below and in range with said hoppers, means for continuously conveying a package over said scales, vertically reciprocating means in each compartment capable of lifting at each stroke a single article at a time to the mouth of its hopper, means for discharging said lifted article from said reciprocating means into the corresponding hopper and means automatically controlled from each weighing scale for operating said discharge means when the weight of a package is less than the predetermined weight setting of the scale.

2,451,535
MULTIPLE CONTROL
Harry F. Clark, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application January 29, 1943, Serial No. 473,892
5 Claims. (Cl. 200—122)



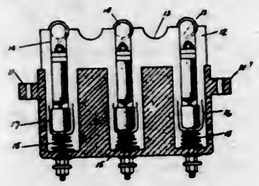
1. A control including a plurality of movable means, each of said movable means including a portion of magnetic material, means for mounting said movable means to hold said portions of magnetic material in alignment for movement into contact with and away from each other, separate independent flow control devices individually operable by two of said movable means when said two movable means each reach a predetermined position away from each other, magnetic means having poles located beyond the limit of movement of said portions of magnetic material to form a magnetic field throughout the path in which said portions of magnetic material operate for providing a magnetic force to hold said two movable means in said predetermined positions and to cause the portions of magnetic material to be attracted to each other when both leave said predetermined positions and move toward each other and also to cause said portions of magnetic material to return simultaneously to said predetermined positions when this attraction is overcome.

2,451,536
DIALLYL DIGLYCOLATE-STYRENE COPOLYMER
Martin E. Cupery, Brandywine Hundred, and Henry S. Rothrock, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 25, 1945, Serial No. 574,615
1 Claim. (Cl. 260—78.3)



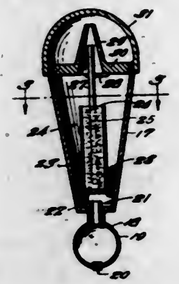
An interpolymer of diallyl diglycolate and styrene wherein the ratio by weight of said ester to styrene is at least 2 to 98.

2,451,537
DOOR FASTENER
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application November 14, 1946, Serial No. 709,808
3 Claims. (Cl. 292—218)



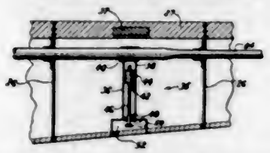
1. In a fastener for a hinged door of a container, the combination with fixed top and bottom keepers on said container above and below the door; of a vertically disposed, rotary operating bar on said door; top and bottom keeper engaging members on said bar having camming engagement with the keepers; and top and bottom, radially extending arms on said keeper engaging members respectively engageable over the top keeper and beneath the bottom keeper to lock said bar against vertical displacement when the fastener is in door locking position, said top arm having wedging engagement with the upper side of the top keeper, and said bottom arm having wedging engagement with the underneath side of the bottom keeper.

2,451,538
TUBE SOCKET FOR RADIO AND LIKE TUBES
Scipione M. Del Camp, Maywood, Ill., assignor to Cinch Manufacturing Corporation, Chicago, Ill., a corporation of Illinois
Application August 16, 1944, Serial No. 549,728
3 Claims. (Cl. 173—328)



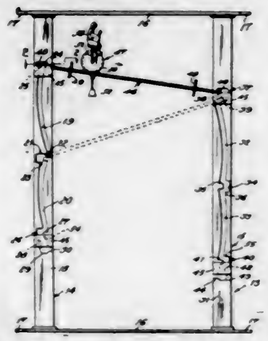
2. An electrical socket for connection with prong type tubes and the like comprising a socket body formed with a plurality of prong-receiving apertures opening through the upper face and contact-receiving bores below and communicating with said prong-receiving openings, a prong-engaging contact loosely and shiftably mounted in each of said bores, and a retainer member engaging the lower face of said socket body and underlying said bores for retaining said contacts therein, said retainer member having bosses extending into the contact-receiving openings to hold the contact members in positions to increase the barrier between adjacent contact members thereby increasing the voltage breakdown of the socket.

2,451,539
NEON LIGHTING EQUIPMENT
Stephen Denning, Toronto, Ontario, Canada, assignor to E. L. Ruddy Company, Limited, Toronto, Ontario, Canada
Application June 17, 1944, Serial No. 540,860
1 Claim. (Cl. 173—328)



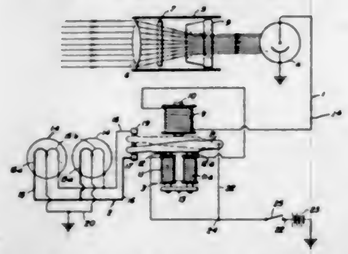
In neon lighting equipment, a housing formed of insulated material and having outside mounting flanges, the said housing being formed with a plurality of recesses, a wall projecting outwardly from one edge of said housing and having a plurality of arcuate neon tube supporting surfaces formed in the edge thereof and located at right angles to the direction of the recesses formed in said housing, phosphorus helical springs situated in the bottom of the recesses of said housing and detachably secured terminal posts extending through the bottom of said recesses, cups supported by said helical springs and enclosing the ends of neon tubes, electrodes in the neon tubes electrically connected to said cups, the neon tubes being supported by the arcuate surfaces of said wall and extending into the recesses of the housings and contacting with said cups, and fastening members for detachably securing said tubes in the said arcuate supporting surfaces against the tension of the said helical springs.

2,451,540
INHALER
Frank J. Dinyer, Mandan, N. Dak.
Application September 28, 1945, Serial No. 619,086
2 Claims. (Cl. 128—185)



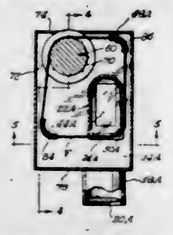
1. In a hand pressure type inhaler of the class described, a case transversely partitioned at one end to define separate chambers, one chamber for accumulation of air under pressure, an air furnishing bulb attached to one end of said case and communicating with said last-mentioned chamber, a plurality of communicating tubes mounted in said partition and affording communication at opposite open ends between said chambers, and a nozzle mounted on the opposite end of said case and substantially closing the end of the adjacent medicament chamber.

2,451,541
DYNAMIC BALANCER FOR ROTOR BLADES
Glidden S. Doman, Stamford, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application May 24, 1945, Serial No. 595,605
6 Claims. (Cl. 170—159)



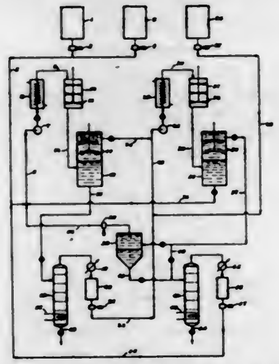
2. A rotor blade comprising structural parts shaping the blade including a longitudinal leading edge member of substantial mass, a hollow blade portion trailing said leading edge member and terminating in the trailing edge of said blade and a longitudinal spar located aft of said leading edge member, and mechanism carried by said spar in the outer third of the length of the latter and extending aft of said spar into said hollow blade portion for adjusting the chordwise mass center of the outer portion of said blade into coincidence with the chordwise aerodynamic center thereof, said adjusting mechanism including chordwise guiding means, a mass movable along said guiding means, and a rotatable adjusting member having a screw threaded connection with said mass and operable from the exterior of said blade for adjusting said mass chordwise of said blade.

2,451,542
TOY
Aimee J. Dube, Troy, N. Y.
Application December 13, 1946, Serial No. 716,039
7 Claims. (Cl. 46—130)



1. In a toy of the character described, a base, a pair of uprights secured thereto and rising therefrom in substantially parallel relationship, said uprights having longitudinally disposed slotted portions including arcuate longitudinal sections and upwardly facing shoulders, a rod having transverse portions for slidably engaging said slotted portions of the uprights and constructed and arranged to rest on said upwardly facing shoulders and to slide relatively to said arcuate portions in response to intermittent oscillatory movement of opposite ends of said rod, a wheeled vehicle adapted to be propelled by gravity from adjacent one end to adjacent the opposite end of said rod, and said rod having stops forming abutments for the wheeled vehicle by the impact of which said rod is laterally displaced relatively to the uprights and thereby caused to oscillate and slide relatively to the slotted portions of said uprights for positioning the opposite ends of the rod alternately in elevated position whereby said vehicle will be caused to move alternately from end to end of the rod.

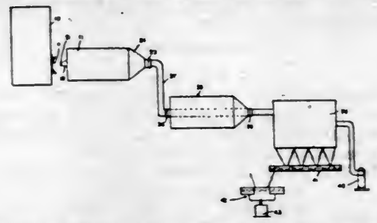
2,451,543
AUTOMATIC HEADLIGHT DIMMER
Richard A. Edell, Montgomery, Minn.
Application April 1, 1946, Serial No. 658,858
5 Claims. (Cl. 315—82)



1. An automatic light dimming mechanism for vehicles comprising a detector circuit including a light-sensitive cell, a dim-lighting circuit and a bright-lighting circuit, a movable armature actuable for alternately opening and closing said dim-lighting and bright-lighting circuits, a relay for actuating said armature, said relay comprising a permanent magnet adapted to normally attract and hold said armature in closing position with respect to the bright-lighting circuit and a coil connected in the detector circuit and winding about said magnet in a direction such as to create a magnetic flux in opposition to and of approximately the same magnitude as the polarity of the magnet, and an electromagnet in the detector circuit adapted to attract said armature to break the bright-lighting circuit and close the dim-lighting circuit upon energization of the detector circuit.

2,451,544
FILM VIEWING DEVICE
Robert W. Farrell, New York, N. Y.
Application October 26, 1946, Serial No. 705,876
4 Claims. (Cl. 88—17)

1. In a film viewing device, provided with film moving means, a chamber provided with a viewing opening, said chamber having a peripheral wall, in which said viewing opening is provided, spaced side walls, and a second peripheral wall in said chamber spaced laterally of said first mentioned peripheral wall, said second peripheral wall having an opening in registry with said viewing openings, means for mounting an endless film in the form of a single loop in said chamber widthwise between said spaced side walls for movement by said film moving means around said second peripheral wall in the space between said two peripheral walls and across said openings, said second peripheral wall defining a light compartment sealed from the interior of said chamber except at said opening which registers with said viewing opening, said mounting means including stationary parts which are slidably engaged by the film and including also a rotary member having a cylindrical portion engaging the surface of film and directing the latter for movement from one direction to a direction transversely of said one direction and provided with means releasably engageable with the film for moving the latter around said second peripheral wall.

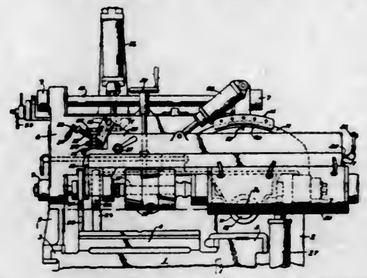


2,451,545
DEWAXING OF HYDROCARBON OILS
Seymour W. Ferris, Mount Holly, N. J., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
Application December 23, 1944, Serial No. 569,603
2 Claims. (Cl. 196—18)

1. The method of dewaxing an oil-wax mixture which comprises commingling the oil-wax mixture with a solvent and a cerophile at a temperature at which the wax is solidified, said solvent comprising a mixture of toluene, nitrobenzene, and o-nitrotoluene, and said cerophile comprising a liquid paraffinic hydrocarbon, forming two immiscible liquid phases of different specific gravities of which the lighter one comprises the cerophile and the solidified wax suspended therein, and the heavier one comprises the solvent and oil substantially free of solidified wax, separating the lighter phase from the heavier phase, and removing the wax from the lighter phase and the solvent from the heavier phase.

2,451,546
METHOD AND APPARATUS FOR FORMING A POWDER FROM METALS
Harold R. Forton, Greenback, Tenn.
Application June 25, 1945, Serial No. 601,417
2 Claims. (Cl. 18—2.4)

2. Apparatus for producing a powder from a molten material comprising an elongated chamber having an intake opening at one end and having a restricted outlet opening at the opposite end, means for introducing particles of the molten material into the chamber through the intake opening, a second elongated chamber having an intake opening at one end communicating with the outlet opening in the first chamber and also having an outlet opening, means connected to the outlet opening of the second chamber for drawing air through both chambers to successively convey material particles through said chambers, means supporting the chambers for rotation independently of one another about their respective longitudinal axes, means responsive to rotation of the



chambers to introduce material particles which have accumulated in the bottom portions of said chambers into the air stream flowing through the chambers, and means for rotating the second chamber at a slower rate than the first chamber to provide an accumulation of material particles in the second chamber.

2,451,547
ALLOY
Howard M. German, East Orange, N. J., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application January 9, 1942, Serial No. 426,239
6 Claims. (Cl. 75—128)

1. A creep resistant and heat resistant austenitic chromium-nickel-iron alloy comprising substantially 35 percent nickel, substantially 15 percent chromium, 0.5 to 3.0 percent columbium, 0.5 to 3.5 percent molybdenum, 0.01 to 0.8 percent carbon, balance iron.

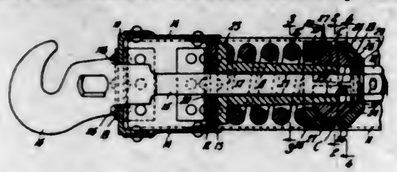
2,451,548
SWARF MILLING MACHINE
Willem Groen and Rudolph F. Onsrud, Chicago, Ill., assignors to Onsrud Machine Works, Inc., Chicago, Ill., a corporation of Illinois
Application September 21, 1944, Serial No. 555,088
8 Claims. (Cl. 90—13)

1. In a milling machine, a work supporting elongated bed and a cutting tool mounting overlaying said bed for relative travel lengthwise of the bed; said tool mounting comprising a vertically movable elevator member, a tilting member extending transversely across said bed and turnable on said elevator member about a horizontal axis directed along said bed, and located adjacent one side of said bed and a motor-driven tool spindle journaled on said tilting member crosswise of said bed; a cutting tool on said spindle and

spaced from said axis; a pair of guide rollers located respectively on said elevator member and on said tilting member; and a pair of template bars extending along said bed and respectively co-acting with said guide rollers to control respectively the elevation and tilting of said tool spindle with respect to said bed, said tilting member roller being adjustable vertically relative to the axis of said spindle.

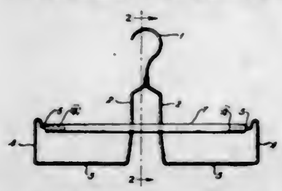
2,451,549
PRODUCTION OF METAL SULFONATES
Felix C. Gzemski, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application August 30, 1945, Serial No. 613,697
4 Claims. (Cl. 260—448)

1. The method of producing a metal salt of an oil-soluble sulfonic acid, which comprises neutralizing an oil containing said oil-soluble sulfonic acid with a heterocyclic nitrogen base at a temperature between 180° F. and 220° F., precipitating and separating the oil-insoluble nitrogen base sulfonate from the oil at a temperature between 140° F. and 160° F., and reacting the nitrogen base sulfonate with a basic compound of a metal at a temperature between 300° F. and 400° F. to replace the nitrogen base with the metal.



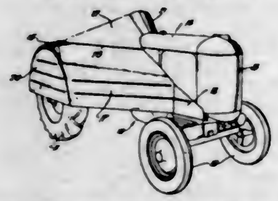
2,451,550
HOLDER
Oscar H. Haller, Los Angeles, Calif.
Application November 14, 1945, Serial No. 628,496
3 Claims. (Cl. 248—315)

1. A flower-pot holder adapted for holding a flower pot against a wall, comprising a wall member adapted to be affixed to a wall, a wing-holding member, a spacing member extending from the wall member to the top of the wing-holding member and adapted to hold the wing-holding member away from the wall, a second spacing member extending rearwardly from the bottom of the wing-holding member and adapted to abut against the wall, a pair of wings protruding outwardly from each side edge of the wing-holding member, each wing forming a ledge at its upper edge and having an oblique edge slanted downwardly and outwardly, a pot-holding ring resting on the ledges and fastened to the wing-holding member for supporting the flower pot, the oblique edges of the wings being slanted to engage the side wall of the flower pot and hold it in an upright position.



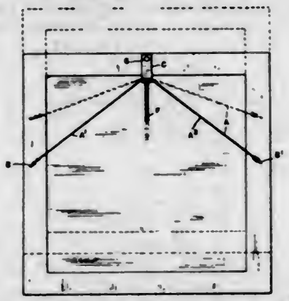
2,451,551
RAILWAY DRAFT GEAR
Stacy B. Haseltine, La Grange, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application June 28, 1943, Serial No. 492,545
6 Claims. (Cl. 213—36)

1. In a draft rigging for a railway car provided with an underframe structure including an end sill and a front stop member, the combination with a friction shock absorbing mechanism including a hollow friction post having a laterally projecting base flange at its front end, the front end of said post abutting said front stop, friction shoes surrounding said post and having lengthwise sliding engagement therewith, a coil spring surrounding said post, said spring reacting between the shoes and the base flange of the post to oppose movement of the shoes forwardly on said



post, and a wedge cap having wedging engagement with the rear ends of said shoes to force the same against the post; of a lengthwise movable drawbar extending through said post, said drawbar having shouldered engagement with the wedge cap to pull the latter forwardly therewith in draft and having shouldered engagement with said end sill to limit inward movement of said drawbar and restrict expansion of the friction shock absorbing mechanism.

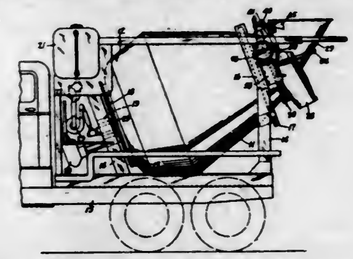
2,451,552
BENT-WIRE CLOTHES HANGER
Lee Hayward, Clayton, Mo.
Application November 16, 1946, Serial No. 710,268
8 Claims. (Cl. 223—95)



1. A garment hanger comprising, a supporting hook, a bar connected to the hook by depending arms, said depending arms forming deviating members below said bar when the hanger is sustained by said hook, said deviating members being removed from the vertical plane traversing said bar when the hanger is sustained by said hook and said deviating members being so biased as to cause said bar to bear against said depending arms.

2,451,553
PROTECTIVE SHIELD FOR ORCHARD TRACTORS
Milton T. Hedquist and James Haley, Rock Island, Ill., assignors to J. I. Case Company, Racine, Wis., a corporation of Wisconsin
Application June 29, 1946, Serial No. 680,440
6 Claims. (Cl. 180—1)

5. In an orchard tractor having a pair of laterally spaced rear wheels, mudguards disposed over said wheels, an engine hood disposed forwardly of said rear wheels having a top portion adapted to be elevated to open the hood for inspection and servicing of the engine, and a steering wheel disposed rearwardly of the hood at a higher level than the top of the hood when the hood is closed, the combination of a streamlined shield for protecting orchard trees from injury by said tractor comprising a main body shield including substantially vertical walls extending forwardly and inwardly from the respective outer edges of said mudguards and terminating substantially in the respective side planes of said hood, said vertical walls having the upper rear portions thereof curved inwardly and terminating in upper edges extending angularly inward from the top of said mudguards to the sides of said hood, and a steering wheel shield comprising a pair of wing members respectively hinged to said upper edges and including front portions curved to overlie said top of said hood and form a sloping shield disposed in front of said steering wheel, and means for locking said wings in shield-forming position, said wings being swingable outwardly on said hinges to positions wherein said top of said hood is free for elevation to open said hood.



2,451,554
PICTURE HANGING MEANS
Olof H. Hedstrom, Hartford City, Ind.
Application June 3, 1946, Serial No. 673,907
4 Claims. (Cl. 248—32)

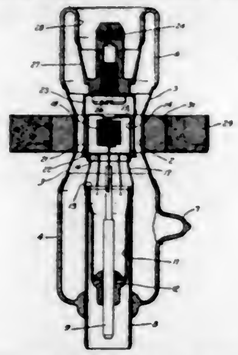
3. In a picture frame hanging means the combination with a cord of predetermined length having fasteners secured to the opposite ends thereof for engagement with a picture frame of a wall engaging member including return bent portions terminating in cooperating clamping jaws, one of said portions being apertured for drawing therethrough and downward between said jaws of a central loop portion of said cord.

2,451,555
MEANS FOR CHARGING, SEALING, AND DISCHARGING MIXERS
Louis G. Hilkemeier, West Allis, and George K. Viall, Milwaukee, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 23, 1944, Serial No. 559,964
10 Claims. (Cl. 259—161)

1. In a concrete mixer, a rotatable mixing drum having an axial opening at one end through which materials pass to and from the drum, an annular member journalled on the end of the drum adjacent said opening, said member being disposed to encircle the drum opening and prevent leakage of material between it and the drum, a charging hopper movable to and from the drum opening having a portion making contact with said annular member when the hopper is in charging position, an element movable toward and from said member disposed to prevent rotation of said member when engaged therewith, means for moving said element into engagement with said member in response to movement of

said hopper into charging position and including delayed action means connecting said hopper and said element to cause said element to engage said member and prevent rotation thereof with respect to said hopper only after rotational contact has occurred between the hopper and the annular member to clean their abutting surfaces.

2,451,556
ELECTRODE STRUCTURE FOR GASEOUS DISCHARGE DEVICES
Vivian L. Holdaway, Midland Park, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 27, 1946, Serial No. 686,615
14 Claims. (Cl. 250—27.5)



1. An electric discharge device comprising a cathode having an extended electron emissive surface provided with a shallow recess, a control anode overlying said recess and having a portion extending into said recess and having an edge substantially conforming to and immediately adjacent the lateral wall thereof, and a work anode opposite said surface.

2,451,557
ELECTRON TUBE FOR HIGH FREQUENCY
Gordon T. Howes, Belmont, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application February 24, 1945, Serial No. 579,668
9 Claims. (Cl. 250—27.5)

1. An electron tube comprising an envelope having a tubular metallic anode section and a

vitreous section sealed to an end of the anode section, a tubular metallic stem member sealed to said vitreous section, an inner metallic stem

member concentric with said tubular member, vacuum-tight closure means interposed between the stem members, and a cathode within the envelope connected to said stem members.

2,451,558

CHEMICALLY TREATED WOOD PULP AND A METHOD OF PRODUCING A CELLULOSIC PRODUCT

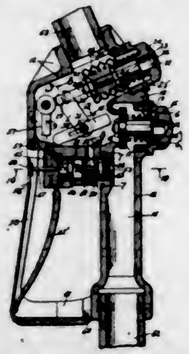
Paul Henry Schlosser and Kenneth Russell Gray, Shelton, Wash., assignors to Rayonier Incorporated, Shelton, Wash., a corporation of Delaware

No Drawing. Application November 6, 1944, Serial No. 562,262
14 Claims. (Cl. 106—163)

1. As a new article of manufacture, a chemically prepared wood pulp product having incorporated therein from 0.01 to 0.2 per cent by weight based on the bone dry weight of the pulp of a mixed ether having the following formula:

$$R{-}O\left(\begin{matrix}CHCH_2O\\ |\\ R_1\end{matrix}\right)_x H$$

where R is an aryl radical substituted by at least one radical selected from the class consisting of an alkyl radical with more than two carbon atoms, an acyl radical with more than two carbon atoms and a cycloalkyl radical; where R_1 is selected from the group consisting of hydrogen and methyl and where x is a whole number greater than 1.



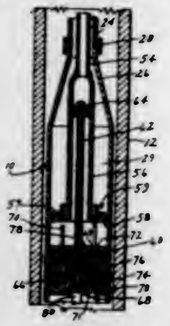
2,451,559

VALVE MECHANISM FOR HANDLING LIQUEFIED GASES AND THE LIKE

Raymond J. Kirkby, Sherman Oaks, Calif., assignor to Adel Precision Products Corp., a corporation of California

Application March 6, 1945, Serial No. 581,319
10 Claims. (Cl. 277—53)

10. In a valve mechanism having a body provided with means for connecting it with a source of fluid under pressure, and with means for connecting it with a closed receptacle to receive said fluid under pressure therefrom, of a valve seat with a movable valve thereon dividing the interior of said body into a receiving chamber and an exit chamber, said valve member being held closed by the fluid pressure in said receiving chamber, a spring normally tending to move said valve member to closed position, manually operable means for moving said valve away from said valve seat, means forming a closed by-pass for fluid pressure from one chamber to the other to equalize the fluid pressure in said body on opposite sides of said valve member, means for manually opening said by-pass, and a manually oper-



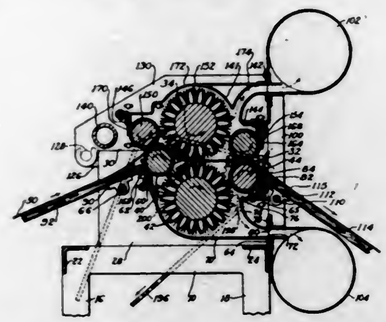
able valve means associated with said by-pass constructed and arranged to effect selectively the equalization of pressure in said chambers or reduction of pressure in said exit chamber.

2,451,560

FLUID OPERATED PUMP FOR OIL WELLS AND THE LIKE

Robert B. Knowles, Maywood, Calif.

Application March 15, 1946, Serial No. 654,661
8 Claims. (Cl. 103—46)



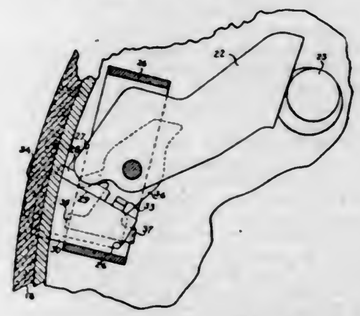
1. In well pumping apparatus having means for intermittently supplying working fluid under pressure, a barrel for mounting in the well, a partition dividing the barrel into an upper compartment and a lower compartment, a port in the partition, a non-return valve controlling said port, a working fluid actuated piston reciprocably mounted in the lower compartment, a first conduit fixed in the barrel and adapted at its top end for communication with the pressure means, a second conduit fixed at its bottom end to the piston and having its top end reciprocably fitting in the lower end of the first conduit whereby to deliver working fluid under pressure to the lower compartment below said piston, a discharge port through the piston, a check valve seating in said discharge port towards the upper compartment, means for unseating the check valve in response to predetermined upward movement of the piston, a pump connected to said piston for drawing fluid from the well into said lower compartment below said piston upon movement of said piston upwardly, means for trapping fluid from the well in the lower compartment below the piston upon downward movement of said piston, and means for passing fluid from the upper compartment.

2,451,561

CONTINUOUS BRUSHING MACHINE FOR LEATHER

Cutler D. Knowlton, Rockport, and David Edgar, Lynn, Mass., assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application August 22, 1946, Serial No. 692,218
12 Claims. (Cl. 69—37)



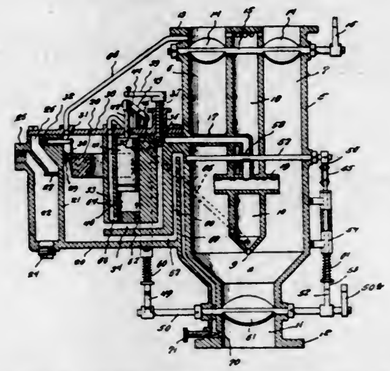
1. In a machine for removing dust from hides and skins, a pair of brush rolls between which a work piece may be passed and treated on both grooved discharge rolls for passing the work piece to the bite of the brush rolls, a pair of grooved discharged rolls for passing the work piece away from the brush rolls, a casing forming with the said feed rolls and discharge rolls an enclosure for the brush rolls, and suction means connected to said casing.

2,451,562

AUTOMATIC ADJUSTER FOR FRICTION ELEMENTS

Ludger E. La Brie, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a corporation of California

Application June 8, 1946, Serial No. 675,417
1 Claim. (Cl. 188—79.5)



In a self-adjusting vehicle brake, a backing plate, a brake shoe pivoted on the backing plate and carrying a wear surface, a brake drum rotatable in proximity to the wear surface on said brake shoe, a stop carried by the backing plate, a pin extending perpendicular to the web of said brake shoe, a lever fulcrumed on said pin and having one end engaging said stop, a pressure plate journaled on another portion of said lever, an abutment carried by the brake shoe, the said abutment and pressure plate forming a wedge shaped receptacle with its wider part toward the wear surface on said shoe, an auxiliary element wedge shaped to conform to the said receptacle, the said auxiliary element comprising a metal housing having opposite surfaces for engaging said abutment and said pressure plate, and having a surface of ceramic material flush with the friction surface of said wear material, a leaf spring having three separately flexible portions, one engaging said lever, one engaging said pressure plate, and one engaging said auxiliary element, all pressing said members toward and into engagement with the web of said brake shoe, and a shell spanning the lever, the pressure plate and the auxiliary element, and forming an abutment for said leaf spring and a guide for said fulcrum.

2,451,563

CARBURETOR

Nick G. La Guardia, Denver, Colo.

Application April 24, 1945, Serial No. 590,043
3 Claims. (Cl. 261—23)

1. In a carburetor, the combination, which comprises a housing having a plurality of parallel air intake passages converging to a common outlet, butterfly valves in the intake passages, a butterfly valve in the outlet, a shaft with extending ends having cams on the ends thereof pivotally mounting said butterfly valve in said common outlet, said housing having a centrally disposed chamber with a discharge orifice in the vertex of a conical-shaped lower end thereof, said orifice aligned with the center of said common outlet, said housing including a float chamber extending at one side of said intake passages and intermediate the ends thereof, a fuel supply connection communicating with the interior of the float chamber, a float in said float chamber, a valve in said fuel supply connection actuated by said float, said float chamber having an inner cylinder therein, a piston in said inner cylinder, levers actuated by one of the cams on the butterfly valve shaft to operate the piston in a compression stroke thereof, means resiliently returning the piston, check valves in the cylinder in the float chamber admitting fluid to the cylinder in the returning stroke of the piston and providing release of fluid in the cylinder through a connection to the vertex of said centrally disposed chamber of the housing as the

piston is actuated through the compression stroke, said housing having a fluid supply connection from the lower end of the float chamber to the valve intake passages thereof, a control valve in said connection, a butterfly valve in said fluid supply connection, means actuating the butterfly valve in said fluid supply connection by one of the cams on said butterfly valve shaft, said housing having a passage for fuel for idling extending from the lower end of the float chamber upward to a point midway of the height of the housing and thence downward to a point in the common outlet beyond the butterfly valve therein, and a control valve in said idling fuel passage.

2,451,564

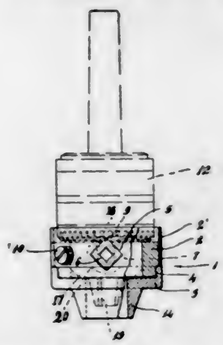
TREATMENT OF HYDROCARBONS WITH ACTIVATED MAGNESIUM SILICATES

William A. La Lande, Jr., Upper Darby, Pa., assignor to Attapulgus Clay Company, Philadelphia, Pa., a corporation of Delaware

No Drawing. Original application March 14, 1942, Serial No. 434,776. Divided and this application August 13, 1946, Serial No. 690,332

5 Claims. (Cl. 196—52)

1. A method of treating petroleum hydrocarbons, which comprises contacting said hydrocarbons, at a temperature within the range of from 700° F. to 1150° F., with a catalyst comprising a water-insoluble magnesium silicate activated by treatment with an ammonium compound in aqueous solution at a temperature between 150° F. and 400° F.



2,451,565

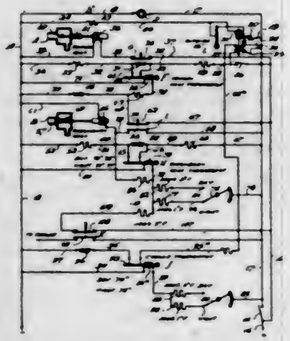
CHUCK ADAPTER

Mitchell Landow, Bronx, N. Y.

Application November 13, 1945, Serial No. 628,105

2 Claims. (Cl. 279—1)

1. A device of the character described comprising a tubular casing whose inner side fits tightly over the lower portion of a chuck body and which is wider in diameter than the outer chuck member and has a recess in its upper wall portion, a sleeve member secured to the outer side of said tubular casing and extending over the upper edge of the latter, a bevel gear having its hub radially extended through said sleeve member and being rotatably arranged in the recessed portion of said casing in such a manner that some of its teeth protrude over the upper edge of said tubular member, and a collar member attached to the lower portion of said tubular member and extending over the jaws of said chuck, said gear being adapted to engage teeth which are on the lower extremity of the outer chuck member, and that portion of said hub which projects over the outer side of said sleeve member being adapted to be rotated by means of a wrench, all substantially as described.



2,451,566

AUTOMATIC PANEL CIRCUIT FOR AIR REHEAT CONTROL

Timothy J. Lehane and Everett H. Burgess, Chicago, Ill., assignors, by mesne assignments, to Vapor Heating Corporation, a corporation of Delaware

Application April 16, 1945, Serial No. 588,609

14 Claims. (Cl. 257—3)

7. In combination with means for circulating air through an enclosed space and means for adding heat to the circulated air including a radiator, an electrically actuated valve for supplying heating medium to said radiator, means for controlling the operation of said valve including a thermostat responsive to temperature changes within the space, an auxiliary electric heater for said thermostat and means for supplying energy to said auxiliary heater including a relay and a control thermostat therefor responsive to temperature changes within said space, whereby the relay is actuated upon the functioning of the second mentioned thermostat to open a circuit through said auxiliary heater and thereby adjust the first mentioned thermostat to a higher functional setting.

2,451,567

PROCESS FOR PREPARING STARCH HYDROLYZING ENZYME WITH ASPERGILLUS

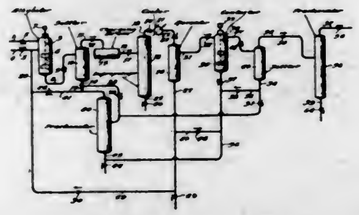
Elmer H. Le Mense and James M. Van Lanen, Peoria, Ill., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application September 10, 1946, Serial No. 696,023

6 Claims. (Cl. 195—73)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process of producing a starch hydrolyzing enzyme complex, which complex contains dextrinizing and saccharifying enzymes, which comprises growing a culture of *Aspergillus niger* NRRL 337 under aerated submerged growth conditions, in a liquid medium comprising a mash of thin stillage, corn meal, and calcium carbonate, the aeration rate being between 10 and 200 percent of the volume of the mash per minute, the medium being buffered to a pH between 4.5 to 6.0.



2,451,568

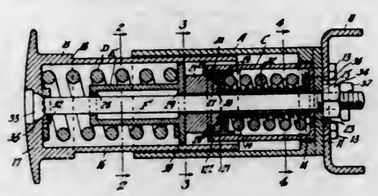
TREATMENT OF HYDROCARBONS

Carl B. Linn, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application October 25, 1945, Serial No. 624,508

8 Claims. (Cl. 260—676)

1. A process for treating a hydrocarbon material containing as an impurity a relatively small percentage of organically combined fluorine to remove fluorine therefrom which comprises contacting said hydrocarbon material at a temperature of from about 0° C. to about 150° C. with a liquid mixture of hydrogen fluoride and the organic constituents of a sludge resulting from the treatment of hydrocarbons with a sludge-forming hydrocarbon conversion catalyst, said mixture containing from about 40% to about 90% of said organic constituents, and recovering the treated hydrocarbon material.



2,451,569

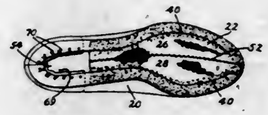
RAILWAY CAR-END BUFFER

Harvey J. Lounsbury, Glen Ellyn, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware

Application November 3, 1944, Serial No. 561,778

3 Claims. (Cl. 213—221)

1. In a buffer for railway cars, the combination with a housing adapted to be secured to a car, said housing being closed at the rear end; of a friction shock absorber within the housing, said friction shock absorber including a casing open at one end and a spring resisted friction clutch slidable within said open end, said clutch including a wedge and friction shoes, said friction shock absorber being buttressed against the closed rear end of the housing; a buffer head slidingly telescoped within the housing; a pressure transmitting column element interposed between said buffer head and the friction shock absorber, bearing on the latter and having its front end normally spaced from the buffer head and adapted to be engaged and actuated thereby after a predetermined compression of the mechanism; and spring means interposed between the buffer head and the friction shock absorber and reacting between the buffer head and the column element to oppose relative approach thereof.



2,451,570

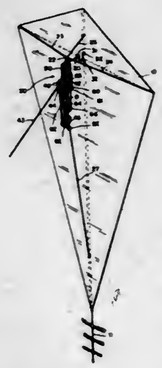
METHOD OF MAKING SLIP-LASTED SHOES

Horatio S. Lyness, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application July 9, 1946, Serial No. 682,231

11 Claims. (Cl. 12—142)

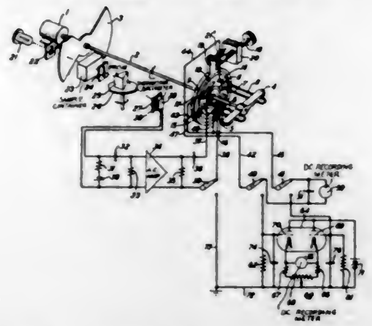
1. That improvement in methods of making shoes which comprises providing a prefitted upper having a scant lasting margin, providing an insole which is smaller than a last bottom by the width of the lasting margin of the upper, dividing said insole substantially along its longitudinal median line to form two half insoles, stitching each half insole by zig-zag stitches inserted off a last to that portion of the lasting margin of the upper which corresponds thereto with the edge of the upper abutting the adjacent edge of each half insole, securing the two half insoles together off a last along the line of division by overseaming stitches with the adjacent marginal portions of the half insoles located in superimposed relation to each other and with their edges substantially flush, said overseaming stitches permitting relative adjustment of the half insoles about the stitches without disturbing said stitches, positioning a second insole of last bottom size inside the shoe against the divided insole, inserting a last into the upper to slip-last the shoe and position the adjacent edges of the half insoles in abutting relation to each other, securing the second insole to the upper and the divided insole, and attaching a sole to the shoe bottom.



2,451,571

DIVE STABILIZER FOR KITES

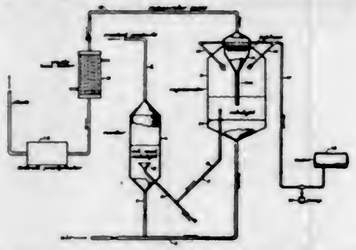
Alfred Marshall, Bay Shore, N. Y.



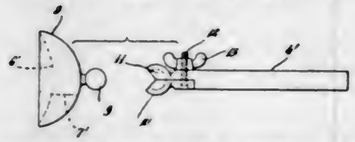
Application June 9, 1947, Serial No. 753,555

21 Claims. (Cl. 244—153)

1. A dive stabilizer for a kite comprising a guide bar, a string connecter element movable on said guide bar, and means responsive to wind pressure acting on said kite to shift said element along said guide bar.



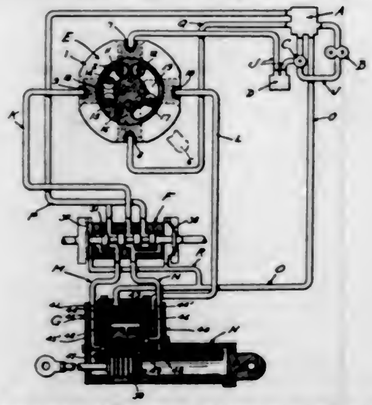
2,451,572
RADIANT ENERGY MEASURING APPARATUS
Hilbert R. Moore, Pluckemin, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 27, 1945, Serial No. 637,412
6 Claims. (Cl. 250—41.5)



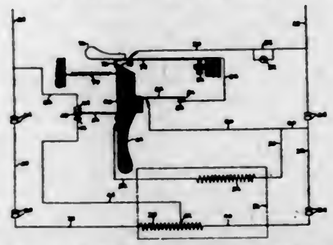
1. A radiant-energy indicating system comprising means for periodically interrupting a beam of radiant-energy for equal periods of interruption separated by equal intervals of passage of the beam, radiant-energy sensitive means having output terminals connected therewith, said radiant-energy sensitive means being positioned in the path of the interrupted beam to respond thereto and produce direct current impulses, and having such a response characteristic as to generate along with said impulses unwanted disturbing electrical current variations occupying a wide frequency band including the frequency of the direct current impulses, an amplifier having an input circuit connected to said output terminals and an output circuit, said amplifier having a band-pass selective transmission characteristic extending from a frequency below that of said impulses to a frequency far above that of said impulses, said amplifier characteristic also discriminating very effectively against certain frequencies below said pass band, a synchronous full-wave rectifier having input terminals connected to the output circuit of said amplifier and output terminals, means for synchronizing said rectifier with the amplified impulses received from said amplifier, and an indicating instrument connected to the output terminals of said rectifier, said indicating instrument being responsive to unidirectional current and to the lower frequency components of the wide frequency band produced by said radiant-energy sensitive means, but substantially unresponsive to components of the frequency of said pulses.

2,451,573
FLUID CATALYST REGENERATOR SYSTEM
William A. Myers and William A. Hall, Springfield, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 15, 1943, Serial No. 487,416
1 Claim. (Cl. 252—417)

The process for regenerating finely divided solid material containing combustible deposits which comprises passing an oxidizing gas upwardly through a regeneration zone containing said finely divided solid material at a controlled rate to maintain a dense turbulent layer of said finely divided solid material in the bottom portion of said regeneration zone, maintaining the temperature within the regeneration zone sufficient to burn said combustible deposits, and injecting steam into the stream of regeneration gas, associated with minor amounts of solid material containing combustible deposits, leaving said dense layer of fine divided material to materially reduce the temperature thereof and avoid secondary combustion above said catalyst layer.

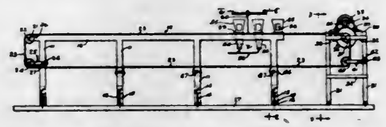


2,451,574
CHIP GUARD
John Paraschuk, New York, N. Y.
Application June 21, 1945, Serial No. 600,789
1 Claim. (Cl. 29—96)



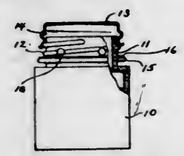
A chip guard comprising a concavo-convex disk having a rectangular slot which extends from the periphery of the disk toward its center, and a stem pivotally secured to the convex side of the disk and being adapted to be inserted into the toolpost of a lathe adjacent the cutting tool which extends through said slot.

2,451,575
HYDRAULIC SELECTOR VALVE
Donald D. Paxton, Burbank, Calif., assignor to Adel Precision Products Corp., a corporation of California
Application February 20, 1946, Serial No. 648,895
1 Claim. (Cl. 60—52)



In a hydraulic system which includes a source of supply of pressure fluid, a hydraulic motor comprising a cylinder in which a piston is reciprocable, a transfer valve through which pressure fluid may be directed for application to either end of said cylinder and through which return fluid may pass, and a spring loaded by-pass valve normally disposed by its spring in a position to afford the by-passing of fluid from one end of the cylinder to the other and adapted to be moved by pressure fluid out of by-passing position; the improvement which consists in providing in said system a selector valve including a valve body member having on one face thereof a seat for a disk valve member and being provided with a pressure intake passage, a return passage, a pair of service passages, a pair of pressure ports extending from said intake passage and opening on said seat, a single return port extending from said return passage and opening on said seat, a pair of service ports extending from one of said service passages and opening on said seat, a single service port extending from the other service passage and opening on said seat, and a rotary disk valve member mounted on said seat and having a pair of recess ports in the face thereof opposed to said seat; a pressure line from said source to said intake passage, a service line connecting one of said service passages with said transfer valve, a second service line connecting the other service passage with said by-pass valve for supplying fluid for moving said valve out of by-passing position, a return line connecting said return port through said return passage to said source, and means for turning said valve member to selectively dispose it in a position in which one of the recess ports will be in communication only with said pair of pressure ports while the other recess port affords communication of one of the pair of service ports and said single service port with said return port; into a second position in which said one recess port will establish communication of said pair of pressure ports with the other of the service ports of said pair, while the other recess port affords communication between said single service port and said return port; and into a third position in which said one recess will establish communication between one of said pressure ports and both of the service ports of the pair thereof while the other recess port will establish communication of the other of said pressure ports with said single service port.

2,451,576
ELECTRICAL CONTROL SYSTEM
George C. Pearce, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application February 28, 1941, Serial No. 381,194
6 Claims. (Cl. 219—20)



1. An electric heating means for heating a zone to be heated, supply conductors for connecting the heating means to a power source, thermostatic switch means in one of the supply conductors for controlling the connection of the heating means to the power source to regulate the temperatures of said zone, connecting means for connecting said heating means selectively into a baking circuit arrangement and into a preheat circuit arrangement, means for setting the connecting means in the preheat circuit arrangement, electrically operated means for controlling the operation of said connecting means to change from the preheat circuit arrangement to the baking circuit arrangement means for holding the connecting means in the baking circuit arrangement except when set in the preheat circuit arrangement, and means for positively energizing said electrically operated means by the potential existing across said thermostatic switch means upon its opening.

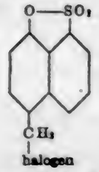
2,451,577
ENDLESS CONVEYER EGG-CANDLING DEVICE
Wesley J. Roberts, Hot Springs, Ark.
Application May 10, 1946, Serial No. 668,700
1 Claim. (Cl. 88—14.5)

In an egg-candling device comprising a supporting table having a longitudinal slot therein and a driven conveyor belt movable over the supporting table longitudinally above the slot and having a series of spaced apertures therein individually serving as receptacles for receiving and conveying eggs above the slot, the features including an upwardly-directed lamp housing supported beneath said table below the slot therein, a lamp in the lamp housing directing its rays upwardly through said slot, a plurality of upwardly-flaring cups adapted to be positioned on said conveyor belt to register with the individual apertures therein in succession, said cups being adapted to surround the eggs individually carried by said apertures, and a viewing window in the side wall of each upwardly-flaring cup, and a reflector adjustably supported over said lamp housing and lamp above the path of travel of said upwardly-flaring cups on said conveyor belt.

2,451,578
ANT FEEDER
John B. Rosefield, Piedmont, Calif.
Application February 22, 1944, Serial No. 523,388
7 Claims. (Cl. 43—131)

1. An insect feeder comprising a container having a filling opening and a threaded portion associated therewith, a member adapted to close the filling openings by engagement with the threaded portion of the container, and insect entrance ports disposed in the threaded portion of the container.

2,451,579



4-HALOGENOMETHYL-1:8-NAPHTHSULTONES AND A PROCESS FOR THEIR MANUFACTURE

Guido Schetty, Basel, Switzerland, assignor to J. R. Geigy A.-G., Basel, Switzerland, a Swiss firm

No Drawing. Application December 10, 1945, Serial No. 634,151. In Switzerland December 12, 1944

8 Claims. (Cl. 260—327)

6. The 4-halogenomethyl-1:8-naphthsultones of the general formula

wherein halogen means a member selected from the group consisting of chlorine and bromine.

2,451,580

COMBINED FLUORESCENT AND FILAMENT LAMP REFLECTOR UNIT

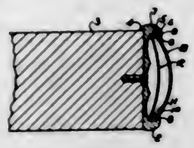
Abram Schwinger, Philadelphia, Pa.

Application December 7, 1946, Serial No. 714,771

1 Claim. (Cl. 240—1.1)

A reading lamp comprising a base housing, a ballast and starter within said housing, a vertical support carrying a hanger member, said hanger member in turn supporting universally a filament lamp socket with a filament lamp therein, a perforated canopy surrounding the body of said socket, a disc of translucent glass beneath said filament lamp, an annular fluorescent lamp adjacent said translucent disc and a reflector surrounding said filament lamp whereby light from both the filament lamp and the fluorescent lamp are mixed and diffused through said translucent disc and may be directed at a plurality of angles.

2,451,581



PRICE TAG MOLDING HAVING A SLIDE HELD TAG AND A TRANSPARENT COVER STRIP

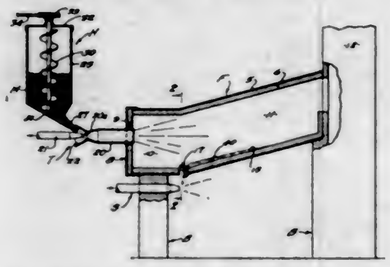
Robert J. Slavsky and John R. Slavsky, Detroit, Mich., assignors to Shaw and Slavsky, Inc., Detroit, Mich., a corporation of Michigan

Application June 14, 1947, Serial No. 754,654

3 Claims. (Cl. 40—16)

3. A price tag molding comprising an elongated strip having a back wall and an edge wall extending longitudinally and laterally of each of the upper and lower edges of said back wall to provide upper and lower channel walls, each of said edge walls having longitudinal inner and outer grooves in the inner surface thereof to receive price and cover strips, respectively, of substantially the same width, the outer surface of each edge wall being convex and extending to the outer side of the corresponding outer groove, said outer surface continuing and merging convexly into the outer side of said corresponding groove, the wall

portion of each strip between said inner and outer grooves having a sharp exposed longitudinal edge, said sharp-edged wall portion being in proximity to and directly behind the corresponding convex edge wall, said convex surfaces facilitating the insertion of a flexible cover strip into said outer grooves and said sharp edges preventing such a strip from slipping into the inner grooves, and a longitudinal extension on one of said edge walls and lying externally of the channel formed by said back wall and edge walls, for mounting the molding on a horizontal surface.



2,451,582

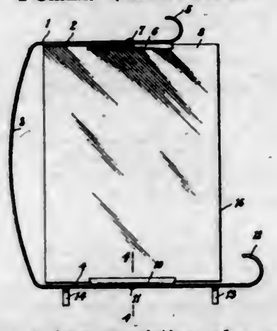
APPARATUS FOR PRODUCING MINERAL WOOL

Herbert C. Smith, Los Angeles, Calif., assignor, by direct and mesne assignments, to American Rock Wool Corp., Wabash, Ind., a corporation of Indiana

Application September 9, 1941, Serial No. 410,177

3 Claims. (Cl. 263—40)

3. In a furnace of the class described, stationary refractory walls defining an elongated combustion chamber having a hearth inclining from adjacent its front end towards its rear end, a stack communicating with the chamber, nozzle means for directing a heating flame and pulverulent raw material into the chamber from the front end thereof, and a discharge opening through the hearth adjacent the front end thereof, said discharge opening communicating with the chamber in a plane with the inner surface of the hearth whereby to prevent formation of a pool of molten material on the hearth, the angle of incline of the hearth and the plane of the nozzle being so related that the fuel is sprayed from the nozzle in a direction longitudinally of the chamber and angularly against the hearth adjacent said discharge opening.



2,451,583

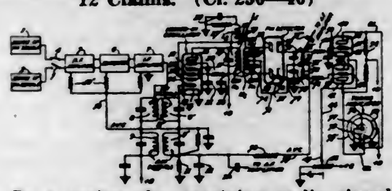
PICTURE HOLDER

Theodore Solomon, New York, N. Y.

Application October 31, 1944, Serial No. 561,175

1 Claim. (Cl. 40—152.1)

A picture holder consisting of a continuous strip of substantially flat springy stock shaped to form a pair of spaced arms extending substantially parallel to one another, said arms being connected by an integral, outwardly bowed, vertically disposed part tending to normally force the arms toward one another to a limited extent and cause them to resiliently grip a picture and a glass placed between them, each of the arms being provided with a rotatively-mounted channel member for engaging an edge of the picture and glass, one of the arms being longer than the other, said longer arm having a free end extending beyond a vertically disposed edge of the picture and glass, said longer arm having its free end formed with an upwardly curled extremity to protect the edge of the picture and glass situated adjacent to said free end, said longer arm also having supporting feet for holding the device upright and with the arms located one above the other, the shorter of the two arms having a hook-shaped extremity arising above the top of the picture.



2,451,584

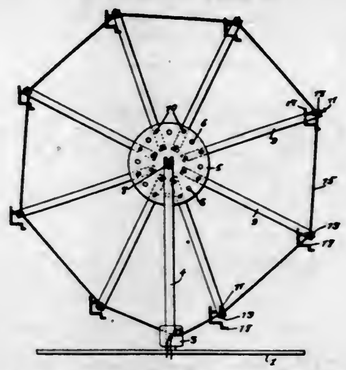
SIGNAL RECEIVER TUNING INDICATOR

Fred B. Stone, Haddon Heights, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application October 27, 1945, Serial No. 625,051

12 Claims. (Cl. 250—40)

1. In a system for receiving radio signals, a resonance indicator of the fluorescent target type provided with a pair of electron deflection electrodes between which passes a beam of electrons to form a fluorescent line on the target, means normally applying equal voltages to said electrodes which are less positive than the target potential thereby to provide a relatively wide shadow sector on the target, said line being located at the center of the sector, and means responsive to received signal carrier amplitude variation for controlling said applying means to vary the magnitudes of said voltages equally whereby the width of the shadow sector is varied to indicate said carrier amplitude variation.



2,451,585

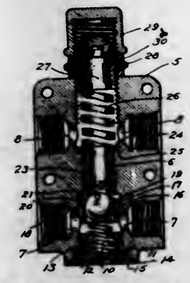
TOY FERRIS WHEEL

Joseph M. Streff, Topeka, Kans.

Application June 24, 1946, Serial No. 678,859

2 Claims. (Cl. 272—31)

1. In a device of the class described, the combination with a frame, a wheel mounted on said frame, said wheel including pairs of spokes, of a primary spoke bolt near the outer ends of and connecting the spokes in each pair, said primary bolt provided on one end outside of a spoke with a bent portion constituting a belt groove around the outside of said spokes, a belt on said bent ends in said belt groove, a motor, and means connecting said motor to said belt.

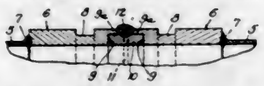


2,451,586

VALVE

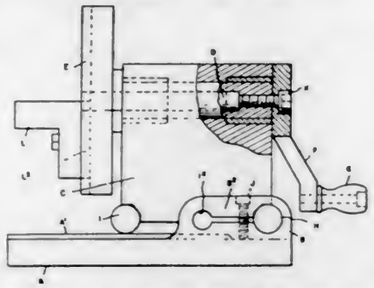
Carl J. Strid, La Canada, Calif., assignor to Adel Precision Products Corp., a corporation of California

Application June 27, 1944, Serial No. 542,382



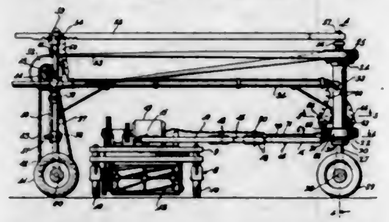
2 Claims. (Cl. 137—53)

1. In a valve, a body member having a bore for the passage of fluid therethrough, a tubular valve member reciprocable in said bore affording the passage of fluid through the bore when unseated, a spherical valve seat member axially movable in said bore, a spring urging said seat member toward said valve member, a spring arranged to urge said valve member against said seat member, and a cup-shaped member loosely embracing said spherical member and positioned with its bottom directed toward said tubular valve member, said bore having a diametrical enlargement which contains said cup-shaped member and provides an annular shoulder; said cup-shaped member having a bottom opening less in diameter than the diameter of said spherical member through which the latter projects and at times effects a closing of the bore of said tubular



member, the bottom of said cup having exterior lugs surrounding its opening and at times engageable with said shoulder, there being fluid passages between said lugs which admit fluid pressure to said tubular valve member at such times, said cup-shaped member cooperating with the spring which acts upon said spherical member to maintain the latter in its operative position.

2,451,587
PIPE END AND JOINT
Edward Hall Taylor, Winnetka, Ill., assignor to Taylor Forge & Pipe Works, Cicero, Ill., a corporation of Illinois
Application May 7, 1945, Serial No. 592,412
3 Claims. (Cl. 285—111)



1. A pipe end member for joining endwise to another similar member, said end member being of a wall thickness materially greater than welding thickness for the major portion of its length and having an interior circumferential recess extending from its inner end and an exterior circumferential groove disposed a substantial distance outward beyond said recess, the inner end portion of said member corresponding to said recess being of welding wall thickness.

2,451,588
GRINDING FIXTURE
Theodore Teclu, Detroit, Mich.
Application July 30, 1945, Serial No. 607,798
3 Claims. (Cl. 51—237)

2. A work holding fixture for grinding machines comprising a base plate having a pair of spaced integral ears extending upward therefrom and a slightly raised top surface portion parallel to the bottom surface thereof, a rectangular block constituting a sine bar extending between said ears, cylindrical pins secured to the opposite lower corners of said block in parallelism to each other, one of said pins being extended to engage pivot bearings in said ears and the other pin when contacting said raised top surface holding said sine bar parallel to said base, a shaft journaled in said block to extend longitudinally thereof and carrying at one end beyond said block a work supporting head or face plate in a plane perpendicular to the axis of said shaft, a crank at the opposite end of said shaft for rotatably adjusting the same to an unlimited extent, clamping means for holding said shaft in its adjusted position, and clamping means for the pivot bearings in said ears for holding said sine bar in any position of angular adjustment.

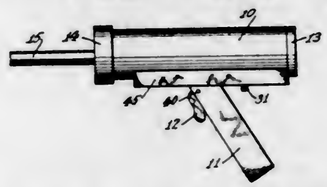
2,451,589
LAWN MOWING MACHINE
George Edward Thomas, Bogalusa, La.
Application November 26, 1945, Serial No. 630,708
5 Claims. (Cl. 56—26)

1. In a machine of the character described, the combination of a vehicle having rear and front wheels, a rod extending upwardly from the axle of the front wheels, a steering lever connected to the upper end of said rod and extending to the rear of the vehicle, a tube surrounding, said rod, a pulley secured to the upper end of said tube, a driving disk secured to the lower end of said tube, operating connections for rotating said tube and disk, a countershaft mounted on the rear of the vehicle, a second pulley secured to said countershaft, a belt connecting said pulleys, operating connections between said countershaft and the axle of the rear wheels, a radius arm hingedly connected to said driving disk, a mower frame, and a universal coupling connecting the outer end of said radius arm with said frame.

2,451,590
PROCESS OF FORMING A LUMINESCENT SCREEN
Stephen Tidik, Passaic, and Albert Steadman, Upper Montclair, N. J., assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J., a corporation of Delaware
No Drawing. Application July 6, 1945, Serial No. 603,584
7 Claims. (Cl. 117—33.5)

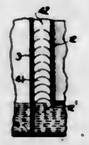
1. The process of forming a luminescent screen on a solid surface, which comprises the steps of providing a colloidal silica gel, distributing an aqueous dispersion of luminescent material upon said colloidal silica gel, allowing said luminescent material to settle through said colloidal silica gel and deposit upon said surface, and removing all of said colloidal silica gel except a residuum that is held between particles of said material.

2,451,591
FASTENING DEVICE
George A. Tinnerman and Laurence H. Flora, Cleveland, Ohio, assignors to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application March 6, 1947, Serial No. 732,774
12 Claims. (Cl. 24—213)



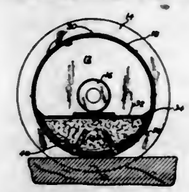
4. A fastener comprising a piece of sheet metal defining a body portion including a pair of spaced head sections extending in the same general direction, a strip portion united to said body portion between said spaced head sections and bent to provide a shank comprising an arm dependent from said body portion and a return bent spring arm having a projection overlapping at least one of said head sections, one of said arms having a shoulder adapted for snap fastening engagement with a part to be secured.

2,451,592
METHOD OF DETERMINING THE RUST-PREVENTING PROPERTIES OF LUBRICANTS
Carroll H. Van Hartesveldt, Rosemont, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application August 28, 1946, Serial No. 693,588
5 Claims. (Cl. 73—86)



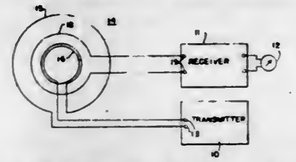
1. A method for determining the rust-preventing properties of lubricant compositions, which comprises subjecting a ferrous metal test piece to the action of exhaust gas products of an internal combustion engine, then coating the test piece with the lubricant, exposing the coated test piece to air containing moisture, and noting the condition of the test piece after exposure.

2,451,593
SUCTION GUN
George Washington, Jr., Morristown, N. J.
Application October 11, 1945, Serial No. 621,754
8 Claims. (Cl. 294—64)



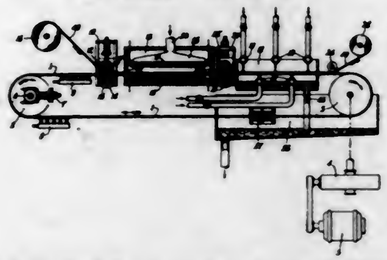
1. A suction gun comprising a hollow barrel closed at one end, a piston slidable in said barrel, a hollow tube carried by the piston and extending forwardly therefrom, means for normally holding said piston in retracted position, means for releasing said holding means, and means for driving said piston and said tube forwardly when said holding means is released, and means providing communication between the interior of said tube and said barrel behind said piston whereby the forward movement of the piston creates suction in the tube from front to rear thereof.

2,451,594
ELECTRONIC STEAM GENERATOR
Glenn W. Watson, Detroit, Mich.
Application December 17, 1947, Serial No. 792,138
5 Claims. (Cl. 219—40)



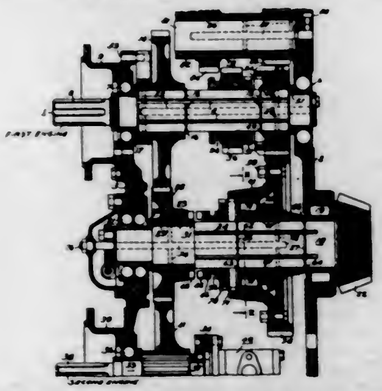
1. The method of electrically vaporizing liquid consisting in inserting a pair of spaced electrodes in the surface of the liquid while dipping one of the electrodes only slightly below the surface of the liquid, applying unlike potentials to said electrodes, and adjusting the spacing between said electrodes to a distance greater than the capillary spacing for the liquid and within the distance that can be bridged by a film of the liquid.

2,451,595
CARPENTER'S LAYOUT WHEEL
Floyd Wheeler, Huntington Beach, Calif.
Application February 15, 1947, Serial No. 728,837
4 Claims. (Cl. 101—328)



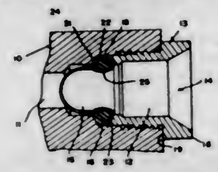
1. A device for marking lengths of lumber, including: a handle; a drum of predetermined circumference; a wall closing one side of said drum and projecting radially beyond the perimeter of said drum to form a guide flange, the other side of said drum being open; points projecting from the surface of the drum to engage with the surface of the lumber to prevent slippage between the surfaces of the drum and lumber; a pair of slots formed through the circular wall of the drum perpendicularly to the edges of the drum; marking elements of absorbent material positioned in said slots; and a tank holding marking fluid secured in said drum and having slots in the wall thereof for passage of the inner portions of said marking elements of absorbent material.

2,451,596
UNITARY BALANCED-INDUCTOR SYSTEM
Harold A. Wheeler, Great Neck, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application December 31, 1942, Serial No. 470,785
6 Claims. (Cl. 175—182)



1. A unitary balanced-inductor system comprising, a first inductor having a predetermined shape and diameter d_1 and number of turns n_1, a second inductor having said predetermined shape but having a larger diameter d_3 and a number of turns n_3, said second inductor being positioned in fixed coaxial relation to said first inductor and said diameters and said numbers of turns of said first and second inductors being proportioned in accordance with the relation $n_1/n_3=\sqrt{d_3/d_1}$ so that alternating currents of equal magnitudes and opposite phases in said inductors produce a magnetic field which has zero normal component of intensity over a predetermined unbroken three-dimensional surface in space completely enclosing on all sides the smaller of said inductors but completely excluding the larger thereof, and a third inductor having any number of turns and being positioned in fixed relation to said first and second inductors and lying substantially in said surface, whereby said third inductor has substantially zero inductive coupling to said first and second inductors when carrying said alternating currents and in the absence of external concentrated bodies of magnetic or conductive materials but has substantial inductive coupling to said first and second inductors in the presence of such bodies.

2,451,597
ANNEALING OF CALENDERED THERMOPLASTIC MATERIAL
William R. Wheeler, Plainfield, N. J., assignor to Bakelite Corporation, a corporation of New Jersey
Application August 23, 1944, Serial No. 550,837
21 Claims. (Cl. 18—48)



1. A method for removing stresses in thermoplastic materials that have been heat-formed into films, sheeting and the like, which comprises pressure-applying the thermoplastic materials onto a smooth solid surface heated to a temperature at which the thermoplastic material adheres, heating in the absence of pressure the thermoplastic material adhering onto the solid surface to a non-decomposing stress relieving temperature above the heat-forming temperature until the stresses have been substantially removed, cooling to a non-plastic condition and then stripping it from the solid surface.

2,451,598
DOUBLE ENGINE TRANSMISSION
William F. Wilson, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application January 12, 1944, Serial No. 517,941
10 Claims. (Cl. 74—389)

1. In a change speed transmission, a driving wheel, means including a rotatable driving element for transmitting power from a driving engine to said driving wheel, an idler rotatable about an axis spaced from the axis of rotation of said driving element and geared to said driving wheel for rotation thereby under the power of said driving engine in a predetermined direction, means for transmitting power from another driving engine to said idler independently of said driving wheel and operable to rotate said idler under the power of said other driving engine in said predetermined direction, a rotatable driven shaft, means selectively operable to establish and interrupt a driving connection between said idler and said driven shaft, and driving means operatively interposed between said driving element and said driven shaft selectively operable to rotate said driven shaft either in said predetermined direction of rotation of said idler or in the opposite direction.

2,451,599
CLOSURE ASSEMBLY
Sumner Wiltse, Detroit, Mich., assignor to Vibraseal Corporation, Detroit, Mich., a corporation of Michigan
Application April 16, 1945, Serial No. 588,560
5 Claims. (Cl. 220—39)

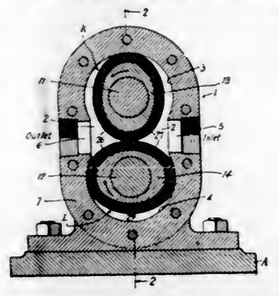
5. A closure assembly for a passage in a part, comprising a shoulder within said passage, an outwardly opening cup-shaped member within said passage and having a lateral flange spaced from and cooperating with said shoulder to provide an annular groove, said cup-shaped member being provided beside said flange with an annular groove in opposed relation to the annular groove aforesaid, a ring of resilient material filling completely and bearing firmly against the walls of the opposed grooves, opposite walls of the first mentioned groove being relatively movable and coacting to maintain a firm engagement of the ring with the walls of both grooves, and means for adjusting one of the relatively movable walls of said first mentioned groove, including a fitting adjustably connected to the part aforesaid.

2,451,600
TUBE GAUGE
Charles H. Woodcock, Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 3, 1945, Serial No. 575,949
3 Claims. (Cl. 33—178)

1. A device for measuring the internal diameter of a tube comprising an elongated cylindrical casing having a longitudinal slot formed in one wall thereof, a collar slidably mounted on the casing relative to the slot, a flexibly jointed operating rod slidably disposed within the casing, means connecting the collar with the joined operating rod, a flange rigidly affixed to one end of the casing, a housing affixed to the flange and having a recess and aperture in one side wall thereof, diagonally-crossed plungers rigidly affixed to one end of the jointed operating rod and extending through the aperture in said housing, a channel extending transversely of the housing, gage pins positioned in said channel and extendable beyond the housing walls, each pin having a slot formed adjacent the inner end slidably engaging a plunger and adapted to correlate the movement of the jointed operating rod with the gage pins, a roller affixed to the outer extremity of each gage pin and adapted to make contact with the walls of the tube to be measured, a cap associated with said housing to protect the free end of the plungers, a calibrated plate adjacent the opposite end of the casing, a pointer associated with the calibrated plate, means operatively connecting the pointer with the jointed operating rod, and spring means applying continuous pressure to the jointed operating rod to hold the gage pins in their extended position.

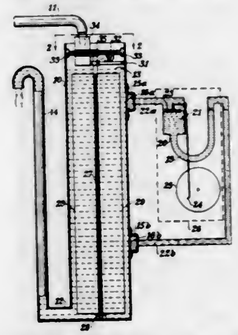
2,451,601
SKATE CONSTRUCTION
Lee A. Woolley, Kokomo, Ind., assignor to Kingston Products Corporation, Kokomo, Ind., a corporation of Indiana
Application January 26, 1946, Serial No. 643,560
5 Claims. (Cl. 280—11.30)

5. A rivetless heel plate and backing member assembly for skates wherein the plate and backing member may be connected together after plating of each, said backing member being formed of a loop of wire rod and said heel plate having portions curled about portions of said backing member to permanently hold said plate and backing member against separation.



2,451,602
MULTIPLE SWITCH INTERLOCK
Robert L. Wolff and William Weber, Milwaukee, Wis., assignors to Globe-Union Inc., Milwaukee, Wis., a corporation of Delaware
Application August 7, 1944, Serial No. 548,330
5 Claims. (Cl. 200—5)

1. In a multiple switch, a panel, a plurality of switches mounted on the panel for movement into any one of a plurality of positions and severally including a lever extending through the panel for moving the switches to any one of their several positions and a spring biasing the movable switch portion into a given position, a plate having cam surfaces engaging each of the operating levers while in any one of said plurality of switch positions for releasably holding one of the switches in a position other than the given position against the action of its spring and releasably holding the other switches in the given position, movement of the plate resulting from movement of any switch out of any of its positions and releasing the previously positioned switch for return by the spring thereof to the given position.



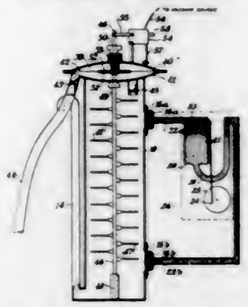
2,451,603
ROTARY PUMP
Virgil D. Barker, Westfield, N. J.
Application October 4, 1944, Serial No. 557,075
15 Claims. (Cl. 103—130)

1. A rotary pump comprising: a casing having an inlet and an outlet, a chamber in said casing in communication with the inlet and the outlet and having cylindrical wall portions, pistons in said casing operatively separating the inlet from the outlet and mounted to rotate coaxially with said cylindrical wall portions, said pistons being in continuous peripheral contact with one another and with said cylindrical wall portions, each piston comprising a quasi-elliptical rotor with a free flexible band enveloping the same, the band being

of a thickness to permit successive peripheral zones thereof to be pressed between the rotor and one of said cylindrical wall portions of said chamber, and friction-reducing means between each rotor and its band, whereby rotation of the rotors causes the flexible bands to progress around said rotors and roll on said cylindrical wall portions, thereby forcing fluid trapped between the bands and said cylindrical wall portions from the inlet to the outlet.

2,451,604
APPARATUS FOR MEASURING DENSITY OF A THIXOTROPIC FLUID
William E. Barnes, Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application August 22, 1945, Serial No. 612,096
2 Claims. (Cl. 73—32)

1. Apparatus for measuring the density of a thixotropic material such as drilling mud fluid which comprises a chamber for the passage of the fluid therethrough, said chamber being designed to maintain a body of fluid therein, a pair of pressure responsive flexible diaphragms vertically spaced apart with respect to the chamber in order to be responsive to the different pressures of the fluid existing at different levels within the chamber, agitating means within the chamber and power means for operating the agitating means in order to minimize gelation, adjacent the diaphragms, resulting from the thixotropic nature of the fluid, a differential pressure indicating de-



vice exteriorly of the chamber and means controlled by each of said diaphragms to operate said device in accordance with the difference in pressures obtaining at the said different levels.

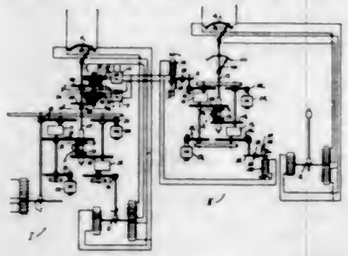
2,451,605

APPARATUS FOR MEASURING DENSITY OF A THIXOTROPIC FLUID

William E. Barnes, Beaumont, Tex., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey

Application June 12, 1946, Serial No. 676,203
2 Claims. (Cl. 73—32)

1. Apparatus for continuously measuring the density of a circulating drilling fluid during the drilling of a well, where the drilling installation is such that the drilling fluid is normally unable to flow by gravity from the main fluid stream into the apparatus, which comprises a vertical chamber for the flow of a minor portion of the main stream of drilling fluid, an inlet adjacent the top and an outlet adjacent the bottom of the chamber, pumping means for feeding a minor portion of the main stream of drilling fluid through said inlet into the chamber, a pair of cooperating diaphragms positioned at different levels within the chamber and each adapted to be flexed by the pressure of the fluid obtaining in the chamber at its level, agitating means within the chamber, said pumping means being arranged to actuate the agitator and prevent gelation of the fluid, a differential pressure indicating device and means for transmitting the pressure exerted by the fluid on each diaphragm to said device.



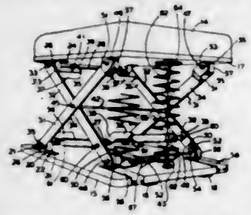
2,451,606

REMOTE INDICATING PLANT OPERATING ON THE IMPULSE COMPENSATION METHOD

Willi Beusch, Zug, Switzerland, assignor to Landis & Gyr, A-G., Zug, Switzerland, a body corporate of Switzerland

Refiled for abandoned application April 28, 1942, Serial No. 440,788. Divided and this application May 16, 1947, Serial No. 748,610. In Switzerland May 5, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 5, 1961
17 Claims. (Cl. 177—351)

1. In a remote indicating system between a transmitter station and a receiver station operating on the impulse compensation principle, a rotating measuring instrument and a rotating compensating instrument at the transmitting station, a device responsive to the difference in speed between said instruments, an impulse generating unit controlled by said device for producing two distinct impulse sequences of different kind dependent upon the preponderant speed of the respective one of said instruments, means operated by said device for controlling the compensation current for said compensating instrument, an indicating arrangement at the receiver



station, and a second device at the receiver station controlled by the impulse sequences transmitted thereto for influencing said indicating arrangement.

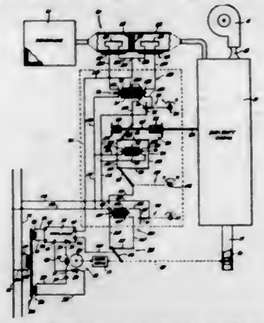
2,451,607

CHIROPRACTIC MACHINE

Albert H. Binash, Oak Park, William A. Tull, Midlothian, and Roy T. Gautney, Chicago, Ill.

Application September 14, 1944, Serial No. 554,034
4 Claims. (Cl. 128—72)

1. In a chiropractic device comprising supporting means for pads upon which a patient lies in a procumbent position, the combination therewith of a stationary base, a movable base carrying an abdominal pad, a pantographic type of lever arrangement connected to said bases for controlling relative movement of said bases in a right line direction, and resilient means connected to parts of said lever arrangement for offering a yieldable reactive stress against relative approach of said bases, said lever arrangement having mutually fulcrumed levers with an end of said levers pivotally connected to said bases and the other ends of said levers being movable along faces of said bases, said ends of said levers having laterally extending bracing portions for acting against said bases to give lateral support to said levers against side movement.



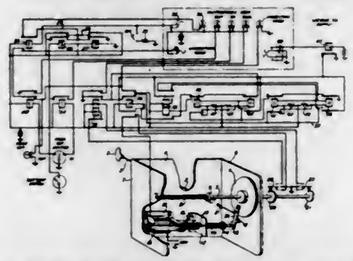
2,451,608

CABIN PRESSURE CONTROL MEANS

George L. Borell, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application October 30, 1944, Serial No. 561,070
9 Claims. (Cl. 98—1.5)

1. Cabin pressure control means comprising, in combination; means for varying the cabin pressure; means responsive to cabin pressure for controlling said varying means in a manner to maintain a predetermined pressure in said cabin; manually operable means for determining said predetermined pressure; reservoir means; conduit means for connecting said reservoir means in restricted fluid flow relation to said cabin; means responsive to fluid flow in said conduit; and means connecting said fluid flow responsive means in operative relation to said varying means,



said cabin pressure responsive means and said manually operable means in such manner that said flow responsive means may oppose the action of said manually operable means to thereby limit the rate of change of cabin pressure.

2,451,609

ARRESTING HOOK DEVICE FOR GROUNDED AIRCRAFT PILOT TRAINERS

Russell B. Buchanan, Lynbrook, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application October 12, 1945, Serial No. 622,067
7 Claims. (Cl. 35—12)

1. In apparatus for simulating the operations incident to the extension of the arresting hook of a carrier based airplane, a switch operable by a pilot under training to either an out or to an in position in simulation of the electrical control of the arresting hook of an airplane, an instructor's desk, a lamp associated with said switch and a lamp at said desk, a circuit established when said switch is operated to its out position for lighting said lamps, and a key at said instructor's desk for rendering said circuit ineffective to simulate the failure of the electrical control of the arresting hook.

2,451,610

PREPARATION OF 4-ALKYL-QUINOLINES

Kenneth Nielsen Campbell, South Bend, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 9, 1944, Serial No. 548,787
7 Claims. (Cl. 260—283)

3. The process of preparing a 4-alkyl-quinoline which comprises reacting a hydrogen halide of a primary arylamine having at least one free ortho-position with an alkyl-vinyl-ketone in 95% alcohol, in the presence of a stoichiometric quantity of ferric chloride to serve as an oxidizing agent and in the further presence of a catalytic quantity of a condensing agent comprising zinc chloride.

2,451,611

PREPARATION OF 4-ALKYL-QUINOLINES

Kenneth Nielsen Campbell, South Bend, Ind., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 9, 1944, Serial No. 548,788
7 Claims. (Cl. 260—283)

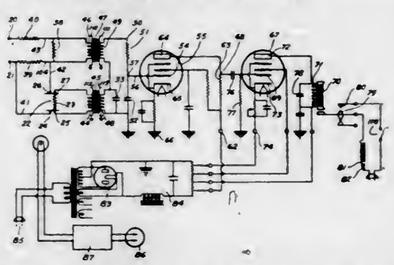
1. The process of preparing a 4-alkyl-quinoline, which comprises condensing a primary arylamine having at least one free ortho-position with a 1,3,3-trialkoxy-alkane in the presence of ferric chloride as an oxidizing agent.

2,451,612

PREPARATION OF UNSATURATED FLUOROHYDROCARBONS

Donald D. Coffman and Leroy Frank Salisbury, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 29, 1943, Serial No. 508,242
7 Claims. (Cl. 260—653)

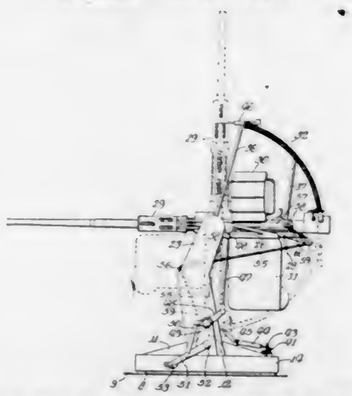


1. A process for producing fluorohydrocarbons which comprises contacting a mixture of a compound of the class consisting of monovinylacetylene and monomethylvinylacetylene, and hydrogen fluoride in the vapor phase under substantially anhydrous conditions with a catalyst comprising an oxide of mercury, the monovinyl acetylene and hydrogen fluoride being mixed together only at the time they are brought in contact with the catalyst.

2,451,613

ELECTRICAL CONDUCTIVITY TESTING MACHINE

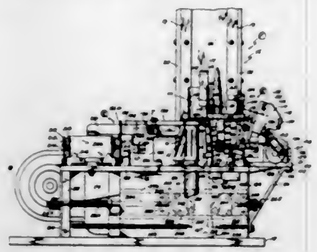
Paul F. Darby, Long Hill, Conn., and Lloyd A. Nevala, Richland, Wash., assignors to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware



Application August 2, 1944, Serial No. 547,736
2 Claims. (Cl. 175—183)

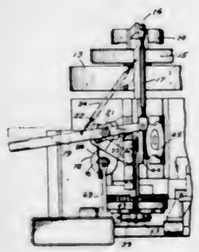
1. Apparatus for testing a normally electrically conductive article comprising a primary electric circuit including in series relationship a source of alternating current, a standard impedance and contactors for making a temporary electrical connection to terminal elements of said article for temporarily including same in said primary circuit; a first transformer having primary and secondary coils and means to connect the pri-

mary coil thereof across the standard impedance; a second transformer having primary and secondary coils and means to establish a temporary connection of the primary thereof to the terminal elements of said article; a resistance; a capacitance; secondary circuit means to connect the transformer secondary coils in series with the resistance and capacitance and with the voltages induced in said secondary coils by current in the primary circuit in opposition to each other whereby current will flow in said secondary circuit only when said induced voltages do not balance each other; an electronic amplifier tube including a control electrode, a cathode, and a plate; means to connect the control electrode and the cathode to opposite terminals of said capacitance; and mechanism connected to said plate for energization in response to plate current therein above a predetermined value as a result of a departure in the resistance of said article beyond a predetermined amount by comparison with said standard impedance.



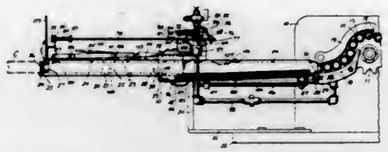
2,451,614
GUN AIMING AND FIRING MEANS
Burns Darsie, Bayonne, N. J., assignor to Electric Boat Company, Groton, Conn., a corporation of New Jersey
Application June 9, 1944, Serial No. 539,428
6 Claims. (Cl. 89—136)

1. In a gun pivotally mounted on a horizontal axis, said gun having a breech end, the combination of a trigger-operating member on said gun, a curved elongated handle member of circular cross-section fixedly attached to and extending upwardly from the breech end of said gun, a tubular grip member fitted on and rotatable on said handle member and substantially co-extensive in length therewith, and means to transmit the rotatable motion of said grip member to the trigger-operating member of said gun.



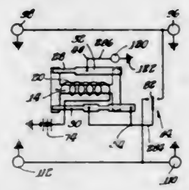
2,451,615
MACHINE FOR GAUGING AND ASSORTING CARTRIDGES ACCORDING TO HEIGHT OF PRIMERS
Robert M. Flanagan, Kansas City, Mo., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application July 21, 1944, Serial No. 545,969
8 Claims. (Cl. 209—88)

8. An automatic machine for gauging and assorting ammunition in accordance with primer height comprising a gauging member having a gauging surface engageable with the cartridge primer; mounting means for said gauging member adapted to multiply movement of the gauging surface; a track adapted to support a cartridge in a predetermined position over said gauging surface; feed means to move cartridges intermittently along said track first to a position over said gauging surface and then off the end of said track; selector means movably supported adjacent the end of said track adapted to receive cartridges moved off the end of the track and to deliver same into receptacles corresponding to specified primer height; electromechanical selec-



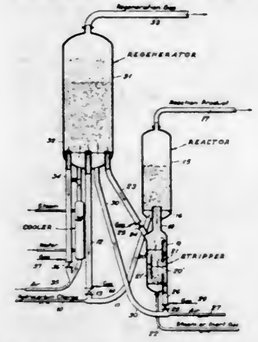
tor positioning means responsive to movement of said gauging arm comprising solenoid means operatively connected to the selector and selectively energized in accordance with the position of said gauging member; selector holding means comprising electrical circuit elements completing a bypass circuit to the solenoid means in response to movement of the selector to maintain the selector in position until a cartridge has been discharged from the track; and switch means operated by the feed means to break said bypass circuit and release the selector holding means after the cartridge has been discharged.

2,451,616
AUTOMATIC STOP AND LOCK FOR MACHINES FOR GAUGING CARTRIDGES
Floyd I. Goin, Independence, Mo., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application April 4, 1944, Serial No. 529,444
1 Claim. (Cl. 209—88)



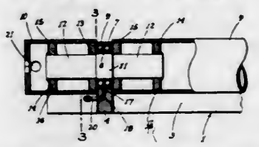
In a machine for the gauging of cartridges, the combination with an indexable drum having therein a plurality of gauging chambers, means for indexing said drum comprising a clutch, means for initially positioning cartridges to be gauged in said chambers, means for finally seating said cartridges in said chambers adapted to be moved by a cartridge so deformed or so misplaced as to be incapable of seating, means for gauging the length of cartridges comprising a displaceable latch, and clutch controlling means controlled by said latch; of means controlled by the movement of said seating means for displacing said latch, and other means controlled by the movement of said seating means for locking said clutch in disengaged position.

2,451,617
PACKAGING MACHINE
Michael J. Grebowiec, Kansas City, Kans., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application May 15, 1945, Serial No. 593,923
10 Claims. (Cl. 86—47)



1. In a packaging machine for packaging a group of a predetermined number of articles arranged in a row, a chute member having an entrance end and an exit end and adapted to convey a continuous row of articles toward said exit end as a propelling force feeds said articles into said entrance end, a reciprocatory ejector slide, projecting means for projecting said slide, retracting means for retracting said slide, control means for effecting the actuation of said projecting stroke ejector means carried by said slide engageable with the last article of a predetermined group of articles disposed forwardly of said ejector means in the retracted position of said slide, contact means engageable by the first article of said predetermined group of articles arranged to actuate said control means to effect the projection of said slide, and contact means engageable by said slide in its projected position arranged to actuate said control means to effect the termination of the projecting stroke and allow the retracting means to effect retraction of said slide.

2,451,618
COMBINED THERMAL AND MAGNETIC FLASHER SWITCH
Henry R. Gross, Chicago, Ill.
Application October 14, 1943, Serial No. 506,161
2 Claims. (Cl. 200—88)



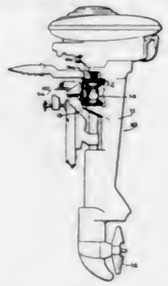
1. In a flasher switch, an electromagnet, a bimetallic member in series with said electromagnet, a first switch including a contact carried by said bimetallic member, said first switch being in series with said bimetallic member and said electromagnet, an armature for said electromagnet, a second switch including a contact carried by said armature and electrically connected in parallel with said first switch.

2,451,619
CATALYTIC CONVERSION PROCESS
Robert J. Hengstebeck, Chicago, and Robert S. McDaniel, Alton, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application November 20, 1944, Serial No. 564,349
8 Claims. (Cl. 196—52)

1. In a catalytic conversion process wherein fluidized solids are contacted with hydrocarbon vapors in a conversion zone under conditions for effecting conversion and the accumulation of carbonaceous deposits on said solids, are passed through a stripping zone for the removal of vaporizable hydrocarbon material, are regenerated in a regeneration zone to effect combustion of said carbonaceous deposits thereby increasing the sensible heat contained in said solids and are finally returned to the conversion zone for supplying heat thereto and for effecting further conversion, the improved method of operation which comprises introducing one stream of hot regenerated catalyst from said regeneration zone to said conversion zone, introducing another stream of hot regenerated catalyst directly from said regeneration zone to said stripping zone, intermingling catalyst from said last-named stream with catalyst from the conversion zone in the upper part of said stripping zone, stripping the intermingled catalyst in said stripping zone and returning the intermingled stripped catalyst from the base of the stripping zone to the regeneration zone.

2,451,620
LUMBER ROLL ASSEMBLY
Hiram C. Holmes, Stockton, Calif.
Application September 23, 1946, Serial No. 598,677
2 Claims. (Cl. 193—42)

2. A unitary roll assembly for lumber trucks comprising a pair of spaced apart beams, cradle blocks secured across between the beams and rigidly secured to the latter, each cradle block having formed in its upper face an upwardly opening semi-circular bearing seat, the open top of the seat being in substantial alinement with the top of the beams, a double race ball bearing disposed in each seat, an arcuate strap disposed over the bearing and secured to the cradle block



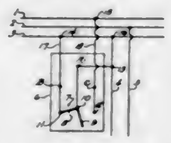
to hold the bearing in the seat, a stub shaft for each bearing, such stub shaft having an enlarged central portion pressed into the central race of the bearing and such central portion being slightly longer than the width of the bearing and projecting clear of both sides thereof, a disc pressed onto each end of the stub shaft and against the adjacent face of the enlarged central portion thereof and covering the adjacent outer face of the bearing, and tubular members disposed over and secured to the discs on opposite sides of the cradles, the outer circumferences of the tubular members extending clear of the holding straps for the bearings.

2,451,621

POWER CONTROL UNIT

Willard G. Houston, Wadsworth, Ohio

Application February 25, 1946, Serial No. 649,826
7 Claims. (Cl. 74—205)



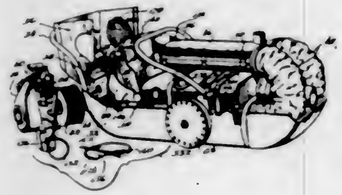
1. A control unit of the class described comprising three relatively shiftable rotary friction members, means for rotatably mounting said members to be shiftable relatively of each other, clutch means for releasably connecting two of said members to rotate together in one condition of rotation thereof, means for selectively shifting said members from and toward a position in which said two members are in said clutching connection or shifting the members to different positions in which the third member is frictionally engageable either with one or with both of the others, for neutral or opposite conditions of rotation respectively of said two members, input power transmission means connected to one of said members, and output power transmission means connected to another of said members.

2,451,622

METHOD OF TRANSPOSING CONNECTIONS

William D. Kyle, Jr., Milwaukee, and Anthony Van Ryan, South Milwaukee, Wis., assignors to Line Material Company, a corporation of Delaware

Original application April 15, 1943, Serial No. 483,160. Divided and this application August 17, 1945, Serial No. 611,194
1 Claim. (Cl. 171—97)



The method of transferring a single-phase electric branch line connection from a first line of one phase of a three-phase feeder circuit to a second line of another phase of said feeder circuit, said method comprising; shunting said branch line connection through a double throw snap switch, removing said branch line connection from said first line, connecting said second line to a neutral pole of said snap switch, actuating said snap switch, first, to quickly open the circuit to said branch line from said first line and, second, to subsequently close the circuit to said branch line from said second line, permanently connecting said branch line with said second line in shunt relation to said switch, and disconnecting said snap switch from said branch line, first line and second line.

2,451,623

ENGINE OPERATED HOT-AIR HEATER WITH ENGINE DEMOUNTING MEANS

John H. Leslie, II, Winnetka, and George A. Crosby, Park Ridge, Ill., assignors to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia

Application December 8, 1943, Serial No. 513,368
7 Claims. (Cl. 126—110)

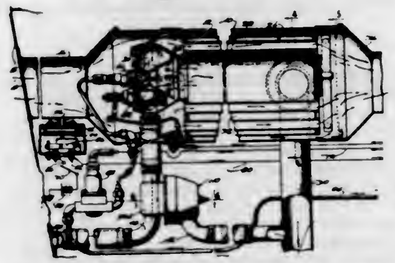
1. In a unit heater of the type employing a hermetically sealed combustion unit and an engine operated blower for supplying combustion and ventilating air to said combustion unit, the combination of a chassis having means cooperable with the base of the engine for locating the latter with respect to the chassis, a resilient bail having its arms pivoted to the chassis adjacent the base of the engine, and means pivotally connected to the cross piece of said bail and engageable with parts at the top of the engine, said last named means including elements having, together with said bail, a toggle effect resiliently to clamp the engine to the chassis.

2,451,624

INERTIA RATE OF FIRE RETARDERS

Crawford C. Loomis, Ilion, N. Y., and Kenneth J. Lowe, deceased, late of Ilion, N. Y., by Jane A. Lowe, administratrix, Ilion, N. Y., assignors to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware

Application August 27, 1947, Serial No. 770,878
6 Claims. (Cl. 89—130)



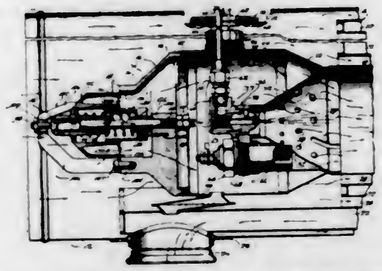
1. In a firearm having a movable member adapted to be forcibly moved during operation of the firearm and also having spring means to oppose such motion; rate modifying means comprising an inertia member mounted between the ends of the spring means for movement along a path substantially similar to that of the movable member, said inertia member being restrained from movement along said path only by engagement with said spring.

2,451,625

AIR PRESSURE RESPONSIVE CONTROL FOR INTERNAL-COMBUSTION HEATERS

William A. Marshall, Jr., Chicago, and John H. Leslie, II, Winnetka, Ill., assignors to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia

Application December 13, 1943, Serial No. 514,078
5 Claims. (Cl. 126—110)



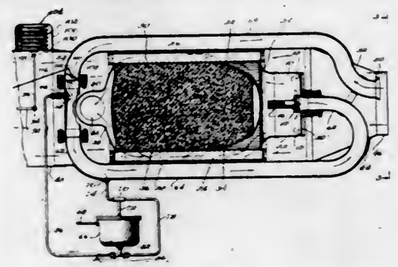
1. A heating system of the class described, comprising an internal combustion heater, means for supplying fuel thereto, a ram for supplying combustion air to said heater, an exhaust pipe for discharging products of combustion from said heater, means for supplying ventilating air to said heater, means forming a bypass connecting said ram with said exhaust pipe, and a valve interposed in said bypass and controlling air flow through said bypass to vary the mass of air flow to said combustion chamber with variations in speed and altitude, said valve including a valve member subject to the pressure differential between the ram and the exhaust pipe, with spring means urging said valve toward closed position, and an evacuated sylphon connected to said valve member operable to supplement the pressure of said spring means upon decrease of ambient atmospheric pressure.

2,451,626

AIR FLOW REGULATING VALVE

William A. Marshall, Jr., Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia

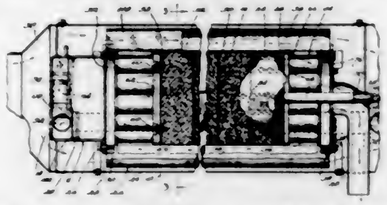
Application February 12, 1945, Serial No. 577,377
2 Claims. (Cl. 137—152)



1. A combustion air regulator for an internal combustion heater which has a source of air of positive but variable pressure for diverting to the combustion chamber of the heater a constant quantity of air from the air flowing from said source, comprising: means forming a housing, an inlet to said housing, a generally cup-shaped valve member having a head against which the air entering said inlet impinges and having a cylindrical skirt adapted to project into said inlet, said skirt having ports therethrough, said valve being telescopically movable with respect to said inlet to vary the effective area of said ports and thereby to control the flow of air into said housing, said valve having an outer diameter slightly smaller than the diameter of said inlet so that when said valve is telescoped into said inlet there will be a narrow annular space between the outer cylindrical surface of said valve skirt and said inlet, a shaft axially disposed with respect to said inlet for supporting said valve member and guiding the movement thereof, a cup-shaped spring retainer on said shaft having a skirt oppositely disposed with respect to the skirt on said valve and projecting thereinto, and a spring positioned about said shaft and reacting between the inner side of the head on said valve and the bottom of said retainer, said spring being adapted to yield upon variation in the pressure of the air on said valve member proportionately to the pressure, whereby the valve member is adjusted to a position to maintain constant the amount of air flowing into said housing, and said retainer being movable axially of said shaft when the latter is rotated for adjusting the tension of said spring.

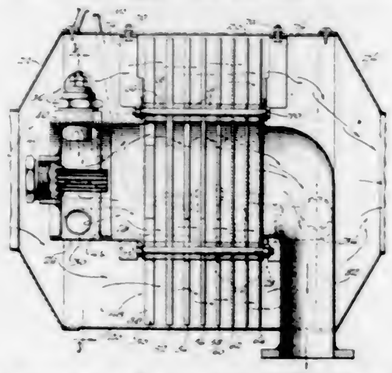
2,451,627

INTERNAL-COMBUSTION AIRCRAFT-TYPE HEATER



Henry J. De N. McCollum, Chicago, Ill.; Thelma McCollum, executrix of said Henry J. De N. McCollum, deceased, assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia

Application October 6, 1942, Serial No. 460,970
5 Claims. (Cl. 126—116)

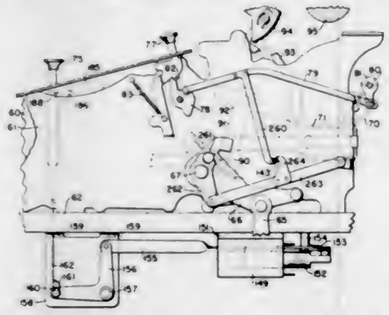


1. In a heater of the class described, comprising heat transfer means, means forming a combustion chamber for supplying hot gases to said heat transfer means, a casing enclosing said heat transfer means, means forming an air inlet and outlet for said casing, a carburetor in said casing and adjacent the outlet thereof, a tube connecting said carburetor with said inlet, said tube extending between said casing and heat transfer means whereby air passing from said inlet to said carburetor is heated in passage, a second tube connecting said carburetor with said combustion chamber, said second tube extending between said casing and said heat transfer means whereby combustible mixture formed in said carburetor is heated prior to introduction into said combustion chamber, and means for igniting the combustible mixture in said combustion chamber.

2,451,628
INTERNAL-COMBUSTION HEATER WITH AIR-HEATING TUBES
Henry J. De N. McCollum, Chicago, Ill.; Thelma McCollum, executrix of said Henry J. De N. McCollum, deceased, assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application April 5, 1943, Serial No. 481,835
3 Claims. (Cl. 126—109)

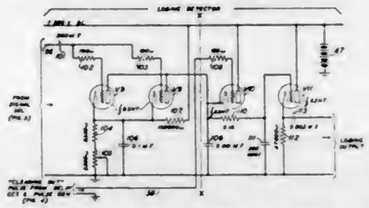
1. A heater of the class described, comprising a heat exchanger composed of a plurality of individual tubes longitudinally extending in side by side contacting relationship and having their contacting portions secured to each other to form a gas tight tubular structure, said tubes having webs therein, each web having opposite edges secured to the walls of its tube throughout substantially the length of said tube, means forming a combustion chamber for supplying hot products of combustion to the interior of said tubular structure, a casing enclosing said heat exchanger in spaced relation thereto, and means for supplying ventilating air to said tubes and to the space between said tubes and said casing.

2,451,629
SECTIONAL HOT-AIR HEATER
Henry J. De N. McCollum, Chicago, Ill.; Thelma McCollum, executrix of said Henry J. De N. McCollum, deceased, assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application June 11, 1943, Serial No. 490,440
2 Claims. (Cl. 126—116)



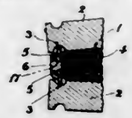
1. Compact, high output heating apparatus of the class described, comprising means providing a combustion chamber having a flange defining an outlet end, a heat exchanger secured to said flange and comprising a plurality of plates each having an annular series of bolt holes therethrough and having gas passages spaced radially from opposite sides of alternate bolt holes, the gas passages of successive plates being staggered so that the passages of one plate are opposite imperforate portions of the adjacent plates, spacer rings interposed between said plates and separating the passages on opposite sides of the bolt holes through said plates, bolts passing through said plates, spacer rings and flange for holding said plates and spacer rings in sealing engagement with each other and with said means, the gas passages inward of said bolt holes being in communication with said combustion chamber, and means for directing air through the gas passages located outside of said bolt holes.

2,451,630
METHOD OF MAKING SWEET CHOCOLATE
Edward F. McGee, Wayland, Mass.
No Drawing. Application September 18, 1945, Serial No. 617,181
6 Claims. (Cl. 99—23)



1. Method of making sweet chocolate which comprises cooling a concentrated sucrose sirup at a rate sufficiently rapid to form a viscous supersaturated mass substantially free from sugar crystals, uniformly mixing said viscous mass with a liquefied chocolate liquor at a temperature below the crystallization point of the sugar component of the mixture, working the mixture and warming it to a temperature at which the sugar component crystallizes out in the form of fine crystals, and thereafter drying the mass at a temperature less than the solution point of said sugar crystals.

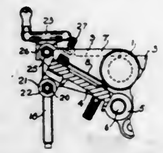
2,451,631
COMBINED ACCOUNTING MACHINE AND TYPEWRITER
Arthur J. Moellenbeck, Milwaukee, and Howard G. Stauffer, Wauwatosa, Wis., assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Application November 6, 1943, Serial No. 509,238
4 Claims. (Cl. 235—60.12)



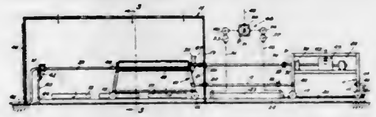
1. In a machine of the class described, the combination of an accumulator; a manually depressible total key for conditioning certain elements of the machine for total operations; means for operating the machine to add into, or subtract from, the accumulator and to take totals therefrom; a traveling carriage; electromagnetic means for depressing the total key; means operated by the carriage for rendering the electromagnetic means effective; a manually depressible, normally locked overdraft key; means controlled by the accumulator for unlocking the overdraft key; and means intermediate said overdraft key and said machine operating means and operable by the overdraft key unlocking means upon operation of the same to prevent operation of said electromagnetic means, said intermediate means being operable by said machine operating means during adding operations.

2,451,632
CONTROL VOLTAGE MEANS IN PULSE RECEIVER
Bernard M. Oliver, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 24, 1944, Serial No. 523,722
14 Claims. (Cl. 250—20)

1. In combination, means for forming a voltage wave comprising a plurality of short pulses which may be of varying amplitude spaced apart by time intervals which are long compared to the duration of a pulse, an energy storage element, means for conditioning said storage element by varying the amount of energy stored therein until the energy reaches a reference level before the occurrence of each pulse but after the occurrence of the immediately preceding pulse, and means for applying each pulse to the storage element to vary the amount of energy stored therein by an amount depending on the amplitude of that pulse.



2,451,633
SLOT CLOSER FOR DYNAMOELECTRIC MACHINES
Albert Edward Bell Perrigo, Walsall, England, assignor to H. Frost and Company Limited, Walsall, England, a company of Great Britain
Application November 15, 1947, Serial No. 786,180
In Great Britain May 31, 1947
9 Claims. (Cl. 171—252)

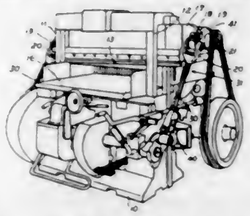


1. A dynamo-electric machine having open coil-receiving slots between adjacent pole teeth, in combination with coils in the slots and composite slot-closing strips of unit construction comprising separate longitudinal side members of magnetic material in direct contact with the pole teeth and an intermediate longitudinal portion of non-magnetic material which connects and spaces the side members to form therewith a self-contained unit.

2,451,634
INK FOUNTAIN FOR PRINTING PRESSES
Arthur Willard Ranger, Brighton, England
Application September 21, 1946, Serial No. 698,568
In Great Britain September 22, 1945
1 Claim. (Cl. 101—364)

An ink duct for a printing press of the type comprising a duct roller, a trough including an inclined, pivotally supported cross-member, and end blocks, a thin metal blade for engagement with the duct roller, means for setting the blade relatively to the duct roller, said blade-setting means being adapted to act upon the blade positively both during advance and retraction of the blade, a screw-threaded rod and a hand-wheel, for moving said cross-member about its pivotal support to open and close the trough, a support for said rod pivotally mounted on the frame of the printing press, a nut for operative screw-threaded engagement with said rod, said nut being pivotally mounted on said cross-member, and an adjustable stop on the frame of the press for limiting the closing movement of said cross-member and thereby determining the closed position of the trough.

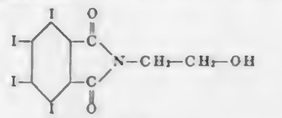
2,451,635
APPARATUS FOR TREATING TUBULAR BODIES
Frank A. Schratt, Cincinnati, Ohio
Application May 5, 1945, Serial No. 592,203
4 Claims. (Cl. 51—14)



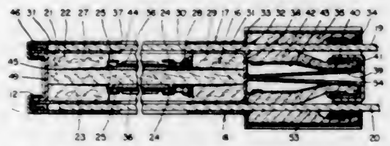
2. Apparatus of the class described comprising a pair of parallel track elements, a dust chamber surrounding a portion of said tracks at one end, a work carriage tractionally supported on said tracks within the dust chamber, a power truck tractionally supported on said tracks exteriorly of the chamber, a tie rod passing slidably through the wall of the dust chamber and rigidly connecting said work carriage and said truck in spaced relation, variable speed power means mounted on the truck, a pair of rollers mounted in spaced side by side relation upon the work carriage in parallelism with the tracks, a drive shaft passing through the wall of the dust chamber and rotatably connecting one of said rollers with said power means, means disposed exteriorly of the chamber for reciprocating said truck and carriage in unison along said track members, and means including a sand blast nozzle and an adjustable support therefor for fixedly holding said nozzle in predetermined relation to the truck for operating on a body supported on said rollers on said work carriage.

2,451,636
CUTTING MACHINE
William R. Spiller, Dayton, Ohio, assignor to Harris-Seybold Company, Cleveland, Ohio, a corporation of Delaware
Application June 21, 1946, Serial No. 678,485
5 Claims. (Cl. 164—54)

1. In a machine for cutting paper and the like having a work table for receiving the material to be cut, a cutting knife, a reciprocatory knife bar for supporting said knife and a drive, the combination of a crank operated from said drive, a non-circular pull bar connected to said crank, a coupling member connecting said pull bar to said knife bar for reciprocation of the latter through a cutting stroke, threaded means for adjusting the connection between said pull bar and said knife bar to provide for determining



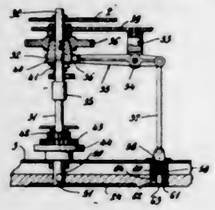
the position of said knife relative to said table at the bottom of its stroke, and releasable locking means effective between said coupling member and said pull bar including disengageable mem-



bers on said coupling member and on said non-circular pull bar respectively adapted to cooperate to prevent relative rotational movement between said coupling member and said pull bar when engaged.

2,451,637
N(β-HYDROXY ETHYL)-TETRAIODO-PHTHALIMIDE
William H. Strain, Rochester, N. Y., and Joseph Dec, Martinsville, N. J., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application February 1, 1947, Serial No. 725,966
1 Claim. (Cl. 260—326)

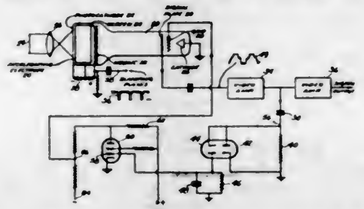
N-(β-hydroxyethyl)-tetraiodo-phthalimide, having the formula



2,451,638
PHOTOGRAPHIC PLATE AND FILM HOLDER
Edward C. Suydam, Los Angeles, Calif.
Application March 27, 1947, Serial No. 737,537
3 Claims. (Cl. 95—66)

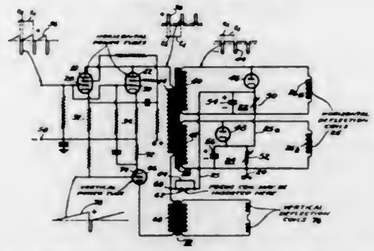
1. A double plate and film holder comprising a central core member having a pair of rectangular recesses in opposite sides thereof, means for retaining a photographically sensitized member in each of said recesses, a slide holder mounted on each side of said core member, each slide holder comprising a receiving member having a rectangular opening therein, inwardly folded side and bottom marginal edge portions on said receiving member, an offset upper end portion on said receiving member with a top marginal flange, a felt sealing strip mounted between the top marginal flange and the bottom of said offset upper end portion and gripped by the top marginal flange, an insert formed substantially similarly to said receiving member and disposed oppositely thereto, said insert having a flanged upper edge portion, a film sealing strip with spring backing gripped beneath said flanged upper edge portion, said insert being slidably inserted within the inwardly folded marginal portions of said receiving member, channel members mounted on the sides and bottom of said core member, the flanges of the channels thereof facing outwardly and being inserted in the inwardly folded marginal edge portions of said receiving members, latch clips mounted on the sides of said film holder, channels enclosing the ends of said offset portions and said film strips, a channel overlying the upper ends of said inserts, and a dark slide slidably insertable between each receiving member and its associated insert to overlie the recess in one side of said core member.

2,451,639
SETTING MEANS FOR WORLD CLOCKS
Andre Tellier, New York, N. Y.
Application November 4, 1946, Serial No. 707,633
3 Claims. (Cl. 58—43)



1. A clock comprising hour and minute hands, mechanism for automatically moving said hands, including an operating arbor mounting the hour hand, a stationary dial plate positioned behind the hands and having a local time-indicating dial shown thereon, a ring member positioned around the outer periphery of said dial plate and operatively connected to the operating arbor of the hour hand for rotation thereby in calculated speed therewith, a stationary disc member positioned around the outer periphery of said ring member, said ring member and disc member having correlated and coindicative indicia displayed thereon indicating the time at various global zones and in coordinated and calculated proportionate time indications in relation to the time indicated on the local time-indicating dial of the clock and mechanism for manually moving said hands independently of said automatic mechanism for adjusting the same including a pivoted lever adapted to move the connection between the ring member and operating arbor to inoperative position, said dial plate having a socket portion and adapted to receive a tool for moving said lever about its pivot.

2,451,640
CONTROL SYSTEM
Robert R. Thalner, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 11, 1945, Serial No. 593,153
14 Claims. (Cl. 178—7.2)

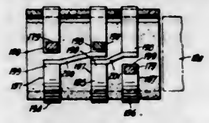


2. In a television system, a camera tube in which a cathode ray scanning beam is developed to scan a mosaic electrode on which electrostatic charges are developed in proportion to the brilliance of an optical image, the signal output of said tube having a peak-to-peak value which is a measure of the brilliance of said optical image, a peak-to-peak rectifier, means for applying the signal output of said camera tube to said peak-to-peak rectifier, an energy storage circuit, means for applying the output of said

peak-to-peak rectifier to said energy storage circuit so as to develop a relatively smooth D.-C. having an amplitude approximately equal to the peak-to-peak value of the signal output of said

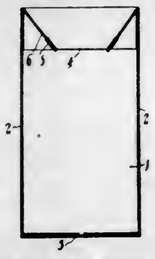
camera tube, and means for applying the output of said energy storage circuit to said camera tube to control the intensity of said scanning beam in direct proportion to said peak-to-peak value of the signal output.

2,451,641
POWER CONSERVATION SYSTEM
Charles Edward Torsch, Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application September 28, 1945, Serial No. 619,176
11 Claims. (Cl. 315—27)



1. In a system having a source of D.-C. power, means for converting the D.-C. power supplied by said source into A.-C. power, and an inductively reactive load circuit into which the A.-C. power output of said converting means is fed, the combination of a pair of electron discharge tubes each of which is connected to rectify a portion of the reactive energy cyclically developed in said load circuit, a pair of energy-storage devices, means for respectively applying the energy rectified by said electron discharge tubes to said energy-storage devices so as to establish substantially smooth D.-C. potentials thereon having values dependent upon the magnitude of the respective rectified energies, and a circuit for applying the D.-C. potentials established on said energy-storage devices to said converting means additively in series both with each other and with said source of D.-C. power, whereby the amount of A.-C. power available for application to said load circuit is increased.

2,451,642
VISCOUS MINERAL OIL COMPOSITIONS
Roger W. Watson, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application October 23, 1944, Serial No. 560,049
1 Claim. (Cl. 252—50)

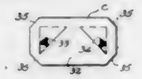


A stable normally liquid viscous mineral oil composition comprising a viscous mineral oil normally susceptible to oxidative deterioration in the presence of metal and from about 0.001% to about 0.5% of N,N'-dibenzyl-paraphenylene diamine.

2,451,643
VARIABLE INDUCTANCE TUNER
Sidney Y. White, Wilmette, Ill., assignor to Victor S. Johnson, Chicago, Ill.; Alex Thomson administrator of said Victor S. Johnson, deceased
Application December 8, 1942, Serial No. 468,195
7 Claims. (Cl. 171—242)

1. A tuning coil of solenoidal form for ultra-high frequencies comprising a plurality of no-pitch turns for directing the flux along the coil axis, cross connecting means joining the ends of adjacent turns to one another to produce additive inductive effects, said connecting means extending substantially in the direction of the coil axis, and a core arranged to move axially inside said coil, the coil turns being critically spaced from one another and being of different critically related diameters in relation to the core characteristics, whereby the combined effect of the changes of self-inductance of the turns, dependent upon their respective diameters, and the mutual inductance of the turns, dependent upon their diameters and spacing, is made responsive to the core movement to produce a straight line relationship of core displacement to frequency.

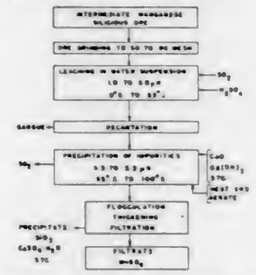
2,451,644
CONTAINER
Geoffrey H. Wood, Toronto, Ontario, Canada
Application April 2, 1946, Serial No. 659,075
1 Claim. (Cl. 229—39)



A shipping container adapted to be used when emptied as a waste receptacle comprising four side walls and end walls, one end wall consisting of a first pair of substantially rectangular flaps hingedly mounted at their ends on opposite side walls and a second pair of substantially quadrilateral flaps hingedly mounted at their ends on the other opposite side walls and having substantially parallel ends and converging sides, said flaps being adapted to be folded inwardly and overlapped to form a closure for the container, each of the first pair of flaps having a pair of slots therein extending diagonally in opposite directions from separated points on the end of the flap towards the sides of the flap, the pairs of slots being opposite to and substantially symmetrical with one another, and each of the second pair of flaps having a pair of tabs extending outwardly from its convergent sides adjacent to

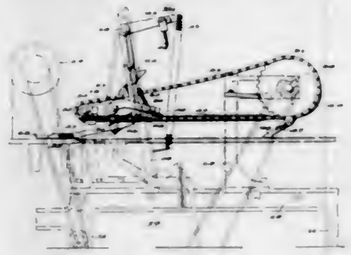
the end of the flap, the slots being positioned so that when both pairs of flaps are swung inwardly and downwardly within the container with the first pair below the second pair the tabs are adapted to enter the slots in the adjacent flaps and lock the flaps together to form a hopper-type cover with a central aperture.

2,451,645
FUNGICIDAL AND BACTERICIDAL COMPOSITIONS CONTAINING 1-(4'-ISOPROPYLBENZYL)-PIPERAZINE
Ferdinand B. Zienty and George W. Steahly, St. Louis, Mo., assignors to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application May 24, 1947, Serial No. 750,382
12 Claims. (Cl. 167—33)



5. A fungicidal and bactericidal composition comprising a substance selected from the group consisting of 1-(4'-isopropylbenzyl)-piperazine and its acid salts, and a carrier.

2,451,646
PICTURE CORNER MOUNT
Albert A. Ainsworth, Savannah, Ga.; Clara Ayles Ainsworth, executrix of said Albert A. Ainsworth, deceased, assignor to Clara Ayles Ainsworth, Savannah, Ga.
Application March 1, 1943, Serial No. 477,605
1 Claim. (Cl. 40—158)



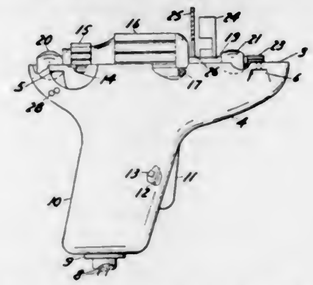
A combined right and left corner mount including a body portion and a pair of tongues formed integral therewith, said tongues being in the form of right angle triangles, each connected to the body portion along a line parallel one edge of the combined mount and being cut away from the body portion along lines respectively perpendicular and diagonal to the hinge line, and the diagonal lines of the two tongues being oppositely directed so as to form right and left corners.

2,451,647
PROCESS OF TREATING INTERMEDIATE MANGANESE SILICEOUS ORES
John R. Allen, Seattle, Wash., assignor to Manganese Products, Inc., Seattle, Wash., a corporation of Washington
Application December 21, 1944, Serial No. 569,204
14 Claims. (Cl. 23—117)

1. In the method for recovering manganese from manganese bearing ores containing silica, the step of treating an ore pulp mass including a sulfuric acid containing manganese sulfate solution which contains silica in a dissolved and dispersed state with a basic material capable of forming a precipitate upon reaction with said acid in such amount as to only partially neutralize said acid to thereby cause the precipitate formed by reaction of the basic material with said acid and carrying the silica interspersed therewith to be thrown out of said solution.

2,451,648
BLANK ADVANCING MEANS
Gustave A. Anderson, New York, N. Y., assignor to The International Handkerchief Mfg. Co., New York, N. Y., a corporation of New York
Application February 15, 1946, Serial No. 647,784
1 Claim. (Cl. 198—170)

An apparatus for advancing blanks of material for making handkerchiefs and the like toward sewing machines which sew opposite side edge portions of the blanks into hems, said apparatus comprising, a frame, a pair of spaced parallel supports carried by said frame and disposed rearwardly and defining the path of travel of the blanks, two pairs of sprocket wheels mounted above said supports, a pair of endless chains mounted on said sprocket wheels for actuation so that each chain during a portion of its path of travel runs above and substantially parallel to one of said supports respectively, rigid straight guide supports positioned along said chains to support said portions against upward sagging, and gripping means carried by said chains and adapted to press opposite side edge portions of the blanks against said supports and to advance the blanks along the supports toward the sewing machines, each of said chains having at least one enlarged triangular link, a gripper foot pivotally mounted intermediate its ends on said triangular link, and spring means for urging the gripper foot into blank engaging position, cam means disposed adjacent to sprocket wheels, the inner ends of said gripper feet having means for engaging said cam means to lower the gripper feet into blank engaging position at the beginning of the blank advancing movement and to raise the gripper feet from the blanks as the latter approach the sewing machines.



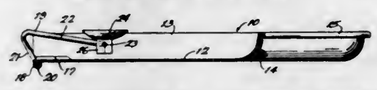
2,451,649
ORNAMENTAL FLOWER CONSTRUCTION
Mario Andreoli, Providence, R. I.
Application November 5, 1945, Serial No. 626,723
1 Claim. (Cl. 63—20)

A brooch comprising a base, an eyelet mounted on said base, a metal stamping simulating a flower petal and having a central opening, said eyelet passing through said opening, a second stamping simulating a flower petal having upturned petals and a central opening, said eyelet passing through said opening, an integral one-piece stamping simulating a plurality of flower stamens and having a central opening, said eyelet passing through said opening and said eyelet be-

ing swedged to lock said petals and stamen to said base, and an ornamental flower portion integral with said stamen stamping for concealing the swedged end of said eyelet.

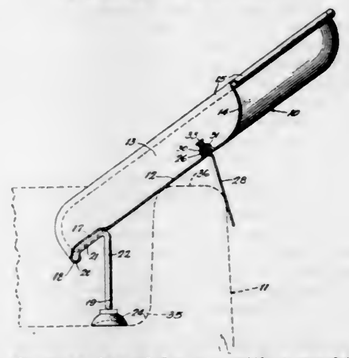
2,451,650
PISTOL GRIP MOTOR CASING
Kenneth C. Atkin, Toledo, Ohio
Application July 11, 1945, Serial No. 604,439
2 Claims. (Cl. 172—36)

1. A pistol type electric motor hand tool comprising a major housing section providing a complete tool-directing grip portion, there being, lengthwise of said section oppositely from the grip portion, an endless seat having a planar face, a motor shaft having its axis in the plane of said seat, a pair of aligned bearings for the shaft, within the bounds of said seat said major housing section having re-entrant clearance in which said bearings are nested to extend upwardly from the plane of said seat, a minor complementary housing section having a planar face endless seat in register with the major section seat, said minor section being recessed in completing nesting of the bearings, a motor field having one portion nested in the major section and a second portion nested in the minor section, a motor rotor carried by the shaft between the bearings and enveloped by the field portions, and a tool mounting transmission in the minor section and connectable with the motor from assembly of the sections.



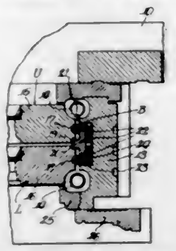
2,451,651
SADDLE HORN
Joseph P. Baldwin, Kingsville, Tex., assignor to King Ranch, Inc., Kingsville, Tex., a corporation of Texas
Application May 1, 1946, Serial No. 666,497
2 Claims. (Cl. 54—44)

2. In combination with a saddle, a saddle horn embracing and secured to the saddle-tree of the saddle; a flange forming one end of the saddle horn base, said flange disposed beneath the remainder of said base and at an acute angle thereto and engaging the forward face of the saddle-tree swell and a plurality of fastening means extending through portions of the saddle-tree swell and anchored at their ends in said flange and in a portion of the saddle horn base, disposed thereabove, said fastenings comprising rivets having elongated shanks, one of the head-



ed ends of each of said rivets engaging the outer side of said flange, and the other headed end of each of the rivets engaging the outer side of the portion of the base disposed thereabove.

2,451,652
SHAMPOO BOARD
Jacob L. Bazelon, Chicago, Ill.
Application March 2, 1948, Serial No. 12,590
10 Claims. (Cl. 4—159)

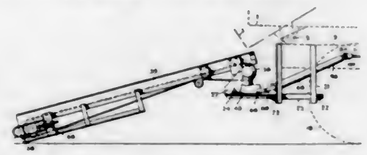


1. A shampoo board for use with a washbasin, comprising a dished trough adapted to overlie the rim portion of the washbasin and open at the lower end and having a neck-receiving portion adjacent its upper end, a bracket pivoted to the trough adjacent the lower end thereof to be folded against the trough or extended underneath the trough, and a pair of suction cups mounted on the bracket to engage the bowl portion of the washbasin to mount the shampoo board on the washbasin.

2,451,653
SHAMPOO BOARD
Jacob L. Bazelon, Chicago, Ill.
Application July 31, 1947, Serial No. 765,116
10 Claims. (Cl. 4—159)

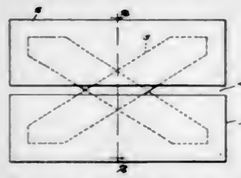
1. A shampoo board for use with a washbasin, comprising a dished trough adapted to overlie the exterior portion of the washbasin and open at its lower end and having a neck-receiving portion adjacent its upper end, a bracket adjacent the lower end of the trough and provided with suction cups to engage the bowl portion of the washbasin to mount the shampoo board on the washbasin, and a bracket adjacent the neck-receiving portion of the trough to engage the exterior portion of the washbasin.

2,451,654
WINDOW STRUCTURE
Forrest F. Beil, Clinton, Iowa, assignor to Curtis Companies Incorporated, Clinton, Iowa, a corporation of Iowa
Application March 22, 1944, Serial No. 527,520
7 Claims. (Cl. 20—52.4)



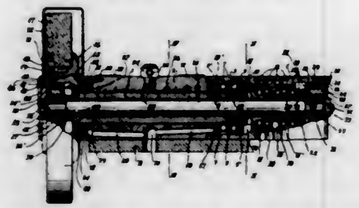
1. In a window structure, a side jamb having a channel, a pair of sashes slidable relative thereto, and a weather seal between said side jamb and said sashes comprising a sealing bar floatingly movable toward and from the bottom and between the walls of said channel, said sealing bar having rounded tongue and groove coaction with said sashes, said sashes having rounded rabbets in their adjacent edges, said bar having a central rounded tongue for cooperating with the rabbets and a resilient Z-shaped weather strip in said channel and urging said sealing bar toward said sashes adjacent the outer edges thereof.

2,451,655
COATED WELDING ROD
Henri Bienfait and Paul Christiaan van der Willigen, Eindhoven, Netherlands, assignors, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
No Drawing. Application January 28, 1946, Serial No. 643,971. In the Netherlands December 15, 1945
5 Claims. (Cl. 219—8)



3. A coated electric arc-welding rod, comprising a semi-conductive slag-forming coating having a fusible metallic constituent dispersed therein, the portion of said coating at the welding extremity being in a fused form and so having a greater conductivity than the portion of the coating remote from said welding extremity.

2,451,656
POWER-DRIVEN CONVEYER ATTACHMENT FOR DUMP TRUCKS
John W. Birch, Washington, D. C.; Catherine Ruth Birch executrix of said John W. Birch, deceased
Application December 19, 1946, Serial No. 717,118
6 Claims. (Cl. 214—83.26)

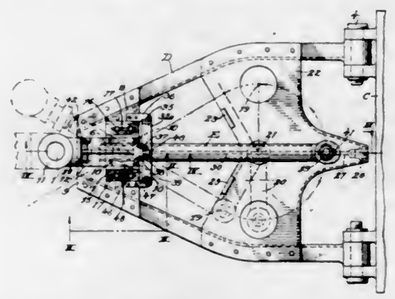


1. A power-driven conveyor attachment for motor-driven dump trucks of the rearwardly tilting and discharging dump body type, comprising a stationary frame attached to the rear end of the truck beneath the rear end of the dump body, a movable frame slidably supported by the stationary frame for shifting movements from an out-of-the-way position beneath the truck, to a rearwardly extended position, a saddle pivotally mounted on the movable frame for pivotal movements about a vertical axis, a conveyor unit of the endless belt type attachable to the movable frame when the latter is extended and pivotally supported at one end on the saddle for pivotal movements about a horizontal axis in a vertical plane, said conveyor unit also being swingable with the saddle about the vertical pivotal axis of the latter while always maintaining the conveyor unit in a position to receive the contents of the dump body when the latter is rearwardly tilted to discharge said contents, and power-driven means for transmitting power from the truck motor to the conveyor for driving the latter.

2,451,657
BUILDING BLOCK
Joseph N. Blackbourn, Prairie du Chien, Wis.
Application September 11, 1945, Serial No. 615,535
1 Claim. (Cl. 72—43)

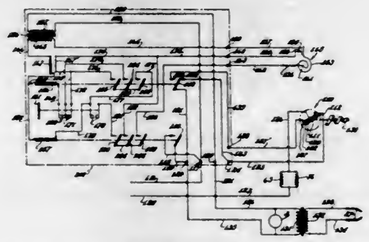
A building block comprising blocks spaced apart from each other whereby to provide an air space, and tie strips connecting the same, said strips each being in the form of a length of wood material, one of the strips being superposed upon the other in non-connected crossed relation relative thereto, said strips lying in parallel horizontal planes, the point of crossing of the strips being disposed substantially at the center of each strip and of the air space, the end portions of the strips being embedded in the blocks and portions of both strips at the point of crossing being embedded in each block, said embedding constituting the sole connection of the strips to the blocks.

2,451,658
MOUNTING OF GRINDING WHEELS, ESPECIALLY ON GRINDING MACHINES
Ettore Bugatti, Paris, France
Application September 11, 1945, Serial No. 615,633
In France December 3, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 3, 1963
15 Claims. (Cl. 51—166)



10. In a grinding machine, the combination of a frame including an elongated cradle portion and at least two longitudinally spaced apart lugs on each side of said cradle portion; a grinding unit including a long bearing for a grinding wheel shaft and for means to drive said shaft, said long bearing being so shaped as to seat in said cradle; at least two flexible straps, each of which extends from a lug on one side of said cradle to the opposite lug on the other side of said cradle; and means providing an adjustable, resilient connection between each lug and the corresponding strap.

2,451,659
RECOVERY OF PROTEINS FROM SOYBEANS IN PRESENCE OF BLANKETING AGENTS AND ENZYME INHIBITORS
Francis E. Calvert, Cincinnati, Ohio, assignor to The Drackett Company, Cincinnati, Ohio, a corporation of Ohio
No Drawing. Application November 5, 1946, Serial No. 707,973
4 Claims. (Cl. 260—112)

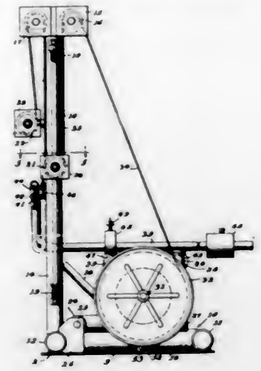


1. A method of minimizing the formation of color in protein during isolation from oleaginous seed material by the process of treating the material with a protein solvent at a pH above 6, precipitating the dissolved protein with acid, and filtering and drying the precipitate, which includes the steps of introducing in effective amounts during the isolation process and prior to the drying of the protein an enzyme inhibiting agent and a blanketing agent, said blanketing agent comprising a liquid organic compound having low solubility in water, and capable of forming an adsorption compound with protein to exclude oxygen from contact with the protein molecule and to prevent molecular aggregation of the protein during drying, and retaining the blanketing agent in contact with the protein until the latter is dried.

2,451,660
VEHICLE COUPLER
Andrew B. Clark and Kenneth C. Clark, Watsonville, Calif.
Application August 6, 1946, Serial No. 688,664
7 Claims. (Cl. 280—33.15)

2. The combination with a vehicle tongue, of a sleeve pivotally secured to the tongue and being swingable about an axis that extends at right angles to the plane of the tongue, a draw bar slidably carried by the sleeve and having a pintle-receiving eye at its front end, a collar placed on the bar near the eye, said bar having a longitudinally extending slot at the rear end, an arm pivoted to the tongue, a trunnion carried by the free end of the arm and being slidably received in the slot, a latch pivotally connected to the tongue and engaging with the collar when the bar is fully retracted, a hook for holding the latch in released position, said arm paralleling the bar when the latter is fully retracted, a trigger engageable with the arm for holding it from swinging when the bar is retracted, and connections between the hook and trigger for releasing the trigger from the arm when the hook engages with the latch for holding it in released position.

2,451,661
DUAL FIRING RATE OIL BURNER APPARATUS
Richard M. Cochrane, West Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, Springfield, Mass., a corporation of Massachusetts
Application September 22, 1947, Serial No. 775,548
10 Claims. (Cl. 158—28)



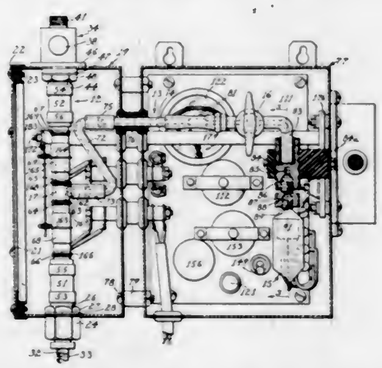
1. In a variable firing rate oil burner apparatus for house heating systems, of the type wherein air and oil for combustion are respectively supplied by a fan to an air conduit and by a pump to one or the other of two oil conduits, each of which terminates in the air conduit with an atomizing nozzle, and valve means are provided for selectively connecting said oil conduits to the pump to secure high or low rates of firing, and the fan and pump are driven by an electric motor which is adapted to be started and stopped by a room thermostat when there is a demand for heat and when such demand is satisfied, respectively; electromagnetic means for actuating the valve means, a primary nozzle selector switch, a primary energizing circuit for the electromagnetic means including the primary selector switch, the latter being movable from one position to another to cause the electromagnetic means to be actuated to connect one or the other nozzle to the pump, a second nozzle selector switch movable with the first selector switch but operating reversely, an alternate energizing circuit for said electromagnetic means including the second selector switch, a third switch, an electromagnet for actuating the third switch, the latter normally adapted to connect the primary energizing circuit to a source of supply and operable when said electromagnet is energized to connect the alternate energizing circuit to said source, a fourth switch opening and closing in response to the presence or absence of combustion, and a circuit for the electromagnet including the fourth switch and said room thermostat.

2,451,662
UNWINDING DEVICE
John Cook, Ridgewood, N. J.
Application August 1, 1945, Serial No. 608,203
22 Claims. (Cl. 242—156)

1. In combination, weight actuated brake means effective for controlling the delivery of wire from a roll, tension responsive means adapt-

ed to be supported by the feeding run of said wire, and flexible weight means connected to said tension responsive means and said brake means for operating the latter, said tension responsive

means being movable in response to tension variation of said run to shift at least a portion of the weight of said flexible means relative to said brake means and thus render the latter effective in acordance with said variation.



2,451,663

BRIDGE STRUCTURE FOR pH MEASUREMENT DEVICE

Edwin D. Coleman, Maywood, Ill.

Original application February 8, 1940, Serial No. 317,805, which is a division of application Serial No. 252,779, January 25, 1939. Divided and this application July 5, 1943, Serial No. 493,559

4 Claims. (Cl. 204—195)

1. In a device for measuring ion activity, an electrode comprising a tube having a bore through which the sample is passed for test purposes, a bridge tube connecting with said bore intermediate its ends, a supply of plastic bridge material incapable of flow through said bridge tube under its own hydrostatic pressure but capable of easy flow through said tube under moderate pressure, and means for forcing bridge material through said bridge tube to establish liquid junction with said sample at the junction of said tubes.

2,451,664

ORGANO-DISILOXANE AND METHODS OF PREPARING IT

William Herbert Daudt, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a corporation of New York

No Drawing. Application August 9, 1945, Serial No. 609,919

1 Claim. (Cl. 260—448.2)

Pentamethylphenyldisiloxane.

2,451,665

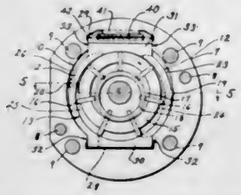
CHILD'S VEHICLE

Joseph A. Di Bartolomeo, Baltimore, Md.

Application November 12, 1947, Serial No. 785,363

4 Claims. (Cl. 280—7.15)

4. In combination with a vehicle of the bicycle type including a main frame having at its rear end a downwardly extending fork composed of a pair of limbs having alined axle-accommodating holes in their lower end portions, a plate having in its medial portion a pair of holes to accommodate the limbs of said fork and provided at its ends with ears having alined holes disposed in the same vertical plane as said pair of holes, and an axle insertable through the holes in said ears and through the holes in said limbs when the latter are disposed in the holes in said plate to interlock said plate with said limbs, said axle being adapted to have mounted on its end portions outwardly of said ears a pair of rear supporting wheels for the vehicle.



2,451,666

VARIABLE CAPACITY PUMP

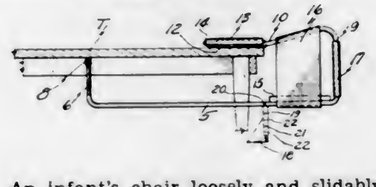
Warren H. De Lancey, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, Springfield, Mass., a corporation of Massachusetts

Application November 1, 1945, Serial No. 626,023

5 Claims. (Cl. 103—120)

1. A rotary pump, comprising, a casing having therein a central cylindrical chamber with two short diametrically-opposed recesses each of which has two short straight walls paralleling a diameter of said chamber, a hollow cylindrical member mounted in said chamber, the cylindrical opening in said member forming a pump chamber,

said member having two diametrically-opposed ends projecting outwardly from its periphery one into each of said recesses, each such end having two straight parallel side walls engaged one with each of the first-named side walls to support said member for sliding movement radially of said cylindrical chamber, a drive shaft rotatably mounted in said casing, a bladed pump rotor fixed to the drive shaft and mounted in the pump chamber, said casing having inlet and outlet passages communicating with the pump chamber on opposite sides of the rotor, yieldable means acting on one end of said member and tending to move the pump chamber into eccentric relation with the rotor, and means connecting the discharge side of the pump to one of said recesses at a location beyond the other end of said member, whereby fluid pressure acts directly on such end as a piston and moves the member radially in opposition to said yieldable means to decrease the relative eccentricity of the pump chamber and rotor and thus the rate of pumping.



2,451,667

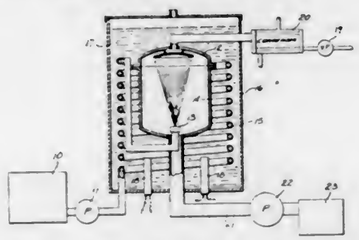
INFANT'S CHAIR

Francis E. Ducey, Midland, Mich.

Application August 20, 1945, Serial No. 611,547

5 Claims. (Cl. 155—78)

1. An infant's chair loosely and slidably attachable to a table and the like comprising, a one-piece main frame including forwardly extending legs terminating in an upwardly bent end section loosely engageable with and bearing against the underside of a table, the rear end of the legs being bent upwardly and over to form a horizontally disposed overhanging section connected at its forward end, said forward end section bearing on the face of the table at a point spaced horizontally from the point of bearing of the upwardly bent legs, and a seat provided on the legs at the rear end of the main frame.



2,451,668

PROCESS AND APPARATUS FOR RECONDITIONING CONTAMINATED OIL

Charles J. Egger and Robert H. Webster, Cleveland, Ohio, assignors to The Buckeye Laboratories Corporation, a corporation of Ohio

Application March 17, 1943, Serial No. 479,462

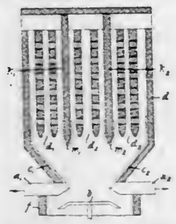
11 Claims. (Cl. 196—16)

1. Apparatus for treating oil comprising, a vessel, means for evacuating the vessel, spray means for spraying the oil in the vessel, a container having a heat transfer liquid, means for heating the said liquid, conduit means for conveying the oil to the spray means, said conduit means and said vessel being immersed in the said heat transfer liquid.

2,451,669

GAS BLAST CIRCUIT BREAKER

Ernst Eichenberger, Wettingen, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland



Application March 27, 1945, Serial No. 585,031

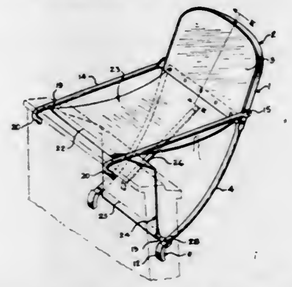
In Switzerland September 15, 1943

Section 1, Public Law 690, August 8, 1946

Patent expires September 15, 1963

9 Claims. (Cl. 200—148)

1. Gas blast circuit breaker comprising switch contacts; a pair of auxiliary contacts constructed and arranged to catch and hold root points of the arc formed upon opening of said switch contacts, a blast chamber disposed crosswise of the path of the arc, said chamber being subdivided longitudinally by interior wall means into three compartments through which blast gas is adapted to flow, and said auxiliary contacts being located respectively at the entrance to the outer two of said compartments, a plurality of spaced probes arranged one above the other in each of the said outer two compartments, and similarly spaced probes in the middle compartment individual to and electrically connected with each of the probes in said outer compartments, said spaced probes forming successive points of attachment for the arc intermediate the root points thereof upwardly through the blast chamber as the arc is lengthened by the blowing action of the blast gas.



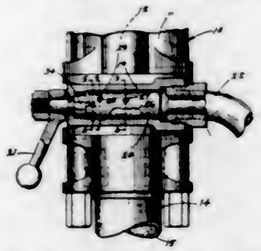
2,451,670

SAFETY WINDOW SEAT

Edward A. Favre, Waltham, Mass.

Application November 15, 1945, Serial No. 628,802

7 Claims. (Cl. 304—27)



1. A device of the character described comprising a U-shaped main frame portion having a

back portion, located at the base of the U and having its opposed ends provided with bearing portions, means for connecting the opposed ends together, a pair of supporting members having hooked portions pivotally connected to the main frame member and having hooked portions adjacent the free ends thereof, means for connecting the supporting portions with each other adjacent said free ends, foldable means connecting said supporting portions with the branches of the U-shaped main frame member at points spaced at the pivotal connections and a seat of collapsible flexible sheet material having one end supported adjacent the back portion and having the portion overlying the means connecting the free ends of the supporting portions and secured in said relation.

2,451,671
THROTTLE VALVE FOR STOPERS

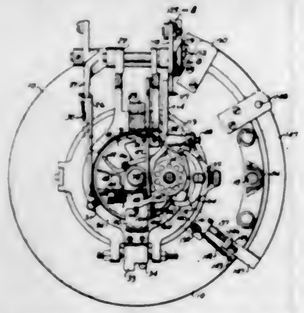
Albert Feucht, Garfield Heights, Ohio, assignor, by mesne assignments, to Le Roi Company, Milwaukee, Wis., a corporation of Wisconsin

Application August 17, 1943, Serial No. 498,933
10 Claims. (Cl. 121—9)

1. In a valve for distributing pressure fluid to the motor and feed cylinder of a stoper, a valve housing having an inlet for pressure fluid, a passage for motor fluid, a passage for feed fluid and an orifice leading to atmosphere, a hollow valve piece operable in said housing having ports for connection simultaneously with said motor fluid passage and said feed passage, the interior of said hollow valve piece being in communication with said inlet whenever either of said ports is in operative position, and said valve also having a bleed passage adapted, when the valve piece is in position to connect said feed passage with said inlet, for connecting said feed passage with said orifice independently of said motor fluid passage.

2,451,672
ALCOHOL INSOLUBLE NITROGEN SUBSTITUTED POLYAMIDES

Hugh W. Gray, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware



No Drawing. Application December 8, 1944, Serial No. 567,316
12 Claims. (Cl. 260—78)

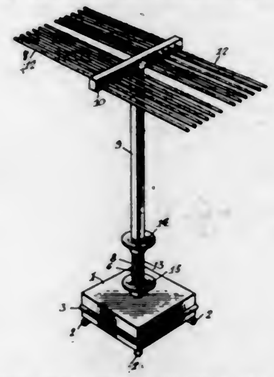
1. A process for rendering N-alkenoxymethyl polymides insoluble in alcohol and increasing their melting point, said process comprising incorporating with an alcohol-soluble N-alkenoxymethyl polycarbonamide, in which from 1% to 100% of the amide substitution consists of N-alkenoxymethyl groups, a free radical-producing agent in amount of from 0.1% to 20% by weight of said N-alkenoxymethyl polycarbonamide, said agent being selected from the group consisting of peroxy compounds, ketones, organo-metallic compounds, and azo compounds, and then activating said agent at a temperature of from 20° C. to 200° C. to decompose said agent into free radicals, and continuing the reaction until said polycarbonamide is essentially insoluble in alcohol in which the initial untreated polyamide is soluble, the amide groups in said polycarbonamide being an integral part of the polymer chain, and the average number of carbons in the segments of the chain separating the amide groups being at least two.

2,451,673
WRAP STRIPE ATTACHMENT FOR KNITTING MACHINES

Cornelius Sherman Grove, Sr., Julius Van McKinney, and Silas Pittman, Hickory, N. C., assignors to G. and H. Hosiery Company, Inc., Hickory, N. C., a corporation of North Carolina

Application September 28, 1946, Serial No. 700,056
9 Claims. (Cl. 66—135)

1. In a circular knitting machine, having a bed plate, a pattern drum, a latch ring, and a throat gap, and a circular series of needles, spaced needles disposed at intervals around a portion of the circle and having long butt jacks associated therewith, other spaced needles disposed around another portion of the circle and having medium butt jacks associated therewith, an elevating cam for engaging said butts and raising the same, means for advancing the cam fully inwardly to raise both the long butt and medium butt jacks for raising the same, means for advancing the cam inwardly to a lesser amount to engage and raise only the long butt jacks, and means for feeding wrap threads to the needles raised by their associated jacks, the means for advancing the cam fully inwardly and the means for advancing the cam inwardly a lesser amount comprising a push rod movable by the pattern drum, a lever mounted on the bed plate and having one end engaging the cam for moving it inwardly and having its other end engageable by the push rod, and such rod having one cam portion for engaging said lever and moving it to move the cam partially inward to engage only the long butt jacks and having another cam portion for engaging the said lever and moving the cam further inwardly to engage both the medium butt jacks and the long butt jacks.



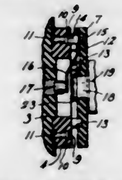
2,451,674
CLOTHES DRIER

Emile Hade, Montreal, Quebec, Canada

Application January 22, 1945, Serial No. 573,866
1 Claim. (Cl. 211—176)

A clothes drier comprising a base having a vertical hole, a cross pin in said hole, a post receivable in said hole, the lower extremity of said post having a pair of intersecting grooves

adapted selectively to receive said pin, a nut threaded on said post and engaging said base to

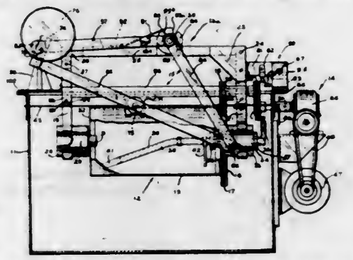


effect lifting said post from said pin, said post having a cross bar at its upper end with horizontal arms extending from said cross bar.

2,451,675
DISTRIBUTOR

Kenneth A. Harmon, Longmeadow, Mass., assignor to Wico Electric Company, West Springfield, Mass., a corporation of Massachusetts

Application May 3, 1946, Serial No. 667,069
11 Claims. (Cl. 200—24)



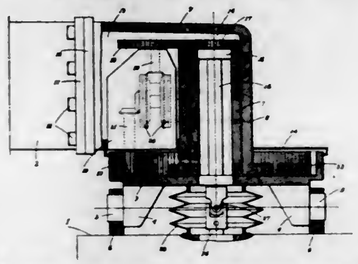
2. In a distributor, a rotatable driving member, a plurality of fixed electrodes disposed around the axis of revolution of said member and each having an exposed face, an element rotatably driven by said member, an electrode fixed to said element and having a face adapted to successively move into confronting relation with each of the first-named faces during rotation of said member, said element being mounted to float on its driving member with freedom to be adjustably moved as may be necessary to enable said end face of the rotatable electrode to freely move into parallelism with each of the first-named faces as it confronts the same, a fixed track adjacent the fixed electrodes, three brushes fixed to said element and riding on said track, and means for adjustably moving said element to press said brushes against said track, whereby to cause said face of the rotatable electrode as it moves into confronting relation with each of the first-named faces to be positioned in parallelism therewith.

2,451,676
ELECTROPLATING MACHINE

Norman K. House, St. Louis, Mo., assignor to Lasalco, Inc., St. Louis, Mo., a corporation of Missouri

Application April 19, 1946, Serial No. 663,272
8 Claims. (Cl. 134—137)

1. In an electroplating device having a tank, a barrel and a counterbalanced supporting structure for moving the said barrel from a point within to a point without said tank, the combination of a frame for mounting said barrel on said



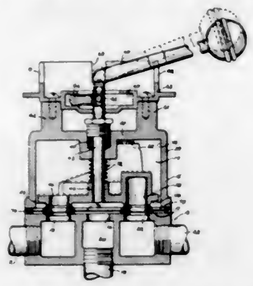
supporting structure, and means forming a part of said frame carrying an end closing cover for said barrel pivotably movable to open and close said barrel.

2,451,677
VEHICLE COUPLING AND POWER STEERING DEVICE

John H. Hyler, Peoria, Ill., assignor to R. G. Le Tourneau, Inc., Stockton, Calif., a corporation of California

Application June 29, 1945, Serial No. 602,184
5 Claims. (Cl. 180—79.4)

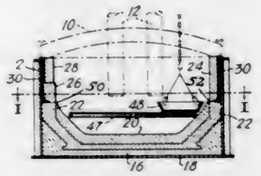
2. A tractor-trailer draft coupling and power steering device comprising an upstanding post, means adapted to mount the post on the tractor for relative lateral tilting about a longitudinally extending axis, a sleeve rotatably surrounding the post, means adapted to fix the sleeve in connection with the trailer, a driven shaft journaled in the post, driving connections between the shaft and sleeve operative to cause relative rotation of said post and sleeve, a drive shaft upstanding from the tractor in substantially alined relation to but spaced from the driven shaft, and a universal connection secured between adjacent ends of said shafts, the center of universal movement of the latter connection being in substantial alinement with the axis of tilting movement between the post and the tractor.



2,451,678
MULTIPLE PORT VALVE STRUCTURE

Bruce W. Johnson, Rockford, Ill., and Adolph D. Bullerjahn, Milwaukee, Wis., assignors to Automatic Pump & Softener Corporation, Rockford, Ill., a corporation of Illinois

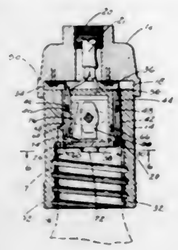
Application April 4, 1945, Serial No. 586,568
9 Claims. (Cl. 251—84)



2. The combination in a lift-turn valve of a stator member having a face provided with a plurality of ports, a rotor member having a face opposed to the face of the stator provided with a plurality of ports arranged for registry with ports

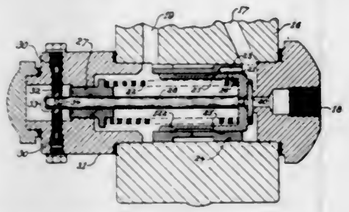
of the stator in selected positions of the rotor, a rigid plate of sheet material overlying the face of the stator having a plurality of openings therein coaxial with the ports in the stator, the outer edge of the plate having radially disposed ears, a gasket at the edge of said plate of greater thickness than the plate having flanges projecting inwardly on opposite sides of said plate, one of said flanges acting to space said plate from the face of the stator, a bonnet enclosing the

rotor, said plate and the face of the stator seated on said gasket, fastening means for securing the bonnet to the stator shaped to engage said ears to locate said plate with respect to the stator, a port gasket of resilient material affixed to the plate at each of the openings in said plate for sealing the space between the rotor and the stator, and means for lifting, turning and reseating the rotor against said port gaskets to compress the same between the rotor and the stator.



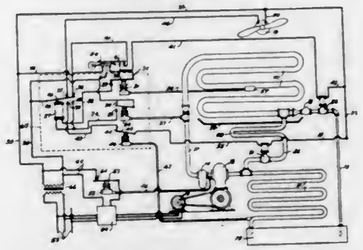
2,451,679
FURNACE LINING STRUCTURE
Stanley A. Komorowski, Chicago, Ill., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application June 25, 1945, Serial No. 601,520
4 Claims. (Cl. 266—43)

1. In a furnace comprising a shell and a refractory lining, a plurality of metal inserts of generally L-shape, said inserts being of substantial area, one leg of the inserts being mounted in upright position between the shell and the lining and the other projecting outwardly from the shell under a portion of the lining, said inserts being spaced at intervals around the furnace, whereby pulling of the inserts in a direction upwardly of the furnace effects dislodgement of the furnace lining.



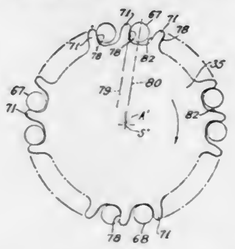
2,451,680
ELECTRIC LIGHT SOCKET
Herbert Lagin, New York, N. Y.
Application December 15, 1945, Serial No. 635,186
5 Claims. (Cl. 200—51.16)

5. In an electric socket for threaded reception therein of a lamp, a cap member having a recess at one end thereof and an opening extending from the recess to the top thereof for receiving therein two wires, a prong extending from the cap for securing therein one of the wires, a resilient catch extending from the prong, a second prong spaced from the first prong and extending from the cap for securing thereto the other wire, said prong having a second resilient catch extending therefrom, a sleeve received in the cap member in the recess thereof and frictionally held therein by the cap member, said sleeve having openings therein for receiving the



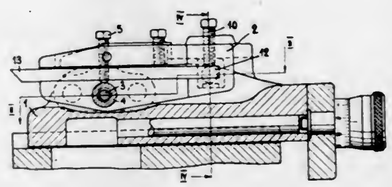
prongs in the interior of the sleeve upon inserting the sleeve in the cap in the recess therein, walls of said sleeve at the said openings being undercut to provide shoulders extending away from the openings, the walls on the interior of the sleeve moving the resilient catches inwardly away therefrom upon insertion of the sleeve in the cap whereby the prongs are received in the openings said shoulders passed by the resilient catches to thereby release the catches by the walls of the sleeve to pass under the shoulders, said shoulders cooperating with the catches to prevent removal of the sleeve from the cap.

2,451,681
OIL BURNER DELAYED-ACTION VALVE
Joseph A. Logan, Hadley, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application November 4, 1944, Serial No. 561,927
3 Claims. (Cl. 158—36.3)



1. In an automatic gun type oil burner of the kind described, the combination of a fan to supply a controlled air stream, an oil pressure atomizing nozzle to discharge oil in said air stream, an oversize pump to supply oil to said nozzle, an oil conduit to connect the pump and the nozzle, an automatic pressure regulating valve interposed in said oil conduit, said regulating valve having a valve face and valve seat portion and spring means to hold the face to the seat, said face portion of the valve being retractable from the seat by fluid from the pump exerting pressure on a movable surface of the valve to overcome said spring means, and a frictional device to additionally hold said valve face to its seat and delay the opening of the valve by making the pump supply oil under pressure substantially higher than that necessary to overcome said regulating valve spring means, said frictional device being operably connected with said regulating valve to be moved out of friction exerting position when the valve opens and returned to said position when the valve closes, all for the purpose described.

2,451,682
REFRIGERATION SYSTEM USING GAS FOR DEFROSTING
Ole B. Lund, Havre, Mont.
Application August 9, 1946, Serial No. 689,323
3 Claims. (Cl. 62—2)

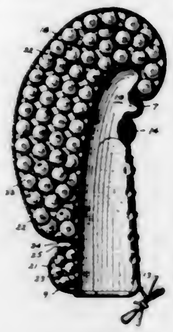


1. In a refrigerating system having a gas compressor, a suction line leading from said evaporator to said compressor, a condenser receiving the gas from the compressor, and a liquid line carrying the liquid gas from the condenser to the evaporator, means for defrosting the evaporator comprising: a by-pass line extending from the discharge of the compressor to the intake of the evaporator; an electrically controlled valve in said by-pass line; a second electrically controlled valve in said liquid line; a pressure-operated switch connected to the suction line; electric contacts controlled by said switch, said contacts being arranged to open the first valve and close the second valve when the pressure in the suction line has decreased to a pre-determined point; and means for closing the first valve when the pressure in the condenser has decreased to a certain pre-determined point.

2,451,683
COUPLING
Burr W. Mantle, Pittsford, N. Y., assignor to American Brake Shoe Company, Wilmington, Del., a corporation of Delaware
Application January 8, 1944, Serial No. 517,486
3 Claims. (Cl. 64—19)

1. In a rotary driving coupling, a driving member and a substantially aligned driven member, driving and driven sprockets fixed on adjacent ends of said driving and driven members respectively, each of said sprockets having teeth formed thereon, thrust bearing means interposed between said driving and driven members and arranged to enable relative pivotal and lateral shifting of said members, spring means acting between said sprocket members to maintain said thrust bearing means in firm engagement, an endless chain member having two parallel interconnected runs of chain each having rollers and the rollers of one of such runs having convex outer bearing surfaces, said chain member surrounding both of said sprockets and having the rollers thereof engaging the teeth thereof so as to transmit rotary motion from said driving member to said driven member, the one of said sprockets which is engaged by the convex surfaced rollers having the teeth thereof formed with substantially complemental concave side surfaces for engagement by such convex rollers and against which such convex rollers may bear and along which such rollers may shift radially with respect to said sprockets in the course of rotary movement of such sprockets.

2,451,684
TOOLHOLDER FOR AUTOMATIC LATHES
Guillaume Ernest Mégel and Henri Mancia, Moutier, Switzerland, assignors of one-half to Usines Tornos Fabrique de Machines Moutier S. A., Moutier, Switzerland, a Swiss firm
Application April 15, 1946, Serial No. 662,249
In Switzerland April 11, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires April 11, 1965
2 Claims. (Cl. 82—36)



1. A tool holder for automatic lathes comprising a U-shaped slide, a tool supporting member pivotally mounted between the side members of said slide, means for pivotally mounting said supporting member on said slide comprising a tapped bushing in said supporting member and a fulcrum pin inserted therethrough, a micrometer screw on said fulcrum pin for adjusting said supporting member transversely of said slide, said supporting member having two holes on a side thereof arranged on opposite sides of said fulcrum pin, springs inserted in said holes, and adjusting screws in said slide abutting against said springs whereby tension of said springs may be adjusted for preventing transverse play of said supporting member.

2,451,685
BOXING GLOVE
Edward S. Mollanen, Oakland, Calif.
Application December 4, 1944, Serial No. 566,492
9 Claims. (Cl. 2—18)

1. In a boxing glove, a flexible outer casing, and a plurality of resiliently elastic and relatively un-

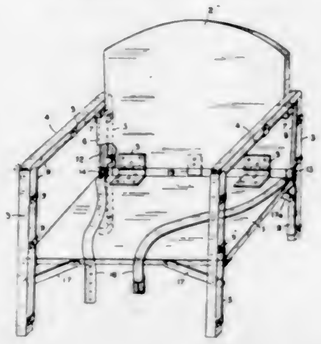
attached members enclosed in the casing in mutually free and contacting relation and cooperatively providing a compressedly yielding padding for the glove.

2,451,686

STARCH COMPOSITIONS CAPABLE OF FORMING WATER-SOLUBLE DERIVATIVES

Fredrik André Möller, Haren, near Groningen, and Jan Lolkema, Hoogezand, Netherlands, assignors to Naamlooze Vennootschap: W. A. Scholten's Chemische Fabrieken, Groningen, Netherlands, a corporation of the Netherlands

No Drawing. Application March 28, 1946, Serial No. 657,898. In the Netherlands April 25, 1941
5 Claims. (Cl. 252—188.3)



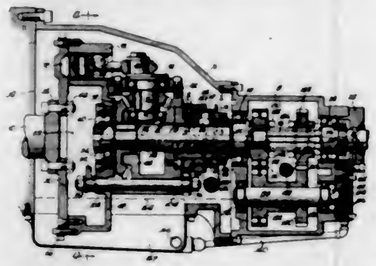
1. A starch product soluble in cold water, the solution of which when moderately heated will produce soluble starch derivatives of the group comprising starch ethers and starch esters consisting of a dry mixture of cold swelling starch, a reagent of the group comprising etherifying and esterifying agents and the proportion of alkaline substance necessary for effecting the reaction with the reagent in the solution.

2,451,687

COLLAPSIBLE CHAIR

Leycester W. Morris, Berkley, Mich.

Application October 4, 1944, Serial No. 557,067
10 Claims. (Cl. 155—148)



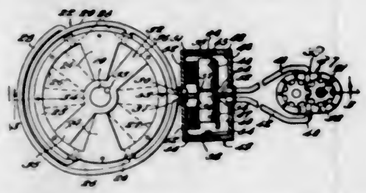
1. A collapsible chair comprising a seat, a pair of side frames each including a pair of front and rear leg-forming uprights and an arm rest interconnecting the paired uprights, means providing slidable and pivotal connections between the seat and uprights, means on the uprights for seating said connections and thereby imposing the weight of the seat and its occupant on the uprights, and a pair of links elongated transversely of the chair and forming swinging connections between the side frames and seat, and further forming braces in the use position of the uprights to maintain such position in conjunction with said slidable and pivotal connections and coacting with such connections to guide the side frames to collapsed positions of substantial parallelism with the seat.

2,451,688

HYDRAULIC CLUTCH AND VARIABLE-SPEED DRIVE

Cecil Harvey Myers and Hubert A. Myers, Chicago, Ill.

Application January 13, 1944, Serial No. 518,074
17 Claims. (Cl. 74—294)



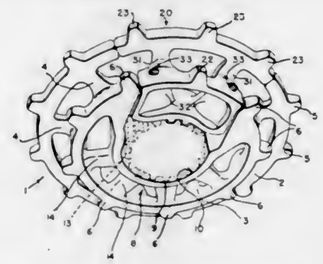
1. In a hydraulic clutch and variable speed drive, a power shaft, a flywheel assembly driven thereby and comprising cylinders, pistons therein, connecting rods, crank shafts and crank shaft gears rotatable as a unit, said cylinders being distributed around the axis of rotation of said power shaft, said connecting rods connecting said pistons with said crank shafts, a driven shaft having a gear meshing with said crank shaft gears, an oil chamber, balanced valve means interposed between said cylinders and said oil chamber for controlling the flow of oil pumped by said pistons to and from the oil chamber, said valve means comprising a plurality of radially slidable valves distributed around said axis of rotation and closable by centrifugal force, and means for synchronizing the movement of said valves.

2,451,689

VALVE ASSEMBLY FOR HYDRAULIC STEERING SYSTEMS

Everett E. Nelson, Litchfield, Minn.

Application March 16, 1946, Serial No. 654,911
2 Claims. (Cl. 137—69)



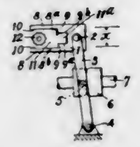
1. An automatic valve for an hydraulic system comprising a valve body having a longitudinal bore throughout its length forming a cylinder and spaced parallel bores on opposite sides of the cylinders, a partition wall separating the spaced parallel bores into longitudinally spaced chambers, an hydraulic fluid reservoir in the valve body above the bore and chambers, the bottom wall of the reservoir having a port adjacent each side of the partition wall establishing communication between the reservoir and the cylinder, the cylinder having ports adjacent the partition establishing communication with the respective longitudinally spaced chambers, check valves in the longitudinally spaced chambers in one of the spaced parallel bores on one side of the cylinder to permit flow of fluid toward respective ports, each spaced parallel bore having a wholly open port adjacent the partition wall and communicating at its opposite end with the cylinder, and a plunger slidable in the cylinder and having a groove midway of its length selectively to open or close the first and second mentioned ports.

2,451,690

TWO-PART SPROCKET

William P. Oehler, Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

Application May 12, 1945, Serial No. 593,403
10 Claims. (Cl. 74—243)



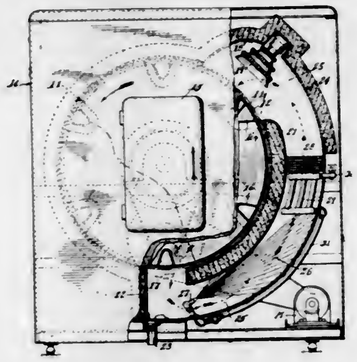
5. A two-part sprocket comprising a pair of complementary sprocket members adapted to be assembled about a shaft, cooperating interengaging means formed on said sprocket members and adapted to be brought into interengaging relation by an axial movement of one sprocket part relative to the other and, when engaged, being adapted to resist relative displacement in a generally radial direction, and means for holding said sprocket parts in engagement.

2,451,691

SYNCHRONIZING DEVICE

Leif Christian Olsen, Newcastle-on-Tyne, England

Application May 4, 1945, Serial No. 592,005
In Great Britain May 4, 1944
4 Claims. (Cl. 178—69.5)



1. A telegraphic receiving instrument comprising a ratchet wheel adapted to accelerate or retard a synchronized shaft of the instrument according to the direction in which the wheel is turned, a dual pawl comprising two spaced limbs with a symmetrically spaced gap therebetween, providing a wider gap portion and a narrower gap portion, means to reciprocate said pawl in timed relation to said shaft and signal responsive means including a two-pronged spring tongue entering the gap in the pawl at right angles thereto, one of said prongs being flexed on such reciprocation and the other of said prongs entering the narrower gap portion, the actuation of said signal responsive means determining the path of the pawl during reciprocation to apply correctional movement to the ratchet wheel in the event of signals arriving out of synchronism.

2,451,692

CLOTHES DRIER

Merlin L. Pugh, Minneapolis, Minn.

Application February 19, 1946, Serial No. 648,729
8 Claims. (Cl. 34—74)

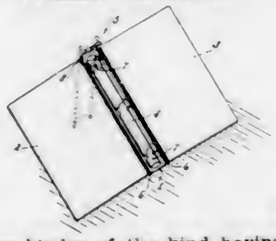
1. In a clothes drier, a casing having a clothes receiving opening in the front thereof, a drum rotatable in said casing and having a clothes receiving opening registering with the clothes receiving opening of said casing, means for rotating said drum, said drum being perforate to permit the circulation of air therethrough, a source of heat for heating the circulating air, a duct for air extending from adjacent the bottom of said drum to a location adjacent the top of said drum, and being in communication therewith at both ends, said source of heat also being disposed adjacent to the top of said drum, a cold water supply, a jet nozzle near the bottom of said duct for directing a cold water spray upwardly in said duct to forcibly circulate air from the bottom of said drum to the top thereof through said duct and to remove moisture and lint from the air so circulated and means for removing the water from the spray from the bottom of the casing.

2,451,693

SIGNAL DEVICE FOR FISHING TACKLE

Kenneth D. Richards, Gardner, Mass.

Application February 10, 1945, Serial No. 577,238
8 Claims. (Cl. 43—17)

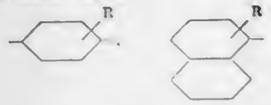


1. A device of the class described comprising a standard adapted to be set in upright position, a resilient signal, means to tension the signal, a shaft mounted on the standard, said signal being

rotatable with the shaft, a line, a reel, means to rotate the shaft by the reel as the line pays out,

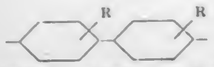
said shaft being adapted to release the tensioned signal upon initial rotation thereof.

2,451,694
EASEL BOOK CONSTRUCTION FOR RING BOOKS OR LOOSE-LEAF BINDERS
Frank Stanley Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application July 30, 1947, Serial No. 764,722
2 Claims. (Cl. 281—33)



2. A ring binder of the kind having a back panel, hinged covers, and ring mechanism lying along and on the inside face of the back panel, with rivets fastening it near the ends and added to said ring binder an easel construction comprising a hinge plate of sheet metal having a portion extending across the upper margin of the back panel against its inside face and extending down far enough to be riveted to the back panel with one of the said rivets fastening said ring mechanism, side ears in the hinge plate extending against said mechanism to prevent the plate pivoting on said rivet, an upstanding flange at the upper end of said plate having hinge eyes bent at the upper edge of the flange, a stiff wire having bent ends passing through said eyes to hinge the wire on said flange, said ends having bent extensions to serve as hinge stops by abutment against the inside face of said flange, said wire being bent into an easel arm by extension to and down along the side edges of the back panel on the outside.

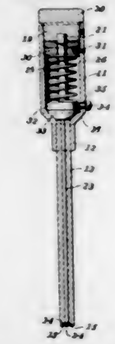
2,451,695
POLYAMIDES OF HIGH BIREFRINGENCE AND METHOD FOR OBTAINING SAME
Richard S. Schreiber, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 6, 1945, Serial No. 581,342
7 Claims. (Cl. 260—78)



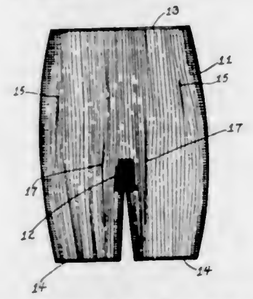
1. A polyamide consisting of the reaction product of a polyamide-forming composition comprising at least 20% by weight of a mixture in substantially equimolecular amounts of a dicarboxylic acid which has at least 4 chain carbon atoms between the carboxyl groups and in which the carboxyl groups are the sole reactive groups, and a diamine of the formula

$$H_2N—Ar—CH_2.CH_2—Ar—NH_2$$

in which Ar is a 1,4-arylene radical selected from the group consisting of

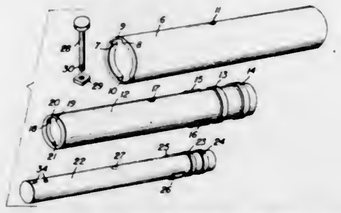


and



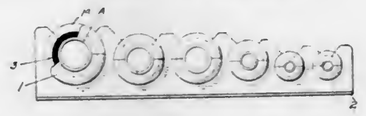
R being a substituent selected from the group consisting of hydrogen, alkyl groups containing not more than six carbon atoms, and alkoxy groups containing not more than six carbon atoms.

2,451,696
SCREW HOLDING SCREW DRIVER
Michael J. Sopcak, Midland, Mich.
Application December 1, 1944, Serial No. 566,091
2 Claims. (Cl. 145—50)



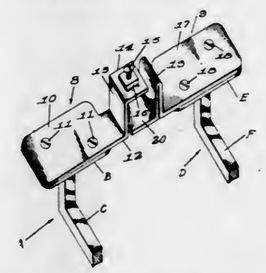
2. A screw-driver of the class described comprising an elongated hollow cylindrical handle having a bore internally screw-threaded and open at its normally upper end, the opposite end of said handle being circumferentially tapered and defining a correspondingly tapered end portion for the bore and merging into a centrally positioned and reduced hollow neck, a screw-driver shank fitted into and secured in said hollow neck, said shank having a central bore extending entirely therethrough, the outer end of said shank terminating in opposed kerf-engaging main bits, a plunger device, embodying an enlarged disc-like shoulder having a conical portion rotatably engaging the tapered end portion of the bore of said handle, having an integral stem extending downwardly from said shoulder and rotatably through the bore in said shank and terminating at its outer end in an auxiliary bit arranged between the first named main bits, said handle having an arcuately extending slot formed in the side, a finger-grip exteriorly disposed in respect to said handle and having a part extending interiorly into the handle by way of said slot and removably connected with a marginal portion of said shoulder, said stem having an enlarged integral upper end located and confined in said handle and projecting above said shoulder and having at its upper end a notch to accommodate a screw-driver, a coiled spring abutting and anchoring washer fixedly mounted in the upper end portion of said handle, the adjacent notched end portion of said stem extending slidably and rotatably through and above the washer, a coiled torsional spring confined in said handle and surrounding the enlarged portion of said stem, one end of said spring bearing upon said shoulder and being attached to said stem and the other end of said spring bearing against said washer and being secured to said washer, and a screw plug threaded into the screw-threaded end portion of the handle above the notched end of said stem.

2,451,697
UNDERGARMENT
Merle Speicher, St. Louis, Mo.
Application February 7, 1947, Serial No. 726,997
4 Claims. (Cl. 66—177)



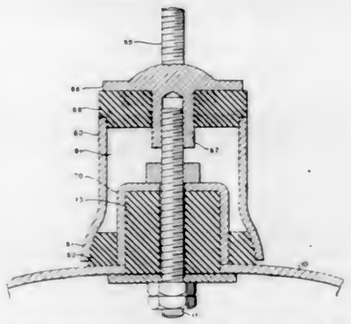
1. An elastic form fitting substantially seamless undergarment made of continuously knitted elastic yarn arranged in successive horizontal stitch courses, the courses being increased downwardly as to number of stitch loops therein at four substantially equally spaced points around the intermediate portion of the garment and being increased upwardly in stitch loops from certain symmetrically located points in the lower portion of the garment.

2,451,698
EXTENSION TONGUE
Dean E. Swinehart, Ravenna, Ohio
Application October 17, 1947, Serial No. 780,336
1 Claim. (Cl. 280—33.14)



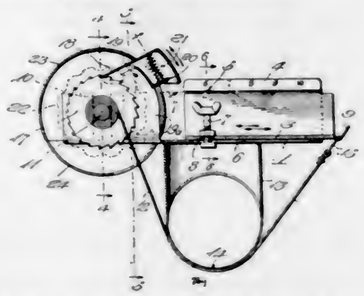
An extension tongue for trailers comprising a series of concentrically arranged telescoping tongue sections, means at the forward end of said inner section and at the rear end of said outer section for attaching the same respectively to a motor vehicle and to a trailer, means for locking said sections in telescoped position, annular bearing rings on the innermost sections slidably engageable with the inner walls of the surrounding outer sections, said outer sections being formed with cooperating oppositely disposed annular locking shoulders at their forward ends and diametrically opposed slots between said shoulders, and said inner sections being formed with oppositely disposed lugs on their rear ends slidable through said opposed slots.

2,451,699
SUPPORT
Stanley E. Twaroski, Los Angeles, Calif.
Application September 28, 1945, Serial No. 619,015
2 Claims. (Cl. 248—68)



1. In a device for supporting cylindrical objects, a support bracket made from sheet material and having sunk in the edge thereof one or more grooves, each groove having an enlarged-circular bottom contracted at the upper portion thereof to form a neck, the groove having a second circular enlargement above said neck and a contraction at the upper part thereof to form a second neck, both necks being of a width snugly to pass the objects to be supported, in combination with soft resilient grommet-shaped centrally split sleeves seatable in said circular enlargements firmly to encompass the objects to be supported.

2,451,700
COMPANION CLUTCH AND BRAKE PEDAL FOR AUTOMOBILES AND THE LIKE
Ralph Van Trine, Durham, N. C., assignor of thirty per cent to Leona T. Van Trine and thirty per cent to Marian Van Trine Davis, Durham, N. C.
Application February 26, 1946, Serial No. 650,268
2 Claims. (Cl. 74—478)



1. In combination, a clutch operating pedal, a brake operating pedal, an upstanding flange carried by the clutch operating pedal constituting a safety stop and to prevent accidental slippage of the left foot, and an upstanding safety stop flange carried by the brake pedal and located to prevent accidental slippage of the right foot, said flanges being disposed on adjacent marginal ends of the respective clutch and brake pedals, said first flange being provided with a horizontal actuating member, and said second flange being likewise provided with a horizontal thrust member, said members being disposed in superposed normally spaced parallelism.

2,451,701
TERMINAL REPLACEMENT FOR SEALED REFRIGERATION UNITS
William Wagner, Brooklyn, N. Y.
Application April 6, 1946, Serial No. 660,270
2 Claims. (Cl. 174—77)

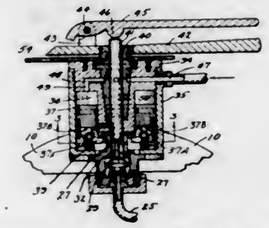
1. A terminal replacement for a refrigeration unit which is hermetically sealed in a casing and whose original terminals extend through holes in said casing, each original terminal being protected by a collar affixed to said casing and surrounding said terminal, said terminal replacement comprising a sleeve whose lower end flares outwardly to form a skirt, said sleeve being disposed around said collar concentrically therewith, a substantially cylindrical washer disposed between said skirt and said collar, a ring-shaped washer mounted on the top of the sleeve and a nut engaging the original terminal and clamping the ring-shaped washer to the top of said sleeve and also clamping the skirted lower end of said sleeve against the cylindrical washer, and thereby clamping said cylindrical washer to said collar, said nut being provided with an upwardly extending threaded portion which constitutes the extension terminal of the refrigeration unit.

2,451,702
PIPE CLAMP
Frank G. Weigand, Mount Carmel, Ill.
Application March 12, 1946, Serial No. 653,818
3 Claims. (Cl. 113—102)

1. A pipe clamp comprising a frame, a member slidable on a portion of the frame, means for holding the said member in different positions of adjustment, a lug on the outer end of said member, a flexible pipe embracing element having a connection for anchorage to the lug, a shaft on which the pipe embracing element is wound for regulating its tension on the pipe sections, means for holding the shaft in different positions of adjustment, a housing for the shaft and said means, and a hand operated element on the shaft externally of the housing for rotating said shaft.

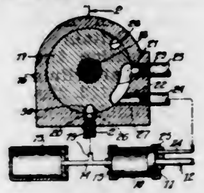
2,451,703
RESILIENT TANTALUM TUBES AND A PROCESS FOR MAKING SAME
Paul Alfred Weiss, Chicago, Ill., assignor to the United States of America as represented by the Secretary of War
No Drawing. Application May 2, 1945, Serial No. 591,641
12 Claims. (Cl. 128—334)

1. In a process for preparing resilient tantalum tubes from tantalum foil, the steps of forming a cylinder comprising overlapping turns of pliable tantalum foil, and heat treating said cylinder in a manner such that a heat gradient exists between the inner surface and outer surface of said cylinder, with the inner surface of the cylinder being the cooler surface, and the outer surface being the hotter surface, the said tantalum foil cylinder being heated to a temperature and time sufficient to produce a permanent cylindrical deformation of the foil, whereby the foil permanently retains a cylindrical tubular configuration.



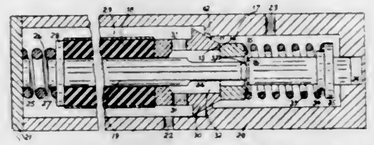
10. A sutureless joint adapted for use in joining severed nerve ends comprising a preformed tantalum cylinder having a thickness between 0.0004 and 0.00075 inch, said cylinder having overlapping longitudinal edges and a gradient of elasticity from the outer longitudinal edge to the inner longitudinal edge.

2,451,704
LIQUID LEVEL GAUGE
Howard L. Wood, Oskaloosa, Iowa
Application December 7, 1946, Serial No. 714,790
3 Claims. (Cl. 73—425.4)



1. A gauge for indicating the level of liquid in a container between predetermined high and low liquid levels comprising, a large tube member closed at its bottom end and having a slot spaced from such bottom end, a small tube member slidable within said large tube having a transparent portion movable across said slot and an outer portion projected from the top end of said large tube, a body member mounted on the top end of said large tube having a bore therethrough, with the outer portion of said small tube being extended through the bore in said body member, stop means for limiting the slidable movement of said small tube member relative to said large tube member, means carried on said body member for yieldably moving and holding said small tube at a position extended outwardly from said large tube, with said small tube being movable within said large tube, against the action of said yieldable means, to close said slot, and means for supporting the gauge within said container such that said slot extends between said predetermined high and low liquid levels.

2,451,705
CONTROL DEVICE FOR HYDRAULIC STEADY-REST CHUCKS
Russell Sandford Adair, Youngstown, Ohio
Application September 29, 1947, Serial No. 776,841
4 Claims. (Cl. 279—4)

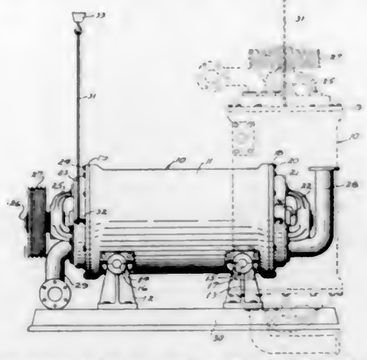


1. A hydraulic steady rest chuck having movable work engaging members and a piston and cylinder assembly for actuating the same, a remote source of fluid pressure and means for detachably connecting the said remote source of fluid pressure with the said piston and cylinder assembly, said means including a fitting formed in the said hydraulic steady rest chuck and a valve body for detachable connection therewith, the said fitting being in communication with the said piston and cylinder assembly and the said valve body being in communication with the said source of fluid pressure, valve means formed in the said fitting and secondary valve means formed in the said valve body, said secondary valve means including a reciprocally positioned plunger for actuating the first mentioned valve means, and a rotary valve element for controlling the said fluid pressure applied to the said fitting.

2,451,706
DRIVE CONTROL FOR AIR POWERED APPARATUS
Francis M. Aimes, Yonkers, N. Y.
Application November 20, 1943, Serial No. 511,163
5 Claims. (Cl. 121—38)

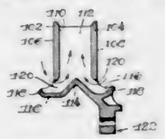
5. The combination with an apparatus employing a piston driven in a cylinder in the power stroke of the apparatus by air under high pressure introduced into one end of the cylinder, a storage chamber spaced with respect to said cylinder and of a capacity substantially equal to the capacity of said cylinder, means comprising a unitary rotatable valve movable into different positions for transmitting the air introduced into the first named end of the cylinder to said storage chamber in one position of said valve and then in another position of said valve to transmit air from the first named end of the cylinder into the other end of the cylinder and to said storage chamber to drive the piston in the opposite direction in said cylinder, and means including said valve in another position thereof for exhausting air from the cylinder to atmosphere in both movements of the piston in the cylinder.

2,451,707
VALVE ARRANGEMENT
Fullerton George Gordon Armstrong, Molescroft, Beverley, England
Application March 14, 1944, Serial No. 526,425
In Great Britain January 28, 1944
1 Claim. (Cl. 236—93)



An assembly of two oppositely acting pressure release valves for controlling the flow of fluid, comprising in combination a hollow casing internally divided into two parts by a valve seat defining a port and having a connection for fluid into each of said parts, a spindle having an abutment and a leak orifice defining surface thereon extending from one part of the casing into the other part thereof, a member having a valve head complementary to the valve seat aforesaid and a valve seat coaxially formed on the member with respect to said head with means to conduct fluid through the member to the valve seat thereof carried by and displaceable along the spindle, a thermal responsive tubular element having a coefficient of thermal expansion different from that of said casing and from that of said spindle surrounding the spindle and having its ends respectively in contact with said abutment and said member, an element displaceable along said spindle having a valve head complementary to the valve seat on said member and having a leak orifice defining surface coacting with the aforementioned leak orifice defining surface of the spindle to define a leak orifice between said casing parts at least whilst the said valve element is in contact with the said member, spring means carried by the spindle urging said valve element along the spindle towards the valve seat on said member whereby the pressure exerted by the said spring means on said valve element when said valve element and said member are in any given relative position is varied in accordance with temperature and likewise the leak orifice is varied in size in accordance with temperature whilst the said valve element is in contact with the said member, and a second spring means acting between the casing and the spindle urging the spindle together with the thermal responsive element and said member towards a position wherein said member makes contact with the valve seat in the casing whereby the pressure exerted by the second spring means on the spindle when the valve head of said member and the valve seat of the casing are in any given relative position is varied in accordance with temperature.

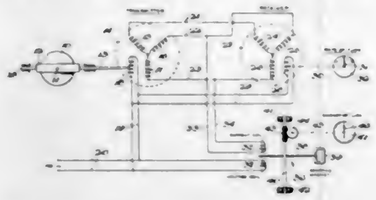
2,451,708
ROTARY REFINER
Edmund P. Arpin, Jr., Neenah, Wis.
Application December 16, 1944, Serial No. 568,513
7 Claims. (Cl. 92—26)



3. In a rotary refiner including a rotor, a shaft, a pair of heads fixed thereon, rods extending be-

tween said heads, and refining elements pivotally mounted from said rods for radially outward swinging movement, means for limiting such outward movement comprising a disc freely mounted on said shaft, a cleat secured to said disc for

adjustment substantially radially thereof and a shoe fixed to the free end of each of said elements and provided with an offset portion for engagement with said cleat to limit the radially outward movement of said free end of each element.



2,451,709
COOLED BRAKE ROTOR
Walter H. Baselt, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application January 1, 1944, Serial No. 516,677
15 Claims. (Cl. 188—264)

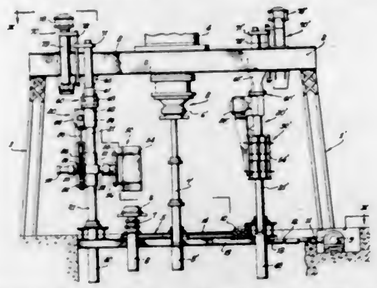
15. In a brake rotor, a brake ring comprising a plurality of spaced annular plates defining a fluid chamber therebetween, blades extending between said plates, and a hub member comprising a web V-shaped in radial cross-section connected to the radially inner extremity of said blades, said web being spaced from the inner perimeter of said ring to provide fluid inlet passages communicating with said chamber and being formed to direct fluid through said passages, said web extending axially outwardly of said ring at opposite sides thereof.

2,451,710
ORIENTATION SYSTEM
Paul F. Bechberger, Tenafly, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application November 3, 1944, Serial No. 561,809
2 Claims. (Cl. 33—204)

1. In combination, a two-degree-of-freedom gyroscope having a rotor mounted for spinning about one axis and for precession about a second axis perpendicular to the spin axis, electromagnetic means having a closed circuit and an energized movable part connected for operation by precession of said gyroscope and inductively coupled with said circuit whereby said circuit develops a counter force proportional to the rate of turn for opposing gyro precession and a current flows in said circuit proportional to the rate

of turn, and means coupled with said circuit for deriving the amount of turn from the rate of turn.

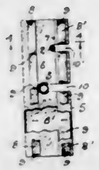
2,451,711
SAND PAIL
Samuel L. Beder, New York, N. Y., assignor of one-half to Irwin F. Mills Associates, New York, N. Y., a partnership
Application December 22, 1945, Serial No. 636,741
8 Claims. (Cl. 46—46)



1. A device as described consisting of a pail, frusto-conical in configuration, a dish-shaped sifter also frusto-conical in shape frictionally seated concealedly in said pail and having a central tubular hub, a plurality of sector-shaped sand molds nested around said hub and snugly received in said sifter, and a shovel lodged in said pail beneath said sifter and having a handle protruding into and through the tubular hub of said sifter above said pail.

2,451,712
ACROLEIN AND ETHYLENE BY PYROLYSIS OF DIHYDROPYRAN
John George Mackay Bremner and David Gwyn Jones, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 9, 1944, Serial No. 548,804. In Great Britain August 10, 1943
3 Claims. (Cl. 260—601)

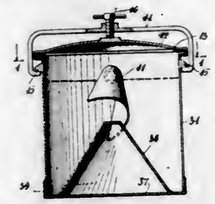
1. A process for simultaneously producing producing acrolein and ethylene which comprises flowing 2,3-dihydropyran through a heated reaction space at a temperature of 450° to 500° C. at a space velocity of about 0.5 volume of liquid dihydropyran per volume of reaction space per hour and cooling the effluent and separating acrolein from the resulting condensate.



2,451,713
SEWER PIPE OFF-BEARING AND FINISHING MACHINE
Davis Brown, Los Angeles, and John D. Rossier, Compton, Calif.; said Rossier assignor to said Brown
Application November 5, 1945, Serial No. 626,752
22 Claims. (Cl. 25—40)

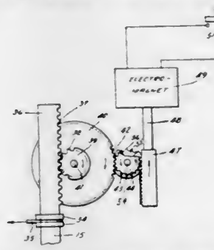
1. In a machine for handling unburned clay pipe, the combination of: a vertically movable assembly adapted to remove pipe from a forming device, said assembly including a clamp arranged to virtually encircle and grasp the pipe; means for raising and lowering the assembly; a releasable block for preventing premature upward movement of the assembly; an inverter for the clamp adapted to rotate about a horizontal axis; a turning mechanism for alternately moving the

assembly about a vertical axis from one to another of two predetermined positions; means for releasing the block and means actuating the releasing means when the clamp is actuated; an actuating mechanism for operating the turning mechanism and the inverter when the assembly is raised; and means actuated by turning of the assembly to a discharge position for sequentially lowering the assembly and opening the clamp.



2,451,714
ABSORBENT DRIP PAD FOR TOILET TANKS
Robert C. Buffham, Racine, Wis.
Application December 6, 1944, Serial No. 566,906
1 Claim. (Cl. 4—252)

As a new article of manufacture, a flush tank absorbent pad, comprising a flexible sheet folded upon itself to form a double thickness, a pair of spaced parallel longitudinally disposed waterproof adhesive strips secured to the upper face of the pad adjacent the edges of the same, the pad being provided with spaced slots interrupting one of the adhesive strips, the said strips being adapted to engage the bottom of a flush tank whereby minute air channels are formed between said pad and flush tank bottom.



2,451,715
INJECTOR APPARATUS
William E. Caldwell, New York, N. Y., assignor to Carman & Co., Inc., New York, N. Y., a corporation of New York
Application September 14, 1945, Serial No. 616,252
3 Claims. (Cl. 259—4)

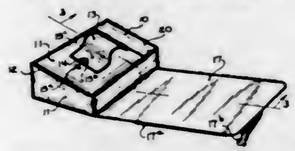
1. Injector apparatus comprising a casing, a tapered core projecting upwardly in the central portion of the casing from the lower end thereof, an inlet nozzle communicating with the interior of the casing and discharging in a tangential direction around the lower portion of the core, an outlet having greater capacity than the inlet nozzle formed in the casing above the core, and a baffle disposed around the upper portion of the outlet and extending downwardly around the sides and

front thereof to a point beneath the lowermost point of the outlet and terminating at its lower end in an opening facing in an opposite direction to the direction of discharge of the inlet nozzle.

2,451,716
MECHANISM FOR STUD WELDING GUNS AND THE LIKE
Albert M. Candy, La Grange, Ill., assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill., a corporation of Delaware
Application September 28, 1946, Serial No. 700,054
16 Claims. (Cl. 219—4)

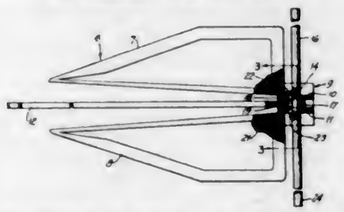
1. In stud welding apparatus wherein a stud to be welded to a work piece is held in a stud welding machine and is arranged to be withdrawn therefrom a short distance by longitudinal movement of a shaft in response to energization of motor means to strike a welding arc between the stud and the work piece, in combination, a driven rack secured to and movable with said shaft, a driving rack arranged to be operated by said motor means, and gear means for operatively interconnecting said racks, said driving rack having a plurality of sets of teeth thereon in staggered relation and the gear means for engaging the same having a plurality of sets of teeth in the same staggered relation and being normally out of engagement therewith and arranged to engage the same on energization of said motor means whereby said engagement takes place after a minimum of movement of said driving rack.

2,451,717
BENDING BALL ARBOR
Frank M. Check, Sr., Stratford, Conn.
Application June 21, 1946, Serial No. 678,430
4 Claims. (Cl. 153—63)



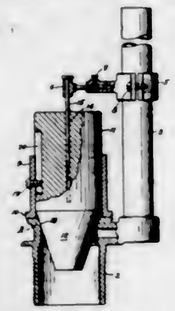
1. A bending ball arbor, comprising a plurality of balls of substantially toroidal configuration, said balls each being formed with an axial bore therethrough, a plurality of links received in said bores, pins extending through said links to connect adjacent links together, the free ends of said pins extending laterally outwardly of each

side of said links, and said bore of each ball being formed with a pair of diametrically-opposed longitudinally extending grooves, each of said



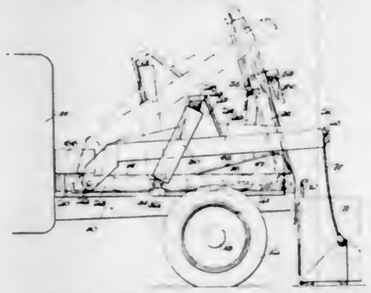
grooves being closed at one end, and said free ends of a pin being received in each pair of grooves.

2,451,718
BABY BOTTLE HOLDER
Beatrice M. Corrao, Brooklyn, N. Y.
Application August 10, 1945, Serial No. 610,032
3 Claims. (Cl. 248—105)



1. A practical baby nursing bottle holder comprising in combination: a wedge shaped cushion providing an inclined resting place for a baby bottle and a sleeve attached to a top wall of said cushion on one side and attachable to the same top wall on the other side by means of adjustable fastening means, said wedge shaped cushion having an elongated flexible film extension flap which can be put below an infant's body while said infant is nursing.

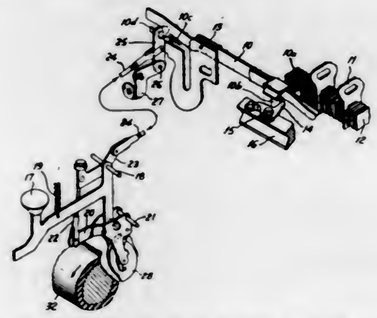
2,451,719
ANCHOR
Richard S. Danforth, Berkeley, Calif.
Application January 13, 1945, Serial No. 572,635
11 Claims. (Cl. 114—208)



1. An anchor of the twin fluke type comprising a shank having a forward and an after end, a pair of flukes, a crown at the after end of the flukes, a stock, said crown and said shank each having an aperture therein to pass said stock whereby the stock provides a pivotal support for the shank and flukes, said stock having a first projection and a second projection thereon spaced apart substantially the width of the crown, said first projection being of a larger size than said second projection, a radial slot formed along a side of said aperture in said crown and in said shank and of a size sufficient to pass only said second projection upon insertion of the stock into the crown and movement of the stock in the crown until said first projection engages a side of said crown and said second projection is substantially in engagement with the opposite side of said crown, said radial slot being at an angle in said crown to the plane of the flukes and at an angle to the longitudinal axis of said shank, each of said angles being substantially equal to one another and the sum of said angles being greater approximately than said fluke angle, as herein defined.

2,451,720
CENTERING DEVICE
Thomas J. Davis, San Francisco, Calif.
Application June 7, 1946, Serial No. 675,277
1 Claim. (Cl. 33—180)

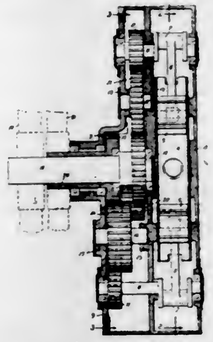
A device for centering an adjustable overhanging valve stem guide bearing with relation to a valve seat comprising a cylindrical sleeve having an outturned flange at one end forming a planar collar adapted to rest upon the valve seat, a centering plug having a cylindrical upper portion fitting within said sleeve and a frusto-conical lower portion adapted to engage the interior surface of the valve seat, said plug having an axial bore extending partially therethrough and opening at the upper end thereof, a centering pin axially withdrawable from said plug and adapted to be inserted in the adjustable guide bearing and into said axial bore, and means for limiting the rotational and axial movement of said plug relative to said sleeve.



2,451,721
TRANSPORTING AND DUMPING EQUIPMENT
George R. Dempster, Knoxville, Tenn.
Application February 19, 1945, Serial No. 578,714
6 Claims. (Cl. 214—77)

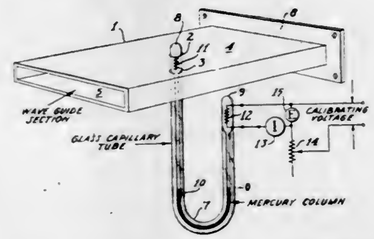
1. In apparatus of the character described, in combination with a base frame providing fore and aft extending tracks, a carriage mounted on said tracks, mechanism for moving said carriage forwardly and rearwardly on said tracks, skid frames mounted on said carriage, said skid frames

providing a pair of tracks, an extension frame mounted on said last named tracks and having an upper transverse member, ball guide members respectively projecting upwardly from said carriage between said last named tracks and projecting downwardly from said transverse member, means mounted on said carriage and operatively connected to said transverse member for moving said extension frame on said last named tracks, and means for raising and lowering a load with respect to said skid frames and extension frame in all positions of the latter.



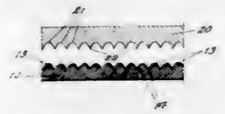
2,451,722
POWER-OPERATED SKIP TABULATING MECHANISM FOR TYPEWRITING MACHINES
Ronald D. Dodge, Poughkeepsie, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application February 24, 1945, Serial No. 579,556
4 Claims. (Cl. 197—177)

1. In combination with a carriage, tabulating mechanism including a column stop and a counter stop, one of which stops is movable into the path of the other, and including means to hold the movable stop in the path of the other during a tabulating movement of the carriage, said means being releasable by engagement of the column stop and counter stop; power mechanism for moving the movable stop into the path of the other, including a power device connected to the movable stop and held in an operated position by the movable stop while the carriage is being tabulated; and a key for controlling said power device, said power device including an element actuated by the key for causing a single operation of the power device and preventing a second operation thereof when said key is only momentarily depressed, and for permitting a second operation of the power device when said key is held depressed long enough to permit release and return of said power device from operated position following the said single operation thereof.



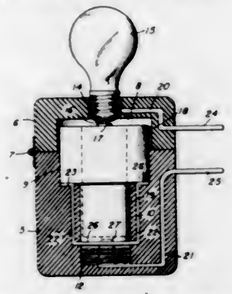
2,451,723
GEARING CONNECTING OPPOSITELY ROTATING SHAFTS
Harold Stanley Eagle, Strathfield, near Sydney, New South Wales, Australia
Application March 4, 1944, Serial No. 525,072
In Australia March 4, 1943
1 Claim. (Cl. 74—389)

In combination a pair of mutually contra rotatable power shafts, a pair of mutually contra rotatable driven shafts, means for transmitting rotation from the power shafts to the driven shafts and for synchronising the rotation of said power shafts, said transmitting means including a gear on each power shaft, an idler gear in mesh with each power shaft gear, a gear fixed upon each driven shaft, one driven shaft gear meshing



with one idler gear and the other driven shaft gear meshing with the other idler gear, and an overlapping idler gear in mesh with one of the first mentioned idler gears and with one of the driven shaft gears.

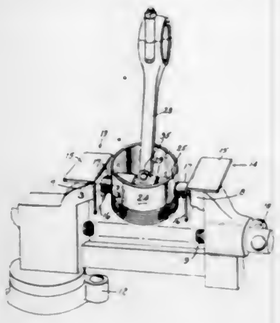
2,451,724
SUPER HIGH FREQUENCY WATTMETER
John Evans, Hightstown, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Original application August 31, 1943, Serial No. 500,605, now Patent No. 2,427,094, dated September 9, 1947. Divided and this application December 6, 1945, Serial No. 633,201
2 Claims. (Cl. 171—95)



1. Apparatus for measuring microwave energy in a waveguide transmission system comprising a first resistive element for translating said microwave energy into heat energy, capillary tube means including a first enlarged portion enclosing said element and extending within said waveguide system and including an indicating liquid column having its position determined by gas pressure responsive to said heat energy, a second resistive element enclosed within a second enlarged portion of said tube external of said waveguide system, an adjustable source of electrical energy for energizing said second resistive element to oppose changes in position of said liquid column by gas pressure responsive to the heat generated in said second element, and calibrated means for adjusting said source to provide comparative indications by the position of said liquid column of the energy applied to each of said resistive elements.

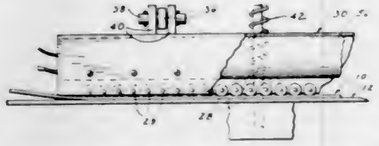
2,451,725
METHOD OF MAKING A STRUCTURAL UNIT
Albert W. Franklin, New York, N. Y., assignor of one-half to Jacob Poster, Brightwaters, N. Y.
Original application March 24, 1945, Serial No. 584,523. Divided and this application July 28, 1945, Serial No. 607,605
1 Claim. (Cl. 29—155.5)

A method of producing an article of manufacture from a non-metallic base sheet and a sheet of metal superimposed thereon consisting of the single operational step of applying a force to shear the metal sheet along a plurality of parallel lines to form a plurality of parallel strips, the shearing action cutting into the base sheet, and sequentially to the completion of the shearing action to bend the strips to form them into non-planar cross sectional shape whereby they are spaced, the planar width of said strips being equal to the distance between the center lines of any adjacent pair of strips.



2,451,726
DRY CELL DEPOLARIZING AND RECONDITIONING DEVICE
Donald R. Fry, East Greenbush, N. Y.
Application January 27, 1948, Serial No. 4,687
6 Claims. (Cl. 320—4)

6. In a dry cell depolarizer and reconditioner device, a closable container with a movable lid both provided with cavities, adapted to accommodate dry cells to be reconditioned, contact means in said lid and container, adapted to come into electric contact with the cell electrodes upon closure of the lid, and contact making connector elements on said closable container and movable lid, adapted to be brought into a parallel relation and to be inserted into a standard connector upon closure of the container.

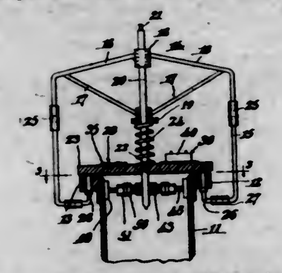


2,451,727
PISTON PIN HOLDER ATTACHABLE TO CONVENTIONAL VISE JAWS
Charles Richard Garland, Hollywood, Calif.
Application June 16, 1947, Serial No. 754,905
2 Claims. (Cl. 81—38)

1. Piston mounting means comprising similar members adapted to be mounted on the jaws of a vice, each member comprising an element having a horizontally disposed plate for engagement with the top of a vise jaw and an integral vertically disposed plate for engagement with the clamping face of said vise jaw, the latter plate of each element having a hole therethrough, a cylindrical element having a reduced neck shorter than the thickness of the vertical plates and positioned in the hole of each plate, each cylindrical

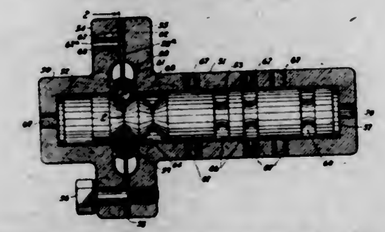
element having a cylindrical body extending from the respective vertical plate, and a reduced conical end projecting from the cylindrical body and defining an annular shoulder therebetween, said conical ends, in operative position being opposed for end engagement with the wrist pin of a piston.

2,451,728
HEAT-SEALING APPARATUS
Arthur A. Gardner and John G. MacCormack, New York, N. Y., assignors to Breslee Mfg. Company, New York, N. Y., a copartnership
Application April 17, 1945, Serial No. 588,826
1 Claim. (Cl. 154—42)



In heat-sealing apparatus, upper and lower endless movable bands having adjacent and confronting longitudinally extending companion runs between which the heat sealable material is engaged during the travel of said bands, a housing positioned in the space between the upper and lower runs of the upper band, a bracket mounted for pivotal movement and pivotally connected to said housing, a plurality of rollers carried by said housing and engaging the lower run of said upper band, a heater in said housing for heating said rollers whereby to heat said rollers for heating said lower run of said upper band, and spring means connected to said housing for pressing the rollers against said lower run of the upper band.

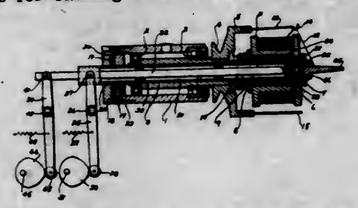
2,451,729
FLANGE FACING TOOL
Ulrick K. Gardner, Montgomery, Ala.
Application October 19, 1944, Serial No. 559,465
4 Claims. (Cl. 51—241)



1. In a flange facing tool, a bracket, extensible arms projecting from said bracket, longitudinally extensible claw members at the ends of said arms, bearings centrally aligned in said bracket and disposed parallel with said arms, a shaft rotatably mounted in said bearings, a plate secured

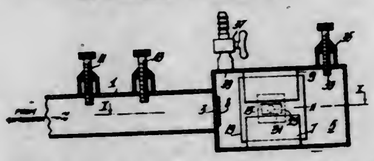
to said shaft, dressing tools carried by said plate, and an expansion spring encircling said shaft

and interposed between said plate and one of said bearings.



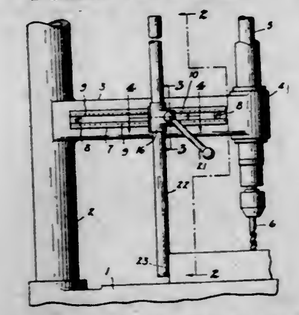
2,451,730
DETENT MEANS
Harry R. Greenlee, Indianapolis, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a corporation of Delaware
Original application May 15, 1944, Serial No. 535,587. Divided and this application May 2, 1946, Serial No. 666,664
14 Claims. (Cl. 74—527)

1. A shift mechanism comprising a housing having a bore therein and an annular recess opening into said bore, a shift rod mounted for sliding movement in the bore of said housing, said rod having an annular groove and an annular coil spring disposed about said rod and confined in the recess of said housing against movement axially of said rod, said annular coil spring being of a diameter to extend normally into a groove of said rod to prevent normally sliding movement of the latter, and diaphragm means in the recess of said housing for applying force to said annular coil spring.



2,451,731
STRAND COILING AND WINDING APPARATUS
Daniel E. Hennessy, Petersham, Mass., assignor to Springfield Wire and Tinsel Company, West Springfield, Mass., a corporation of Massachusetts
Application November 19, 1945, Serial No. 629,324
4 Claims. (Cl. 140—71)

1. In a strand coiling apparatus of the type comprising a non-rotating polygonal tapered mandrel having an outwardly curved heel, a wire-supplying spool mounted for rotation about the axis of the mandrel, a flyer eye rotatable about the axis of the mandrel, guiding the wire from the spool to the mandrel and of sufficiently small size to act as a curling edge, and means for keeping the wire taut; a sleeve surrounding the mandrel between the mandrel and the spool and having a free end positioned in the path of the wire between the flyer eye and the mandrel to direct the wire to the heel of the mandrel, and means for causing relative axial movement be-



tween the sleeve and the mandrel during rotation of the flyer eye to control the place of engagement of the wire with the heel of the mandrel.

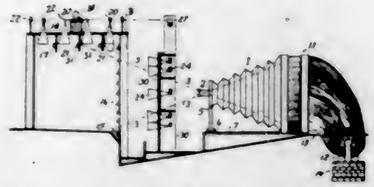
2,451,732
MICROWAVE-ABSORPTIVE GAS LIGHT VALVE
William D. Hershberger, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 15, 1944, Serial No. 540,428
19 Claims. (Cl. 88—61)

1. A radiant energy variable prismatic device comprising a conductive chamber for enclosing a microwave energy absorptive gas, means for introducing microwave energy into said chamber to establish therein a microwave field to excite molecular resonance in said gas for varying the radiant energy refractive and density properties of said gas in response to energy absorbed by said gas, and means for directing a beam of radiant energy through said gas in a direction transverse to the microwave electric field in said gas to refract said beam as a function of the intensity of said field.

2,451,733
WORK POSITIONER
John Hochwarder, Cleveland, Ohio
Application November 29, 1945, Serial No. 631,534
1 Claim. (Cl. 248—121)

A combination with a vertical standard, an arm extending horizontally from the standard having a vertical spindle bearing portion at its

outer end, said arm having a longitudinal undercut channel in a side face thereof, an adjusting device comprising a holder having a rigid base portion overlying said channel and grooved to slidably receive said arm, said holder having an integral portion extending outwardly from the base and provided with a vertical opening through it adjacent its outer end and a vertical slot extending the length of the opening at one side to provide a clamping flange normally spaced from the body of the holder, a head slidable in said channel, a bolt attached to the head and extending through said base, outwardly extending portion and clamping flange, a work positioning member having a stem slidable in said opening, and a nut threaded on the outer end of the bolt and engaging said clamping flange.



2,451,734

METHOD OF AND MEANS FOR THE TRANSMISSION AND REPRODUCTION OF OPTICAL AND ACOUSTICAL EFFECTS

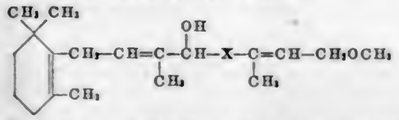
Edwin Hopkins, New York, N. Y.

Original application January 26, 1922, Serial No. 531,990, now Patent No. 2,056,967, October 13, 1936. Divided and this application May 26, 1941, Serial No. 395,264

3 Claims. (Cl. 178—5.6)

3. In an apparatus of the class described for the transmission and reproduction of optical effects a whirling cell bank as set forth in claim 2 adapted to rotate, and a motor for producing such rotation fitted with means for electrically maintaining synchronism in another motor adapted to operate means for reproducing optical effects from electrical variations originating in optical effects.

2,451,735



POLYENES AND PROCESS FOR THE MANUFACTURE THEREOF

Otto Isler, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application October 16, 1946, Serial No. 703,483. In Switzerland October 18, 1945

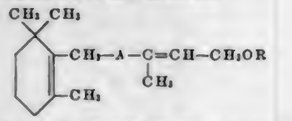
12 Claims. (Cl. 260—611)

1. The compound of the formula

wherein X is selected from the group consisting of the radicals —CH=CH— and —C≡C—.

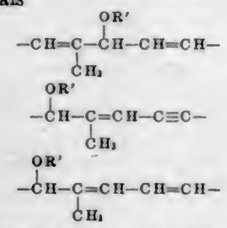
12. A process which comprises hydrogenating 1-alkoxy-3,7-dimethyl-6- hydroxy - 9 - trimethylcyclohexenyl-nonadiene-(2,7)-yne-4 to the corresponding triene-(2,4,7) and treating said triene with a minor amount of iodine to effect molecular rearrangement and dehydration to the corresponding ether of vitamin A.

2,451,736



POLYENES AND PROCESS FOR THE MANUFACTURE THEREOF

Otto Isler, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey



No Drawing. Application October 16, 1946, Serial No. 703,484. In Switzerland October 18, 1945

10 Claims. (Cl. 260—611)

1. A compound of the formula

wherein A is selected from the group consisting of the radicals

and R is selected from the group consisting of alkyl, aryl and aralkyl radicals and wherein R' is a member of the group consisting of acetyl and benzoyl.

5. A process of treating an ether of 1-hydroxy-3, 7 - dimethyl-6-hydroxy-9-trimethyl-cyclohexenyl-nonadiene-(2, 7)-yne-(4) to produce a vitamin A ether, which process comprises a partial hydrogenation to convert the triple bond to a double bond and an allyl rearrangement effected by the action of an agent selected from the group consisting of halides and anhydrides of acetic, benzoic and phthalic acids, these two steps being employed successively.

2,451,737

PROCESS FOR THE MANUFACTURE OF PENTAENES

Otto Isler, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application February 10, 1947, Serial No. 727,733. In Switzerland October 18, 1945

6 Claims. (Cl. 260—611)

1. A process which comprises treating a member secured from the group consisting of alkyl, aryl and aralkyl 1 - ethers of 1 - hydroxy - 3,7-dimethyl - 6-hydroxy-9-trimethyl-cyclohexenyl-nonadiene-(2,7)-yne-(4) with a minor amount of iodine to effect molecular rearrangement and dehydration to the corresponding 1-ether of 1-hydroxy-3,7-dimethyl-9-trimethyl-cyclohexenyl-nonatriene-(2,6,8)-yne-(4).

2,451,738

PROCESS FOR THE MANUFACTURE OF PENTAENES

Otto Isler, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application February 10, 1947, Serial No. 727,734. In Switzerland October 18, 1945

9 Claims. (Cl. 260—611)

1. A process of treating a member selected from the group consisting of alkyl, aryl, and aralkyl 1-ethers of 1-hydroxy- 3,7 -dimethyl-6-hydroxy-9-trimethyl - cyclohexenyl - nonadiene - (2,7)-yne-(4) which comprises a partial hydrogenation to convert the triple bond to a double bond and an allyl rearrangement effected by means of a carboxylic acid selected from the group consisting of formic acid, glycolic acid, phthalic acid, trichloracetic acid, malonic acid, oxalic acid and salicylic acid, these two steps being employed successively.

2,451,739

PROCESS FOR THE MANUFACTURE OF PENTAENES

Otto Isler, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application February 18, 1947, Serial No. 729,399. In Switzerland October 18, 1945

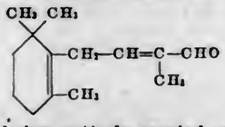
Section 1, Public Law 690, August 8, 1946

Patent expires October 18, 1965

21 Claims. (Cl. 260—617)

19. Process which successively comprises the steps of hydrogenating and rearranging and dehydrating a compound from the group consisting of 1-hydroxy-3,7-dimethyl-6-hydroxy-9-[2',6',6'-trimethyl - cyclohexene - (1') - yl] - nonadiene - (2,7)-yne-(4) and 1-acetoxy-3,7 - dimethyl - 6 - hydroxy-9-[2',6',6'-trimethyl - cyclohexene - (1')-yl]-nonadiene-(2,7)-yne-(4).

2,451,740



PROCESS FOR THE MANUFACTURE OF AN ALDEHYDE

Herbert Lindlar, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

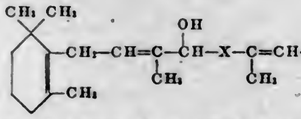
No Drawing. Application June 7, 1947, Serial No. 753,279. In Switzerland December 24, 1946

13 Claims. (Cl. 260—598)

2. A process which comprises condensing β-ionone with a halogeno acetic ester and reacting the condensation product with an alkaline agent to produce a compound of the formula:

said process being entirely carried out at a temperature not in excess of 50° C.

2,451,741



PROCESS FOR THE MANUFACTURE OF UNSATURATED COMPOUNDS

Walter Huber, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

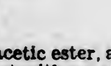
No Drawing. Application June 13, 1947, Serial No. 754,594. In Switzerland December 31, 1946

7 Claims. (Cl. 260—611)

1. Process for the manufacture of unsaturated compounds, comprising reacting a compound of the formula

wherein X stands for a radical selected from the group consisting of —CH=CH— and —C≡C—, and R represents a low alkyl radical, with an iodo-compound easily splitting off iodine in order to bring about allyl rearrangement and dehydration.

2,451,742



PROCESS FOR THE MANUFACTURE OF ALDEHYDES

Herbert Lindlar, Basel, Switzerland, assignor to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey

No Drawing. Application August 13, 1948, Serial No. 44,223. In Switzerland October 14, 1947

1 Claim. (Cl. 260—598)

Process which comprises condensing an ionone, other than β-ionone, and having the characteristic side chain

(lower alkyl) with a halogeno acetic ester, and reacting the condensation product with an alkaline agent to produce a corresponding butene-(2)-al-(1) having the characteristic corresponding side chain —CH_2—CH=C(lower alkyl)—CHO, said process being entirely carried out at a temperature not in excess of 50° C.

2,451,743

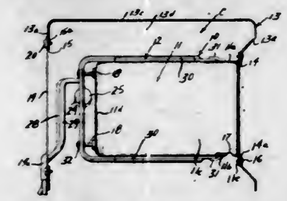
POWDERED POLYTHENE

Kenneth Barry Jarrett, Welwyn Garden City, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application August 1, 1944, Serial No. 547,645. In Great Britain September 17, 1943

6 Claims. (Cl. 260—94)

1. A process for embrittling polythene, having initially a melt viscosity of about 330 poises at 190° C., which comprises admixing about 100 parts by weight of the said polythene with about 10 parts by weight of methylated spirits, thereafter mechanically distintegrating the resultant mixture in an enclosed space, and drying the resultant product.

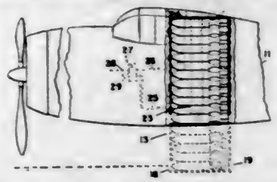


2,451,744

REFRIGERATOR LINER EVAPORATOR

Bernard C. Johnson, Mundelein, Ill., assignor to Houdaille-Hershey Corporation, Detroit, Mich., a corporation of Michigan

Application June 10, 1946, Serial No. 675,582

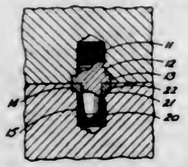


6 Claims. (Cl. 62—126)

1. In combination, a cabinet having front and rear walls with openings bounded by marginal flanges, a canister type liner in said cabinet having an open front with an outturned mounting flange therearound mating with the marginal flange around the opening in the front wall of the cabinet, means securing the mounting flange of the liner with said marginal flange around the opening in the front wall of the cabinet, a heat exchange unit insertable through the opening in the rear wall of the cabinet in telescoped

snug engagement on said liner, tubes secured to said unit for circulating fluid therethrough, and an embossed removable cover overlying the marginal flange on the rear wall of the cabinet for closing the opening in said rear wall and receiving said tubes through the embossed portion thereof.

2,451,745
ROCKET LAUNCHING DEVICE
Carl H. Jolly, United States Navy
Application June 13, 1945, Serial No. 599,294
1 Claim. (Cl. 89—1.7)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

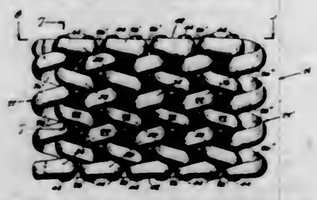


A missile launching device for airplanes comprising an open bay in an airplane, a vertically movable rack in said bay, said rack comprising a plurality of containers spaced from each other, each container being rectangular in cross-section and rigidly mounted on a common base plate, a plurality of missiles vertically positioned in each of said containers, an opening in each of the forward and aft walls of said containers adjacent said base plate, a piston rod rigidly mounted on said base plate of such length to house said rack within the airplane in one position and to place said openings in said rack beyond the propeller arch in line of travel parallel to the airplane thrust line in a second position, a cylinder in axial alignment with said piston rod, a piston fixed to the free end of said piston rod and slidably mounted in said cylinder, an opening in each end of said cylinder, conduit means for placing one of said openings in communication with a source of fluid under pressure and the other of said openings in a discharge outlet, and reversing valve means operably connected to said conduit means for reversing the flow of fluid through said openings.

2,451,746
FEVER THERMOMETER
Kathryn M. Keller, Elizabeth H. Keller, and Anne H. Keller, Chicago, Ill.
Application November 26, 1945, Serial No. 630,952
1 Claim. (Cl. 73—373)

A fever thermometer comprising a glass tube containing a thermosensitive fluid and a bored transverse member of glass for rotating the glass tube, the surface of the bore of which intimately engages the entire circumferential surface of the tube adjacent an end thereof, said tube and transverse member being permanently joined at such engaging surface.

2,451,747
DOWELED STRUCTURE
Ernest T. Kindt, Lakewood, Ohio
Application March 23, 1945, Serial No. 584,396
2 Claims. (Cl. 22—110)



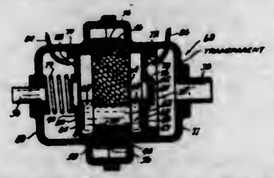
1. In combination, two parts of a divided pattern or the like and two elements of a dowel pin set, the elements comprising a bushing and a pin engaging within the bushing, each element being fitted in one of the parts, each element being formed with a shoulder, a pilot bearing adjacent thereto, and a threaded terminal portion for retention of the element in the part, the part being formed with a bore dimensioned to fit closely the pilot bearing and an abutment for the shoulder, and with threads dimensioned to receive the terminal portion with sufficient clearance to avoid interference by the terminal portion with the alignment of the element in the part.

2,451,748
OXIDATION INHIBITOR FOR FATS AND OILS
Henry R. Kraybill and Buell W. Beadle, Chicago, Ill., assignors, by mesne assignments, to A. W. Brickman, Victor Conquest, Frank J. Madden, Wrisley B. Oleson, and Emery T. Filbey, all of Chicago, Ill., as trustees for the benefit of American Meat Institute Foundation
No Drawing. Application June 20, 1945, Serial No. 600,647
6 Claims. (Cl. 99—163)

1. A material normally subject to the deteriorating effect of oxidative rancidity due to its content of a compound of the group consisting of fatty acids and glycerides of fatty acids containing a fractional percentage of NDGA ranging from .001% to .01% and phosphoric acid in a quantity not exceeding .02%.

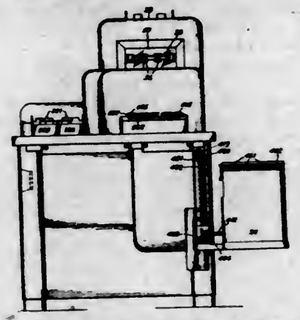
2,451,749
BRACELET OR THE LIKE AND METHOD OF MAKING THE SAME
Leslie Kreisler, Teaneck, N. J., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J., a corporation
Application May 31, 1946, Serial No. 673,691
12 Claims. (Cl. 63—4)

1. A flexible bracelet band, comprising a series of alternate, oppositely directed spiral elements



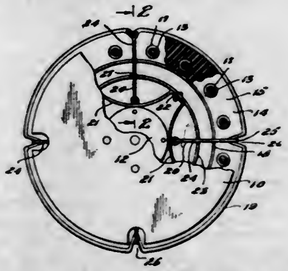
arranged side-by-side with the convolutions of adjacent elements in meshed relation, the intermeshed convolutions of adjacent elements being at each of their intersections mutually deformed into mutual limited interlocked relation to prevent substantial relative movement between said adjacent elements, other than restricted relative pivotal movment therebetween about axes parallel to their longitudinal axes, and means extending through the intermeshed convolutions of adjacent elements, respectively, said means positively holding adjacent elements in said meshed and relatively pivotal relation.

2,451,750
BRACELET AND METHOD OF MAKING SAME
Leslie Kreisler, Teaneck, and John G. Siska, Cresskill, N. J., assignors to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J., a corporation of New Jersey
Application August 23, 1946, Serial No. 692,617
6 Claims. (Cl. 63—4)



1. A bracelet band, comprising a series of alternate, oppositely directed spiral elements arranged side by side with the convolutions of adjacent elements in meshed relation, the intermeshed convolutions of adjacent elements being at each of their intersections mutually deformed into mutual interlocked relation to prevent substantial relative movement between said adjacent elements, said interlock between the intermeshed convolutions of adjacent elements solely holding the latter against separation.

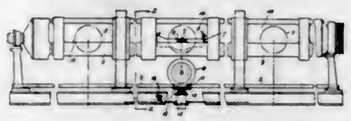
2,451,751
SWITCH DEVICE
Carl G. Kronmiller, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application May 19, 1944, Serial No. 536,234
5 Claims. (Cl. 200—152)



1. In a switch device of the class described, a transparent casing, and a cylindrical mercury switch which is operative by rotation on its longitudinal cylindrical axis positioned within said casing, biasing means within said casing and abutting said mercury switch to cause said switch to move in unison with said casing in response to movement of said casing, a tool receiving portion on said mercury switch to provide means for manual rotation of said switch independent of said casing, said casing having an aperture adjacent said tool receiving portion to provide access for insertion of a tool, the transparency of said casing providing for visual observation of the position of said switch with respect to said casing during the period of manual rotation whereby said switch may be manually rotated to an operative position without respect to the position of said casing.

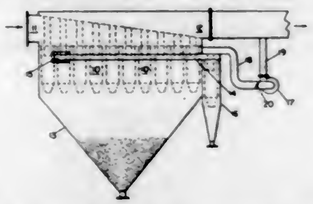
2,451,752
RECORD PUNCHING MACHINE
Clair D. Lake, Binghamton, and Francis E. Hamilton, Endicott, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application August 24, 1946, Serial No. 692,758
56 Claims. (Cl. 164—113)

1. In a card punching machine, the combination of a magazine for holding a supply of cards, means for successively feeding said cards to a visible station with written data on each card exposed and held to the view of the operator, and thereafter to a punching station, a storage unit including columnar arranged data storage setup means, a keyboard comprising keys operated by the operator according to data written on the card, means controlled by said keyboard to set up said data setup storage means in columnar succession, for representing said written data, card punches of a punching means at said card punching station, and means controlled by said storage unit effective upon completion of the setting up of the data corresponding to matter written on a card to select said punches to punch a data representation on the card in the punching station corresponding to its written data.



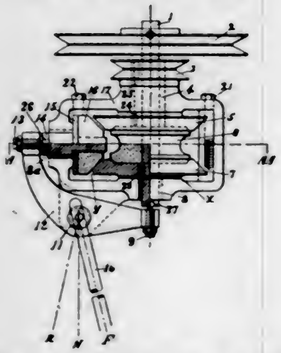
2,451,753
ABRASIVE WHEEL WITH FLEXIBLE RESILIENT RIM
Miles E. Landau, Brooklyn, N. Y.
Application October 15, 1947, Serial No. 780,025
6 Claims. (Cl. 51—194)

3. In an abrasive wheel, a hub having side plates disposed in spaced relation to provide a



circumferentially extending space therebetween, a flexible resilient tread of annular formation mounted between the side plates with the outer peripheral portion thereof protruding beyond the peripheries of said plates, said side plates having arcuately spaced trunnions extending through apertures in the tread for loosely supporting the tread thereon between the said plates and permitting radial movement of the tread, and an annular spring band freely arranged between said side plates in surrounding relation with the hub on which the inner periphery of the tread is resiliently supported.

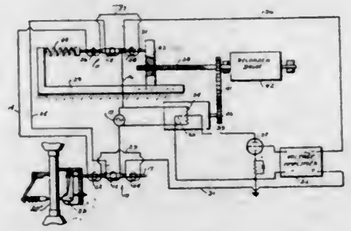
2,451,754
LOADING AND UNLOADING DEVICE FOR WIRE STRANDING, ROPE, AND CABLE MAKING MACHINES
Allin Larmuth and Leonard James Larmuth, Worsley, England
Application November 14, 1945, Serial No. 628,424
In Great Britain December 13, 1944
4 Claims. (Cl. 57—54)



1. A wire stranding, or rope, or cable, making machine, comprising a rotatable tubular frame, bearings supporting said frame, means for rotating said frame, bobbin supports in said frame, a track below said frame on which bobbins can be run to positions, said frame having openings below said bobbin supports to allow access from below to said bobbin supports, transverse members across said track below each of said bobbin supports, platforms carrying said transverse members, a power lifting device below said platform and supporting it, by which bobbins on said transverse members can be raised to, and lowered from, said bobbin supports in said frame.

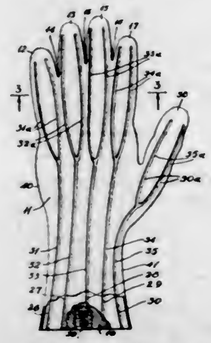
2,451,755
DUST COLLECTOR
Leonard Lee, Glasgow, Scotland, assignor to James Howden & Company Limited, Glasgow, Scotland, a British company
Application August 7, 1947, Serial No. 766,943
In Great Britain November 4, 1946
3 Claims. (Cl. 183—83)

1. In a multi-cell dust collector having a structure including a hopper for the reception of and collection of separated dust, a plurality of dust separator cells within the structure and mounted for the discharge of separated dust directly into the hopper, a dusty gas inlet conduit for supplying dusty gas to the structure and arranged to distribute dusty gas to the separator cells, a clean gas outlet conduit connected into said structure and arranged to receive clean gas from each of the separator cells, an independent dust separator exterior to said structure, at least one conduit between said independent separator and a point of said structure adjacent to the position of the inlet conduit and arranged to receive gas discharged from the separator cells into the hopper from a position above the collected dust in the hopper, a gas circulating fan, and conduits connecting the fan with said independent separator and with the clean gas outlet conduit, the fan and the conduits associated therewith being arranged to draw gas from the hopper to the independent separator and to draw clean gas from the independent separator and discharge it into the clean gas outlet conduit.



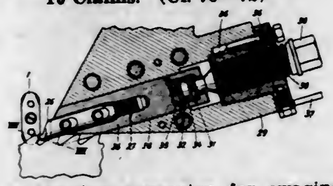
2,451,756
SPINDLE REVERSING DEVICE FOR DRILL PRESSES
Paul M. Lloyd, Glendale, Calif.
Application December 28, 1945, Serial No. 637,704
1 Claim. (Cl. 74—265)

In a spindle-reversing device, the combination of a housing, driving and driven shafts co-axially aligned and journaled in said housing, two oppositely disposed beveled disc elements upon said driving shaft, one mounted securely to the driving shaft, the other attached to a driven sleeve member rotatable co-axially with said driving shaft and extending along said driving shaft through a housing bearing to receive a securely attached sheave, a beveled composition friction member interposed between said beveled disc elements. a second beveled composition member being mounted securely on a free running shaft within a third bearing in said housing at right angles to driving shaft, said beveled member and free running shaft being free longitudinally to engage with beveled disc elements when pressure is exerted on said free running shaft parallel to the axis of said third bearing, thereby, actuating said beveled disc elements in contrary rotation, and means applied manually and variably upon the driving shaft to effect the engagement and disengagement of said beveled friction member with disc elements.



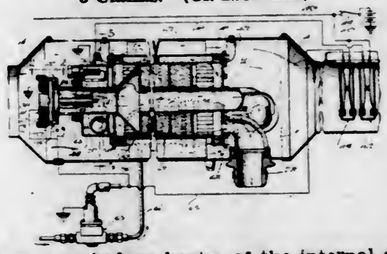
2,451,757
MOTION RECORDING APPARATUS
William D. Macgeorge, Drexel Hill, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application July 18, 1944, Serial No. 545,498
3 Claims. (Cl. 318—28)

1. An electrical follow-up system comprising a network including a first and a second "microformer," each "microformer" comprising a primary coil and a pair of relatively oppositely wound secondary coils juxtaposed to relatively spaced by and in axial alignment with the primary coil, and a core common to and relatively movable axially of the coils of each "microformer," the network including means joining the respective secondary coils of both "microformers" in series, means in the network joining the respective primary coils in series with a source of alternating current so that the current through both primary coils is identical, a multiple phase motor having



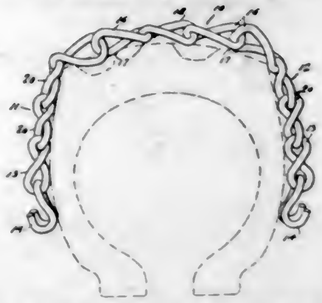
one of its winding continuously connected to and energized by current from the same source which supplies said primaries and other of its windings having a continuous connection to said secondaries so as to be responsive to an unbalance created by movement of the core of one "microformer" toward unbalance of the network, means for axially moving a core of one "microformer" to establish such unbalance, and means operably coupling said motor and the core of the other of said "microformers" to move said last mentioned core proportionally to the movement of the first mentioned core toward balance of the network.

2,451,758
RUBBER GLOVE
Henry Maim, New York, N. Y.
Application October 30, 1945, Serial No. 625,520
7 Claims. (Cl. 2—168)



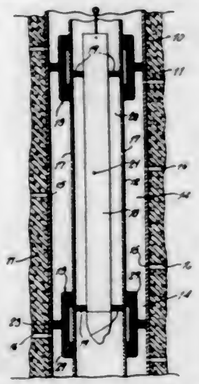
1. A rubber glove comprising wrist, finger and thumb portions, the finger portions of the glove having short ends and being joined by web portions forming, within the glove between adjacent fingers, inwardly of the finger tips, air spaces, and means comprising inwardly extending ribs opening through the edge of the wrist portion and extending to the short finger ends to circulate air to said spaces when the glove is on the hand.

2,451,759
SWAGING APPARATUS
Gottfried Maurer, Zurich, Switzerland, assignor to A. Müller A.-G. Brugg, Brugg, Switzerland, a joint-stock company of Switzerland
Application March 1, 1944, Serial No. 524,607
In Switzerland January 19, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires January 19, 1963
10 Claims. (Cl. 76—72)



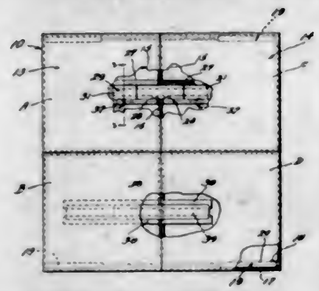
3. In a swaging apparatus for swaging saw teeth, a frame, a mould comprising two individual side sections and an individual back section cooperating with said side sections, the faces of said side sections lying in front of each other having the form of the side faces of the teeth to be swaged, said back section having a face of the form of the back of the teeth to be swaged in order to form a rest support for said back, a lever mounted on said frame carrying one of said side sections, a driving means in cooperation with said lever for approaching the side section on said lever to the other side section for clamping fast a tooth between said side sections, and a stamp for swaging the front face of the teeth, slidably mounted on said frame to carry out rectilinear movement and organised to be moved toward and away from the open side of said mould.

2,451,760
AIRCRAFT HEATER WITH COMBUSTION AIR CONTROL
Henry J. De N. McCollum, Chicago, Ill.; Thelma McCollum, executrix of said Henry J. De N. McCollum, deceased, assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application August 2, 1943, Serial No. 496,975
3 Claims. (Cl. 126—116)



1. In an airplane heater of the internal combustion type having a combustion chamber and a heat exchanger, the combination of unitary blower means for supplying ventilating air to the heat exchanger and additionally to supply combustion air to the combustion chamber, a valve normally preventing flow of the combustion air, and remote control means to open said valve to permit said unitary blower means simultaneously to supply ventilating and combustion air, said last named means including a thermostat responsive to the temperature of the heater and operative to cause closure of the valve independently of the continued operation of said blower means.

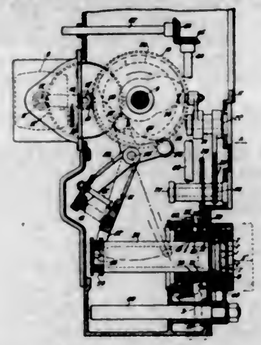
2,451,761
ANTISKID CROSS CHAIN
William A. Miller, Buffalo, and Robert E. Gerspacher, Kenmore, N. Y., assignors to Columbus McKinnon Chain Corporation, Tonawanda, N. Y., a corporation of New York
Application October 7, 1943, Serial No. 505,344
3 Claims. (Cl. 152—243)



2. In combination with a vehicle tire, a cross chain comprising links defining a traction section for engagement with the tread portion of the tire, an anchoring section at each end of said cross chain, and a tilt limiting section connecting said traction section with each of said anchoring sections and lying against a side wall portion of the tire, each link of said traction section having a relatively wide and twisted form, said traction section normally lying in substantially flat contact with the tread of the tire and movable to tilt about the longitudinal axis of the chain toward a substantially radially projecting attitude relative to the tire tread thereby increasing the cleat effect thereof while twisting the tilt limiting and anchoring sections to remove slack from the chain until further tilting movement of said traction section will be resisted.

2,451,762
PACKING RING
Charles V. Millikan, Tulsa, Okla., assignor to Geophysical Research Corporation, New York, N. Y., a corporation of New Jersey
Application July 4, 1945, Serial No. 603,127
6 Claims. (Cl. 166—10)

1. A packing ring comprising a flexible resilient sleeve having an integral flexible resilient peripheral flange, an annular recess in the inner surface of said sleeve, passageways leading to said recess from the exterior surface of said sleeve at either side of said flange, and means for preventing fluid flow from said recess through said passageways while permitting flow in the reverse direction.



2,451,763
FOLDING TABLE WITH SECTIONAL TOP
Michael J. Misko, Inglewood, Calif.
Application January 25, 1946, Serial No. 643,393
6 Claims. (Cl. 311—89)

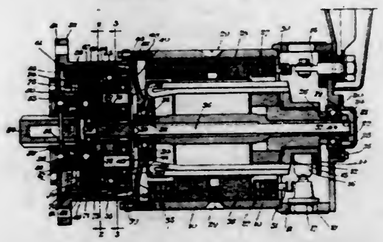
1. A folding table comprising a top divided along two right angularly related lines to form four sections, hinge means disposed on one of said lines and coupling the sections together in pairs to form the top in two portions, the sections of one portion being foldable against the sections of the other portion along one of said lines, a pair of opposed guides carried by adjacent sections of the two portions and alined transversely of the other one of the two division lines, a hinge bar slidably supported between the said guides and across the division between the two portions and comprising a long center part and end parts each hingedly connected to an end of the center part, a sliding coupling between opposite longitudinal edges of each end part of the hinge bar and a pair of guides of one section whereby the center part of the hinge bar may be disposed in a position between the two table portions upon separation of one portion from the other, means for locking the end parts of the hinge bar to the guides when the two table portions are moved together on the hinge bar, means for establishing a rigid connection between the other two sections of the two table portions when the portions and sections are in a common plane, and a leg carried by each of said sections.

2,451,764
FUSE SETTING APPARATUS
Desmond Walter Molins, Valentine Pearce Harvey, James Arthur Mason, and Gordon Francis Wellington Powell, Deptford, London S. E. 8, England, assignors to Molins Machine Company Limited, Deptford, London S. E. 8, England
Application November 24, 1942, Serial No. 466,808
In Great Britain June 18, 1941
14 Claims. (Cl. 89—6)

1. Fuze-setting apparatus comprising the combination of a rotatable fuze-engaging element mounted for axial reciprocation into and out of setting engagement with the movable fuze-element of a round, a fixed stop whose position determines the beginning of rotational setting movement of the fuze-engaging element, an adjustable control member, a stop which is carried by said adjustable control member and whose momentary position determines the end of rotational setting movement of the fuze-engaging element, rotatable driving means, means operable to stop said driving means after the latter has rotated a predetermined constant amount, means operated by said driving means for reciprocating the fuze-engaging element, and means driven by the driving means to rotate the fuze-engaging element to set the fuze after the

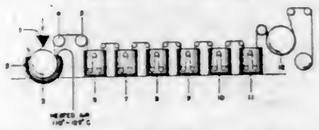
fuze-engaging element has reached the end of its outward stroke and before the commencement of its return stroke, said driven means comprising a clutch device having a movable member adapted to engage the stop carried by the adjustable control member and to be moved thereby to break the rotational drive to the fuze-engaging element.

2,451,765
FILLER REINFORCING MEANS AND GUARD FOR MECHANICAL PENCILS
John L. Morton, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 5, 1946, Serial No. 701,501
4 Claims. (Cl. 120—9)



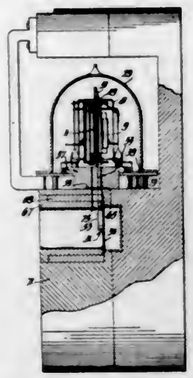
1. In a mechanical pencil of the character described, a ferrule having a central bore extending therethrough, a crayon stick disposed in said bore, means for feeding said stick to project the same from or to withdraw the same into said ferrule, a reinforcing sleeve slidably disposed in said bore and surrounding said stick and movable from an advanced position wherein a relatively short length thereof projects beyond the end of said ferrule to a retracted position wherein it is substantially fully withdrawn into the latter, and means yieldingly maintaining said sleeve in its advanced position, said sleeve being adapted when the crayon stick is projected a slight distance beyond the end of said ferrule to substantially conceal the stick and to become at least partially retracted against the action of said yielding means to expose the writing point of the stick when writing pressure is applied to a writing surface by the writing end of the pencil.

2,451,766
DENTAL APPLIANCE
Francis J. Moylan, Scranton, Pa.
Application June 17, 1947, Serial No. 755,068
5 Claims. (Cl. 32—19)



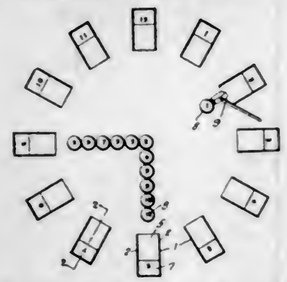
5. In a device of the class described, comprising a plate carried by the maxilla and a plate carried by the mandible, a capsule mounted on one of said plates and comprising an inverted cup and a cup slidably telescoping therewith and having a spring interposed therebetween normally biasing the cups away from each other, spaced annular shoulders on said inverted cup and latch means carried by said cup and engaging said shoulders to latch the cups in contracted or expanded position, said latch means comprising semi-circular, flat, leaf springs encircling the cup member and having one end secured thereto, the free ends of said springs carrying latching detents projecting through said cup and into the path of movement of said shoulders.

2,451,767
COMBINED STARTER AND GENERATOR
Romeo M. Nardone, Teaneck, N. J., assignor to Joseph J. Mascuch, Milburn, N. J.
Application June 5, 1946, Serial No. 674,546
6 Claims. (Cl. 74—6)



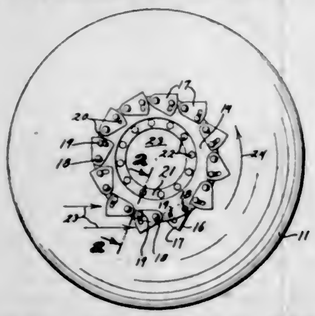
1. In a combined starter and generator, an electric motor, a starter unit attached thereto and directly coupled to the engine, a gear train comprising a plurality of planetary gears rotated by the electric motor, means within the starter unit consisting of an internally geared barrel member in mesh with the said gears, and means comprising a plurality of clutch discs mounted upon sprags, said sprags being journaled upon a tubular support member within the said starter unit to prevent the said barrel from rotating, to transmit the torque from the said gear train to the engine and means to drive the electric motor from the engine once said engine is operating under its own power.

2,451,768
REGENERATED CELLULOSE FILM MANUFACTURE
James Burton Nichols, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application March 13, 1945, Serial No. 582,583
7 Claims. (Cl. 18—57)



1. A process for preparing regenerated cellulose film from viscose which comprises extruding viscose on a support to form a viscose film, drying the viscose film in a stream of inert gas heated to a temperature of from 75° to 150° C., and circulating at a speed of at least 400 feet per minute with respect to the film until the water content of the film is reduced to less than 45% by weight before irreversible gelation takes place, and thereafter subjecting said film to the action of a non-swelling liquid regenerating medium until regeneration of the cellulose is substantially complete.

2,451,769
ELECTRONIC SYSTEM FOR MEASURING MICROWAVE TRANSMISSION THROUGH A WAVE GUIDE
Lowell E. Norton, Princeton Junction, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 11, 1945, Serial No. 598,740
5 Claims. (Cl. 171—95)

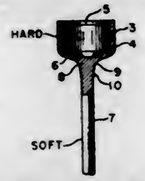


5. A system for measuring microwave transmission through a waveguide including an electro-mechanical device comprising an evacuated envelope, said envelope enclosing an electron source, means for focusing electrons from said source to form a flat beam, an anode, a fixed apertured shielding electrode disposed between said focusing means and said anode, said electrode aperture being in the plane of said beam, a movable electron shutter element disposed between said focusing means and said apertured electrode in the plane of said beam for selectively shielding said anode from electron irradiation, and electron beam deflecting means disposed adjacent said beam between said source and said shutter element for providing adjustment of the plane of said beam, and means including a flexible diaphragm forming a portion of said envelope coupled to means disposed externally of said envelope for moving said element to selectively expose said anode to said electron irradiation whereby said anode current is a function of the displacement of said externally disposed means, means for connecting said anode to an external device, a flexible conductive section of the wall of said waveguide movable in response to microwave stresses therein, and means coupling said flexible waveguide section to said externally disposed means whereby said anode current is a function of said microwave transmission.

2,451,770
GAME OF THE BALL AND MALLET TYPE
Norman M. Parke, Jacksonville, Fla.
Application February 18, 1946, Serial No. 648,271
2 Claims. (Cl. 273—127)

1. Game comprising a plurality of ball traps and an equal number of balls of uniform size, each ball trap comprising a receptacle having a bottom, side walls, and an intervening end wall, and being open at one end, said bottom comprising a portion upwardly inclined from said open end having its higher end terminating intermediate the length of said bottom, and a depressed portion beyond said higher end defining with said side walls and end wall a dwell for a ball, the diameter of the balls relative to the length and width dimensions of the dwells being such that a dwell can be occupied by only one ball at one time.

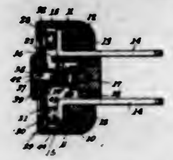
2,451,771
PREROTATION MEANS FOR AIRPLANE LANDING WHEELS
James F. Perkins, Oakland, Calif.
Application March 4, 1946, Serial No. 651,700
2 Claims. (Cl. 244—103)



1. A prerotation device for attachment to an airplane wheel comprising an annular auxiliary frame the outer peripheral portion of said frame

spaced laterally from a side wall of a tire mounted on said wheel, a series of pairs of side members at each side of the frame and pivoted thereto, the side members having slots therein, pins on the frame and projecting through the slots, and vanes opposite the outer periphery of the frame and connecting the pairs of side members, each said pair of side members and a connected vane forming a pivotally mounted bucket-like member to entrap air during a part of the rotative travel of the wheel to which the device is attached.

2,451,772
SOLUBILIZATION OF RUTIN WITH METHYL GLUCAMINE
Mikhail B. Plungian, Philadelphia, Pa., assignor to Temple University, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application December 27, 1946, Serial No. 718,589
3 Claims. (Cl. 167—65)

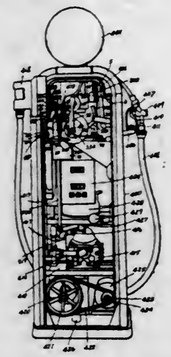


1. A therapeutic product consisting of a methyl-glucamine complex of rutin characterized by its high degree of stability and high therapeutic value and non toxicity.

2,451,773
TERMINAL CONNECTION AND METHOD OF MAKING THE SAME
Noel J. Poux, Meadville, Pa.
Application February 2, 1945, Serial No. 575,890
3 Claims. (Cl. 173—324)

1. A terminal connection of the class described comprising a one-piece metallic body member having a hollow relatively thin-walled cylindrical cap portion with an elongated solid wire-like extruded lead portion integrally arranged therewith and extending outwardly therefrom, said cap portion being work hardened so as to be relatively tough and hard and said lead portion being relatively soft and flexible as a result of extruding.

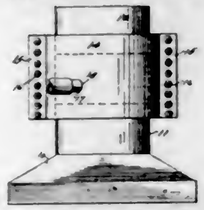
2,451,774
COMBINED CONNECTING PLUG AND FUSE
Samuel J. Richter, New York, N. Y.
Substituted for application Serial No. 364,089, November 2, 1940. This application September 24, 1946, Serial No. 698,903
5 Claims. (Cl. 200—115.5)



1. In a connecting plug of the character described, a cup shaped housing having a threaded recess therewithin, a binding post having a threaded recess in its end arranged within the threaded recess in the housing, and a cover arranged over the open end of the said housing, said cover having a layer of fusible material having exposed portions, a screw passing freely through the said cover contacting the said layer of fusible material and engaging within the threaded recess in the said binding post to permit free rotation of the cover over the said housing.

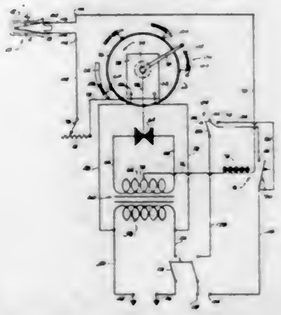
2,451,775
HOLDER FOR INDIVIDUAL STENCILS AND THE LIKE
Harrison Rober, La Crescenta, Calif.
Application August 6, 1945, Serial No. 609,056
7 Claims. (Cl. 101—128)

1. A sign making device comprising an elongated holder formed of sheet material doubled laterally upon itself, said doubled material being bent at an angle along its length to provide a pair of engageable angular surfaces between which a stencil or the like is insertible and means for tightly confining the stencil between said surfaces.



2,451,776
PREDETERMINED STOP DISPENSING MECHANISM OF COIN AND MANUAL CONTROLLED TYPE
Leo E. Rush, West Lafayette, Ind., assignor to Gasoteria Corporation, Buffalo, N. Y., a corporation of New York
Application December 30, 1939, Serial No. 311,734
41 Claims. (Cl. 194—90)

1. In a liquid dispensing apparatus, the combination of a source of liquid supply, a pump having the suction side thereof connected to said source of liquid supply, a meter connected to the outlet side of said pump, a computer connected to and operable in accordance with meter operation, a dispensing line connected to the meter discharge, a valve included in said dispensing line and controlling the dispensing of said line, means automatically rendering said apparatus inoperative and closing said valve when a predetermined amount of liquid has been dispensed, and coin actuated means for controlling in terms



of cost the predetermined amount of liquid to be dispensed and operatively associated with said last mentioned means, said coin actuated means including a predetermined stop mechanism movable in accordance with the control coin value to insure delivery of an amount corresponding to the value of the coin, said mechanism being reversely movable through the computer movement for cessation of dispensing.

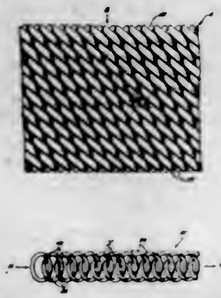
2,451,777
COMBINATION JACK AND CONCRETE FORM
Miguel Salas, Chihuahua, Mexico
Application September 6, 1946, Serial No. 695,197
3 Claims. (Cl. 25—131)

3. A concrete form and hydraulic jack, comprising two spaced, cylindrical blocks of concrete or similar material, a removable cylindrical sleeve for reception of said blocks in spaced alignment, said sleeve consisting of a plurality of segments provided with abutting longitudinal flanges, threaded bolts to fasten said flanges together, a conduit in one of said segments to admit fluid concrete under pressure to the space between said blocks, a valve to prevent the return of the fluid concrete when being supplied to said space, means to reinforce the concrete blocks and the poured concrete, and means to tie the sections of the completed column together.

2,451,778
THERMOTEMPORAL RESPONSIVE DEVICE
William Sambur, Jamaica, N. Y.
Application November 13, 1942, Serial No. 465,437
11 Claims. (Cl. 236—46)

1. A control device for intermittently operating a mechanism with respect to a predetermined outdoor temperature range for periods of time which increase in proportion to decreases of temperature within said range, said device comprising a control switch for turning said mechanism off and on and an energizing circuit including an electric actuating means for said switch, the operation of said actuating means being governed by the value of the potential applied thereto, said circuit including time controlled means to render said actuating means operative to set said mechanism in operation at a preselected time of the day, means to vary the potential applied to said actuating means in proportion to temperature, and time controlled means to vary the potential applied to said actuating means in proportion to the time elapsed after a preselected period of time following the beginning of a period of operation of the mechanism at said preselected time so as to stop operation of said mechanism after a time lapse following the preselected period of time, said lapse being proportional to temperature.

2,451,779
MANUFACTURE OF AMIDINES
Wallace Frank Short and Peter Oxley, Nottingham, England, assignors to Boots Pure Drug Company, Limited, Nottingham, England, a company of Great Britain
No Drawing. Application June 4, 1947, Serial No. 752,569. In Great Britain June 12, 1946
9 Claims. (Cl. 260—501)

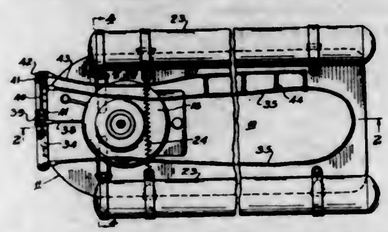


1. A process for the manufacture of a compound having the amidine grouping

$$-C(:NH)NH_2$$

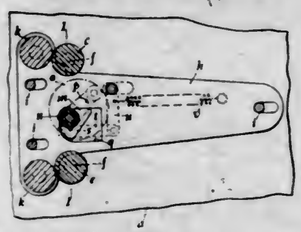
comprising the step of heating at a temperature within the range 30° C. to 160° C. and at atmospheric pressure a mixture of reactants consisting of ammonia and an N-substituted amidine of the general formula $R.C(:NR_1)NR_2R_3$ where R is a member of the group consisting of monovalent radicals of the aliphatic, araliphatic and aromatic series and of the heterocyclic series wherein the hetero-atoms are nitrogen atoms and the unsatisfied valency bonds are on carbon and R_1, R_2 and R_3 are members of the group consisting of hydrogen atoms and monovalent radicals of the aliphatic, araliphatic and aromatic series and of the heterocyclic series wherein the hetero-atoms are nitrogen atoms and the unsatisfied valency bonds are on carbon, one of said reactants being present in the form of a salt.

4. A process as claimed in claim 1 wherein the salt is a sulphonic acid salt.



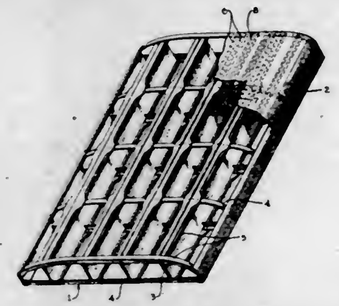
2,451,780
FLEXIBLE MESH BRACELET AND METHOD OF MANUFACTURE
John G. Siska, North Cresskill, N. J., assignor to Jacques Kreisler Manufacturing Corporation, North Bergen, N. J., a corporation
Application July 25, 1947, Serial No. 763,673
11 Claims. (Cl. 63—4)

1. A flexible bracelet band, comprising a series of spiral elements arranged side-by-side with the convolutions of adjacent elements interlaced with each other for pivotal connection of the latter, and the interlaced convolutions of adjacent elements being at their intersections mutually deformed into mutual limited interlocked relation to prevent relative movement, other than restricted pivotal relative movement, between said adjacent elements.



7. In a method of making a flexible bracelet band according to which a series of spiral elements are interlaced with each other to form a chain of pivotally connected elements, that improvement which comprises compressing the chain, while holding it against lengthwise and widthwise buckling, substantially lengthwise and widthwise into a substantially closed mesh in which the interlaced convolutions of adjacent elements are at their intersections mutually deformed into mutual limited interlocked relation to prevent relative movement, other than restricted pivotal relative movement, between said adjacent elements.

2,451,781
POWER-DRIVEN SURFBOARD
Doty M. Steele, Los Angeles, Calif.
Application June 25, 1945, Serial No. 601,487
6 Claims. (Cl. 9—18)

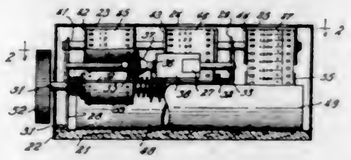


1. In a power driven surf board, the combination with an elongated hollow body provided in its forward portion with a vertical opening, of a motor disposed above said opening, a propeller driven by said motor and disposed below said opening, a rudder disposed beneath the forward end of said body, manually operable means for actuating said rudder and pontoons hinged to the sides of said body so as to swing upwardly and inwardly onto the sides of the deck of said body and a retractile spring connecting said pontoons.

2,451,782
CAMERA FILM GATE THREADING MECHANISM
Herbert Charles Macleod Stevens, Taunton, England, assignor to Avimo Limited, Taunton, England
Application April 16, 1946, Serial No. 662,466
In Great Britain May 4, 1945
2 Claims. (Cl. 88—17)

1. A film gate for photographic cameras of the kind specified, having in combination a pair of rollers mounted in fixed positions, a slidable member formed with a gap having straight and curved edge portions, a second pair of rollers mounted on said member and movable thereby towards and away from the first mentioned pair of rollers, a loading spring whereby said member is movable in the direction for moving said second pair of rollers towards the other pair, a rotatable cam by which said member is movable in the opposite direction for moving said second pair of rollers away from the other pair, and which is arranged within the gap in said member, and a finger piece whereby said cam is operable, said cam having a flat portion which serves by abutting against a straight edge portion of said gap to limit the movement imparted to said member by said spring, and also having a rounded portion which serves by co-operation with a curved edge portion of said gap to move said member against the action of said spring into a position in which said cam prevents movement of said member by said spring.

2,451,783
METHOD OF MAKING SKIN-AND-FRAME ASSEMBLIES
Edward J. Sweeney, Philadelphia, Pa., assignor to The Budd Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 30, 1944, Serial No. 556,611
3 Claims. (Cl. 29—148.2)



1. A method of making a structural assembly which comprises, securing one sub-assembly including a plurality of connected parts in one jig unit, securing another sub-assembly including a plurality of connected parts in another jig unit, one of the jig units and the sub-assembly carried thereby being reticulated, bringing the jig units together with the sub-assemblies carried thereby into predetermined registering relationship to place the sub-assemblies in proper interrelationship between the jig units, and securing the sub-assemblies together by working through one jig unit and the sub-assembly carried thereby.

2,451,784
CALCULATOR MECHANISM
Frederic Tellander, Jr., Sheldon, Ill., assignor to Victor O. Lothman, Evanston, Ill.
Application June 13, 1947, Serial No. 754,503
8 Claims. (Cl. 235—71)

1. The combination in a calculator having a plurality of rotatable members, a drive shaft for said rotatable members, a frame for said shaft, a spring biased brake for each of said members, said spring biased brakes being arranged to engage said frame and normally to engage said

rotatable members, a brake releasing member mounted on said drive shaft, a pair of clutches for interconnecting either of said members with said drive shaft, and an over-center shifting

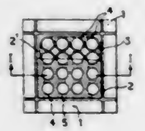
means for controlling said clutches, said brake releasing member being responsive to the action of said clutches to disengage a brake from one of said members.

2,451,785

METHOD FOR MAKING A LACQUER ENAMEL

Marcus Thau, New York, N. Y., assignor to Lacquer & Chemical Corporation, Brooklyn, N. Y., a corporation of New York

No Drawing. Application July 26, 1944, Serial No. 546,756
1 Claim. (Cl. 106—198)



A method for making a lacquer enamel adapted to provide a particularly smooth, durable, non-chalking protective film or coating, which consists in providing a readily-dispersible pigment substantially free of materials having chalking tendencies, and a lacquer vehicle containing a cellulose derivative selected from the group consisting of nitro-cellulose and ethyl cellulose, grinding the pigment with a portion of the lacquer vehicle for a time just short of the time necessary to impart a gloss to the resultant coating, mixing the ground mixture with the rest of the lacquer vehicle, and screening the resultant mixture to remove conglomerates and particles larger than 2 microns.

2,451,786

MULTITUBULAR HEAT EXCHANGER

Eugen Villiger and Eduard Benninger, Zurich, Switzerland, assignors to Aktiengesellschaft Fuer Technische Studien, Zurich, Switzerland, a corporation of Switzerland

Application January 24, 1946, Serial No. 643,126
In Switzerland January 30, 1945
3 Claims. (Cl. 285—25)

1. A multi-tubular unit for use in tubular heat exchangers, comprising in combination a bundle of tubes assembled side-by-side with their ends substantially in a common plane; a frame of massive cross-section as compared to the diameter and wall thickness of individual tubes in the bundle, encircling and confining the terminal portion of the bundle, with the tube ends and the end face of the frame substantially in a common plane; and a continuous network of fused material, filling the spaces between tube ends and between the tube ends and the frame and fused to both.

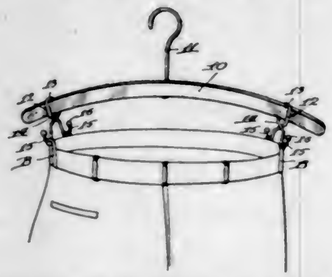
2,451,787

POLYMERIZATION OF CHLOROPRENE

John Richard Vincent, Newport, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 29, 1946, Serial No. 658,209
4 Claims. (Cl. 260—92.7)

1. The process for effecting emulsion polymerization of chloroprene, which comprises incorporating in the emulsion prior to polymerization from 0.05% to 5.0%, based on the weight of the polymerizable material, of an ester of an organic acid of the class consisting of keto-acids and dicarboxylic acids which contain the grouping:



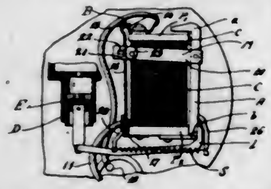
which esters contain from 5 to 19 carbon atoms in the molecule.

2,451,788

GARMENT HANGER

Albert G. Wahl, Los Angeles, Calif.

Application November 15, 1945, Serial No. 628,729
1 Claim. (Cl. 223—88)



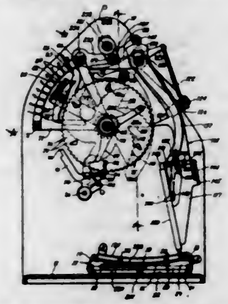
A garment hanger comprising a single piece of resilient wire, the central portion of which is bent to form a substantially rectangular loop the upright side portions of which normally converge downwardly so as to grip a garment hanger rail which passes through said loop, with those portions of the wire below said loop loosely crossing each other at a single point and the end portions of the wire below said crossing portions terminating in substantially U-shaped garment engaging hooks.

2,451,789

VIBRATORY ARMATURE ELECTRO-MAGNETIC MOTOR

Charles F. Wallace, Westfield, N. J., assignor to Wallace & Tiernan Products, Inc., Belleville, N. J., a corporation of New Jersey

Application August 3, 1945, Serial No. 608,700
7 Claims. (Cl. 172—126)



1. An electromagnetic motor, comprising an electromagnet and a spring-retracted pivoted armature; and having means for controlling the magnet circuit comprising a fixed contact, a movable contact, an auxiliary armature which tends to hold the movable contact against the fixed contact when the magnet is energized and which is under tension to move the movable contact away from the fixed contact, and a connecting member extending between the main armature and the auxiliary armature pivotally connected to one and having a lost motion connection to the other, whereby the auxiliary armature is moved to break the circuit as the main armature nears the end of its movement toward the magnet and is moved to close the circuit as the main armature nears the end of its outward movement.

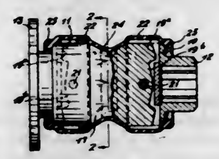
2,451,790

REGISTER-CONTROLLED TIME RECORDER

Thomas J. Watson, New Canaan, Conn., and Alfred L. Sprecker, Freeport, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application November 17, 1944, Serial No. 563,918
24 Claims. (Cl. 346—104)

1. In recording apparatus of the type wherein a register operates to receive time controlled data entries and wherein a recording means operates to record on a record sheet the data indicated by said register, the combination of a holder for positioning the record sheet in recording position; locking means effective when moved to an operative position to prevent insertion and removal of the record sheet from said holder and effective when moved to a non-operative position to permit such insertion and removal; start means effective when operated to move said locking means to its said operative position and to start entering operations of said register; stop means effective when operated to provide first for stopping entering operations of said register, then to provide for the operation of said recording means to record on the record sheet the data indicated by the register, and then to move said locking means to its said non-operative position; and interlock means operable upon an operation of said start means to prevent a second operation of said start means until said stop means has been operated and operable upon an operation of said stop means to prevent a second operation of said stop means until said start means has been operated.



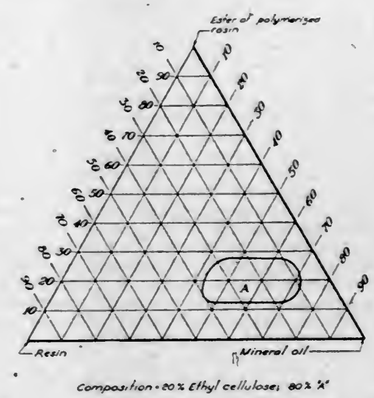
2,451,791

UNIVERSAL JOINT

Elverton W. Weaver, Cleveland Heights, Ohio, assignor to Towmotor Corporation, Cleveland, Ohio, a corporation of Ohio

Application January 25, 1945, Serial No. 574,457
6 Claims. (Cl. 64—17)

2. A universal joint comprising a pair of yokes each having means for attaching the same to a shaft section and each having a cylindrical bearing bore extending therethrough and each having a slot extending from the inner face thereof and intersecting the bearing bore therein and extending longitudinally of and for substantially the full length of said bore, cylindrical bearing blocks adapted to be inserted within the said bores, each of the bearing blocks having a slot extending longitudinally of and for substantially the full length thereof, a driving element having ends adapted to be received within the slots of the bearing blocks and within the slots in the yokes,



the portions of the driving element which project through the slots in the yokes being of less thickness than the width of these slots, and a rubber-like flexible constricting retaining member surrounding each yoke and having rib means extending about and engaging the opposite ends of the yokes, said rubber-like member having a depressed midsection engaging said driving element, said rubber-like member also being in intimate engagement with the periphery of said yokes throughout their length whereby said rubber-like element tends to center said bearing blocks within their respective bores.

2,451,792

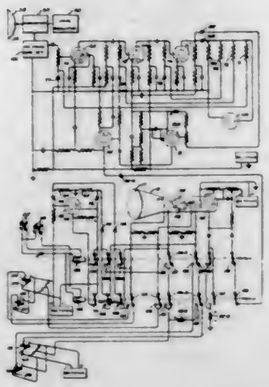
HOT-MELT COATING COMPOSITION

Arthur E. Young and Kenneth D. Bacon, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Michigan

Application November 9, 1945, Serial No. 627,749
2 Claims. (Cl. 260—16)

Composition = 20% Ethyl cellulose, 80% 'A'

1. A wax-free hot-melt coating composition consisting essentially of from 18 to 22 per cent by weight of an ethyl cellulose having an ethoxyl content of from 47.5 to 50 per cent and a viscosity less than 30 centipoises, as determined in a 5 per cent solution thereof, by weight, in an 80:20 mixture, by volume, of toluene and ethanol, the balance of the composition, correspondingly



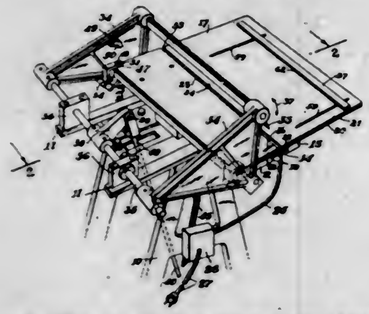
from 82 to 78 per cent of the whole, being a ternary mixture of: at least 42.5 per cent and not over 72.5 per cent of a refined pale mineral oil having a viscosity of 40 to 100 Saybolt units at 210° F.; at least 12.5 per cent and not over 27.5 per cent of an ester of polymerized rosin with a polyhydric alcohol from the group consisting of ethylene glycol, diethylene glycol, and triethylene glycol; and, at least 7.5 per cent and not over 40 per cent of a maleic anhydride-modified ester gum having a melting point in the range from 115° to 120° C., the proportions of the oil, rosin ester and modified ester gum in said ternary composition being defined by any point falling within the area A on the accompanying drawing.

2,451,793

RADIO LANDING APPARATUS

Ernst F. W. Alexanderson and Franklin G. Patterson, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York

Application May 22, 1943, Serial No. 488,012
14 Claims. (Cl. 343—107)



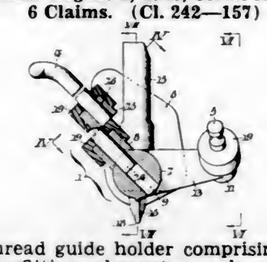
1. In a blind landing system in which a plurality of spaced broadcast beacons are located about the area in which said landing is to be effected, a viewing screen carried by the craft, means to scan a fixed predetermined area ahead of said craft for radio waves produced by said beacons and to produce a point of light on said screen at a position corresponding to the direction to each beacon from which said waves are received, said points merging into substantially a single point on said screen at a position corresponding to the direction of said area when the craft is at sufficient distance therefrom and separating into a plurality of points when said craft approaches said area, means additionally to produce two lines of light at right angles to each other across said screen and intersecting each other at a desired point when the plane is in level flight on a predetermined course, and means controlled by the orientation of said craft to cause each of said lines to move bodily in either of its two broadside directions in accord with the movement of said craft in the vertical or horizontal plane, whereby the pilot by observation of said screen may approach said area from a distance and locate his craft with respect to a predetermined course through said area, observe his glide angle with respect to said area and effect a landing at a desired position relative to said beacons.

2,451,794

MACHINE FOR FOLDING SHEETS OF THERMOPLASTIC AND LIKE MATERIAL

Maurice M. Balsam and Henry M. Balsam, New York, N. Y., assignors to M. M. Balsam, Inc., New York, N. Y.

Application January 8, 1947, Serial No. 720,906
5 Claims. (Cl. 18—19)



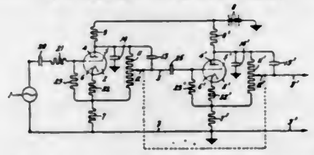
5. A machine for permanently folding sheets of thermoplastic and like materials comprising in combination a horizontal stationary support having a folding edge; a horizontal movable support having also a folding edge being parallel to said folding edge of said horizontal stationary support; means supporting said horizontal movable support slidably to and fro between inoperative position with its folding edge spaced from the folding edge of said horizontal stationary support and operative position with its folding edge tending to press against the folding edge of said horizontal stationary support; spring means permanently tending to slide said horizontal movable support from said inoperative into said operative position; first means for sliding said horizontal movable support against action of said spring means from operative into inoperative position, whenever required; second means for sliding said horizontal movable support against action of said spring means from operative into inoperative position; a pushing blade adapted to force the sheet to be folded in folded position between said folding edges of said horizontal stationary and horizontal movable supports when said horizontal movable support is in inoperative position with its folding edge spaced from the folding edge of said horizontal stationary support; means supporting said pushing blade turnably between inoperative position spaced from said horizontal supports and operative position reaching into the space between the folding edges of said support; combined operating means adapted to be moved between operative position and inoperative position, said combined operating means constructed so as to actuate when in inoperative position said first means for sliding said horizontal movable support and to actuate when in operative position said second means for sliding said horizontal movable support and to simultaneously move said means supporting said pushing blade from inoperative position into operative position with said pushing blade reaching into said space formed between the folding edges of said horizontal supports; spring means for automatically returning said operating means from said operative into said inoperative position, thereby turning said means supporting said pushing blade together with the same from said operative into said inoperative position and permitting said spring means permanently tending to slide said horizontal movable support to move the same during movement of said operating means from its inoperative into its operative position; heating means arranged under said horizontal stationary support and said horizontal movable support so as to heat the same at and adjacent to said folding edges thereby heating the sheet to be folded during the folding operation; and adjustable stop means arranged on said horizontal stationary support so as to enable proper positioning of the sheet to be folded on said supports.

2,451,795

THREAD GUIDE HOLDER

Joseph H. Barnes, New Castle, Del., assignor to Delaware Rayon Company, New Castle, Del., a corporation of Delaware

Application August 1, 1946, Serial No. 687,760
6 Claims. (Cl. 242—157)



1. A thread guide holder comprising cylindrically interfitting elements, each eccentrically apertured to receive a thread guide, one of said elements constituting a lock nut which by rotation to different positions with respect to the other element is caused to frictionally grip the thread guide or to release the same.

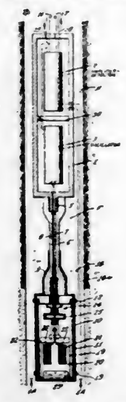
2,451,796

PHASE SHIFTING CIRCUIT

Seymour Berkoff, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York

Application September 23, 1943, Serial No. 503,545
6 Claims. (Cl. 323—119)

1. In a phase shift network, an electron discharge device having an anode, control electrode, and a cathode, a source of operating voltage having its positive terminal connected to said anode through a resistance and its negative terminal connected to said cathode through a resistance, means to supply an alternating voltage between said control electrode and cathode, a resistance connected between said anode and cathode, and a load circuit connected between said negative terminal and a point variable along said last resistance in accordance with the phase shift desired.



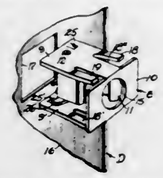
2,451,797

APPARATUS FOR PRODUCING PRESSURE PULSES IN BOREHOLES

André Blanchard, Houston, Tex., assignor to Schlumberger Well Surveying Corporation, Houston, Tex., a corporation of Delaware

Application February 17, 1945, Serial No. 578,529
12 Claims. (Cl. 177—386)

1. An apparatus for emitting pressure pulses in a liquid comprising a first liquid-tight casing, a liquid-tight substantially rigid bell casting, means having capacity for elongation and contraction connecting said bell casing to said first casing, an electromagnet in said bell casing, means in said first casing for supplying alternating current to said electromagnet, and armature means resiliently connected to said casing and adjacent to said electromagnet, whereby, upon energization of said electromagnet, said bell casing is reciprocated bodily with respect to said first casing.



2,451,798

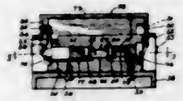
CATCH

Earl M. Borchers, Rockford, Ill., assignor to American Cabinet Hardware Corporation, Rockford, Illinois, Rockford, Ill., a corporation of Illinois

Application November 10, 1944, Serial No. 562,766
6 Claims. (Cl. 292—18)

1. A catch having a supporting frame comprising a side plate and a front plate for limiting movement of the side plate through a mounting member having a hole therein proportioned to conform substantially to the width of said plate, an elongated spring finger on said side plate movable into positive holding engagement with the mounting plate automatically as an incident to the forcing of the frame into its said limit position, and a second spring finger of a length somewhat greater than the length of the first mentioned finger so as to be frictionally engageable with the edge of the hole and mounting plate.

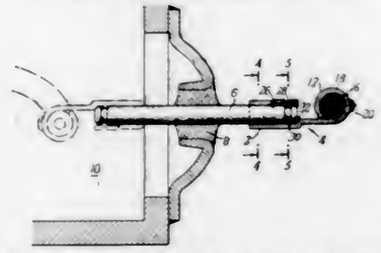
2,451,799



VALVE STRUCTURE

William R. Brown, Chicago, Ill., assignor to W. R. Brown Corporation, Chicago, Ill., a corporation of Illinois

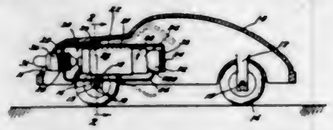
Original application January 11, 1943, Serial No. 472,020. Divided and this application April 7, 1944, Serial No. 529,898
5 Claims. (Cl. 277—21)



2. In a foot actuated controller for a pressure fluid operated device, the combination with a

base, of a valve mounted on said base, a valve member in said valve shiftable between two positions to control the supply of pressure fluid to the device, spring means yieldably urging said valve member toward one of said positions, a plunger at one end of said valve operative when actuated to shift the valve member to the other of said

positions against the action of said spring means, actuating means for said plunger including a member mounted on said base to rock about an axis located at one side and substantially parallel to the axes of said plunger and said valve member, and a cam element carried by said rocking member for coaction with said plunger.



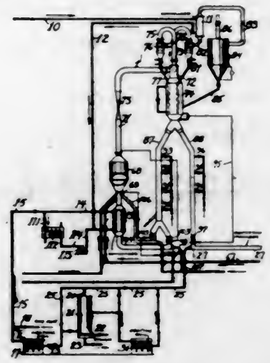
2,451,800
TERMINAL CLIP FOR ELECTRICAL CONDUCTORS
Stephen N. Buchanan, Westmoreland Hills, Md., and Ormiston J. Breen, East Greenbush, N. Y., assignors to Buchanan Electrical Products Corporation, a corporation of New Jersey
Application November 15, 1946, Serial No. 710,172
3 Claims. (Cl. 173—269)

2. A friction-type terminal clip of unitary construction for releasably connecting a flexible conductor having an outer insulating sheath to an electrically conductive pin having a reduced portion spaced from its end, comprising a ferrule portion for mechanically gripping said insulating sheath and electrically connecting said conductor; a receptacle portion integral with said ferrule portion and having oppositely-disposed walls for receiving and frictionally gripping therebetween said pin; a resilient U-shaped loop portion integrally connecting said walls to permit said walls to expand and contract as said pin is inserted into or withdrawn from said receptacle portion; an integral inwardly extending boss on at least one of said walls adapted to frictionally contact the reduced portion of said pin; and a shoulder spaced longitudinally from said boss and forming stop means at the juncture of said body portion and said ferrule portion.

2,451,801
TOY
Abe Buchmann, Cincinnati, Ohio
Application January 6, 1948, Serial No. 658
8 Claims. (Cl. 46—203)

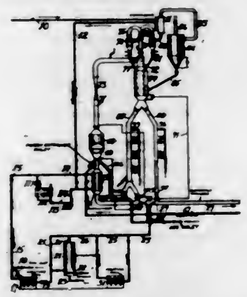
1. In a toy the combination of a body member having a cavity formed therein, a simulated running gear for supporting said body member, an electric circuit carrying battery holder disposed in the cavity, a lamp secured to the holder and projecting exteriorly of the body member, a switch arm on the holder disposed between the body member and the running gear, said arm being adapted to normally hold said body mem-

ber and running gear in resilient spaced apart positions and upon depression of the body member adapted to close said electric circuit to the lamp.



2,451,802
CAM
Paul B. Burrus and Merton C. Leinberger, Dayton, Ohio, assignors, by mesne assignments, to Worthington Pump and Machinery Corporation
Application April 23, 1945, Serial No. 589,920
3 Claims. (Cl. 74—568)

1. A cam assembly including a rotatably mounted member presenting a surface normal to the axis of rotation, said rotatable member having apertures in said surface, a pair of cam sectors adjustably mounted on said surface, each of the cam sectors having an elongated opening registering with an aperture in said surface, screws for clamping the cam sectors against said surface, one of said cam sectors being provided with a notch, the other cam sector being provided with an extension projecting into the notch, a laterally movable cam follower, said notch and said extension underlying a portion of the width of the path of the cam follower so that the cam follower spans the gap between the cam sectors by resting upon the extension.

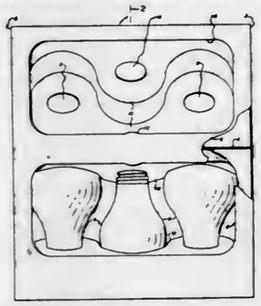


2,451,803
METHOD OF CONTACTING SOLIDS AND GASES
Donald L. Campbell, Roselle Park, Homer Z. Martin, Elizabeth, and Charles W. Tyson, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application October 5, 1940, Serial No. 359,854
24 Claims. (Cl. 196—52)

1. A process for contacting solids and gases which comprises passing a confined stream of said gases through an extended path including a treating zone, imposing an initial positive pressure on the stream of gases at least sufficient to overcome the resistance of said path to the flow of said gases under obtaining conditions, introducing the solids to be contacted in finely-divided state into said stream of gases prior to removal of said gases from the treating zone, maintaining a column of downwardly flowing solids above the point of entry of said solids into said gases, introducing gas into said column in an amount controlled to maintain a pseudo-liquid mixture of gas and solid throughout substantially the entire length of said column capable of generating a fluistatic pressure at the base thereof, maintaining said column at a height such that the fluistatic pressure developed at the base of said column is greater than the pressure on said gases at the place of entry of said solids therein, and discharging solids from said

column into said gases while under fluistatic pressure generated by said column.

2,451,804
METHOD OF AND APPARATUS FOR CONTACTING SOLIDS AND GASES
Donald L. Campbell, Short Hills, Homer Z. Martin, Elizabeth, and Eger V. Murphree and Charles W. Tyson, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 27, 1940, Serial No. 371,923
23 Claims. (Cl. 196—52)

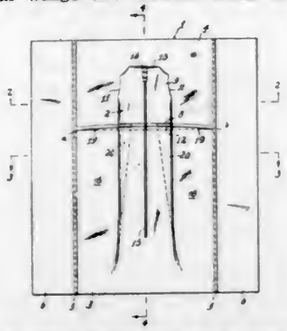


13. In a process for contacting solids with gases the steps which comprise passing a confined stream of a gaseous medium upwardly through a contacting zone containing a body of finely divided solids at a low velocity controlled to maintain a relatively dense fluidized phase of gas and solids in said zone, maintaining a column of said finely divided solids exterior to said contacting zone, passing a gaseous medium lengthwise of said column in an amount controlled to fluidize the solids throughout the full length thereof and thereby generate a fluistatic pressure at the base of said column, delivering a stream of fluidized solids from the base of said column while under said fluistatic pressure into the first named stream prior to passing the same through the contacting zone and continuously withdrawing finely divided solids from the contacting zone, the height of said column being sufficient to generate a fluistatic pressure substantially greater than the loss in pressure of the gases passing through the contacting zone.

2,451,805
PROCESS OF COATING ASBESTOS
Thomas D. Callinan, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 4, 1944, Serial No. 557,237
3 Claims. (Cl. 117—126)

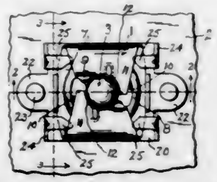
1. The method of treating a fabricated, flexible, paper-like sheet material consisting of a major portion of asbestos fiber and a minor portion of bentonite to increase the tensile strength thereof, which comprises impregnating said sheet material with a solution of a compound of a metal selected from the group consisting of magnesium, barium, calcium, zinc and aluminum, thereafter impregnating said sheet material with a solution of ammonia, drying said sheet and heating the dried sheet at a temperature of about 175° C. to obtain a product having a tensile strength substantially greater than that of the untreated material.

2,451,806
CUSHIONED DISPLAY CONTAINER
Percy A. Carson, East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application November 13, 1945, Serial No. 628,251
6 Claims. (Cl. 206—45.14)



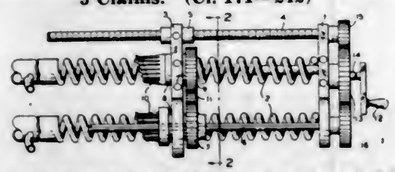
2. A packing container of relatively stiff flexible material having a wall portion provided with a row of spaced apertures for accommodating the base end of incandescent lamps, the wall portion having also a slit extending between and around the apertures to form a pair of flaps which are opposed to each other and tend to return to a position flush with the wall when bent back into the interior of the container, each of said flaps having at least one of said apertures therein and having a concave edge portion so spaced from the aperture as to engage the bulb of a lamp the base end of which is inserted in an aperture in the opposite bent back flap whereby the bent flaps releasably clamp the lamps between them for display through the opening left in the container wall thereby.

2,451,807
INFANT'S GARMENT
Daniel Catizone, New York, N. Y.
Application March 2, 1946, Serial No. 651,581
1 Claim. (Cl. 2—114)



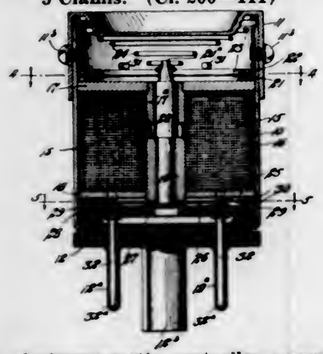
A protective sleeping garment for infants consisting of a combined jacket and bed sheet, said bed sheet comprising an upper and a lower section, said upper section having a sufficient length to extend well beyond the head of the infant in its sleeping position, both sections hav-

ing an equal width with the exception of the upper part of the lower section, said upper parts having upwardly and laterally outflaring portions extending at the upper edge of said lower sheet section sufficiently beyond the width of the sheet to be connected to the front and a substantial part of the rear portion of said jacket whereby in the assembled state of the garment two lateral wings are formed from the upper



part of said lower sheet section to permit ample lateral movement of the infant, a longitudinal center opening extending through the front portion of said jacket and the major portion of said lower sheet section, means to close said opening and two lateral panels having substantially the same length as said bed sheet, being connected with the upper and the lower sheet section and uniting the same to form a coherent article.

2,451,808
FLOATING COWL FASTENER CONSTRUCTION
Wilmer H. Churchill, Saugus, Mass., assignor to United-Carr Fastener Corporation, Cambridge, Mass., a corporation of Massachusetts
Application June 9, 1944, Serial No. 539,569
3 Claims. (Cl. 24—221)



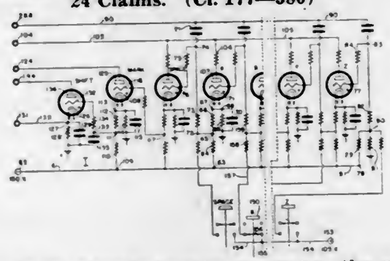
2. A fastener member for detachably connecting an apertured support and a stud-carrying part to be attached thereto; said fastener having a base provided with a central outwardly dished apertured embossment providing a stud-engaging seat, the material of said base surrounding said embossment providing a substantially continuous annular bearing surface of substantial width, a plate-like attaching member for said fastener having longitudinally spaced apertured attaching extensions and an enlarged central aperture adapted to be shiftably aligned with said fastener seat and opposed pairs of fastener-retaining tongues connected to said plate in planes intermediate the central aperture and apertures of the attaching extensions and overlying the bearing surface of said base transversely removed from said attaching extensions and adjacent the embossment thereon, and stop means on said fastener member disposed between and cooperating with tongues of each pair inwardly of the plane of connection of said tongues to said plate.

2,451,809
VARIABLE INDUCTANCE DEVICE
James L. Clark, Cambridge, Mass., assignor to the United States of America as represented by the Secretary of War
Application December 10, 1945, Serial No. 634,086
5 Claims. (Cl. 171—242)

5. In combination, a flat panel, a threaded feed screw journaled perpendicularly through said panel for rotational movement only relative to said panel, a guide shaft parallel to and spaced from said feed screw, also journaled through said panel for rotational movement only relative to said panel, means to rotate said feed screw and guide shaft simultaneously, a shorting block supported by said feed screw and guide shaft and longitudinally movable relative thereto and parallel to said panel, two stationary helical conductors parallel to and spaced from said feed screw and guide shaft, a tubular contact carrier surrounding each of said helical conductors, said contact carriers being journaled through said shorting block for rotational movement only relative to said block, each of said contact carriers being provided with a plurality of longitudinally disposed wiping contact fingers, each of which fingers is provided with a wiping contact portion, the wiping contact portions of each contact carrier being positioned relative to each other to follow the configuration of a portion of a helix of the diameter and pitch of its associated conductor so that said contact portions may be maintained in contact with a portion of said helical conductor at all times, gear means between the guide shaft and the contact carriers so that said contact carriers are rotated upon rotation of the guide shaft.

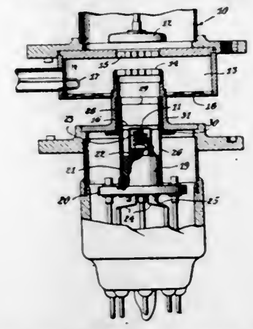
2,451,810
ELECTROMAGNETIC CONTROLLER
Arthur M. Cohen, New Rochelle, N. Y., assignor to Ward Leonard Electric Company, a corporation of New York
Application December 22, 1944, Serial No. 569,369
5 Claims. (Cl. 200—111)

2. An electromagnetic controller comprising a cylindrical outside casing, a winding within the casing, a plunger rod extending axially within the winding, a magnetic plunger carried by said rod at its lower end, contact means secured to the lower end of said plunger and rod and having a



common conducting portion and a plurality of yieldable contact portions extending therefrom angularly disposed about the axis of the magnet, a base of insulating material fixed within and extending across the lower end of the casing, and a plurality of contact elements supported by and extending upwardly through said base and having their inner ends positioned opposite said contact portions respectively within the base and positioned relatively to said contact portions to be successively engaged by said contact portions by the downward movement of the plunger and successively disengaged by the upward movement of the plunger, said contact elements having a threaded engagement with said base and being individually adjustable towards and from said contact portions.

2,451,811
CORNER FASTENER FOR PLASTER LATHS
John L. Daily, Johnstown, Pa.
Application October 7, 1946, Serial No. 701,816
3 Claims. (Cl. 85—11)



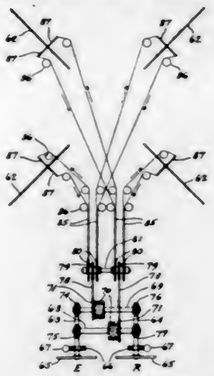
1. A wall fastener of the class described comprising pairs of longitudinally aligned arms formed from a single sheet of bendable metal, said arms being disposed at right angles with respect to each other and said arms being bent along a line connecting the vertex of one angle with that of another to provide a pair of V-shaped fasteners in planes at right angles to each other for fitting in the corner of a room, and prongs projecting inwardly from the arms for embedding in a wall.

2,451,812
ELECTRON TUBE VARIABLE IMPULSE TRANSMITTER
Joseph R. Desch, Ernest V. Gulden, and Robert E. Mumma, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Original application September 16, 1942, Serial No. 458,546, now Patent No. 2,425,307, dated August 12, 1947. Divided and this application February 19, 1944, Serial No. 523,024
24 Claims. (Cl. 177—380)

1. In an electric impulse generator, the combination of electron discharge tube means selectively operable to produce small-amplitude and large-amplitude rapidly recurring discrete positive impulses; and selectively operable means to control the selective operation of the electron discharge tube means to produce an impulse train containing a plurality of groups of selected numbers of small-amplitude impulses separated by large-amplitude impulses.

2,451,813
ELECTRON DISCHARGE DEVICE HAVING AN ELECTRON BEAM PASSAGE AND ALIGNING MEANS THEREWITH FOR THE CATHODE
Paul M. Dickerson, East Orange, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 30, 1943, Serial No. 481,069
6 Claims. (Cl. 250—27.5)

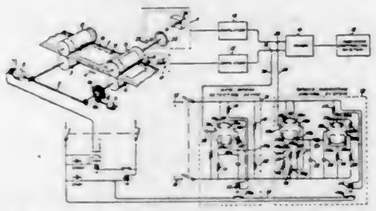
3. An electron discharge device comprising a housing having a passage for flow of a beam of electrons therethrough, a cathode in said passage directed toward a far end thereof, another electrode opposite the far end of said passage for reception of the beam of electrons, a focusing collar around the cathode, an insulator in one end portion of said collar in engagement with both the cathode and collar bracing the cathode from said collar coaxially, and means interposed between the other end portion of said collar and housing centering and aligning the collar and cathode.



2,451,814
DEICING COMPOSITION FOR AIRCRAFT PARTS AND SURFACES
Theodore Augustine Dissel, Hartford, and Isaac Laird Newell, Wethersfield, Conn., assignors to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
No Drawing. Application March 22, 1946, Serial No. 656,536
3 Claims. (Cl. 106—13)

1. A de-icing composition, consisting essentially of a long chain fatty acid partial ester of sorbitan, selected from the group consisting of sorbitan monopalmitate and sorbitan monostearate, and anhydrous potassium acetate, these materials being present in the ratio of the sorbitan compound to the potassium compound of about 10 to 1 by weight.

2,451,815
AIRSHIP
Lloyd H. Donnell, Chicago, Ill., and Elgin L. Shaw, Cuyahoga Falls, Ohio, assignors to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Original application July 16, 1941, Serial No. 402,586. Divided and this application September 25, 1945, Serial No. 618,562
9 Claims. (Cl. 244—96)



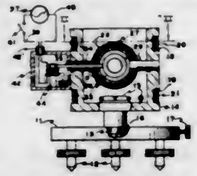
1. An airship comprising a hull, an empennage carried by the stern of said hull, said empennage consisting of two pairs of fins the planes of which cross each other, including a control surface hinged to the end of each fin, the pairs of fins being arranged at an angle to the horizontal, an

elevator control spindle and a rudder control spindle, two sprocket-equipped differential gears each of which being in operative engagement with both of said control spindles, two sets of freely rotating transmission sprockets, one of said

sets being driven by the one differential sprocket and the other set of sprockets being driven by the other differential sprocket, control lines operatively connecting the one set of sprockets to one pair of control surfaces and the other set of sprockets to the other pair of control surfaces.

2,451,816
WEB BREAK DETECTOR
George B. Dunn, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 31, 1946, Serial No. 695,339
10 Claims. (Cl. 318—461)

9. For use on a machine having a driving motor and an element operating on a length of material provided with a plurality of indicia distributed along its length comprising an alarm circuit, means responsive only to speeds of said element greater than a predetermined minimum speed for preparing said alarm circuit for actuation, photoelectric means responsive to non-passage of said indicia for actuating said prepared alarm circuit and means responsive to actuation of said alarm circuit for deenergizing said driving motor.



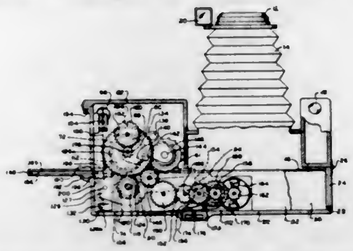
2,451,817
PROCESS FOR REGENERATING SPENT AQUEOUS ALKALINE SOLUTION
Lloyd C. Fetterly, Long Beach, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application June 26, 1944, Serial No. 542,258
5 Claims. (Cl. 252—192)

1. In a process for regenerating spent aqueous alkaline solution containing mercaptans extracted from hydrocarbons, the improvement comprising treating said spent solution with a free oxygen-containing gas in the presence of a phenolic oxidation catalyst, thereby oxidizing said mercaptans to organic disulfides which catalyst is capable of a reversible oxidation reaction and subject to non-reversible oxidation by oxygen in an alkaline solution in the absence of a protecting reducing agent, and maintaining dissolved in said solution during said oxidation treatment, by extraneous addition, an inorganic sulfide sulfur content of at least 0.1% by weight of sulfide sulfur sufficient to protect said catalyst from non-reversible oxidation.

2,451,818
VINYLPHENOXTHINES AND METHOD OF PREPARING THE SAME
Ralph G. Flowers and Leola W. Flowers, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York
No Drawing. Application May 29, 1947, Serial No. 751,468
6 Claims. (Cl. 260—327)

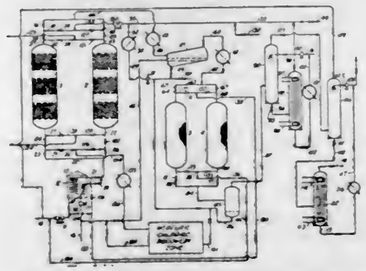
2. Monovinylphenoxthine.

2,451,819
INDUCTION MAGNETOMETER
Alex Frosch, Houston, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application April 12, 1944, Serial No. 530,623
4 Claims. (Cl. 175—183)



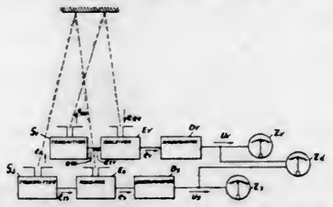
1. A magnetometer comprising, in combination, a coil arranged in a circuit including a potential indicating device, a relatively flat non-magnetic high conductivity element, a mounting means securing the coil in fixed position, non-magnetic means of stable elastic properties securing the high conductivity element to the mounting means for angular movement about a fixed axis and a driving means arranged to vibrate the element and move its plane through a small angle with respect to the axis of the coil at a relatively rapid rate, said high conductivity element being mounted in the electromagnetic field of said coil and with its plane, when at rest, substantially perpendicular to the axis thereof and adapated to vary the current induced in the coil when the element is in motion.

2,451,820
APPARATUS FOR EXPOSING AND PROCESSING PHOTOGRAPHIC FILM
Elmer E. Garrett, Freeport, N. Y., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application September 20, 1947, Serial No. 775,364
15 Claims. (Cl. 95—13)



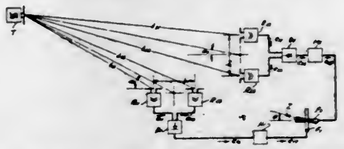
1. Camera apparatus for use with a composite film unit, said unit comprising an envelope having an exposure aperture formed therein and containing, respectively, a photosensitive film, an opaque sheet material displaceably positioned between said film and exposure aperture, and a film-

processing fluid releasably contained between facing surfaces of said film and sheet material to one side of said exposure aperture, said apparatus comprising, in combination, means for mounting said film unit so that said photosensitive film is positioned in the focal plane, said mounting means having an aperture formed in one end thereof for slidable removal of said unit after exposure of said photosensitive film, means adapted to engage said opaque sheet material and to cooperate with said aperture in said mounting means for slidably displacing said sheet material from said photo-



sensitive film to permit photographic exposure of the latter and for returning said sheet material to original position after said exposure, and means comprising a pair of pressure-applying surfaces mounted adjacent the aperture of said mounting means for the film unit, said surfaces being adapted to compress said film unit during advancement of said unit between said surfaces, progressive subjection of said composite unit to compression providing release of the processing fluid and spreading of said fluid between facing surfaces of said exposed photosensitive film and said opaque sheet material.

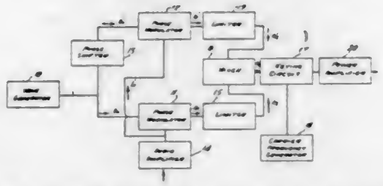
2,451,821
CHLORINATION OF PARAFFINIC HYDROCARBONS
Everett Gorin, Dallas, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application January 26, 1946, Serial No. 643,800
10 Claims. (Cl. 260—659)



1. The process for the manufacture of at least one chloride of methane from methane which comprises maintaining said methane in contact with a chlorinating agent consisting of mercuric chloride vapor in a reaction zone at a temperature within the range of from about 500° C. to about 650° C. and for a contact time such that not more than 90 percent of said mercuric chloride is converted to metallic mercury and recovering said chloride of methane from the gaseous effluent of said reaction zone.

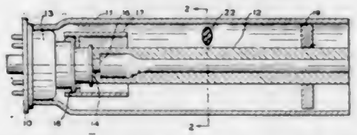
2,451,822
DISTANCE AND SPEED INDICATING SYSTEM
Gustav Guanella, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application February 15, 1945, Serial No. 578,013
In Switzerland October 27, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires October 27, 1963
12 Claims. (Cl. 343—12)

8. In a system for determining the distance between a first and a second point moving relatively with respect to each other, means for transmitting from said first point a pair of radiant energy portions one of which has a constant frequency and the other having a frequency varying periodically as a predetermined function of time, receiving means at said first point for combining components of the respective energy portions received from said transmitting means both directly and indirectly by way of reflection from said second point, to produce a pair of beat energies having frequencies varying, respectively, in proportion to the relative speed between said points and in proportion to the combined relative speed and distance between said points, a modulator for combining said beat energies to produce output energy of frequency varying in proportion to the absolute momentary distance between said points, means for converting the frequency of said output energy into a current of proportional variation, and a translating means energized by said output current.



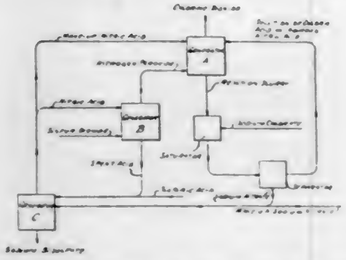
2,451,823
DIRECTION FINDING SYSTEM
Gustav Guanella, Zurich, Switzerland, assignor to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application December 10, 1947, Serial No. 790,797
In Switzerland May 12, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires May 12, 1960
19 Claims. (Cl. 343—104)

1. A direction finding system comprising a transmitting station, a receiving station, means for transmitting portions of radiant energy of periodically varying frequency from said transmitting station to said receiving station over at least three transmission paths whose lengths vary in proportion to the directional angle of a line connecting said stations, means at said receiving station for producing at least two control energies having amplitudes varying, respectively, in proportion to the instantaneous beat frequencies between the received energies transmitted over a



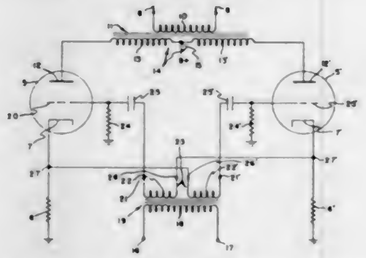
first and a second pair of said paths, respectively, and ratio indicating means excited by said control energies for producing an indication proportional to the directional angle subtended by said line and a predetermined reference direction.

2,451,824
MEANS FOR AND METHOD OF PRODUCING TIME MODULATED SIGNAL IMPULSES
Gustav Guanella, Zurich, and Paul Güttinger, Wettingen, Switzerland, assignors to Radio Patents Corporation, New York, N. Y., a corporation of New York
Application November 22, 1946, Serial No. 711,538
In Switzerland December 18, 1945
13 Claims. (Cl. 332—9)



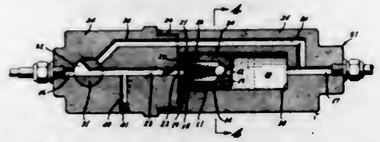
1. A method of producing pulse time modulation which comprises the steps of phase modulating in accordance with a given modulating signal wave at least one of a pair of auxiliary waves of like frequency and predetermined fixed normal phase relation, and multiplicatively combining said auxiliary waves to produce a resultant wave comprising a series of constant amplitude impulses of frequency equal to the auxiliary wave frequency and of width varying in proportion to the instantaneous amplitudes of said modulating wave.

2,451,825
OSCILLATOR TUBE WITH TUNABLE COAXIAL RESONATOR
John J. Guarrera, Astoria, Long Island, N. Y., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 1, 1945, Serial No. 608,303
1 Claim. (Cl. 315—39)



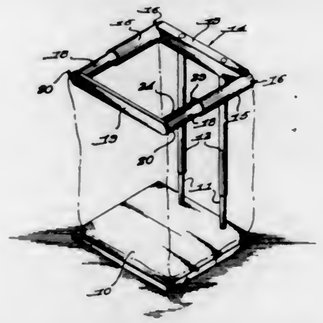
An oscillator comprising an electron tube having grid, anode and cathode terminals, first, second and third cylindrical conductors coaxially arranged and connected to said terminals, said first and second conductors forming a resonator between said anode and said grid terminals, said second and third conductors forming a resonator between said grid and cathode terminals, said first and third conductors defining a resonator between said anode and cathode terminals, an adjustable plunger interposed between said first and third conductors, said plunger providing a capacitative short circuit for radio frequency currents, an elliptical cylinder interposed between said first and third conductors, a conductive coating on said cylinder, the axis of said cylinder being transverse to the common axis of said conductors, a dielectric shaft axially supporting said cylinder, said shaft projecting through an opening in said third conductor, a motor for driving said shaft whereby said cylinder is rotated to periodically vary the effective capacitance between said first and third conductors.

2,451,826
PROCESS FOR MAKING CHLORINE DIOXIDE
John F. Haller, Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia
Application March 17, 1948, Serial No. 15,450
7 Claims. (Cl. 23—152)



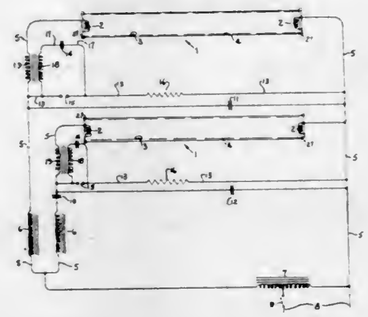
1. In the generation of chlorine dioxide, the improvement which comprises reacting dry nitrogen peroxide with a solution of chloric acid in aqueous nitric acid containing not less than 35% by weight HNO_3 on the total of water and nitric acid.

2,451,827
PUSH-PULL AMPLIFIER
Leland J. Haworth, Belmont, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 1, 1945, Serial No. 608,158
1 Claim. (Cl. 179—171)



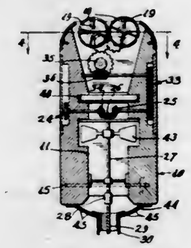
In a push-pull circuit comprising at least two vacuum tubes each having a cathode, a plate, and a grid adapted to receive an impressed signal, the combination of two cathode resistances, one in the cathode circuit of each of said tubes, an input transformer having a secondary which consists of two portions, said portions supplying substantially equal voltages, each such portion having two terminals, said combination being so adapted that one of said terminals of one of said portions is electrically connected to the grid of one of said tubes, and the other terminal of said one portion is electrically connected to the cathode circuit of the other of said tubes between the cathode and the said cathode resistance thereof, and so that the one of said terminals of the other portion of said secondary which is in phase opposition to said one terminal of said one portion is electrically connected to the grid of the said other tube, and the other terminal of said other portion is electrically connected to the cathode circuit of the said one tube between the cathode and the said cathode resistance thereof.

2,451,828
SAFETY DEVICE FOR FLUID BRAKES
David R. Herriott, Glendale, Calif.
Application January 6, 1947, Serial No. 720,353
5 Claims. (Cl. 303—84)



1. A safety device for a fluid brake, said device comprising a cylinder having a port at each of its opposite ends, a piston slidable in said cylinder and shutting off the flow through one of said ports when said piston is at that end of the cylinder, a unilateral fluid seal around said piston permitting leakage flow towards said one port, and preventing leakage flow in the opposite direction, a relief passage through said piston and a spring pressed relief valve therefor preventing flow through said passage towards said one port and permitting flow through said piston in the opposite direction, a by-pass around said piston, a valve for said by-pass, and a bleed passage between said by-pass valve and said piston.

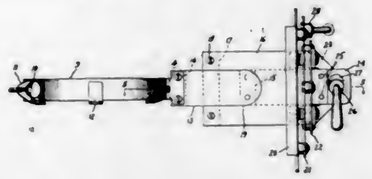
2,451,829
SACK HOLDING FRAME
Ransom L. Hightower, Sinton, Tex.
Application July 18, 1946, Serial No. 684,470
1 Claim. (Cl. 248—100)



A sack holding frame for supporting the mouth of a sack in expanded position for filling which includes a main supporting bar, a tubular arm at each end of the supporting bar, a supporting rod telescopically associated with each tubular arm, a tie bar connecting the supporting rods, compression coil springs wholly enclosed within the tubular arms for yieldingly urging the supporting rods outwardly, a sack supporting hook on each arm adjacent the main supporting bar, a sack supporting hook at each end of the tie bar, and means supported wholly within the confines of the frame to limit the outward movement of the supporting rods under the influence of the springs.

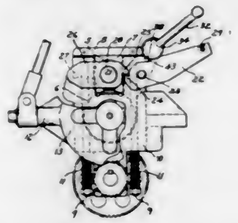
2,451,830
STARTING ARRANGEMENT FOR ELECTRIC DISCHARGE DEVICES
Donald D. Hinman, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
Application November 21, 1944, Serial No. 564,479
7 Claims. (Cl. 315—96)

1. The combination with an electric discharge device containing an ionizable atmosphere and coacting electrodes, and a discharge circuit connected to said electrodes, of a starting circuit energized from said discharge circuit independently of discharge between said electrodes, including a loop circuit responsive to the voltage supplied to said discharge device and a current-limiting impedance in series with said loop, a capacitor and an auxiliary electric discharge device connected in said loop in parallel with one another with respect to said impedance, said auxiliary discharge device having a break-down voltage less than the supply voltage in said discharge circuit and having a maintaining voltage higher than the voltage thereon during operation of the first-mentioned discharge device, and an inductive coupling between said loop and a portion of said discharge circuit which is in series with the first-mentioned discharge device.



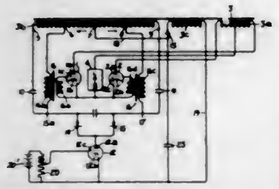
2,451,831
DRY SHAVER
Howard J. Horwood, New York, N. Y.
Application December 6, 1944, Serial No. 566,796
3 Claims. (Cl. 30—43)

1. An electric shaver, comprising a housing, a pair of hollow cylindrical perforated hair cutting and skin spreading massaging rollers rotatively mounted thereon adjacent and in contact with each other, hair cutters mounted within said rollers, drive means for said hair cutters, and means for slowly rotating said rollers away



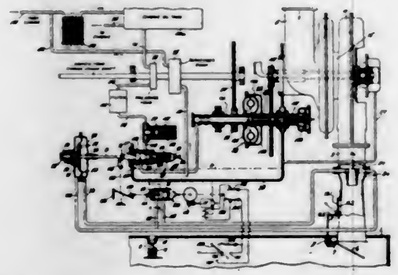
from each other, said hair cutters being rotative within said rollers in a direction opposite to the direction of said hair cutting and skin spreading massaging rollers.

2,451,832
CATHODE-RAY TUBE SUPPORT AND POSITIONING MEANS
Donald B. Keim, Bridgeport, Conn., assignor to General Electric Company, a corporation of New York
Application January 2, 1947, Serial No. 719,809
4 Claims. (Cl. 178—7.5)



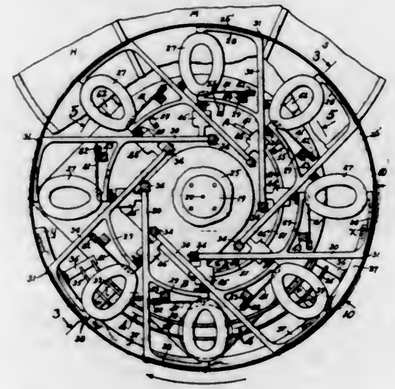
4. A device for insulatingly supporting and positioning a cathode ray tube of a television receiver comprising a supporting plate, a pair of plates arranged parallel with said supporting plate, rotary cam means positioned between one of said parallel plates and said supporting plate for moving said one plate in a first direction, rotary cam means positioned between said pair of plates for moving the other of said plates in a direction transverse to said first direction, a member attached to said other plate extending in a direction transverse to said first and second directions, insulating supporting means for said tube attached to said other plate, and rotary cam means connected with said member for moving said supporting means in a direction transverse to said first and second directions.

2,451,833
ROLL FEED
Frederick Koch, Sparta, N. J., assignor to Associated Patentees, Inc., Ampere, N. J., a corporation of New Jersey
Application August 22, 1947, Serial No. 770,098
3 Claims. (Cl. 271—2.4)



1. Roll feed mechanism comprising separably mounted companion feed rolls, a trip lever arranged to effect separation of said feed rolls, a cam rotatable in engagement with said trip lever to effect actuation of the same, said cam having a cam slope for effecting tripping movement of said lever and a substantially concentric portion at the end of said cam slope engageable with the lever to retain it in the tripped position and a spring for rotating the cam in the trip lever releasing direction and operative to return the cam to the release position when the cam is relieved of pressure of the trip lever, a stop shoulder on the cam at the beginning of said cam slope and a stop pin engageable by said stop shoulder to position the cam in a definite release position.

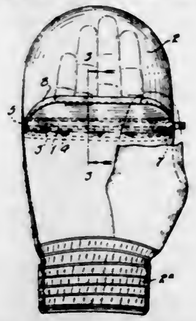
2,451,834
PHASE SHIFTING CIRCUIT
Ernest F. Kubler, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 26, 1947, Serial No. 776,375
4 Claims. (Cl. 323—119)



1. A control system for an electric valve provided with an anode, a cathode and a control grid comprising means for supplying to the anode cathode circuit a periodically varying voltage, means for supplying to the grid and cathode a periodically varying voltage of adjustable phase with respect to the anode voltage comprising a pair of bridge circuits having a common arm, a source of direct voltage connected in said common arm, means for supplying to the input terminals of said bridges a periodically varying voltage of the same periodicity as said anode voltage to modulate the direct voltages at the output terminals, a transformer having a primary winding connected across the output terminals of one of said bridges, a second primary winding connected across the output terminals of the other of said bridges and a secondary winding connected between said grid and cathode, and a control electric valve connected in said common arm.

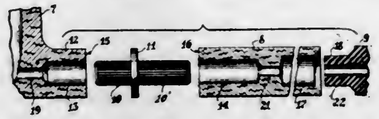
2,451,835
SUPERCHARGER CONTROL SYSTEM
Wilfrid E. Johnson, Marblehead, Mass., assignor to General Electric Company, a corporation of New York
Application January 28, 1942, Serial No. 428,570
23 Claims. (Cl. 98—1.5)

3. In a control system for an aircraft cabin supercharger, the combination of a supercharger, a conduit connecting the discharge side of the supercharger to the cabin, a pressure-difference-creating device for creating a pressure difference which bears a definite relation to the rate of flow in said conduit, speed regulating means including a movable abutment for the supercharger, conduits connecting the pressure-difference-creating device to said movable abutment, and a member responsive to atmospheric pressure acting on said abutment.



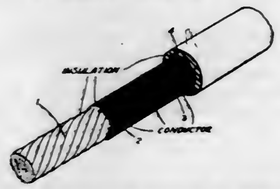
2,451,836
ROTARY COUNTERBALANCED EGG-CARRIER MECHANISM FOR CLASSIFYING EGGS ACCORDING TO WEIGHT
Curtis S. Jordan, Maywood, Calif.
Application October 14, 1944, Serial No. 558,672
5 Claims. (Cl. 209—121)

1. In an egg classifying machine, a supporting structure, a revoluble structure mounted thereon with means for turning it, a plurality of shafts mounted thereon, in the same plane and at acute angles relative to each other, around said revoluble structure to move therewith, said shafts being rockable on their longitudinal axes, each of said shafts having at one side thereof a pair of literally extended arms at one end and rigid therewith, an individual egg carrier held between the free ends of each pair of arms to be raised and lowered about the axis of its shaft as said shaft is rocked, a weight rigidly connected with each shaft to counterbalance the weight of the egg in its egg carrier, said weight operating at the opposite end of said shaft, and on the opposite side thereof adjustable tripping mechanisms around the path of travel of said egg carriers, to be engaged by depending parts carried by said egg carriers, and depending parts connected with said egg carriers to selectively engage and be actuated by said tripping mechanisms according to the adjustments of said tripping mechanisms, whereby to discharge eggs in predetermined places.



2,451,837
SPORTSMAN'S MITTEN
George J. La Londe and Allen Jewer, Detroit, Mich.
Application August 24, 1945, Serial No. 612,500
3 Claims. (Cl. 2—158)

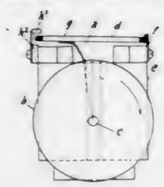
1. A mitten having a front and a back of suitable material attached together at peripheral edges, said front having a transverse opening substantially centrally of the palm providing edge portions in the same plane, a zipper strip on each edge of the opening metallically secured together at the opposite ends, a slide for opening or closing the zipper strips, and a flap on each side of said



opening normally overlying the said opening and zipper strips.

2,451,838
SMOKER'S PIPE
David P. Lavietes, Boone, N. C.
Application July 9, 1946, Serial No. 682,404
1 Claim. (Cl. 131—225)

A smoker's pipe comprising a wooden bowl member having a short shank with a recess therein, an elongated wooden tubular member forming an extension of said shank and having a recess in one end, an elongated metallic splicer tube having fine teeth cut lengthwise thereof along its outer surface and having one end bitingly secured in the recess in the shank of the bowl and having its other end bitingly secured in the recess in the end of the wooden tubular member, a bit member having one end secured to the other end of the wooden tubular member and a separate metallic washer member slidable lengthwise on the metallic splicer tube and sealed between the faces of said shank and said wooden extension member.

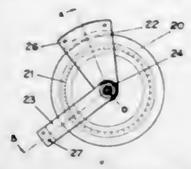


2,451,839
ELECTRICAL CONDUCTOR
Cecil George Lemon, London, England, assignor to Tenaplas Limited, London, England, a British company
Application May 7, 1945, Serial No. 592,481
In Great Britain February 15, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 15, 1964
14 Claims. (Cl. 219—46)

1. A heating unit including at least one electrical conductor of a type adapted to produce heat on a commercial basis wound to a spiral or coiled

tubular form on a generally cylindrical core with adjacent coils or turns in mutually spaced insulated relationship, in which condition the coils or turns are maintained by a woven electrically insulating supporting body through interstices of which the conductor is interlaced, the insulating material being of a nature which will not be injured by the heat to be evolved.

2,451,840
IMPULSE TRANSMITTING APPARATUS
Marian Lewandowski, Warsaw, Poland, assignor to Inz. M. Lewandowski i B-cia Kasinowscy Spólka z ograniczona odpowiedzialnóscia, Warsaw, Poland
Application May 16, 1938, Serial No. 208,330
In Poland May 22, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires May 22, 1957
5 Claims. (Cl. 74—142)



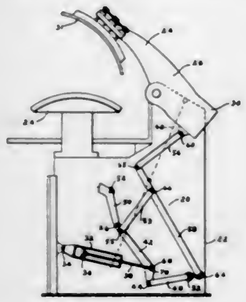
1. Apparatus for converting movement of vibrating bodies into unidirectional motion comprising, a body vibrating on account of any energy applied thereto and provided with a flat arcuate shaped spring when in a position of rest contacting at its free end with the periphery of a rotatable wheel at such a point which lies within the limits of the quadrant positioned from the side where the spring is fixed determined by a straight line parallel to the vibrating body and passing through the center of the wheel and a radial line perpendicular to the straight line, and said spring being so arranged that the plane of the movement of the vibrating body and the plane of the movement of the free end of the spring lie substantially transverse to each other, whereby the action of the spring is effective only when the arch of the spring straightens out on the wheel and its free end is directed in the same direction as the rotation of the wheel.

2,451,841
AURO-THIO-GLYCOLIC-ACID-ANILIDE AND METHOD OF MAKING THE SAME
Mozes Juda Lewenstein, New York, N. Y.
No Drawing. Application January 31, 1941, Serial No. 376,841
2 Claims. (Cl. 260—430)

1. As a new product, auro-thio-glycolic-acid-anilide.

2,451,842
CALCULATING INSTRUMENT
Dora Minna Liebmann and Gerhard Liebmann, Cambridge, England
Application January 20, 1945, Serial No. 573,722
In Great Britain February 10, 1944
9 Claims. (Cl. 235—84)

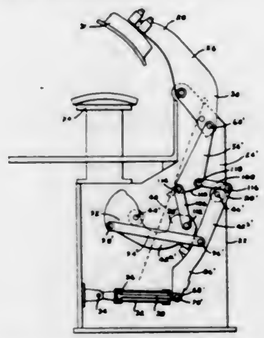
1. A calculating instrument comprising a disk shaped member, provided with a center hole, at least one fixed scale arranged on each side of said disk, a cursor constituted by two flat members, one flat member being arranged on either side of said disk, the said two flat members being joined together beyond the periphery of said disk and being joined together by a hollow bush inserted into said center hole and attaching the said cursor to the said disk, a second cursor constituted by two flat members, one flat member being arranged on either side of said first cursor, the said flat members being joined together beyond the outer edge of the said first cursor and being joined together by a journal inserted into



the said hollow bush and attaching the said second cursor to the said first cursor, each said flat member carrying at least one radial index line, the two said cursors being movable relatively to each other and relatively to said disk and being adapted to rotate around a common center and to slide over each other and over said disk, the said second cursor having no point of physical contact with said disk.

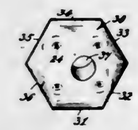
2,451,843
MANUFACTURE OF FLUOROALKANES
Carl B. Linn and Louis Schmerling, Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application May 31, 1946, Serial No. 673,608
4 Claims. (Cl. 260—653)

1. A process for producing 1-fluoro-3,3-dimethylbutane which comprises reacting ethylene, isobutylene and hydrogen fluoride at a temperature of from about —50° C. to about 100° C.



2,451,844
PRESSING MACHINE AND LINKAGE MECHANISM FOR TRANSMITTING AND TRANSFORMING FORCE FOR USE THEREIN
Frank C. Lornitzo, Pawtucket, R. I., assignor, by mesne assignments, to Pantex Manufacturing Corporation, a corporation of Delaware
Application October 18, 1941, Serial No. 415,600
10 Claims. (Cl. 38—41)

9. In a garment pressing machine, a frame, a pressing buck mounted on said frame, a pressing lever of the first class pivotally mounted on said frame having a power arm, a pressing head mounted on said pressing lever to move to a closed

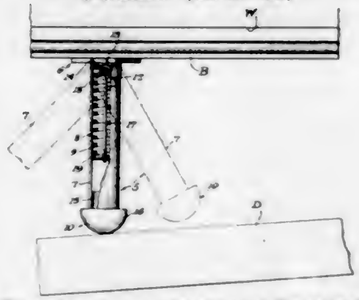


position into pressing contact with said buck and to an open position away therefrom, pivotally mounted motor means for actuating said pressing lever, means urging said pressing lever to an open position, mechanism connecting said motor means to the power arm of said pressing lever, consisting solely of rigid pivoting connecting members, comprising a power applying floating lever, a pair of spaced pivotal means, constraining means pivotally connected to said pivotal means and to spaced points on said floating lever to constrain said spaced points to arcuate paths with respect to said pivotal means and rigid means pivotally connecting said mechanism to said pressing lever power arm and to said motor means, certain of said constraining means being transmutable to alternately function as successive fulcrums for said floating power applying lever and as guide means for said floating power applying lever, said floating power applying lever, said constraining means and said rigid means being so constructed and connected respectively to each other and to said pressing lever power arm and the movement permitted by said constraining means being such as to transmit to said pressing head the substantially even force supplied by said motor means against the force of said urging means while actuating said pressing lever, while transforming it into a relatively extremely light force applied to said pressing head during its closing period and a relatively extremely heavy substantially constant force applied to said pressing head during its pressing period after an extremely short intermediate rapid force increasing transmutation fulcrum changing period during which said pressing head contacts said buck; and also transforming said even force to cause an extremely rapid relative movement of said pressing head during its closing period and a relatively slow movement of said pressing head during its pressing period after said extremely short intermediate transmutation period.

2,451,845
PRESSING MACHINE AND MULTIPLE LEVER LINKAGE MECHANISM FOR TRANSMITTING AND TRANSFORMING FORCE FOR USE THEREIN
Frank C. Lornitzo and Herbert G. Beede, Pawtucket, R. I., assignors, by mesne assignments, to Pantex Manufacturing Corporation, a corporation of Delaware
Application October 20, 1941, Serial No. 415,778
2 Claims. (Cl. 38—41)

1. In a garment pressing machine, a frame, a pressing buck mounted on said frame, a pressing lever of the first class pivotally mounted on said frame, a pressing head mounted on said pressing lever to move to a closed position into pressing contact with said buck and to an open position away therefrom, motor means for actuating said pressing lever, means urging said pressing lever to an open position, a booster power applying lever of the first class comprising a lower toggle link having a long arm and a short arm, pivotable on a single fixed pivot on said frame, effective to apply a slow movement and a large force to said pressing head having said motor means pivotally connected at a single point adjacent the end of the long arm thereof, a second power applying lever of the first class having a long arm and a short arm pivotable on a single fixed pivot on said frame, effective to apply a rapid movement and a small force to said pressing head, a link pivotally connecting a fixed point on the long arm of said first lever to a fixed point on the short arm of said second lever, a triangular member comprising an upper toggle link having the apex thereof pivotally connected to a single point on said pressing lever, a power transmitting link pivotally connecting a fixed point on the long arm of said second lever to a fixed point on the front end of the base of said triangular upper toggle link and a power transmitting link pivotally connecting a fixed point on the short arm of said first lever to a fixed point on the rear end of the base of said triangular upper link, said levers and interconnecting link means being so constructed, connected and guided as to transmit to said pressing head the substantially even force supplied by said motor means against the force of said urging means while actuating said pressing lever, while transforming it into a relatively extremely light force applied to said pressing head during its closing period and a relatively extremely heavy substantially constant force applied to said pressing head during its pressing period after an extremely short intermediate rapid force increasing effective leverage changing transmutation period during which said pressing head contacts said buck; and also transforming said even force to cause an extremely rapid relative movement of said pressing head during its closing period and a relatively slow movement of said pressing head during its pressing period after said extremely short intermediate effective fulcrum changing transmutation period.

2,451,846
NURSING BOTTLE HOLDER
Marie H. Love and Paul T. Love, Riverdale, N. Y.
Application November 28, 1945, Serial No. 631,252
2 Claims. (Cl. 248—105)



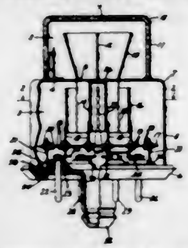
1. A nursing bottle holder comprising a yielding body of regular polygonal shape, said body having an opening through it from one end face to the other, the extremities of the openings being offset from the centers of said end faces at unequal distances from said centers and so disposed that the axis of said opening is inclined with respect to said end faces so that when the holder rests upon different side faces thereof, the height and inclination of the bottle is varied.

2,451,847
BASE STRUCTURE FOR ELECTRON DISCHARGE TUBES
Harry D. Madden, deceased, late of South Orange, N. J.; by Fidelity Union Trust Company, executor, Newark, N. J., and James W. Greenbowe, East Orange, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 2, 1943, Serial No. 481,516
22 Claims. (Cl. 250—27.5)

1. A molded glass base having terminal posts extending therefrom and an exhausting stub disposed adjacent said posts, each post comprising a generally cylindrical terminal portion, a flared skirt extending therefrom and with its free edge embedded in the glass base, a lead extending beyond said skirt and projecting from the opposite surface of said glass base, the extreme end of said exhausting stub having a socket for connection with an exhaust tube.

2,451,848
DOORSTOP
Charles H. Martin, Los Angeles, Calif.
Application March 20, 1946, Serial No. 655,706
3 Claims. (Cl. 16—86)

1. In a door stop, a base plate for attachment to a baseboard and having an integral ear formed and extending outwardly from and at right angles to said plate provided with an eye, a rod having a hook on one end engaged in said eye, an abutment plate on the rod, a tubular stem engaged over the rod and having an inwardly directed flange and a central opening, and compressible means engaged with the abutment plate and the stem for normally holding the latter at right angles to the base plate.

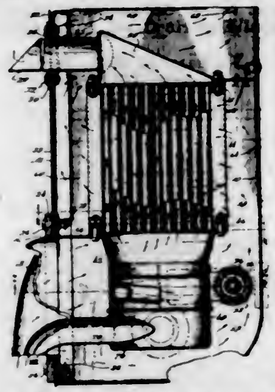


2,451,849
DENTAL ACCESSORY
Santo A. Massimiano, Merchantville, N. J.
Application September 4, 1946, Serial No. 694,716
1 Claim. (Cl. 132—92)

A dental accessory comprising a resilient holder provided with a substantially circular opening to receive a spool of dental floss, said holder including a pair of convergent members providing an extension arm, the free end portion of said arm at the convergence of said members being arcuated and terminating in a pointed extremity, said arcuate portion being formed with a longitudinally extending arcuate passage, an open sided recess provided at the inner end of said

passage and constituting a guide, and a cutter blade mounted adjacent the free end of said arm.

2,451,850
PHOTOSENSITIVE DISCHARGE DEVICE
Elmer D. McArthur, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 27, 1946, Serial No. 686,668
10 Claims. (Cl. 250—165)



1. A photo-sensitive electric discharge device comprising an hermetically sealed envelope, a transverse metallic wall dividing said envelope into chambers disposed on opposite sides thereof, said wall having a portion external to said envelope, an aperture in said wall within said envelope, an electric discharge device comprising electrodes mounted within the chamber on one side of said wall including an anode, a cathode, and a control grid conductively connected to said wall, a photo-responsive discharge device comprising photo-responsive electrodes mounted within the chamber on the other side of said wall including a photo-emissive member and a photo-anode, and a window portion in said envelope operatively associated with said photo-emissive member, one of said photo-responsive electrodes being connected to said wall, the other through said aperture to one of said electrodes other than said grid whereby voltages between said photo-anode and said photo-emissive member induced by photo-emission therebetween may be impressed between said electrodes, said portion of said wall constituting an externally accessible terminal for said control grid and said one of said photo-responsive electrodes and a heat dissipating surface for cooling said device.

2,451,851
INTERNAL-COMBUSTION HEATER FOR HEATING AIR
Henry J. De N. McCollum, Chicago, Ill.; Thelma McCollum, executrix of said Henry J. De N. McCollum, deceased, assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application January 1, 1944, Serial No. 516,648
6 Claims. (Cl. 126—116)

1. In an air heater, the combination of means forming a combustion chamber and a heat exchanger immediately adjacent said chamber for

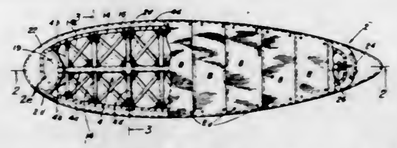
transferring heat from the hot products of combustion to a current of air in out-of-contact relation thereto, said heat exchanger comprising a pair of headers with tubes connecting them and forming conduits for said hot products of combustion, one header constituting one wall of the combustion chamber and having a surface exposed to said hot gases as they approach the tubes to flow longitudinally through them, said tubes being secured in said header in intimate contact therewith and being closely spaced, the total area

of contact of said tubes with the header being at least equal to the total area of the header exposed toward the combustion chamber, said header and tubes being of a metal of high thermal conductivity and having a thick wall of cross sectional area approximately half the cross sectional area of the tube, whereby the heat absorbed by the header is rapidly transmitted to the tubes and distributed throughout the length of said tubes by conduction, and means directing a current of ventilating air across and between said tubes.

2,451,852
BETA-ALLYLAMINO PROPIONITRILES
William M. McLamore, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 24, 1945, Serial No. 618,402
3 Claims. (Cl. 260—465.5)

3. A n-beta-cyanoethyl substituted allylamine.

2,451,853
MANUFACTURE OF PENICILLIN
Thomas Hobson Mead and Maurice Vincent Stack, London, and Ernest Lester Smith, North Harrow, England, assignors to Therapeutic Research Corporation of Great Britain Limited, London, England
No Drawing. Application August 4, 1945, Serial No. 609,020. In Great Britain October 31, 1944
3 Claims. (Cl. 195—36)



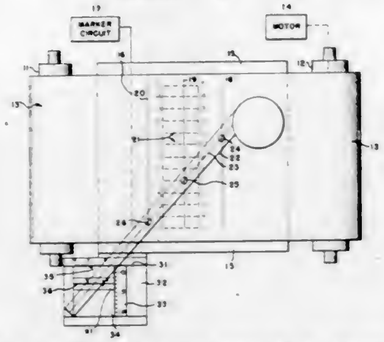
1. A process for manufacturing penicillin which comprises growing a penicillin producing mold in a nutrient medium containing corn steep liquor and containing an added amount over that contained in any corn steep liquor present of at least one substance selected from the group consisting of β-phenylethylamine, β-p-hydroxyphenylethylamine and salts of said amines, said substance being added in an amount producing a concentration not exceeding 1% by weight of the medium.

2,451,854
DRY SPINNING APPARATUS
Albert J. Mehler, Jr., Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application June 15, 1944, Serial No. 540,471
1 Claim. (Cl. 18—8)

In a spinning cell comprising a sight-box opening at the upper end thereof and adapted for the spinning of cellulose acetate yarn from acetone solutions of cellulose acetate, the improvement which comprises a yarn outlet means at the bottom of the cell, said yarn outlet means comprising an open-ended tube provided at its upper end with an outwardly extending flange through which said tube is removably attached to the bottom end of the spinning cell; a small opening in the side wall of the tube adapted to be connected with an aspirating line, a large screened opening in the side wall of the tube diametrically opposite said small opening, a second tube removably fitted snugly within said open-ended tube in such manner that vapors cannot pass between the walls of said tubes, said second tube being closed at the top except for a removable plate having an orifice therein, said orifice being of such size that the amount of acetone vapor flowing therethrough of its own weight, plus the acetone vapor entrained by the filaments, substantially balances the amount of acetone formed in the cell by evaporation, and a small opening and a large opening in the side wall of the second tube registering with the small and large openings respectively in said open-ended tube, the lower end of said cell being sealed except for said orifice in said removable orifice plate.

2,451,855
BOAT
Pierre Ernest Mercier and Raymond Villers-Allerand, New York, N. Y.; said Mercier assignor to said Villers-Allerand
Application August 10, 1945, Serial No. 610,070
8 Claims. (Cl. 9—1)

1. A boat comprising a keel frame, a deck frame secured to said keel frame at spaced points, an inextensible flexible skin enclosing said frames and forming the outer walls of the boat, longitudinally disposed inflatable members below the deck frame and within the skin and inextensible



flexible members intermediate said inflatable members for forcing the same when inflated against the skin member whereby the walls of the hull of the boat may have a predetermined contour.

2,451,856

MECHANICAL DEVICE FOR DETERMINING THE FUTURE POSITION OF AIRCRAFT

Edward E. Miller, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War

Application July 9, 1945, Serial No. 604,055
3 Claims. (Cl. 33—1)

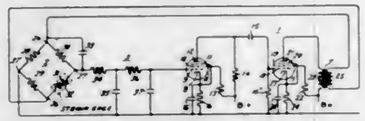
3. A mechanical device adapted to be used in combination with a transparent record sheet for indicating the future position of aircraft and time of arrival at a predetermined point by the use of data derived from radio object-locating equipment, said device comprising driving means, electrical marking means for burning lines at intervals in the record sheet, a surface having suitable range calibrations thereon, means driven by said driving means for moving the transparent record sheet over said surface and past said marking means at a uniform rate, a first scale calibrated in time units and disposed adjacent said supporting means, a second scale calibrated in distance units and having a first index thereon, said first scale and said second scale being disposed at right angles to each other, said second scale being further disposed so as to be movable relative to said first scale whereby said first index will indicate the relative positions thereof, a third scale calibrated in time units and having a second index thereon, said first and third scales being disposed parallel to each other and said third scale being further disposed so as to be movable relative to said second scale whereby said second index will indicate the relative positions thereof, and a straight edge adapted to be aligned through plotted points on the record sheet and moved therewith whereby the future position and time of arrival of an aircraft at a predetermined point may be determined from the crossing of said straight edge and points on said third scale.

2,451,857

SEPARATION OF CAPRYL ALCOHOL FROM METHYL HEXYL KETONE BY ALKALI TREATMENT AND DISTILLATION

John J. Miskel, Brooklyn, and Bernard A. Dombrow, New York, N. Y., assignors to Nopco Chemical Company, a corporation of New Jersey

No Drawing. Application June 1, 1944, Serial No. 538,334
6 Claims. (Cl. 202—57)



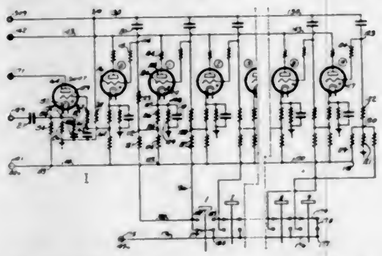
1. A process for separating capryl alcohol from methyl hexyl ketone which comprises heating under substantially anhydrous conditions a mixture of said compounds with a condensing agent of the group consisting of the oxides, hydroxides, alkoxides, and amides of sodium, potassium and lithium to change the ketone to polymeric form, and separating the capryl alcohol from the polymeric ketone.

2,451,858

CONTROLLED FREQUENCY OSCILLATOR

Raymond P. Mork, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application January 26, 1945, Serial No. 574,658
11 Claims. (Cl. 250—36)



1. A frequency controlled oscillator comprising an electron discharge amplifier having input and output circuits, and means for supplying oscillations from said output to said input circuit comprising a network for shifting the phase of oscillations by an amount determined by the frequency of said oscillations and a second network for shifting the phase of said oscillations by a selectable amount substantially independent of said frequency.

2,451,859

ELECTRON TUBE VARIABLE IMPULSE COMMUNICATION SYSTEM

Robert E. Mumma and Francis X. Bucher, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

Application February 25, 1943, Serial No. 477,096
6 Claims. (Cl. 177—353)

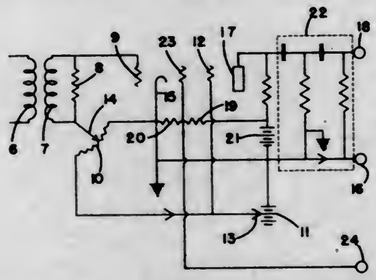
1. In a communication system in which different numbers of signals are assigned to represent different symbols which may be transmitted and which comprises a sending station and a receiving station, the combination of means at the sending station for generating uniformly spaced bursts of different numbers of substantially identical signals according to the symbols being transmitted, which signals of a burst follow each other at a supersonic frequency; means to transmit the bursts of signals one after another over a single communication channel to the receiving station, with a uniform space or time interval between bursts; a plurality of means at the receiving station, responsive to the number of supersonic signals in the various bursts as they are received, and controlled solely by the number of signals, to set up direct representations of the symbols to which the different numbers of signals have been assigned; and means responsive to the signals in the bursts, and operated during the time interval between bursts, for routing the bursts to different ones of said plurality of means to cause the operation thereof to set up the symbols.

2,451,860

RAZOR HONING DEVICE

Vincent Munno, Hoboken, N. J.

Application April 12, 1946, Serial No. 661,778
3 Claims. (Cl. 51—214)



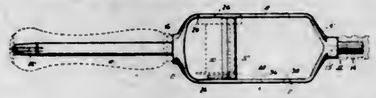
1. In a honing device having a U-shaped frame rotatively supporting a pair of balls in contact with each other adjacent the outer free ends of the flexible arms of said frame, means for varying the spacing of said arms to vary the pressure with which the balls engage each other, comprising bolts non-rotatively mounted in axial alignment on the inner faces of said arms and directed toward each other, said bolts having threads of opposite hand, and a tubular collar having said bolts threadedly engaged into its ends, whereby the collar may be turned in one direction to extend the bolts and spread the arms to reduce the pressure on the balls and in the opposite direction to draw the bolts together and relieve the arms to increase the pressure on the balls.

2,451,861

METHOD OF CONTROLLING PHASE RELATIONSHIPS IN AN ELECTRONIC CIRCUIT

Cleve C. Nash, Jr., Tulsa, Okla., assignor to Standard Oil Development Company, a corporation of Delaware

Application July 24, 1942, Serial No. 452,169
2 Claims. (Cl. 179—171)



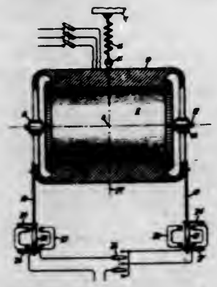
2. A method for maintaining a constant phase relationship in an amplifier tube, said tube having at least a cathode, an anode, a control grid, and a suppressor grid, comprising the steps of applying negative biasing voltages to the said control and suppressor grids and adjusting the ratio of the negative biasing voltages on the two grids until amplification may be varied by changing the value but not the ratio of the said biasing without changing the phase relationship between the anode and cathode of the said amplifying tube.

2,451,862

FISHING REEL SUPPORT OR FRAME

Noble A. Nelson, Chicago, Ill., assignor of one-fifth to Harold Freevol, one-fifth to Sam Smedberg, one-fifth to Howard Brandon, and one-fifth to Carl E. Anderson

Application August 26, 1943, Serial No. 500,038
2 Claims. (Cl. 43—20)



1. As an article of manufacture, a reel frame comprising a one piece integral member including an elongated housing having opposed side and end walls adapted to receive operating mechanism for the reel and in which the width of said side walls is greater than the diameter of the spool of said operating mechanism, said end walls being provided with laterally projecting elements, one being with securing means to receive a rod ferrule, and the other being provided as a core for a handle for said rod and reel and having securing means for a finishing cap for said handle, the upper and lower faces of the frame being open, and one or more reinforcing elements extending between said opposed side walls.

2,451,863

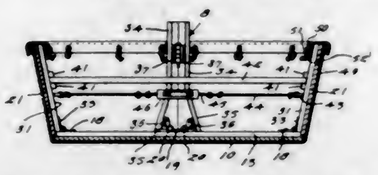
APPARATUS FOR BALANCING ROTORS

Henry D. Oakley, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application May 23, 1945, Serial No. 595,351
2 Claims. (Cl. 73—66)

1. In rotor balancing apparatus for use with a framework having bearing means for centrally rotatably supporting a rotor member to be balanced, means including a universal joint type of connection for resiliently suspending said framework from a point above the center of gravity of the combined framework and rotor member with the axis of rotation thereof horizontal to permit the framework to have freedom of movement in response to any unbalance of the rotor when the latter is rotating, such rotor unbalance producing a vibratory bodily movement of the framework or a vibratory tipping movement of the framework in a vertical plane passing through the axis of rotation or a combination of such movements depending upon the nature of the rotor unbalance and at a frequency corresponding to the speed of rotation of the rotor member, a pair of means including movable parts secured to said framework for producing alternating current voltages of a frequency corresponding to the speed of rotation and respective-

ly proportional to the vertical movements of the framework at points equally distant horizontally from the point of suspension measured along the axis of rotation, and a circuit including a reversing switch for connecting said voltage producing means in series to obtain a summation voltage which is proportional to the vertical bodily movement of said framework when the reversing switch is in one position and is proportional to the tipping movement of said framework when the reversing switch is in a reverse position.



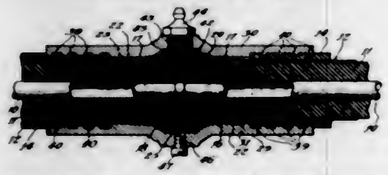
2,451,864
EXPLOSIVES
Daniel P. O'Brien, Stamford, Conn.
No Drawing. Application May 15, 1945, Serial No. 593,971
1 Claim. (Cl. 52—15)

An explosive containing magnesium, calcium phosphide and potassium perchlorate in substantially the proportions by weight of 32 parts magnesium, 2 parts calcium phosphide and 1 part potassium perchlorate.

2,451,865
ADHESIVE MATERIAL
William J. O'Brien, West Haven, Conn., assignor to The Seamless Rubber Company, New Haven, Conn., a corporation of Connecticut
No Drawing. Application May 7, 1945, Serial No. 592,529
6 Claims. (Cl. 260—23)

1. A composition used as an adhesive and containing four principal components, of which the first is zinc oxide, the second a resinous material, the third a rubbery component, and the fourth a factice, the resinous component being in excess of 18% by weight so as to render the mass tacky; comprising a material from the group consisting of hydrogenated rosin, glyceryl ester of hydrogenated rosin, dehydroabietic acid and wood rosin, the rubbery component being material of the group consisting of polyisobutylene of molecular weight between 80,000 and 120,000 and a rubbery copolymer of isobutylene and a diolefine in approximately the proportions of 98:2, and mixtures thereof, the factice being light in color and consisting of a highly refined cured vegetable oil of the group consisting of rapeseed oil and linseed oil.

2,451,866
COLLAPSIBLE BOAT
Clyde Ormond, Rigby, Idaho
Application November 24, 1944, Serial No. 565,004
1 Claim. (Cl. 9—2)

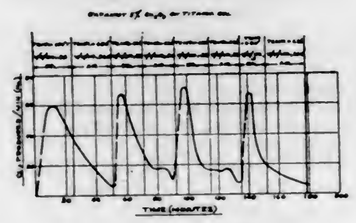


In a collapsible boat, a bottom section, side sections converging at a pair of their ends to form a bow, a stern section, said sections being detachably connected together, a flexible covering for said sections, said covering terminating at its upper edges at the upper edges of the side sections and stern section, a strip extending longitudinally of the side and stern sections, detachable connections between the outer edges of the strip and the upper edges of the covering, eyes at the inside of the side and stern sections and tie members between the strip and the eyes, said strip being flexible to permit disposition over the upper edges of the side and stern sections.

2,451,867
MELAMINE-FORMALDEHYDE RESIN DISPERSION IN A NONBASIC WATER-SOLUBLE ALCOHOL MEDIUM
Gilbert Pitzl, Buffalo, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 6, 1944, Serial No. 543,727
8 Claims. (Cl. 260—29.4)

1. A composition comprising a partially polymerized malamine-formaldehyde resin insoluble in water in concentrations below 35% but soluble within the range of concentrations from 35% to 70%, dispersed in a liquid medium comprising essentially a non-basic water-soluble alcohol from the group consisting of dihydric and trihydric alcohols as the disperse medium and from 0.4 to 0.6 part of hydroxy acetic acid per part of resin, said composition being capable of being diluted with water without precipitation of resin.

2,451,868
JOINT FOR HIGH-FREQUENCY TRANSMISSION LINES
Edward Clarke Quackenbush, Roselle, Ill., and Harner Selvidge, Silver Spring, Md.
Application January 18, 1943, Serial No. 472,708
6 Claims. (Cl. 174—88)

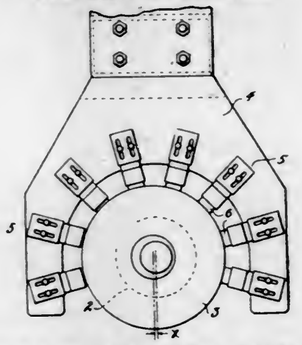


1. In a joint for a high frequency transmission line having inner and outer coaxial conductors maintained in spaced relation by a continuous solid dielectric, individual coupling means of conducting material joining the adjacent ends of the coaxial conductors together, said coupling means substantially following the diameters of their corresponding conductors for maintaining the characteristic impedance of the transmission line uniform throughout the joint, the adjacent ends of the solid dielectric of the coaxial line being spaced apart at said joint to provide a recess between said coupling means for dielectric material, and a separate dielectric material completely filling said recess, said separate dielectric material having substantially the same dielectric constant and as high a voltage breakdown characteristic as the dielectric provided in the transmission line.

2,451,869
CATALYZED OXIDATION PROCESSES
John C. Rapean and William E. Ross, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 10, 1944, Serial No. 558,281
11 Claims. (Cl. 260—610)

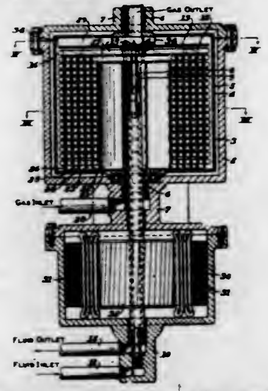
1. In a process for the production of peroxidic compounds selected from the group consisting of tertiary butyl hydroperoxide, di(tertiary butyl) peroxide and mixtures thereof, the steps of continuously conveying a vaporous mixture comprising substantially equivolumetric vaporous amounts of isobutane and oxygen and a volumetric amount of hydrogen bromide equal to about one half that of the isobutane through a reaction vessel having inner surfaces of a hard glass, maintaining said reactants in the reaction vessel at a temperature of about 200° C. at a superatmospheric pressure and for a period of time sufficient to effect the oxidation of the isobutane to said peroxidic compounds, and periodically interrupting said oxidation step to reactivate the reaction vessel walls by subjecting them, at a temperature of between about 275° C. and about 325° C., to the action of nitrogen dioxide.

2,451,870
CHLORINE MANUFACTURE
Roger W. Richardson and Jerry A. Pierce, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application September 4, 1942, Serial No. 457,286
9 Claims. (Cl. 23—219)



1. A continuous process for the preparation of chlorine directly from hydrogen chloride without any intermediate formation of chlorides on the catalyst, which consists in passing hydrogen chloride gas at a rate between 20 and 60 volumes of gas per volume of catalyst per hour over a catalyst mass pre-heated between 2 and 18 hours in an oxygen-containing gas to a temperature between about 500° F. and 850° F., said catalyst mass containing chromium sesquioxide supported on titania gel, the hydrogen chloride gas being contacted with the catalyst mass, at a temperature from about 650° F. to about 850° F. until the rate of production of chlorine rapidly decreases as the catalyst mass becomes spent, then disconnecting the hydrogen chloride supply, then passing air at a rate between 20 and 40 volumes of gas per volume of catalyst per hour over the spent mass for a period of time about the same as that during which the hydrogen chloride was passed over the initial mass, and at a temperature between about 800° F. and about 900° F., disconnecting the air supply and repeating the cycle of passing the hydrogen chloride over the mass and the subsequent passing of air over the spent mass.

2,451,871
DIMETHYL GERMANIUM DICHLORIDE
Eugene G. Rochow, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application August 17, 1946, Serial No. 691,399
1 Claim. (Cl. 260—429)



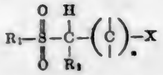
Dimethyl germanium dichloride.

2,451,872
COLLECTOR DRUM
Howard C. Rodgers, Birmingham, Ala., assignor to Tennessee Coal, Iron and Railroad Company, a corporation of Alabama
Application October 16, 1946, Serial No. 703,544
2 Claims. (Cl. 173—324)

1. Apparatus for supplying electrical current to a rotatable element comprising a collector drum, an axis for said collector drum, means for mounting said collector drum for rotation eccentrically about said axis, electrical contact brushes mounted peripherally of said collector drum and extending radially inwardly toward the axis thereof, and resilient means for influencing said brushes inwardly toward the periphery of said collector drum whereby sticking of the brushes is eliminated.

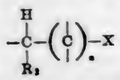
2,451,873
PROCESS AND APPARATUS FOR HEATING BY CENTRIFUGAL COMPRESSION
John R. Roebuck, Madison, Wis.
Application April 30, 1946, Serial No. 666,040
8 Claims. (Cl. 62—170)

1. A heating process comprising subjecting a flowing gas to centrifugal action in a rotating enclosure and thereby compressing and heating the gas, passing a thermoconductive substance in thermoconductive relationship with the gas simultaneously with said compressing after the gas has been heated to a desired extent and by the thermoconductive substance abstracting heat from the heated gas and conducting the thermoconductive substance through heat transfer means whereby the thermoconductive substance acts as a heating medium.



2,451,874

CORROSION INHIBITING COMPOSITION

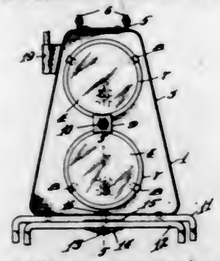


Willis G. Routson, Berkeley, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application June 28, 1944, Serial No. 542,613
21 Claims. (Cl. 252—333)

1. A composition of matter comprising a major amount of a liquid hydrocarbon containing finely dispersed therein a minor amount, sufficient to inhibit corrosion, of an organic sulfone of the formula

wherein R_1 is an aryl radical, a nuclear atom of which is directly connected to S; R_2 is a radical from the group consisting of an alkyl, aralkyl, and cycloalkyl radical in which the alkyl group is a long chain; X is a radical from the group consisting of a carboxyl radical and a metal salt thereof and n plus one is an integer of one to four; the



portion of the sulfone having a minimum of about 10 carbon atoms which render the sulfone oil-soluble.

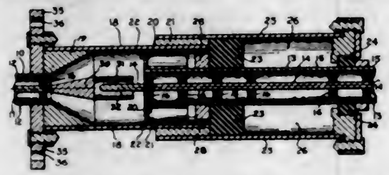
2,451,875

TRAFFIC SIGNALING DEVICE

Charles D. Ryder, Covington, Ky., assignor to The Grote Manufacturing Company, Bellevue, Ky., a corporation of Kentucky

Application October 17, 1945, Serial No. 622,840
5 Claims. (Cl. 248—33)

3. A road traffic signaling device of the nature disclosed, comprising: a pair of panels, each having a light reflecting face side, the panels hingedly connected for a swinging one about the other to alternately enclose or expose the light reflecting face sides of the panels, and a pair of claw bars, one fixed longitudinally to the lower end of one of the panels, the bars in pivotal union to adjust the same to a relative divergent position to sustain the panels as a unit perpendicularly from the ground surface upon which the device is stationed.



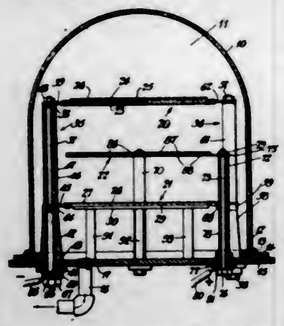
2,451,876

RADIO-FREQUENCY JOINT

Winfield W. Salisbury, Arlington, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy

Application June 5, 1943, Serial No. 489,844
25 Claims. (Cl. 178—44)

1. A joint providing for transfer of radio-frequency energy between two electrically conducting surfaces which includes an electrical resonator one electrical dimension of which is substantially a half-wave length for said radio-frequency, said resonator having a mouth constituted by a gap between said surfaces and located at one end of said half-wave length dimension, said resonator



having also a terminating conducting wall at the other end of said dimension and being so constructed that an interruption is present in the wall of said resonator, other than said mouth, as a result of the assembly of said joint, located at a place approximately an electrical quarter-wave length from said terminating wall.

2,451,877

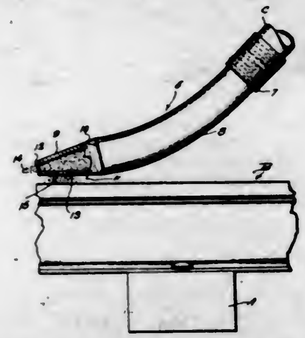
METHOD OF MANUFACTURING OSCILLATOR PLATES

Wallace H. E. Samuelson, Weehawken, N. J., assignor, by mesne assignments, to Reeves Hoffman Corporation, Carlisle, Pa., a corporation of Pennsylvania

Application October 6, 1945, Serial No. 620,720
3 Claims. (Cl. 204—192)

1. The method of simultaneously producing by cathode sputtering electrode coatings on the opposed major faces of an oscillator plate, which consists in supporting the plate with one major face resting downwardly on an apertured anodic support in bridging relation to the aperture whereby said face is partially shielded and partially exposed, exposing at least a part of the opposed major face of the plate, and cathode sputtering metallic coatings on the exposed areas of said plate by passing a high voltage across said anodic support and a coating-metal-disintegrating cathode.

2,451,878



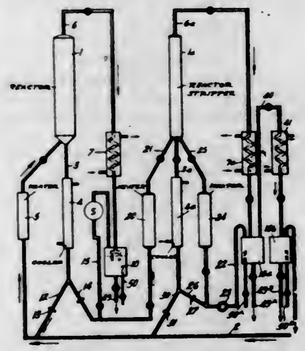
SANDING NOZZLE

John D. Savercool, Cranford, N. J.

Application October 15, 1946, Serial No. 703,389
2 Claims. (Cl. 291—46)

1. In a structural combination of the class described, a track rail, a car wheel thereon, a sand delivery pipe adapted for connection at one end with a source of sand supply and restricted air delivery means, and a sand dispensing nozzle unit

connected to the lower said and air discharge end of said delivery pipe, said nozzle unit being longitudinally curved and having an elongated cylindrical body portion and a tapered tip constituting a discharge end, said tapered tip being substantially rectangular in cross-sectional form and including converging side walls, a downwardly tapered wall, and a complemental rectilinearly straight bottom wall, said walls combin-



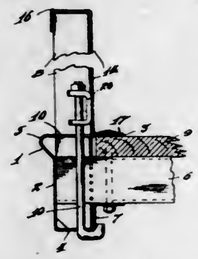
ing and defining a restricted sand issuance orifice of a cross-section considerably less than the cross-section of said body, and said bottom wall having an opening, said opening being spaced inwardly from said orifice, whereby sand is discharged simultaneously through said issuance orifice and bottom opening, the discharging sand from the latter being deposited on that portion of the rail beneath said opening.

2,451,879

HYDROCARBON SYNTHESIS

Walter G. Scharmann, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware

Application April 25, 1945, Serial No. 590,219
6 Claims. (Cl. 260—449.6)



1. The method of operating a hydrocarbon synthesis plant continuously, which comprises providing at least two reaction zones containing fluidized masses of powdered catalyst, charging a gaseous mixture containing CO and hydrogen to the said reaction zones, permitting the CO and hydrogen to contact the catalyst in the reaction zones at reaction temperature for a sufficient period of time to effect a conversion of CO with hydrogen into hydrocarbons and maintaining the catalyst in the first of said zones substantially free of oily and waxy material by continuously withdrawing catalyst from said first reaction zone and charging it to a second one of said reaction zones, subjecting the catalyst in said second reaction zone to a higher temperature than that prevailing in the first zone whereby oily and waxy materials are removed by volatilization, said conversion taking place simultaneously in said second zone, discharging volatile hydrocarbons into said second zone for the purpose of augmenting the volatilization taking place, and thereafter withdrawing the cleansed catalyst and returning it to the first-named zone.

2,451,880

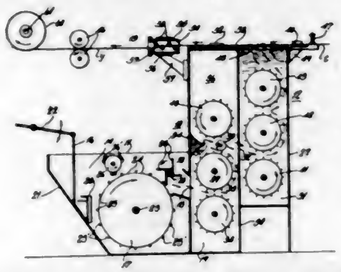
CARGO CARRYING VEHICLE BODY

Wallace H. Seckel, Galion, Ohio, assignor to The Perfection Steel Body Company, Galion, Ohio, a corporation of Ohio

Application January 5, 1945, Serial No. 571,531
1 Claim. (Cl. 296—10)

A body of a cargo carrying vehicle, comprising: a platform having a side rail of channel form in cross section for each of the opposite sides of the platform with the flanges of each rail extending inwardly in the plane of the platform, the top flange thereof having apertures therethrough at intervals longitudinally of the rail, each for traversing an end of a stake for making a socket connection with the rail, the bottom flange terminating with a right angled bend extending inwardly of the channel forming a shoulder longitudinally of the rail in spaced parallelism with the web of the rail and therewith providing a socket for the ends of the stakes, side panels of sheet metal each respectively sustained upon a relative side rail of the platform and at its base end having a lateral flange extending from the inner side of the panel longitudinally thereof and bearing upon the top flange of the rail and bolts mounted upon the outer side of the panel, each having its shank traversing an aperture in each of the flanges of the rail with its head end in anchoring connection with the outerside of the bottom flange of the rail.

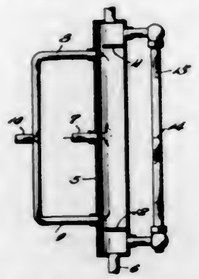
2,451,881



APPARATUS FOR FORMING FUR FILLED YARN

Morris H. Siegel and Frances Sonin, New York, N. Y.

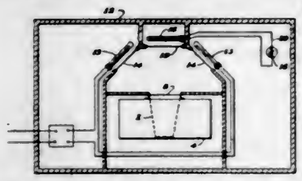
Original application October 11, 1943, Serial No. 505,716. Divided and this application August 30, 1946, Serial No. 693,900
10 Claims. (Cl. 57—5)



1. Apparatus for applying fur hair fluff to an adhesively coated thread, the combination of means forming a narrow slot, means for moving a thread under tension while rotating the same,

means for guiding the thread to pass lengthwise over and close to the slot in position substantially

closing the slot and means for lifting the fluff upwardly through the slot and on to the thread.

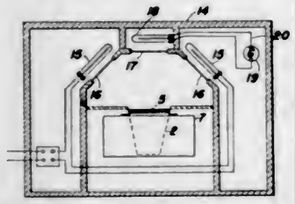


2,451,882
LIQUID PROPORTIONING GAUGE OR INDICATOR
Walter C. J. Smith, Regina, Saskatchewan, Canada
Application August 17, 1945, Serial No. 611,159
1 Claim. (Cl. 73—53)

A gauge of the class described comprising a vertical tube, an inlet at an intermediate portion of the tube adapted to admit a mixture of relatively heavy and light liquids into the tube, outlets at the upper and lower portions of the tube to provide for a circulation of the liquid vertically in the tube downwardly and upwardly from the inlet, a sight gauge connected to the tube between the outlets and the ends of the tube to arrange the same out of the path of circulation of the liquid, and baffles in the tube between the outlets and the connections of the sight gauge to the tube to prevent circulation of the liquid through the gauge.

2,451,883
GEOPHYSICAL PROSPECTING
Rodney M. Squires, Alice, Tex., assignor, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application October 25, 1945, Serial No. 624,563
10 Claims. (Cl. 250—71)

1. A method of prospecting for subterranean petroliferous deposits which comprises collecting a number of soil samples at strategic locations in a prospect area, similarly and separately treating said samples by contacting with an organic solvent to extract significant organic constituents related to the sought deposits therefrom, subsequently removing said solvent from contact with said samples by evaporating said solvent from a relatively small fixed area of sample surface exposed to the atmosphere whereby the significant organic soil substances extracted from said sample are deposited on the exposed surface thereof, determining the fluorescence of the exposed sam-



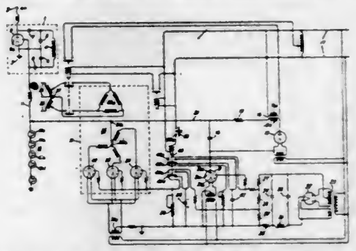
ple surfaces, and correlating the fluorescence values obtained for the different samples in relation to the respective sampling locations in order to derive information as to the presence and location of a sought deposit.

2,451,884
BAR MOUNTING FIXTURE
Otto E. Stelzer, South Bend, Ind.
Application August 16, 1947, Serial No. 768,972
3 Claims. (Cl. 211—123)

1. A device of the character described, comprising a pair of brackets adapted to be mounted on a support in spaced relation and each including a guide portion having a bar-receiving aperture, a bar fitting in said apertures at its opposite ends, and a pair of decorative caps each having a guided slide fit on a bracket and a bar-receiving aperture registering with the bracket aperture, said guide portion including a rigid plate portion disposed substantially perpendicular to said bar and said cap having interior grooves having a snug sliding fit on the opposite margins of said plate portion.

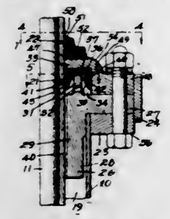
2,451,885
GEOCHEMICAL PROSPECTING
Nelson P. Stevens, Dallas, and Rodney M. Squires, Alice, Tex., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application January 11, 1946, Serial No. 640,593
11 Claims. (Cl. 250—71)

1. The method of determining the fluorescence of a soil sample which comprises the steps of placing said sample in a vessel adapted to expose a relatively small portion of the potential surface of said sample to the atmosphere, covering said exposed surface with a layer of granulated material which is substantially free of organic matter and which is substantially non-fluorescent in character, adding a predetermined amount of an organic solvent to the sample vessel to contact the sample and said granular material to extract organic constituents of said sample, removing the solvent from contact with said sample and said granular material by evaporating it from the surface of said material under conditions such that the desired, indicative portion of the extracted soil constituents are not vaporized along with the solvent but are deposited on the surface of said covering layer as the solvent is evaporated and measuring the fluorescence of the surface of said layer after the solvent has been practically completely removed from said sample and said layer.



2,451,886
ELECTRICAL MEASURING INSTRUMENT
Allen G. Stimson, Lynnfield, Mass., assignor to General Electric Company, a corporation of New York
Original application June 9, 1944, Serial No. 539,546. Divided and this application April 13, 1945, Serial No. 588,196
5 Claims. (Cl. 171—95)

1. In an electrical measuring instrument, a laminated field core of generally U shape with the laminations parallel with the plane of the U and having a yoke portion and pole piece portions at either end of the yoke portion, an energizing coil on the yoke portion, the pole piece portions of the core being thicker than the yoke portion in a direction at right angles to the plane of the laminations, and having the center of the pole piece portions offset from the center of the yoke portion in one direction at right angles to the plane of the laminations.

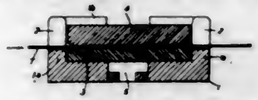


2,451,887
KEYING CONTROL SYSTEM FOR OSCILLATORS
Herbert F. Storm and Ernest W. Hutton, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
Application November 20, 1946, Serial No. 711,164
2 Claims. (Cl. 250—36)

1. In combination an electric valve oscillator comprising an electric valve having a cathode and a control grid and a bias resistor connected between said grid and cathode, means for terminating the oscillations of said oscillator comprising a circuit in parallel with said bias resistor including a capacitor and a second electric valve, means for charging said capacitor and means for firing said second valve to discharge said capacitor to supply to said grid a negative pulse voltage having a rate of decay substantially equal

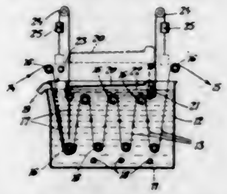
to the rate of decay of said oscillations, and means for supplying to said grid a negative hold-off voltage having a substantially smaller magnitude than said pulse voltage.

2,451,888
PISTON OIL SEAL AND WIPER ASSEMBLY
Elmer B. Thompson, Des Moines, Iowa, assignor to Globe Hoist Company, Des Moines, Iowa, a corporation of Iowa
Application February 16, 1945, Serial No. 578,177
1 Claim. (Cl. 286—18)



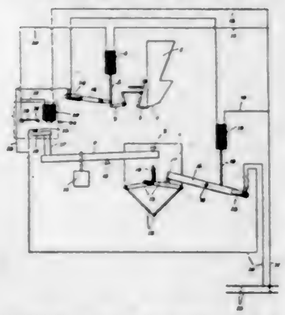
In a hydraulic hoist having a cylinder with a piston therein, a flange about the top of said cylinder having a flat top surface with an upright annular projection thereon, a piston oil seal including a ring member having a flat bottom surface for mating engagement with said top surface, and an undercut recess for receiving said projection, a packing member of substantially inverted U-shape in cross section positioned within said recess, a first spring member positionable between the legs of said packing member and adapted to be engaged by said projection whereby to yieldably urge said legs apart from each other, a piston wiper of substantially L shape in cross section having one leg portion supported on the top of said ring member and the other leg portion in wiping engagement with the piston, a second spring member extended across the top of said wiper member between the ends thereof, a clamping ring adapted to fit over the top surfaces of said second spring member and said ring member, and means extended through said clamping ring, ring member and said flange to clamp the same together.

2,451,889
THREAD TENSIONING DEVICE
Ralph Norman Toone, Wollaton Park, Nottingham, England
Application September 14, 1945, Serial No. 616,229
In Great Britain June 22, 1945
3 Claims. (Cl. 242—149)



1. A thread-tensioning device, comprising two members tapered in width and resting one on

another, and a plurality of guides providing a plurality of alternative paths for a thread be-



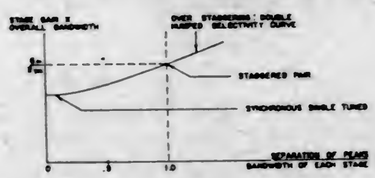
tween the two members, which paths are of differing lengths between the two members by virtue of the taper of said members.

2,451,890
COLLECTION OF GASES FROM ARTIFICIAL SILK AND THE LIKE
Wacław Ufnowski, Warsaw, Poland
Application August 4, 1939, Serial No. 288,452
In Poland September 13, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires September 13, 1958
6 Claims. (Cl. 18—8)

3. Apparatus for recovering gases and vaporizable constituents from artificial cellulosic material which comprises a water tank having a cold zone and a heated zone, a hood extending over the heated zone of said tank with its lower edges dipping below the surface of the water in said tank, means for passing the cellulosic material to be treated continuously into the cold zone of said tank, through the heated zone under said hood and out of the tank, means for introducing cold water at the entrance end of the tank to maintain a cold zone therein, means for heating the heated zone of the tank, and a pipe for withdrawing gases from the hood.

2,451,891
CONTROL CIRCUIT FOR AUTOMATIC WEIGHING MACHINES
Edward J. Vagim, Fresno, Calif.
Application March 28, 1945, Serial No. 585,366
3 Claims. (Cl. 249—53)

1. An electric control circuit for an automatic weighing machine which includes a hopper assembly having a normally open gate, and a vertically movable scale bucket having a normally closed gate, the hopper assembly being disposed to feed the scale bucket; said control circuit comprising one solenoid operative to close the hopper assembly gate, another solenoid operative to open the scale bucket gate, an energizing circuit in which said solenoids are interposed, means in said circuit responsive to scale bucket lowering to a predetermined position to energize said one solenoid to close the hopper assembly gate, other means in said circuit responsive to closing of the hopper assembly gate to energize said other solenoid to open the scale bucket gate; and a separate switch means disposed in the circuit and which is responsive to opening of the scale bucket gate to break said circuit and deenergize both solenoids whereby the gates return to normal positions.



2,451,892
TOOL
Charles S. Van Brocklin, Portsmouth, N. H.
Application November 13, 1944, Serial No. 563,126
1 Claim. (Cl. 279—91)

A tool of the class described comprising in combination, a handle molded from plastic material about a holder member and a lock member whereby said members are immovable relative to one another and relative to said handle, said holder member having a lower portion projecting downwardly from the lower end of said handle and provided with an upwardly extending cylindrical bore open at the lower end of said member, said lock member disposed at the upper end of said holder member and having a lower lock portion depending therefrom into the upper end of the bore and being half-cylindrical in transverse cross-section and having an outer face contiguous with one side of said bore and an inner flat face spaced from an opposite side of said bore, a working member having an upper shank portion which is insertable in the bore of the holder member and is provided with an upper extremity which is half-cylindrical in transverse cross-section and has outer and inner faces complemental to the said opposite side of the bore and inner flat face of the lock portion whereby said shank is held against rotation relative to said holder, said shank provided with an externally screw threaded enlarged portion disposed adjacent the lower end of the holder member, the lower end of said holder member provided with an outwardly extending annular flange, and a nut rotatable on said lower end of the holder member between said flange and lower end of said handle having an internally screw threaded depending portion for screwing onto the screw threaded portion of said shank whereby

the said nut is held against axial movement relative to said holder member and said shank is held against longitudinal movement relative to said holder member.

2,451,893
STAGGER TUNED AMPLIFIER
Henry Wallman, Cambridge, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 30, 1945, Serial No. 613,605
7 Claims. (Cl. 179—171)

1. In a method of tuning an electronic amplifier including n serially connected stages, each of said stages being tuned to a resonant frequency by means of a single resonant circuit, the desired overall selectivity characteristic of said amplifier having a bandwidth Δf between points where the absolute value of the ordinate is approximately .707 of the value of said ordinate at frequency f_0, the desired maximum point of said characteristic, the ratio

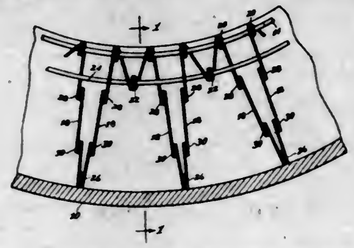
$$\frac{\Delta f}{f_0}$$

being equal to a value δ, the steps including: combining a plurality of said stages into pairs, assigning to each of said pairs a number k, where k is a different value for each pair, said values being a series of successive odd integers beginning with one, assigning to each of said pairs a set of parameters d_k and α_k, where k is as defined above, determining values for d_k and α_k for each pair from the equations:

$$d_k^2=\frac{4+\delta^2-\sqrt{16+8\delta^2\cos\frac{k\pi}{n}+\delta^4}}{2}$$

and

$$\left(\alpha_k-\frac{1}{\alpha_k}\right)^2+d_k^2=\delta^2$$



adjusting the circuit constants of each stage so that d_k is the approximate ratio of bandwidth to resonant frequency for each individual stage of each of said pairs, and so that the resonant frequency of the individual stages of each of said pairs are approximately $f_{0\alpha k}$ and

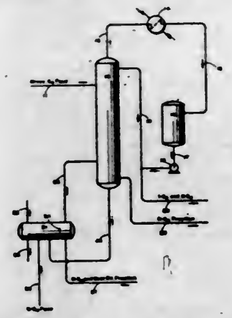
$$\frac{f_0}{\alpha_k}$$

respectively.

2,451,894
STEEL REINFORCED TIRE
Hollis K. Weed, Blakeley Island, Ala.
Application June 27, 1946, Serial No. 679,647
1 Claim. (Cl. 152—284)

A filler for casings of motor vehicle tires comprising a pair of cables positioned around the inner surfaces of the walls of a tire and spaced from the open inner side thereof, coil springs positioned in a centrally disposed plane midway between the cables and extended inwardly into the casing, said coil springs having outwardly extending arms connected to the cables and urg-

ing the cables apart, and circular wire strands with spaced coils therein extending from the cables around the inner surface of the casing.



2,451,895
SYNTHETIC GREASE
Ellis Ross White, Berkeley, and Denham Harman, Albany, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application June 8, 1946, Serial No. 675,332
16 Claims. (Cl. 252—42.1)

2. A stable lubricating grease composition comprising as the major lubricating constituents thereof a thio-ether derivative having the general formula

wherein R_1 and R_4 are hydrocarbon radicals, R_2 and R_3 are aliphatic radicals, a lithium soap, from 4% to 40% of said major constituents being said soap and an oxidation inhibitor.

2,451,896
DISTILLATION OF BUTANE CONTAINING HIGH BOILING CONTAMINANTS
Glenn W. Wilson, Jr., Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application July 29, 1944, Serial No. 547,251
3 Claims. (Cl. 202—40)

1. A continuous method for distilling a primary feed mixture including at least a first component, a higher boiling second component, and a contaminating amount of a component boiling substantially higher than said second component comprising the steps of continuously introducing a stream of said primary feed mixture into a

medial portion of a fractional distillation column, maintaining the distillation column under temperature and pressure conditions to cause removal of predominantly said first component substantially free of the contaminating component as a vapor from the top of column, continuously condensing said vapor to form a condensate, continuously returning at least a portion of said condensate as reflux to an upper part of said column while recovering another portion as distillate product, continuously removing from the bottom of the column a first and a second liquid stream, said first stream being of greater volume than the second and each stream comprising predominantly said second component regulating the relative quantities of said first and second streams so that said second stream contains less than 10% by weight of the total high boiling components in the system, continuously recovering said second stream as liquid product, continuously introducing said first stream into a heated evaporation zone, supplementing the quantity of second component producible from said primary feed mixture by continuously introducing into the evaporation zone a second feed stream from a source external to said distillation column and different from said primary feed mixture, said second feed comprising predominantly said second component and contaminating amounts of higher boiling components substantially in excess of the amount in said second stream, continuously vaporizing a major portion of the second component in the evaporation zone, continuously returning the resultant vapors to a section of the distillation column above the point of withdrawal of said first liquid stream but below said medial portion, and continuously removing from the evaporation zone a liquid stream including approximately 90% by weight of the total high boiling contaminants introduced into the distillation column and the evaporation zone.

2,451,897

METHOD OF TREATING SHRIMP

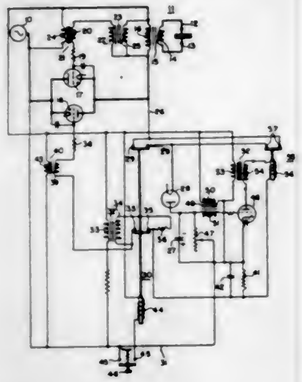
Eric R. Woodward, New York, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia

No Drawing. Application November 23, 1946, Serial No. 711,826

3 Claims. (Cl. 99—111)

1. A method of inhibiting the iodoform taste sometimes encountered in shrimp which includes the step of treating shrimp with chlorine dioxide.

2,451,898



ELECTRONIC CONTROL SYSTEM

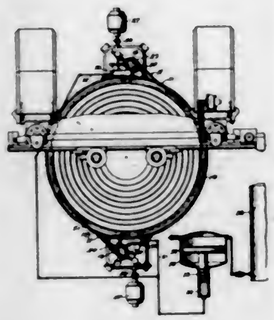
John H. Wyman, Morristown, N. J., assignor to Electrical Industries, Inc., Newark, N. J., a corporation of New Jersey

Application October 26, 1945, Serial No. 624,823

8 Claims. (Cl. 250—27)

7. A control system for controlling the translation of power from an alternating current power-supply source to a power load comprising, a first gas-discharge device having an anode and a cathode serially included between said source and said load and adapted to translate power from said source to said load during an interval when said device is conductive, energy-storage means, a unidirectional energizing circuit responsive to the potential drop across said anode and cathode for causing energy from said source to be stored in said energy-storage means during an interval when said device permits no power to be translated from said source to said load, means for rendering said device conductive to permit power to be translated from said source to said load, means for discharging energy from said energy-storage means during the interval when said device permits power to be translated from said source to said load, a second gas-discharge device normally nonconductive and having an output circuit load impedance included in a control circuit of said first device for rendering said first

device nonconductive during the interval when said second device is conductive, and means for causing said second device to become conductive upon the discharge of said energy to a predetermined value to render said first device nonconductive and terminate the translation of energy through said first device from said source to said load.



2,451,899

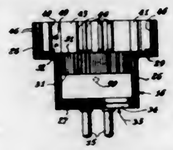
TABLE DRIVE MECHANISM

Lucien I. Yeomans and De Witt Clausen, Chicago, Ill., assignors to Lucien I. Yeomans, Inc., Chicago, Ill., a corporation of Illinois

Application December 26, 1942, Serial No. 470,262

5 Claims. (Cl. 74—221)

1. Mechanism for driving a rotary table comprising a linked chain, and means engaging said chain and positively driving the latter, said chain extending around a peripheral surface of said table and frictionally gripping the latter, said chain comprising a series of pivotally connected links each having side plates provided with enlarged ends and said table surface being formed with grooves spaced to receive said enlarged link ends.



2,451,900

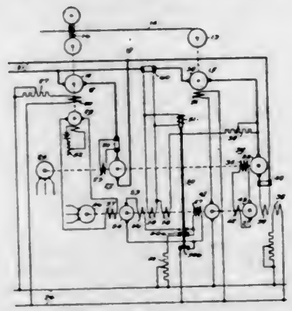
ELECTRICAL DISCHARGE DEVICE AND BASE

Irving Zambakian, Bloomfield, and Ward W. Watrous, Jr., Chatham, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application August 20, 1946, Serial No. 691,836

18 Claims. (Cl. 250—27.5)

1. A base for an electrical device comprising a hollow cylindrical cement-carrying portion with a bottom closure, and a plurality of electrical contact elements projecting therefrom, said cylindrical portion carrying internal ribs some of which form air-carrying ducts along the envelope of said electrical device when in place, said bottom closure having an aperture through which air for cooling may flow to said ribs.



2,451,901

CONTROL SYSTEM FOR REEL MOTORS

Basil J. Auburn, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 13, 1946, Serial No. 683,315

9 Claims. (Cl. 318—6)

9. In a control system for a reel for strip material worked upon by roll means driven by a roll motor; a reel motor having a driving connection with the reel and having an armature and a field winding, means connecting the armature of the reel motor to the same source of electrical energy as the roll motor including a booster generator responsive to the armature current of the reel motor to maintain said current at a predetermined value; a regulating generator having a pattern field winding energized in accordance with the speed of the roll motor, a differential field winding energized in accordance with the counter-electromotive force of the reel motor armature operable to develop a control voltage, a compensating cumulative field winding energized in accordance with the armature current of the reel motor and a self-energized series field winding arranged to maintain the output under balanced conditions; means including a control generator having a field winding and an armature connected in circuit relation with the field winding of the reel motor for effecting energization thereof; and means selectively connecting the field winding of the control generator to a source of substantially constant voltage for providing a minimum value of field excitation or to the regulating generator variably controlling the field excitation.

2,451,902

PROCESS FOR COLOR CINEMATOGRAPHY ON LENTICULAR FILMS

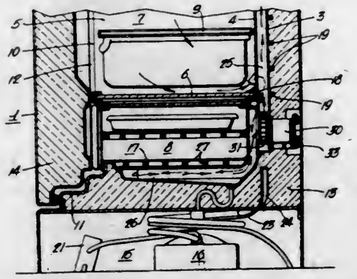
Laurent Bassani and Gaston Gagnepain, Paris, France

Application May 10, 1945, Serial No. 592,956

In France December 22, 1944

3 Claims. (Cl. 88—16.4)

1. A method of color cinematography which comprises projecting on a screen through an objective and a color filter elementary color selective images which have been formed on a lenticular film and are adapted to occupy on said film variable positions from one particular film to the other with respect to the corresponding lenticulation, the light beam passing directly from the lenticular film to the color filter, and imparting to the filter an oscillatory movement whose amplitude is less than the amplitude corresponding to a displacement of an image on the lenticular film equal to the smallest cross-dimension of a lenticulation and proportional to the average displacement of the elementary images with respect to the corresponding lenticulation.



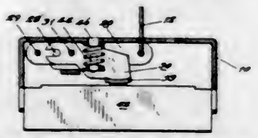
2,451,903

REFRIGERATOR HAVING A HEAT DISSIPATING DEVICE FOR THE ELECTRIC MOTOR THEREOF

John J. Bauman, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

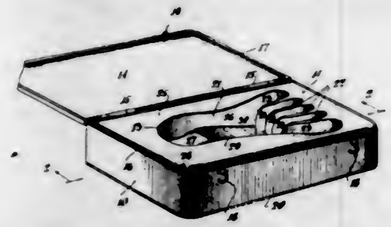
Application June 30, 1944, Serial No. 542,889

8 Claims. (Cl. 62—1)



4. The combination with a motor compressor unit including motor-actuated pumping means mounted within and substantially free from contact with a housing; of a heat conductive member attached to said means in heat exchange relation therewith, said member being movable in response to heat in said means into contact with said housing to thereby afford a path for conduction of said heat to said housing.

2,451,904
LOCATING TOOL
Robert James A. Beatty, Dayton, Ohio, assignor to Aero Supply Mfg. Co., Inc., Corry, Pa.
Application July 15, 1946, Serial No. 683,654
1 Claim. (Cl. 33—169)

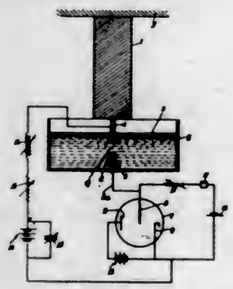


A centering tool for a metal working machine comprising an elongated shank having an axial bore therethrough and a concentric counterbore at the inner end thereof, said shank including a concentric annular enlargement at the outer end thereof, said enlargement having a precision ground peripheral surface and a precision ground outer end, a head formed with a precision ground inner end bearing against the outer end of said enlargement and having an outer diameter equal to the outer diameter of said enlargement, said head including a concentric workpiece engaging outer part of a diameter greater than the diameter of the inner part thereof, said head having a concentric axial bore and a coaxial counterbore extending inwardly from the outer end thereof, a spring disposed in the bore of said shank and head, and a pair of spring tensioning pins disposed one in each counterbore and engaging said spring whereby to yieldably hold said shank and head together.

2,451,905
REVERSE ACTION SWITCH CONTROL
Robert H. Bentley, Hartford, Conn., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a corporation of Connecticut
Application December 3, 1947, Serial No. 789,344
9 Claims. (Cl. 74—110)

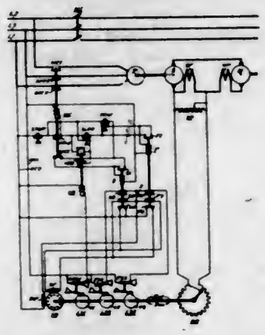
1. In combination, an electric switch having an operating button normally biased outwardly, operating mechanism to hold said button pressed in against its bias comprising a frame, a fixed pivot mounted in said frame, a member mounted on said pivot, a second fixed pivot, a second member mounted on said second pivot, a loose pivotal connection between said second member and said first member between said pivots, spring means between said frame and said second member acting on said second member on the opposite side of its fixed pivot from said loose pivotal connection to cause said second member normally to depress said operating button, and means engageable to move said first member in opposition to said spring means.

2,451,906
FOOT MEDICATION APPLICATOR
Henry L. Berman, Jamaica, N. Y.
Application August 7, 1947, Serial No. 767,029
2 Claims. (Cl. 128—260)



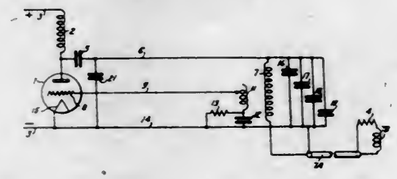
1. A portable applicator for use in the treatment of foot ailments comprising an open top casing and an absorbent and resilient medicament impregnated applying pad fitted into the casing, said pad having a recess therein adapted to accommodate the foot of the user, the walls of the recess being shaped to engage the surfaces of the foot and to project between the toes thereof, whereby pressure by the foot upon the pad will express the medicament contained therein and apply the same to the surfaces of the foot engaged by the pad.

2,451,907
BEARING ALLOY
Walter Betteridge and Ernest Reginald Gadd, Bristol, England, assignors to The Bristol Aeroplane Company Limited, Bristol, England, a British company
No Drawing. Application June 20, 1944, Serial No. 541,279. In Great Britain April 2, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires April 2, 1963
1 Claim. (Cl. 75—134)



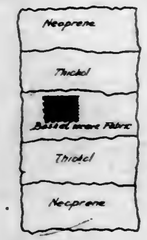
A bearing alloy consisting of copper, silver and lead in equal proportions.

2,451,908
METHOD AND APPARATUS FOR DETECTING CHANGES IN DIMENSIONS
Marietta Blau, New York, N. Y., assignor to Canadian Radium and Uranium Corporation, New York, N. Y., a corporation of New York
Application March 7, 1946, Serial No. 652,773
4 Claims. (Cl. 250—83.6)



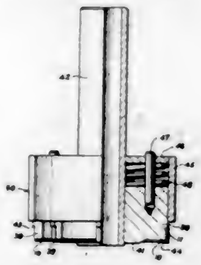
1. A method of detecting a change in dimension of a test body, which consists in regulating the length of a gap between said test body and a companion electrode by said change in dimension, said gap being filled with an ionizable and yieldable and non-gaseous dielectric ionizing, said ionizable dielectric in said gap within a selected ionization range to make said dielectric in said gap conductive when its maximum length equals said ionization range, while applying a difference in voltage between said test body and said companion electrode through said dielectric in said gap to pass an ionization current through said dielectric in said gap when said dielectric is ionized, said dielectric being substantially non-conductive when it is non-ionized.

2,451,909
SERIES GENERATOR-FED MOTOR SYSTEM
Stanley A. Bobe, Atlanta, Ga., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,391
4 Claims. (Cl. 318—158)



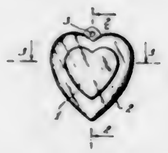
1. In an electric drive for a direct current motor, the combination of, a direct current generator, a series field winding for the generator, circuit means for connecting the generator in series with the direct current motor, an alternating current motor for driving the generator to effect an electrical output thereof, a contactor for energizing the alternating current motor, a resistance element shunting the generator series field winding, means for varying the resistance of the resistance element, a second resistance element shunting the generator series field winding, a movable tap disposed for sliding movement along said second resistance element, and electrically connected to one terminal of the resistance element; an induction motor having starting and running field windings and a rotor connected to drive said movable tap, a pair of alternately operable relays each having normally closed and normally open contacts, cams operated according to movements of the rotor member, a normally closed switch actuated by said cams, a normally open switch actuated by said cams, means for supplying electrical energy, a first circuit connecting said normally open switch and the normally open contacts of one of said pair of relays with said running field winding across said means for supplying electrical energy, a second circuit connecting said normally closed switch and said normally open contacts of the other of said pair of relays with said running field winding across said means for supplying electrical energy, a third circuit including the normally open switch, the normally open contacts of said one relay and the normally closed contacts of said other relay connecting said starting winding in one direction across said means for supplying electrical energy, a fourth circuit including said normally closed switch, the normally open contacts of said other relay and the normally closed contacts of said one relay connecting said starting field winding in a direction reversed from that of said third circuit across said means for supplying electrical energy, and means for selectively energizing said pair of relays.

2,451,910
ELECTRICAL DISCHARGE TUBE CIRCUITS
Ashley P. Bock, Catonsville, Md., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 28, 1943, Serial No. 496,413
4 Claims. (Cl. 250—27)



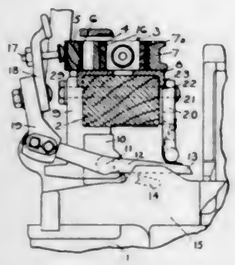
2. In a system for supplying alternating currents to a load, a grid-controlled electrical discharge tube positioned remote from said load, a transmission line connected at its first end to said discharge tube and connected at its second end to an inductance located nearer said load and shunted by a capacitance to constitute an antiresonant circuit, and an additional capacitance shunted across said transmission line at said first end thereof.

2,451,911
LIQUID-HYDROCARBON-RESISTANT CONTAINER
Vally N. Braden, Akron, Ohio, assignor to Wingfoot Corporation, Akron, Ohio, a corporation of Delaware
Application February 24, 1941, Serial No. 380,410
2 Claims. (Cl. 154—43.5)



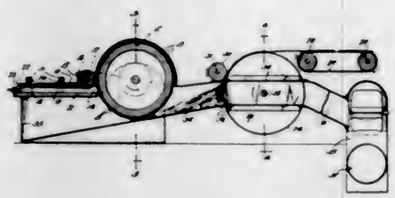
2. A liquid-hydrocarbon-resistant container comprising sheets of ethylene-dichloride-polysulphide plastic coated on at least one side with successive layers of mixed ethylene dichloride polysulphide plastic and polymerized chlorobutadiene of diminishing ethylene dichloride polysulphide plastic content and a final overlapping coat of polymerized chlorobutadiene, said sheets constituting faces of said container and being joined to each other at the perimeter of the faces by a cemented union of the polymerized chlorobutadiene overlaps.

2,451,912
LOADING DEVICE FOR PLASTIC MOLDING MACHINES
Wilburn F. Bradley, Hollywood, Ill.
Application May 31, 1947, Serial No. 751,537
9 Claims. (Cl. 18—1)



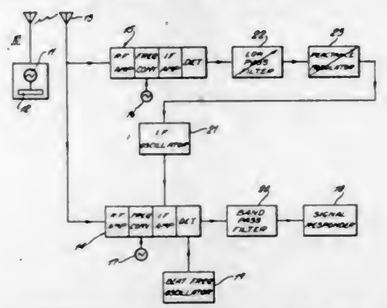
9. In a device of the class described, in combination, a molding die element having an upstanding flange one wall of which is plane and substantially vertical and the opposite wall of which includes a downwardly tapered surface area inclined from a relatively narrow portion at the top of said area to a relatively wide portion at the base of said area, said flange being adapted to receive on its plane and substantially vertical wall a band and being formed with a plurality of upwardly-extending, spaced slots open at their upper ends and with a horizontal groove at the base of said downwardly tapered surface area and adjacent the bottoms of said slots to receive a wire, and a loading device having a body adapted to be moved axially and downwardly into engagement with said flange and having a plurality of spaced, downwardly-extending fingers for carrying on one side thereof said band and adapted, respectively, to enter and slidably interfit with said slots to transfer said band into loaded position on the plane and substantially vertical wall of said flange, said fingers being formed at the lower ends of their sides opposite the sides thereof which normally carry said band during the loading operation with hooks to receive said wire, and said body upon movement downwardly of said flange with said wire engaging the downwardly tapered surface area being effective to force said wire along said downwardly tapered surface area and into registration with said groove, whereby said wire is moved out of engagement with said hooks and subsequently transfers into said groove.

2,451,913
PLASTIC ORNAMENTAL ARTICLE
Walter J. Brice, White Plains, N. Y.
Application October 5, 1945, Serial No. 620,585
1 Claim. (Cl. 41—10)



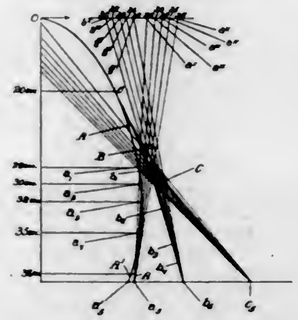
An ornamental article comprising a three-dimensional core of substantial thickness embedded in a homogeneously unitary body of a transparent plastic of a contrasting color, said core being in a predetermined relation to the outer surface of the enclosing body of plastic as a result of the article having been formed by the uniting of a plurality of parts at least one of which had a pre-formed cavity in a surface to be joined to another part in which the core had been placed, whereby said article is identical with similar articles so formed.

2,451,914
DAGGER STOP FOR LOOMS
Walter J. Budzyna, East Douglas, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application September 25, 1946, Serial No. 699,301
6 Claims. (Cl. 139—185)



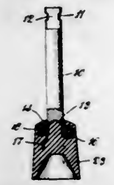
1. For a loom, a dagger stop comprising an attaching portion and a stop abutment, there being an aperture in said stop intermediate said portion and said abutment, and resilient means secured to said attaching portion at one face of the stop and extending through said aperture to the opposite face of the stop and freely beyond the extremity of the stop abutment.

2,451,915
MACHINE AND METHOD FOR FORMING FIBER WEBS
Francis M. Buresh, Blandford, Mass., assignor of one-half to George F. Buresh, Cedar Rapids, Iowa
Application May 1, 1946, Serial No. 666,445
7 Claims. (Cl. 19—89)



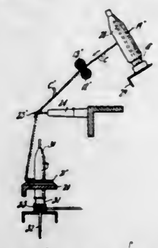
1. A machine of the kind described, comprising a lap support for unorganized fibrous material, a licker-in roll next to the support for licker-in action on said material, a rotary foraminous condenser spaced from the said roll, a tunnel for receiving the material subsequent to the licker-in action by the roll and having a continuation extending diametrically through the said condenser, and means for creating high suction action in the tunnel in the direction of and through said condenser for drawing the fibres at random and collecting them on the condenser.

2,451,916
RADIO TELEGRAPH RECEIVING SYSTEM
Reynold S. Chapin, Flushing, N. Y., assignor to Press Wireless, Inc., New York, N. Y., a corporation of Delaware
Application September 7, 1946, Serial No. 695,530
5 Claims. (Cl. 250—8)



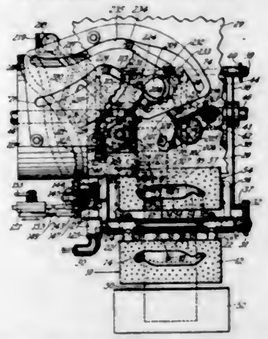
4. A receiving arrangement for "on" and "off" radio telegraph signals, comprising a main radio receiver whose detected output controls a telegraph signal responder, an auxiliary radio receiver, said main receiver being the type having an intermediate frequency carrier stage; a local intermediate frequency carrier generator, and means controlled by the detected output of said auxiliary receiver for rendering said intermediate frequency carrier generator effective to inject local intermediate carrier frequency into said intermediate frequency stage within the pass-band of said stage, the last-mentioned means being responsive to the reception of radio telegraph carrier to render said intermediate frequency carrier generator ineffective to inject intermediate frequency carrier into said main receiver within the pass-band of the said intermediate frequency carrier stage.

2,451,917
METHOD OF AND APPARATUS FOR CONTROLLING THE FLIGHT OF DIRIGIBLE AERIAL TORPEDOES
Constantin Chilowsky, New York, N. Y.
Application August 2, 1941, Serial No. 405,166
In France May 19, 1938
21 Claims. (Cl. 244—77)



1. The method of controlling the flight of a dirigible aerial torpedo toward a target from a controlling station moving through space at high velocity which includes, mutually coordinating the trajectory imposed on the torpedo from the controlling station and the speed of the torpedo with the trajectory and speed of the controlling station imposed thereon by its pilot, said coordination being such that the torpedo and station will, at a certain moment, be on the same direct line of sight to the target, and maintaining mutual coordination of the trajectories and speeds of the torpedo and station on the direct line of sight after said moment while using said established line of sight as the criterion for precise guiding of the torpedo to the target.

2,451,918
DENTAL POLISHING CUP
George A. Chott, Riverside, Ill., assignor of one-half to Hugo J. Chott, Riverside, Ill.
Application April 6, 1944, Serial No. 529,796
1 Claim. (Cl. 32—59)



In a dental polishing tool, a shank having a bore at one end forming a tubular portion split longitudinally to form tongues, certain of the tongues being bent ack on themselves in curved formation substantially normal to the axis of the shank and the other tongues bent outwardly in slightly divergent relation, a partially cured rubber collar on the shank against the first-named tongues with the ends of the tongues engaging the periphery of the collar, and a soft rubber cup having a body portion vulcanized over the tongues and fused with the collar to envelope the same.

2,451,919
METHOD OF MAKING STRETCHABLE YARN
Robert J. Clarkson, Winnsboro, S. C., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application November 25, 1947, Serial No. 787,974
3 Claims. (Cl. 57—156)
